Odour Concentration Measurement Results

The measurement was commissioned by:

Organisation	Elf Farm Supplies Pty Ltd	Telephone	+61 2 4577 5000
Contact	Neil Cockerell	Facsimile	-
Sampling Site	Mulgrave, NSW	Email	manager@elffarm.com.au
Sampling Method	Drum & Pump	Sampling Team	TOU (J. Schulz, M. Assal)

Order details:

Order requested by	Neil Cockerell	Order accepted by	T.Schulz
Date of order	July 2014	TOU Project #	N1952R
Order number	Refer to correspondence	Project Manager	M. Assal
Signed by	Refer to correspondence	Testing operator	A. Schulz

Investigated Item	Odour concentration in odour units 'ou', determined by sensory odour concentration measurements, of an odour sample supplied in a sampling bag.
Identification	The odour sample bags were labelled individually. Each label recorded the testing laboratory, sample number, sampling location (or Identification), sampling date and time, dilution ratio (if dilution was used) and whether further chemical analysis was required.
Method	The odour concentration measurements were performed using dynamic olfactometry according to the Australian Standard 'Determination of Odour Concentration by Dynamic Olfactometry AS/NZS4323.3:2001. NATA accredited for compliance with ISO/IEC 17025. Any deviation from the Australian standard is recorded in the 'Comments' section of this report.
Measuring Range	The measuring range of the olfactometer is $2^2 \leq \chi \leq 2^{18}$ ou. If the measuring range was insufficient the odour samples will have been pre-diluted. The machine is not calibrated beyond dilution setting 2^{17}. This is specifically mentioned with the results.
Environment	The measurements were performed in an air- and odour-conditioned room. The room temperature is maintained between 22°C and 25°C.
Measuring Dates	The date of each measurement is specified with the results.
Instrument Used	The olfactometer used during this testing session was: ODORMAT SERIES V05
Instrumental Precision	The precision of this instrument (expressed as repeatability) for a sensory calibration must be $r \leq 0.477$ in accordance with the Australian Standard AS/NZS4323.3:2001. ODORMAT SERIES V05: $r = 0.2635$ (April 2014) Compliance – Yes
Instrumental Accuracy	The accuracy of this instrument for a sensory calibration must be $A \leq 0.217$ in accordance with the Australian Standard AS/NZS4323.3:2001. ODORMAT SERIES V05: $A = 0.1843$ (April 2014) Compliance – Yes
Lower Detection Limit (LDL)	The LDL for the olfactometer has been determined to be 16 ou (4 times the lowest dilution setting)
Traceability	The measurements have been performed using standards for which the traceability to the national standard has been demonstrated. The assessors are individually selected to comply with fixed criteria and are monitored in time to keep within the limits of the standard. The results from the assessors are traceable to primary standards of n-butanol in nitrogen.

Odour Concentration Measurement Results

The measurement was commissioned by:

Organisation	Elf Farm Supplies Pty Ltd	Telephone	+61 2 4577 5000
Contact	Neil Cockerell	Facsimile	-
Sampling Site	Mulgrave, NSW	Email	manager@elffarm.com.au
Sampling Method	AS4323.3/4	Sampling Team	TOU (M. Assal)

Order details:

Order requested by	Neil Cockerell	Order accepted by	T.Schulz
Date of order	October 2014	TOU Project #	N1952R
Order number	Refer to correspondence	Project Manager	M. Assal
Signed by	Refer to correspondence	Testing operator	D. Hepple

Investigated Item	Odour concentration in odour units 'ou', determined by sensory odour concentration measurements, of an odour sample supplied in a sampling bag.
Identification	The odour sample bags were labelled individually. Each label recorded the testing laboratory, sample number, sampling location (or Identification), sampling date and time, dilution ratio (if dilution was used) and whether further chemical analysis was required.
Method	The odour concentration measurements were performed using dynamic olfactometry according to the Australian Standard 'Determination of Odour Concentration by Dynamic Olfactometry AS/NZS4323.3:2001. NATA accredited for compliance with ISO/IEC 17025. Any deviation from the Australian standard is recorded in the 'Comments' section of this report.
Measuring Range	The measuring range of the olfactometer is $2^2 \leq \chi \leq 2^{18}$ ou. If the measuring range was insufficient the odour samples will have been pre-diluted. The machine is not calibrated beyond dilution setting 2^{17}. This is specifically mentioned with the results.
Environment	The measurements were performed in an air- and odour-conditioned room. The room temperature is maintained between 22°C and 25°C.
Measuring Dates	The date of each measurement is specified with the results.
Instrument Used	The olfactometer used during this testing session was: ODORMAT SERIES V05
Instrumental Precision	The precision of this instrument (expressed as repeatability) for a sensory calibration must be $r \leq 0.477$ in accordance with the Australian Standard AS/NZS4323.3:2001. ODORMAT SERIES V05: $r = 0.2635$ (April 2014) Compliance – Yes
Instrumental Accuracy	The accuracy of this instrument for a sensory calibration must be $A \leq 0.217$ in accordance with the Australian Standard AS/NZS4323.3:2001. ODORMAT SERIES V05: $A = 0.1843$ (April 2014) Compliance – Yes
Lower Detection Limit (LDL)	The LDL for the olfactometer has been determined to be 16 ou (4 times the lowest dilution setting)
Traceability	The measurements have been performed using standards for which the traceability to the national standard has been demonstrated. The assessors are individually selected to comply with fixed criteria and are monitored in time to keep within the limits of the standard. The results from the assessors are traceable to primary standards of n-butanol in nitrogen.

APPENDIX B:

PDS CONSULTANCY METEOROLOGICAL DATASET REPORT

Three Dimensional (3D) Meteorological data file for CALPUFF

Mulgrave(NSW)-2008

This file was exclusively compiled for **The Odour Unit** Pty Ltd By pDs Consultancy Service.

pDs Consultancy
@1999-2014

Introduction

Non steady state PUFF model such as CALPUFF (Californian PUFF model) requires meteorological data, preferably hourly average for the entire modelling domain which is in question. Meteorological domain is usually bigger than the computational domain which is intended to use for dispersion modelling. There are several recommended options available to construct 3D meteorological data files. Selection of the suitable option is depending on the data availability.

Three modes available to run CALMET:

1. CALMET No-Observations (No-Obs) Mode. CALMET using gridded numerical model output (e.g., from the MM5, WRF, RAMS, RUC, or TAPM models). No surface, upper air or buoy observations are used in No-Obs mode.
2. CALMET Hybrid Mode. CALMET run using a combination of gridded numerical meteorological data supplemented by surface and optional overwater buoy data.
3. CALMET Observations-Only (Obs) Mode. - CALMET using observed surface and upper air data, plus optional buoy data.

pDs Consultancy has been engaged by **The Odour Unit(TOU)** to compile an 3D meteorological data file for a site at **Mulgrave** in New South Wales using site-specific meteorological data supplied by their client and other available

meteorological data obtain from Australian Bureau of Meteorology (BoM). The year 2008 was used on TOU's request.

CONSTRUCTION OF GEOPHYSICAL DATA FILE :

Topography and land used over the area were examined and topography data with 90m resolution was used (Source :SRTM3-Global data). Map showing topography in 3D was prepared and preliminary QA/QC was done comparing it with Google maps.

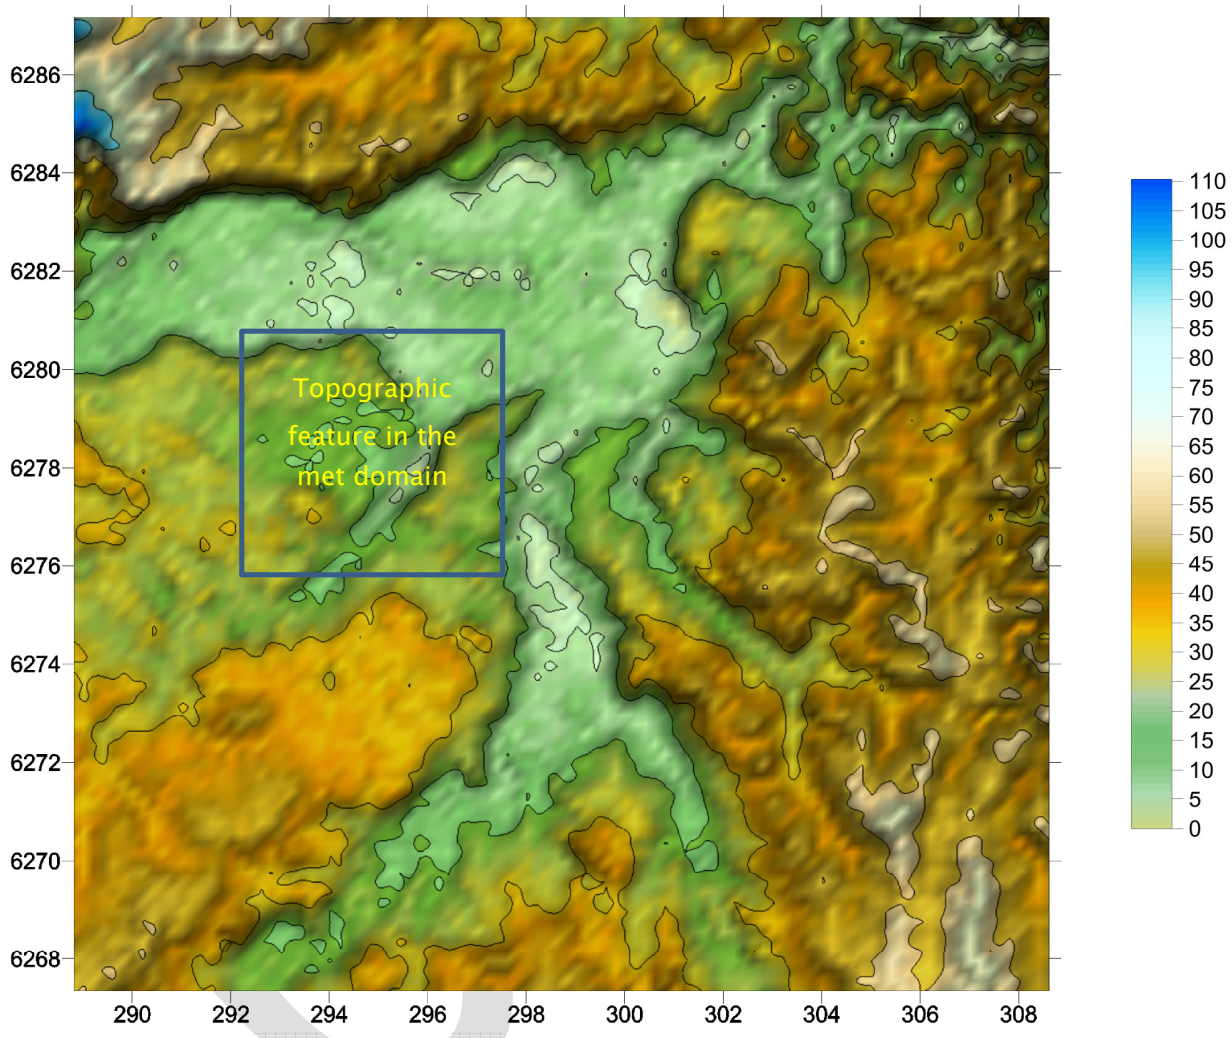

FIGURE 1: TOPOGRAPHY OVER THE METEOROLOGICAL DOMAIN

Global land cover data (Source :GLCC-Australia Pacific) with 900 m resolution was initially used and modified manually to match with real land-use over the area. Only three compatible land use categories were assigned (Built up, Range Land, Forest).

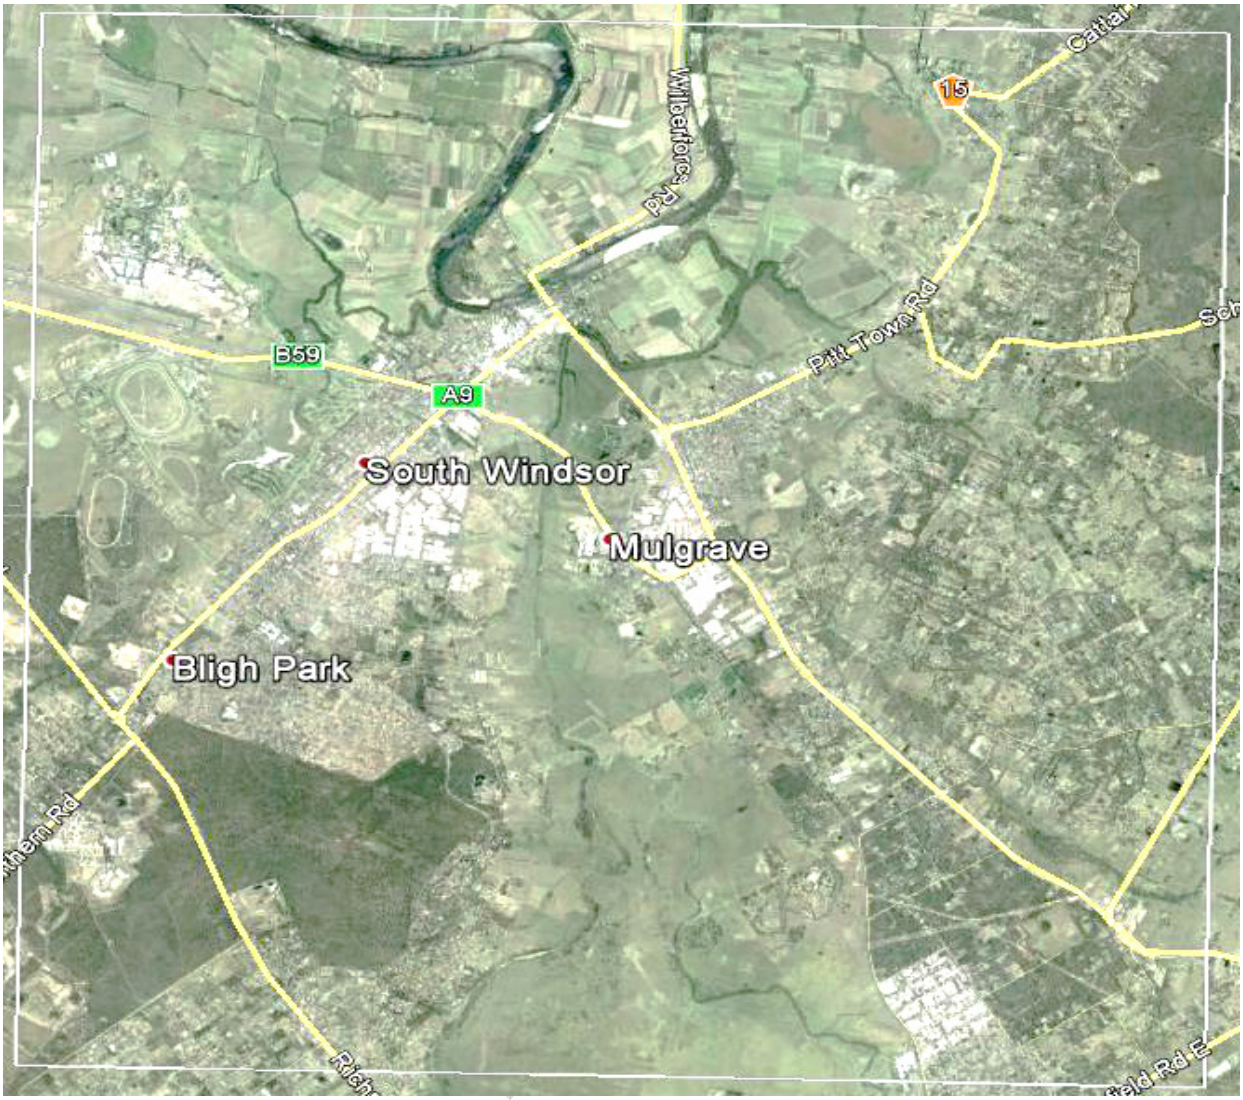

FIGURE 2: LAND USE OVER THE METEOROLOGICAL DOMAIN

Geophysical data file (GEO.Dat) was prepared based on above data sets (Topography and Land use) running TERREL for topography, CTGPROC for Land-use and MAKEGEO for final .geo file, pre-processors of CALPUFF modelling system.

In order to resolve near source terrain features, as well as to capture actual meteorological observations, 200 m grid resolution with 20KM by 20KM grid was used. The dominant scale of the terrain (TERRAD- radius of influence) was set to 1 KM.

INPUT METEOROLOGY

There were two meteorological data sources within the meteorological domain including the data at the site. Therefore we could use 'Hybrid" option available in CALMET-The meteorological module of CALPUFF modelling system.

CALMET was initialised with 3D data tile prepared running meteorological module of TAPM (CISIRO's **T**he **A**ir **P**ollution **M**odel). Topography with 90m resolution and land use with ~1 Km resolution were used to prepare 3KM resolution 3D data tile. This will help resolve topography for some extent even with the 3KM resolution met-tile used for initialisation.

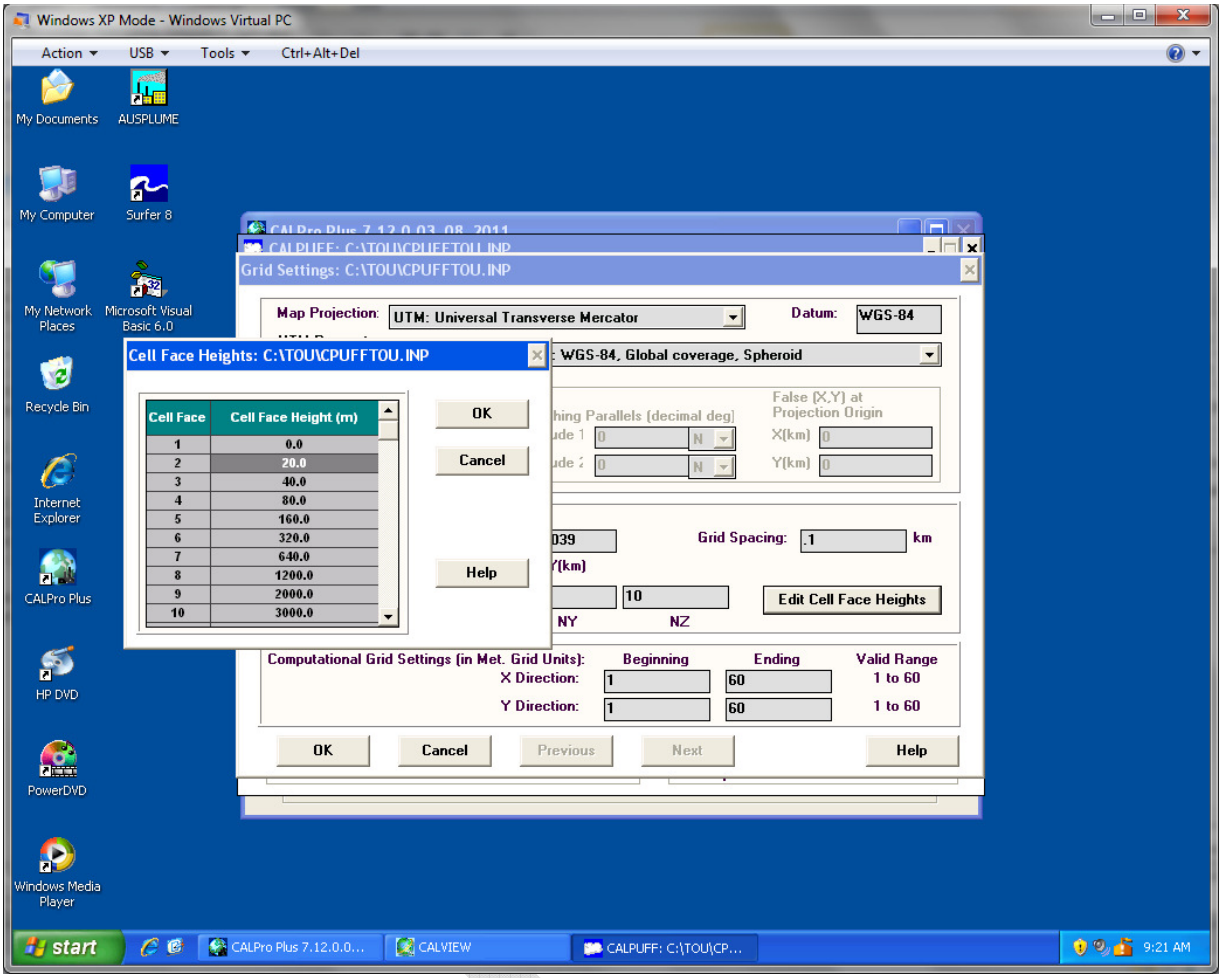
METEOROLOGICAL DOMAIN:

Meteorological domain was designed with 20 KM by 20 KM map extent with 200 m grid resolution in order to capture topography around the application site. Topographic features around the meteorological domain was captured in 3D meteorological data file which was used to initialise CALMET domain which is intended to use for near source modelling.

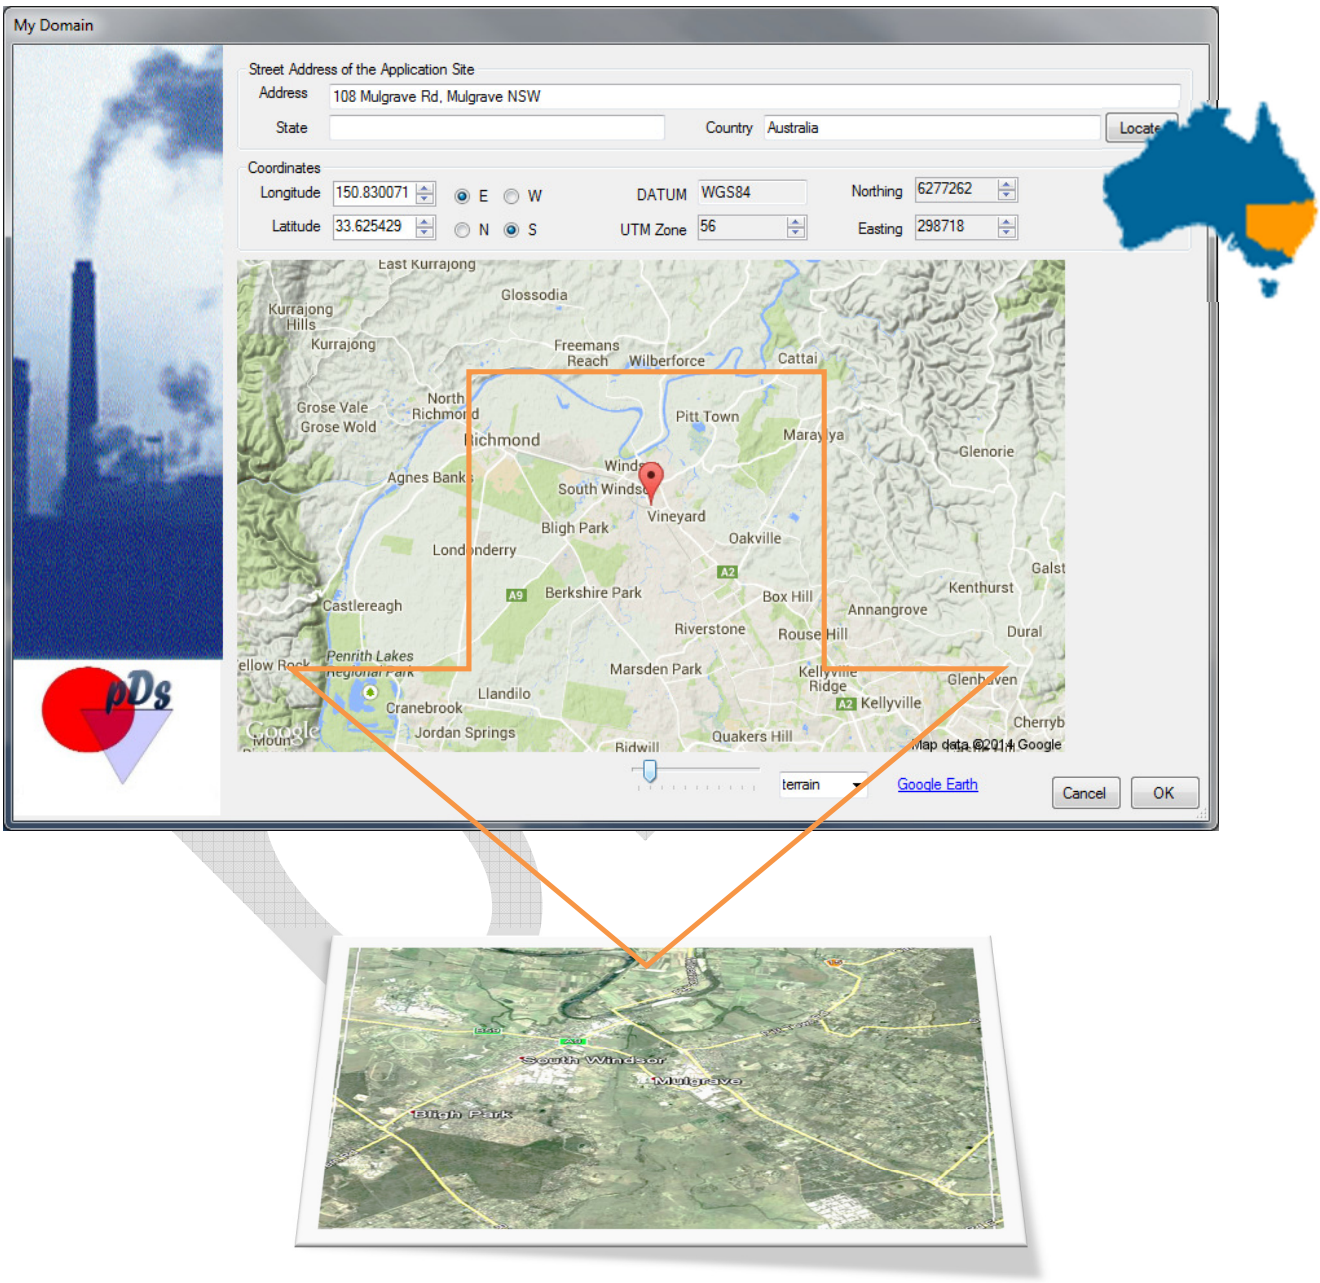
None of the observed data were biased in the modelling since there is not much confidence in the site-specific data. This helps CALMET's model physics to be dominant when deciding the flow pattern.

VERTICAL STRUCTURE

Eleven cell faeces were set up with 0,20,40,80,160,320……,4000m. Predictions were done at 10,30,60 etc..



LOCATION: MULGRAVE, NSW



ANALYSIS OF THE SIMULATED DATA EXTRACTED FOR THE SITE IN QUESTION.

APPENDIX D:

PHASE 2/3 ODOUR EMISSIONS TREND PROFILE WORKSHEET

Appendix D

Worksheet title: Phase 2/3 Odour emission trend profile for a single tunnel
Associated object ID: Figures 3.1 & 3.2

Cycle Time (hrs)	Fan inlet airflow (m^3/hr)	Fan inlet airflow (m^3/s)	Odour emission rate (ou.m^3/s)	Stage
2	40,000	11.1	32,200	Tunnel venting
4	9,600	2.7	13,600	Levelling
6	12,000	3.3	17,000	
8	8,400	2.3	11,900	
10	4,800	1.3	6,790	
12	2,400	0.7	3,390	
14	6,000	1.7	8,480	
16	8,400	2.3	11,900	
18	7,800	2.2	5,180	Warm-up Pasteurisation
20	2,600	0.7	1,730	
22	3,900	1.1	2,590	
24	2,600	0.7	1,730
