With 90 turbines built or under construction in this area I hold a common belief that we as a rural community have endured our share of this reckless destruction of our rural landscape from an aesthetic and audible point of view. These monsters are ugly and generate more noise than the community were led to believe. This is particularly evident at night! We also live in fear that CASA may suddenly deem that beacons be installed with further degradation to our night time peace and serenity.

The current proposed location for Wind Farm 2 is at least within the general viewing range of the existing Wind Farm and though I do not support their installation, the site chosen would be better than other areas of Palerang and Goulburn shires.
