Robert

As per our phone discussion yesterday the submitted documentation for the proposal includes the use of B-Doubles for transportation of materials and component to the site during the construction period (see Figure 2.2 of Appendix H to the EIS). This would direct the heavy vehicles through the main residential area of Gerogery.

Currently that part of Gerogery Road between the Olympic Highway and Glenellen Road is only approved conditionally as a B-Double route for incident management. Please see attached extract from the RAV (Restricted Access Vehicle) Maps. There are nearby alternative routes that are approved for B-Double vehicles however this may need to be further notified.

On this basis consideration may need to be given to an alternative route for B-Double vehicles or restrict the vehicle deliveries to General Access Vehicles.

Regards
