## Neon Signs Australia P/L *qbcc Licence Numbers 1112946 & 1112948*

20 May, 2019

COMPANY: Events Engineering

**Subject: Neon flickering**

Neon glass tubes in their running state will illuminate without flickering. The movement of gas inside the tube is too quick to be perceived by the naked eye.

If neon tubes in an electrical system are flickering it is most likely to be that the neon transformer is faulty or near the end of its life span. This is an electrical issue, not an issue with the neon tubes.

Sincerely,

MICHAEL BLAZEK
