2020 Annual Review Report for DPIE Condition C11 of SSD5300 Kembla Grange Recycling Pty Ltd

Jackson Environment and Planning Pty Ltd
Suite 102, Level 1, 25-29 Berry St, North Sydney NSW 2060
T: 02 8056 1849 | E: admin@jacksonenvironment.com.au
W: www.jacksonenvironment.com.au

This 2020 Annual Review report has been prepared by the following staff of Jackson Environment and Planning Pty Ltd, Suite 102, Level 1, 25-29 Berry St, North Sydney NSW 2060.

Author 1: Rylan Loemker, Senior Consultant, B.EnvSc. (Hons.), Graduate Diploma Business and Technology, Cert IV Carbon Management.

Author 2: Dr Mark Jackson, Director and Principal Consultant, B.Sc (Hons), PhD, Grad. Cert. Mgmt., Exec. Masters Public Admin.

We declare that:

The report contains all available information that is relevant to the compliance assessment of the development, activity or infrastructure to which the report relates, and the information contained in the report is neither false nor misleading.

Executive Summary

This Annual Review report has been prepared for Kembla Grange Recycling Pty Ltd (KGRPL), owner and operator of a construction and demolition waste recycling facility located at 50 Wyllie Rd, Kembla Grange. Under Condition C11 of development consent SSD5300 operating at the site, the proponent is required to report to the Secretary of the Department of Planning, Industry and Environment on the environmental performance of the development. An Annual Review is required by the end of March each year. This Annual Review covers the environmental performance of the development from January 2020 to March 2021 (the Reporting Period). The period covered by the 2020 Annual Review period was extended to align with the Environment Protection Licence reporting year which is now 15th March to 14th March which was amended in Modification 2.

As per the requirements of Condition C11, the report provides an overview of the environmental performance of the development by describing the development that was carried out in the previous calendar year, and the development that is proposed to be carried out over the current calendar year. The report includes a review of the monitoring results and complaints records of the development over the last calendar year in addition to the first three (3) months in 2021 to bring the Annual Review period in line with the Environment Protection Licence reporting period.

The report includes a comparison of the results against the:

- Relevant statutory requirements, limits or performance measures / criteria;
- Requirements of any plan or program required under the consent;
- Monitoring results of previous years; and
- The relevant predictions in the EIS.

The Annual Review also identifies any non-compliance over the reporting period, and describes what actions were (or are being) taken to ensure compliance; identifies trends in the monitoring data over the life of the development; identifies and discrepancies between the predicted and actual impacts of the development and analyses the potential cause of any significant discrepancies. Furthermore, under the C11 consent condition, the proponent must describe what measures have or will be implemented in the reporting period to improve the environmental performance of the development.

To inform the Annual Review, an assessment of compliance with the planning consent and environmental management requirements as specified in the following documents has been performed:

- State Significant Development (5300) Conditions of Consent;
- State Significant Development (5300) Statement of Commitments;
- State Significant Development (5300) Mod 1 Conditions of Consent;
- State Significant Development (5300) Mod 2 Conditions of Consent;
- Environment Protection Licence 20601;
- Department of Primary Industries Controlled Activity Approval;
- Pollution Incident Response Management Plan;
- Operational Environmental Management Strategy as approved by Department of Planning and Environment on 26/02/18 (including sub-environmental strategies);
- Corrective actions from the 2018 Annual Environmental Review; and
- Corrective actions from the first Independent Environmental Audit, completed in November 2019.

The Annual Review also identifies any non-compliance over the last calendar year, and describe what actions were (or are being) taken to ensure compliance; identifies trends in the monitoring data over the life of the

development; identifies and discrepancies between the predicted and actual impacts of the development and analyses the potential cause of any significant discrepancies. Furthermore, under the C11 consent condition, the proponent must describe what measures have or will be implemented in the current calendar year to improve the environmental performance of the development.

Please note that we have included observations from the site inspection done on 13th February 2020 for the 2019 Annual Review as these observations were made during the 2020 Annual Review period. We also note that a compliance audit was conducted on 2nd March 2021. This involved a detailed desktop assessment of all management documentation, and a site inspection across the entire facility.

Across the entire Annual Review period, we found eight non-compliances. Two of which were resolved prior to the inspection on 2nd March 2021. These include:

- Condition B7 (Water Management System). Diversion of surface runoff around the NE corner of the site, with rock armouring and revegetation of the area observed. Improved cleaning of pad and stormwater pits was observed, with more frequent changing of geotextile covers on pits;
- Condition B8 (Erosion and Sediment Control). See observation as per Condition B7 above.

Two non-compliances were resolved following the site inspection:

- Condition B7 (Water Management System). A small oil spill was found on the southern side of the main shed. This oil spill has been cleaned up and has been resolved;
- Condition B25 (Traffic and Access): The ring road around the site was partially blocked and must be maintained in accordance with Drawing No. C10 as approved under SSD5300 and subsequent development modifications. The ring road has been reinstated and the matter has been resolved.

The four non-compliances that still need to be resolved:

1. A building information certificate is required for the rainwater and firewater storage tanks, pump room and fixed picking station which have already been installed. It is noted that this certificate was sought from Wollongong City Council, though it is yet to be issued. It is noted that the building information certificate must be provided to the Planning Secretary with copies of all within 60 days from date of approval of MOD 2. Once the building information certificates have been obtained, this issue will be resolved.
2. The use of the shed building approved for the crushing and grinding plant under Mod 2 is being used as a temporary workshop;
3. An asphalt processing plant and asphalt storage is currently located on the approved green waste storage area;
4. Empty skip bins are being stored adjacent to the water quality ponds.

Environmental monitoring data reviewed as part of the Annual Review found that the facility is being managed within the predictions in the Environmental Impact Statement. It is noted that no complaints were received in the past 12 months in relation to the operations at the site.

1. Introduction

1.1. Background

This Annual Review report has been prepared for Kembla Grange Recycling Pty Ltd, owner and operator of a construction and demolition waste recycling facility located at 50 Wyllie Rd, Kembla Grange. The site is licensed by the NSW Environment Protection Authority (EPL 20601) and has been successfully operating since 2013. It was originally owned and operated by Wollongong Recycling and Building Supplies Pty Ltd. In May 2017, Wollongong Recycling (NSW) Pty Ltd took ownership of the facility. Kembla Grange Recycling Pty Ltd took over operation of the Facility on 21 May 2018. The facility was originally approved under Development Consent DA2009/1153 by Wollongong City Council, which was subsequently surrendered as a requirement of SSD5300.

On 7 March 2016, approval to expand the capacity of the facility was provided under State Significant Development SSD5300 by the Minister for Planning to receive up to 230,000 tonnes per annum of construction and demolition and commercial and industrial wastes. A further modification to the consent under SSD5300 Mod 1 was approved by the Minister for Planning on 8 June 2017 to relocate the second weighbridge and enable installation of a larger weighbridge office.

Modification 2 was approved on 15 May 2020, which regularised rainwater and firewater storage tanks, a pump room and a fixed picking station as well as the installation of new indoor processing plant and fire safety measures.

The facility receives building and demolition and other wastes for recycling. Materials are delivered by a customer base which includes waste collection services, building and construction, small and medium sized businesses and trades.

The facility aims to achieve an 85% recovery rate from processing incoming materials that include concrete, asphalt, tiles, timber, masonry, clay, soils and garden organics. Mobile plant, including excavators and front-end loaders, are used to remove contaminants and separate incoming building and construction wastes for containment in storage bunkers prior to processing.

On 19 August 2016, the Secretary of the Department of Planning and Environment approved the management plans for the development under SSD5300, including approval of construction plans and the Construction Environment Management Plan. A licence variation was obtained from the EPA on 20 September 2016 to undertake construction works. The construction works for Stage 1 were completed in December 2017, with the final Occupation Certificate issued on 23 January 2018. Approval of the amended management plans was provided in February 2018. A varied EPA licence for the completion of the development (Stage 1) and scale up in waste tonnages up to 230,000 tonnes per annum was approved on 6 April 2018.

Under Condition C11 of development consent SSD5300, by the end of March each year, Kembla Grange Recycling Pty Ltd is required to report to the Secretary of the Department of Planning, Industry and Environment on the environmental performance of the development. This Annual Review provides an overview of the environmental performance of the development, including an assessment of compliance with all consents, licenses and approvals. The review also provides a summary of proposed activities for the next 12 months and makes recommendations to improve the environmental performance of the development.

1.2. Annual Review requirements

Under Condition C11 of development consent SSD5300 operating on the site, an Annual Review is required by the end of March to assess the environmental performance of the development. The review must:

- **Condition C11(a):** Describe the development that was carried out in the previous calendar year, and the development that is proposed to be carried out over the current calendar year;
- **Condition C11(b):** Include a comprehensive review of the monitoring results and complaints records of the development over the last calendar year which includes a comparison of the results against the:
 - i. The relevant statutory requirements, limits or performance measures / criteria;
 - ii. Requirements of any plan or program required under the consent;
 - iii. The monitoring results of previous years; and
 - iv. The relevant predictions in the EIS.
- **Condition C11(c):** Identify any non-compliance over the last calendar year, and describe what actions were (or are being) taken to ensure compliance;
- **Condition C11(d):** Identify any trends in the monitoring data over the life of the development;
- **Condition C11(e):** Identify and discrepancies between the predicted and actual impacts of the development, and analyse the potential cause of any significant discrepancies; and
- **Condition C11(f):** Describe what measures have or will be implemented in the current calendar year to improve the environmental performance of the development.

1.3. Overview of the approved State Significant Development

On 7 March 2016, State Significant Development SSD5300 was approved by the Minister of Planning to enable an expansion to the Kembla Grange Resource Recovery Facility. The site currently supplies important recycling services for householders, builders and developers in the Wollongong Region, and is making an important contribution to helping the NSW Government meets its recycling target of 80% for construction and demolition waste by 2021¹. Due to increasing demand for recycling services for building waste and commercial and industrial waste from businesses, an expansion to the existing Resource Recovery Facility has been approved.

The SSD5300 consent (and SSD5300 Mod 1) is being implemented in two stages. Construction and operation of Stage 1 of the development is complete. Separate approvals under Condition A10 of development consent SSD5300 is required from the Department of Planning, Industry and Environment prior to commencement of construction of stage 2 of the development.

Stage 2 of the approved development involves developing the eastern part of the facility including the following. This stage is yet to commence:

- Construction of a workshop facility;
- Construction of truck parking areas;
- Construction of retaining wall;
- Installation of water tank;
- Construction of a minor surface water sediment retention dam with hydrocarbon capture; and
- Construction of a new site building and site office/staff OH&S training building.

1.4. Summary of consents, licences and approvals

To help inform the Annual Review and the compliance audit undertaken by Jackson Environment and Planning Pty Ltd, a list of consents, licences and approvals are provided in Table 1.1 below. These statutory requirements have informed the audit framework for the compliance audit and has assisted in the assessment of the environmental performance of the development from January 2020 to March 2021.

Table 1.1. Summary of consents, licences and approvals operating at 50 Wyllie Rd, Kembla Grange.

Approval type	Reference / details	Date issued	Regulatory authority
On-site Sewage System Approval to Operate	OS-2015/15 – Approval to operate an on-site sewage system	31 August 2015	Wollongong City Council
Planning consent (and Statement of Commitments)	SSD5300 development approval	16 March 2016	Minister for Planning
Management Plan approval (enabling construction of Stage 1 of development)	Stage 1 works including Water Management Plan, Air Quality Management Plan, Landscape Management Plan and Construction Environment Management Plan	19 August 2016	Department of Planning, Industry and Environment
Construction Certificate (Stage 1)	Construction Certificate Cert. No. 2306	8 September 2016	Illawarra Building Certifiers Pty Ltd
Environment Protection Licence	EPL20601 varied for the completion of the Stage 1 development and scale up in waste tonnages up to 230,000 tonnes per annum	20 September 2016 (varied 6 April 2018)	NSW Environment Protection Authority
Planning consent	SSD5300 Mod 1 development approval for relocating the second weighbridge and enable installation of a larger weighbridge office)	8 June 2017	Minister for Planning
Occupation Certificate	Occupation Certificate Cert. No. 2306	23 January 2018	Illawarra Building Certifiers Pty Ltd
Operational Environmental Management Strategy (including Pollution Incident Response Management Plan)	Operational Environmental Management Strategy as required under Conditions C3 and C5 of SSD5300	26 February 2018	Department of Planning, Industry and Environment
Planning consent	SSD5300 Mod 2 development approval for regularising previously constructed elements including rainwater and firewater storage tanks, a pump room and a fixed picking station as well as the installation of new indoor processing plant and fire safety measures.	15 May 2020	Minister for Planning

1.5. Scope of the review

The Annual Review has considered the overall performance of the development for the period of January 2020 to March 2021 (inclusive). The period covered by the 2020 Annual Review period was extended to align with the Environment Protection Licence reporting year which is now 15 March to 14 March (amended in Modification 2). The Annual Review involved a detailed review of compliance against all consents, approvals and licenses as given in Table 1.1.

The purpose of the review is to evaluate the environmental performance of the development, and to recommend changes to management of the development to ensure:

- The environment and human health is protected;
- The statutory obligations of the site owner and operator are met in full;
- The development and operations of the facility for the previous 15 months are captured as a record of activities undertaken to inform regulators, neighbours and the community;
- The environmental performance of the facility is in line with predictions in the EIS for the development;
- Review non-compliances for the past calendar year, and what actions were or are being undertaken to ensure compliance;
- Review and assess trends in monitoring data for the development, and to identify discrepancies; and
- Identify measure that have or will be undertaken to improve the environmental performance of the development; and
- Demonstrate compliance with Condition C11 of SSD5300.

To complement the Annual Review, we have undertaken a desktop and site-based compliance audit of the development. The on-site audit was undertaken on 2nd March 2021 by Dr Mark Jackson, Director, Jackson Environment and Planning Pty Ltd and Mr Rylan Loemker, Senior Consultant, Jackson Environment and Planning Pty Ltd in accordance with the following consents, licenses and approvals as per Table 1.1 above.

- State Significant Development (5300) Conditions of Consent;
- State Significant Development (5300) Statement of Commitments;
- State Significant Development (5300) Mod 1 Conditions of Consent;
- State Significant Development (5300) Mod 2 Conditions of Consent;
- Environment Protection Licence 20601;
- Department of Primary Industries Controlled Activity Approval;
- Pollution Incident Response Management Plan;
- Operational Environmental Management Strategy as approved by the Department of Planning and Environment on 26 February 2018 (including sub-environmental strategies);
- Corrective actions from the 2018 Annual Environmental Review; and
- Corrective actions from the first Independent Environmental Audit, completed in November 2019.

Please note that we have included observations from the site inspection done on 13th February 2020 for the 2019 Annual Review as these observations were made during the 2020 Annual Review period.

2. Annual Review findings

This section provides an overview of the main findings of the Annual review of Kembla Grange Recycling's Resource Recovery Facility located at 50 Wyllie Rd, Kembla Grange. The findings address all the requirements of Conditions 11(a) to 11(f) under SSD5300.

2.1. Development over the past calendar year (Condition C11(a))

For the 2020 calendar year, the focus of the development has been to carry on waste receipt, sorting and recycling operations in accordance with SSD5300 and SSD5300 Mod 1 consents.

A development modification (Mod 2) was approved by the Department of Planning, Industry and Environment under Section 4.55(1a) of the *Environmental Planning and Assessment Act* 1979 in May 2020. The development modification was a retrospective approval of the following constructed elements:

- Installation of rainwater storage tanks on the premises in a location which differs from the approved plans under SSD 5300 Mod 1;
- Installation of firewater storage tanks and a pump room on the premises; and
- An outdoor picking station and associated processing equipment (including de-stoning screen and generator) in the central processing area of the site, installed above a push wall structure built on the premises.

Fire safety measures described in the *Kembla Grange Fire System Upgrade Review* dated 22 March 2020 prepared by EFWF Consulting also noted the following measures which are required to be installed:

- Additional 150kL fire tank to upgrade the site from warehouse only protection to yard hydrant protection;
- Replacement of the fire pumps to provide 30L/s @ 900kPa to the system;
- Provision of 4 new external fire hydrants;
- Provision of one new booster facility and block plan;
- Provision of a flame detection system in the warehouse to assist in early detection or when the space is unoccupied;
- Provision on an occupant warning system coupled with the flame detection system. Manual call points will be provided adjacent exit doors to notify other occupants; and
- A flame detector be provided to address the plastics storage bay under the Outdoor Picking Station sorting area with associated alarms.

However, the Development Control Order issued to Bingo on the 20th of December 2018, in accordance with Item 14 Part 1 of Schedule 5 of the EP&A Act remains in place. The Development Control Order was issued to remedy a breach of a consent for State significant development. The terms of the Development Control Order are that Bingo must cease use of the sorting/picking station, identified in the aerial images in Attachment 1 of the Order, including infrastructure attached to the building.

The picking station has not been used since the Order was issued. It is understood this matter will be resolved following Bingo obtaining building information certificates for the structures. According to Condition A9A of SSD5300, building information certificates must be provided to the Planning Secretary with copies of all within

60 days from date of approval of MOD 2. This has been applied for though it has yet to be issued by Wollongong City Council.

2.2. Development proposed for next calendar year (Condition C11(a))

Kembla Grange Recycling Pty Ltd is seeking a further development modification (Mod 3) to operate the facility 24 hours per day, 7 days per week, in order to harmonise operational hours across its network of resource recovery facilities. Bingo aims to employ a “clean floor” policy, which would ensure most waste material received into the facility during the day is sorted and transferred to their Eastern Creek Recycling Ecology Park in the evening or at night. As such, it would provide more space the following day for customer movements in the drop-off area, and for the preliminary sorting of waste to occur efficiently. To do this, development modification to existing planning consents will be required to change the existing approved operational hours.

2.3. Review of monitoring results, complaints and predictions in EIS (Condition C11(b))

A summary of key statutory requirements, limits or performance measures / criteria and requirements of any plan or program required under the consent is shown in Table 2.1. Monitoring performed is also documented.

Table 2.1. Summary of key statutory requirements, limits or performance measures / criteria and requirements of any plan or program required under the consent.

Requirement or limit under consent	Description	Monitoring performed
Waste receipt (during 2020) under Condition A6 following scale up under Condition A7 of SSD5300	Limit of 230,000 tonnes per year of waste received at the site	Daily Site Supervisor checks and Monthly Waste and Resource Reporting Portal data submitted to NSW EPA
Authorised amount under NSW EPA Licence 20601	Limit of 45,000 tonnes of waste stored on site at any one point in time; including not more than 2,500 m ³ of garden waste and wood waste	Daily Site Supervisor checks and Monthly Waste and Resource Reporting Portal data submitted to NSW EPA
Operating hours	Operations (delivery and operation of machinery): 7am to 6pm Mon to Fri; 8am to 4pm Sat; Nil Sun & Public Hols Operations (all other operational activities): 6am to 6pm Mon to Fri; 8am to 4pm Sat; Nil Sun & Public Hols	Daily Site Supervisor checks
Noise	Noise during operation of the development	Operational Environmental Management Strategy; Complaints Register

Requirement or limit under consent	Description	Monitoring performed																										
	<table><tr><th colspan="4">Table 3: Noise criteria (dB(A))</th></tr><tr><th rowspan="3">Location</th><th colspan="3">Noise criteria (dB(A))</th></tr><tr><th>Day</th><th colspan="2">Morning Shoulder</th></tr><tr><th>L_{Aeq} (15 minute)</th><th>L_{Aeq} (15 minute)</th><th>L_{Aeq} (1 minute)</th></tr><tr><td>The dwelling on Lot 11 DP 878167</td><td>35</td><td>35</td><td>45</td></tr><tr><td>Any dwelling in Farmborough Heights</td><td>37</td><td>37</td><td>47</td></tr><tr><td>Any dwelling in the vicinity of Kingston Town Drive</td><td>41</td><td>41</td><td>51</td></tr></table>		Table 3: Noise criteria (dB(A))				Location	Noise criteria (dB(A))			Day	Morning Shoulder		L _{Aeq} (15 minute)	L _{Aeq} (15 minute)	L _{Aeq} (1 minute)	The dwelling on Lot 11 DP 878167	35	35	45	Any dwelling in Farmborough Heights	37	37	47	Any dwelling in the vicinity of Kingston Town Drive	41	41	51

Any dwelling in the vicinity of Kingston Town Drive	41	41	51																									
Surface water quality (discharged) and grab sampled from pond every 6 months	Quality of surface water discharged to a watercourse following treatment	pH: 6.5 – 8.5 Total suspended solids: 30 mg/L																										
Groundwater quality	Quarterly reporting of groundwater from wells pre- and post-development for submission to Office of Water	6 wells established in February 2018 and monitoring of groundwater quality commenced in March 2018																										
Odour	Occupant shall not allow any odour to leave the boundary of the development	Daily Site Supervisor checks; Operational Environmental Management Strategy; Complaints Register.																										
Dust	Occupant shall not allow any material, sediment or oil to be tracked from the development. No dust is to leave the boundary of the development	Daily Site Supervisor checks; Operational Environmental Management Strategy; Complaints Register.																										
Incidents	Reporting of incidents to NSW Environment Protection Authority and in accordance with Pollution Incident Response Management Plan	Incidents response register.																										
Complaints	Recording and response to complaints made in relation to the development	Online complaints register; Incidents response register.																										

An assessment of how the development has performed in relation to these criteria during the 2020 calendar year (with additional months from January 2021 to March 2021 included) including monitoring results during 2020 is given in the following sections. A comparison of these results has been made to the relevant predictions in the EIS.

2.3.1. 2020 waste receival

During 2020, waste receival and recycling operations were carried out in accordance with Condition A6 and A8 of SSD5300 and authorised amount under NSW EPA Licence 20601 which includes the following limits:

- 230,000 tonnes per year of waste received at the site;
- 45,000 tonnes of waste stored on site at any one point in time, including:
 - No more than 2,500 m³ of organic waste on the site at any one point in time;
 - No more than 500 m³ of the above limit on organic waste is to comprise compost product.

An analysis of waste received at the site for recycling by month in 2020/2021 is given in Table 2.2, including data on the total amount of waste processed and sent off-site for recycling. Data is provided on the total amount of waste (stock) held at site at the end of the month.

The analysis suggests that the site received a total of 95,958.71 tonnes of waste in 2020 and 19,755.99 tonnes for the first three (3) months of 2021, which was well below the maximum of 230,000 tonnes per annum. At all times, the total amount of stock held on site was less than the consent limit of 45,000 tonnes, and daily checks are performed to ensure that less than 2,500m³ of organic waste is held on site at any one point in time. It is noted that no composting was performed on site, and no compost was therefore held as stock on the site.

Table 2.2. Total quantity of waste received by the site in tonnes during the 2020/2021 audit period and closing stock at the end of the month. Data from monthly WARRP reports submitted by the site to the NSW EPA.

Month	Opening Stock	Total waste received (tonnes)	Total amount sent off-site for recycling (tonnes)	Total waste held on site at end of month (tonnes)
January 2020	18,020.57	5,614.00	5,935.36	17,699.21
February 2020	17,699.21	6,514.55	18,283.70	5,930.06
March 2020	5,930.06	7,732.93	28,312.62	-14,649.63
April 2020	-	10,688.47	5,011.50	5,676.97
May 2020	5,676.97	10,344.34	7,500.98	8,520.33
June 2020	8,520.33	8,618.23	6,515.60	10,622.96
July 2020	10,622.96	7,223.44	15,096.60	2,749.80
August 2020	2,749.80	8,689.44	14,261.12	-2,821.88
September 2020	-	7,386.25	10,491.40	-3,105.15
October 2020	-	6,684.21	7,167.64	-483.43
November 2020	-	7,887.95	7,721.06	166.89
December 2020	166.89	8,574.90	10,636.61	-1,894.82
January 2021	-	5306.88	4,168.50	1,138.38
February 2021	1,138.38	6,914.03	5,073.52	2,978.89
March 2021	2,978.89	7,535.08	5,649.72	4,864.25
TOTAL (01/2020 to 12/2020)	-	95,958.71	136,934.19	-
TOTAL (01/2021 to 03/2021)	-	19,755.99	14,891.74	-

¹ Note that the amount of organic waste received on site is limited to garden waste and wood waste. The amount of organic waste held on site is included in the 'Total waste held on site at end of month' column.

2.3.2. Authorised amount under NSW EPA Licence 20601

During 2020, the site was operated to ensure that the amount of waste stored on site did not exceed the authorised amount of 45,000 tonnes (at any one point in time) as per Condition A8 of SSD5300 and Condition L3.2 of EPA Licence 20601 (refer to the final column of Table 2.2).

During the 2020 calendar year, the site complied with this requirement, with evidence provided to the EPA as part of the site's monthly waste reporting. This was cited as part of the audit. Daily checks are also performed by the Site Supervisor as part of the Daily Site Supervisor Checklist.

In the period between January 2021 and March 2021 the site complied with this requirement, with evidence provided to the EPA as part of the site's monthly waste reporting. This was cited as part of the audit. Daily checks are also performed by the Site Supervisor as part of the Daily Site Supervisor Checklist.

2.3.3. Operating hours

The Site Supervisor manages access to the facility and ensures compliance with the site's operating hours consent restrictions. A single locked main access gate ensures that staff, visitors and contractors fully complied with this requirement for the reporting period.

2.3.4. Noise

Approved noise mitigation measures for the site are documented in the Operational Environmental Management Plan as approved by the Secretary of the Department of Planning, Industry and Environment. A series of noise minimisation and mitigation measures are used to ensure that noise does not impact on nearby sensitive receptors.

During this time, no complaints were received, given the site fully implemented all noise mitigation measures.

2.3.5. Surface water quality (discharged)

During the reporting period, the site discharged water five (5) times into the unnamed creek on the south side of the development. In addition, under the Environment Protection Licence for the site (Condition M2.2), surface water quality testing is required once every 6 months and during overflow events.

The results of these analysis and a comparison to EPA discharge limits in EPL 20601 (as per Condition L2.4 of the EPA licence) is given in Table 2.3. Analysis suggests the site complied with EPA licence requirements with the exception of total suspended solids sampled in February 2020 which exceeded the NSW EPA Licence limit.

Table 2.3. Surface water quality testing associated with water in stormwater detention pond as per Condition M2.2 of Environment Protection Licence 20601. Results are for grab samples during overflow events that occurred during the reporting period.

Pollutant	Grab sample from stormwater detention pond (date)	Result	NSW EPA Licence limit	Compliant? (Y/N)
pH	10/02/2020	8.3	6.5-8.5	Y
Total suspended solids (mg/L)		95	30	N
pH	20/02/2020	7.5	6.5-8.5	Y
Total suspended solids (mg/L)		< 5	30	Y
pH	27/07/2020	7.5	6.5-8.5	Y
Total suspended solids (mg/L)		12	30	Y
pH	10/08/2020	7.5	6.5-8.5	Y
Total suspended solids (mg/L)		12	30	Y
pH	02/02/2021	7.5	6.5-8.5	Y
Total suspended solids (mg/L)		7	30	Y

Soil and erosion control measures during the compliance audit on 2nd March 2021 generally showed that measures were effective in minimising erosion and transfer of sediment into the OSD ponds.

No evidence of mud or sediment tracking onto the public road was evident. Street sweepers were observed in operation, which regularly sweep the hardstand areas to keep them free of soil and sediment.

In the 2019 Annual Review, it was recommended to update to the Soil and Water Management Plan to set out additional soil and erosion control measures that need to be considered during wet weather, to avoid excessive sediment load, in accordance with Landcom (2004) *Managing Urban Stormwater – Soils and Construction Vol. 1*.

Additional measures included:

- Using temporary geotextile filter fences, socks or sausages around stormwater pits to trap any transported sediment off the crushed concrete pavement;
- More frequent inspection and maintenance of erosion and sediment control measures during and after periods of wet weather. This includes checking and changing of geotextile covers over stormwater pits in wet weather; and
- Putting in a more rigorous pad monitoring and maintenance program to ensure surface ponding of water does not occur, to ensure the operational pad freely drains in wet weather.

During the site inspection on 2nd March 2021, a number of improvements were identified, as shown in Figures 2.1 to 2.3 below.

Figure 2.1. Improved rock checking along perimeter drainage line to minimise erosion and divert stormwater runoff around the northern side of the facility.

Figure 2.2. Use of geotextile filter sausages along stormwater drainage lines to trap sediment off loose surfaces.

Figure 2.3. Use of geotextile filter sausages and filter around stormwater pits to trap any transported sediment off loose surfaces.

2.3.6. Groundwater quality

Six (6) groundwater wells were established in February 2018 to enable the collection of groundwater samples pre- and post-development for reporting to the Office of Water on a quarterly basis. Consulting Earth Scientists Pty Ltd conducted quarterly groundwater monitoring in February, May, August and November 2020.

Baseline groundwater quality data prior to the approval of SSD5300 is shown in Figure 2.4, together with the results from the 2018, 2019 and 2020 monitoring program. Results from a groundwater well upstream of the development was chosen to best represent pre-development groundwater conditions. This sample was taken on 9th July 2013 by Benviron Group. Baseline data is compared to groundwater data sampled post-development in 2019.

For this analysis, groundwater data reported for Groundwater well 5 is shown, as this well is upstream of the development. Groundwater data for well 2 is also shown, representing groundwater downstream of the development.

Our analysis of groundwater characteristics upstream of the development (Groundwater well 5) and downstream of the development (Groundwater well 2) in Figure 2.4 similarly showed that water quality varied with season for all groundwater quality parameters including pH, nitrate, metals (arsenic, chromium, copper, zinc, lead and nickel), soluble salts (sodium and calcium) and hydrocarbons with little differences between upstream and downstream sampling points.

However, we note that, similar to 2019, ammonium concentrations and electrical conductivity levels were higher in downstream groundwater than upstream groundwater and may indicate that there is some interaction between surface water and groundwater on the lower part of the site. However, this finding is not supported by the trends in other data, particularly for soluble salts such as sodium and calcium. The concentrations of these soluble salts should be higher in groundwater with a high electrical conductivity; however, this is not the case based on test results presented in Figure 2.4. This was not detected in the report by Consulting Earth Sciences, and further assessment is required.

Continued groundwater monitoring in 2021 will help to validate the ongoing effectiveness of the pavement and water management systems on the site.

Figure 2.4. Groundwater quality testing results upstream and downstream of the development. Results have been compared to baseline groundwater monitoring undertaken in the EIS (where available) for the development and monitoring data obtained in 2018 and 2019.

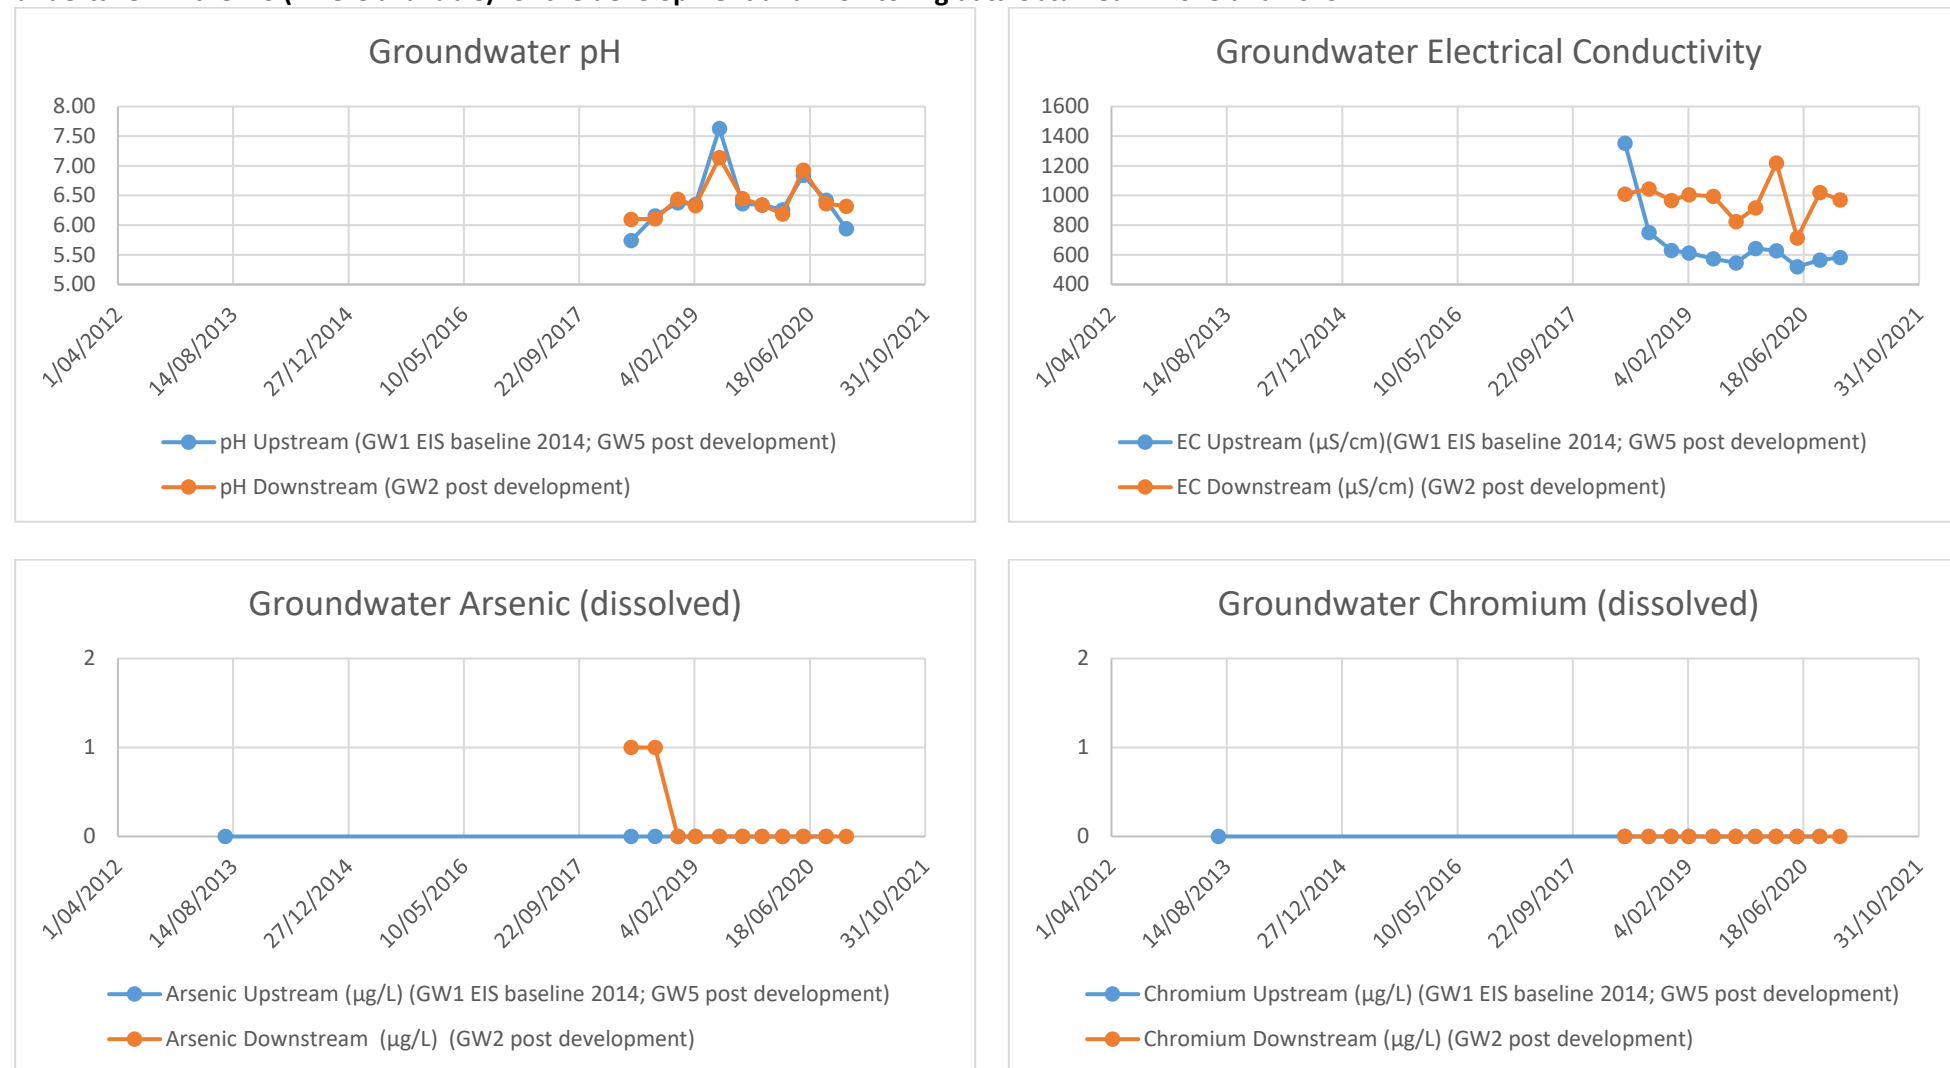

Figure 2.4 (continued). Groundwater quality testing results upstream and downstream of the development. Results have been compared to baseline groundwater monitoring undertaken in the EIS (where available) for the development and monitoring data obtained in 2018 and 2019.

Figure 2.4 (continued). Groundwater quality testing results upstream and downstream of the development. Results have been compared to baseline groundwater monitoring undertaken in the EIS (where available) for the development and monitoring data obtained in 2018 and 2019.

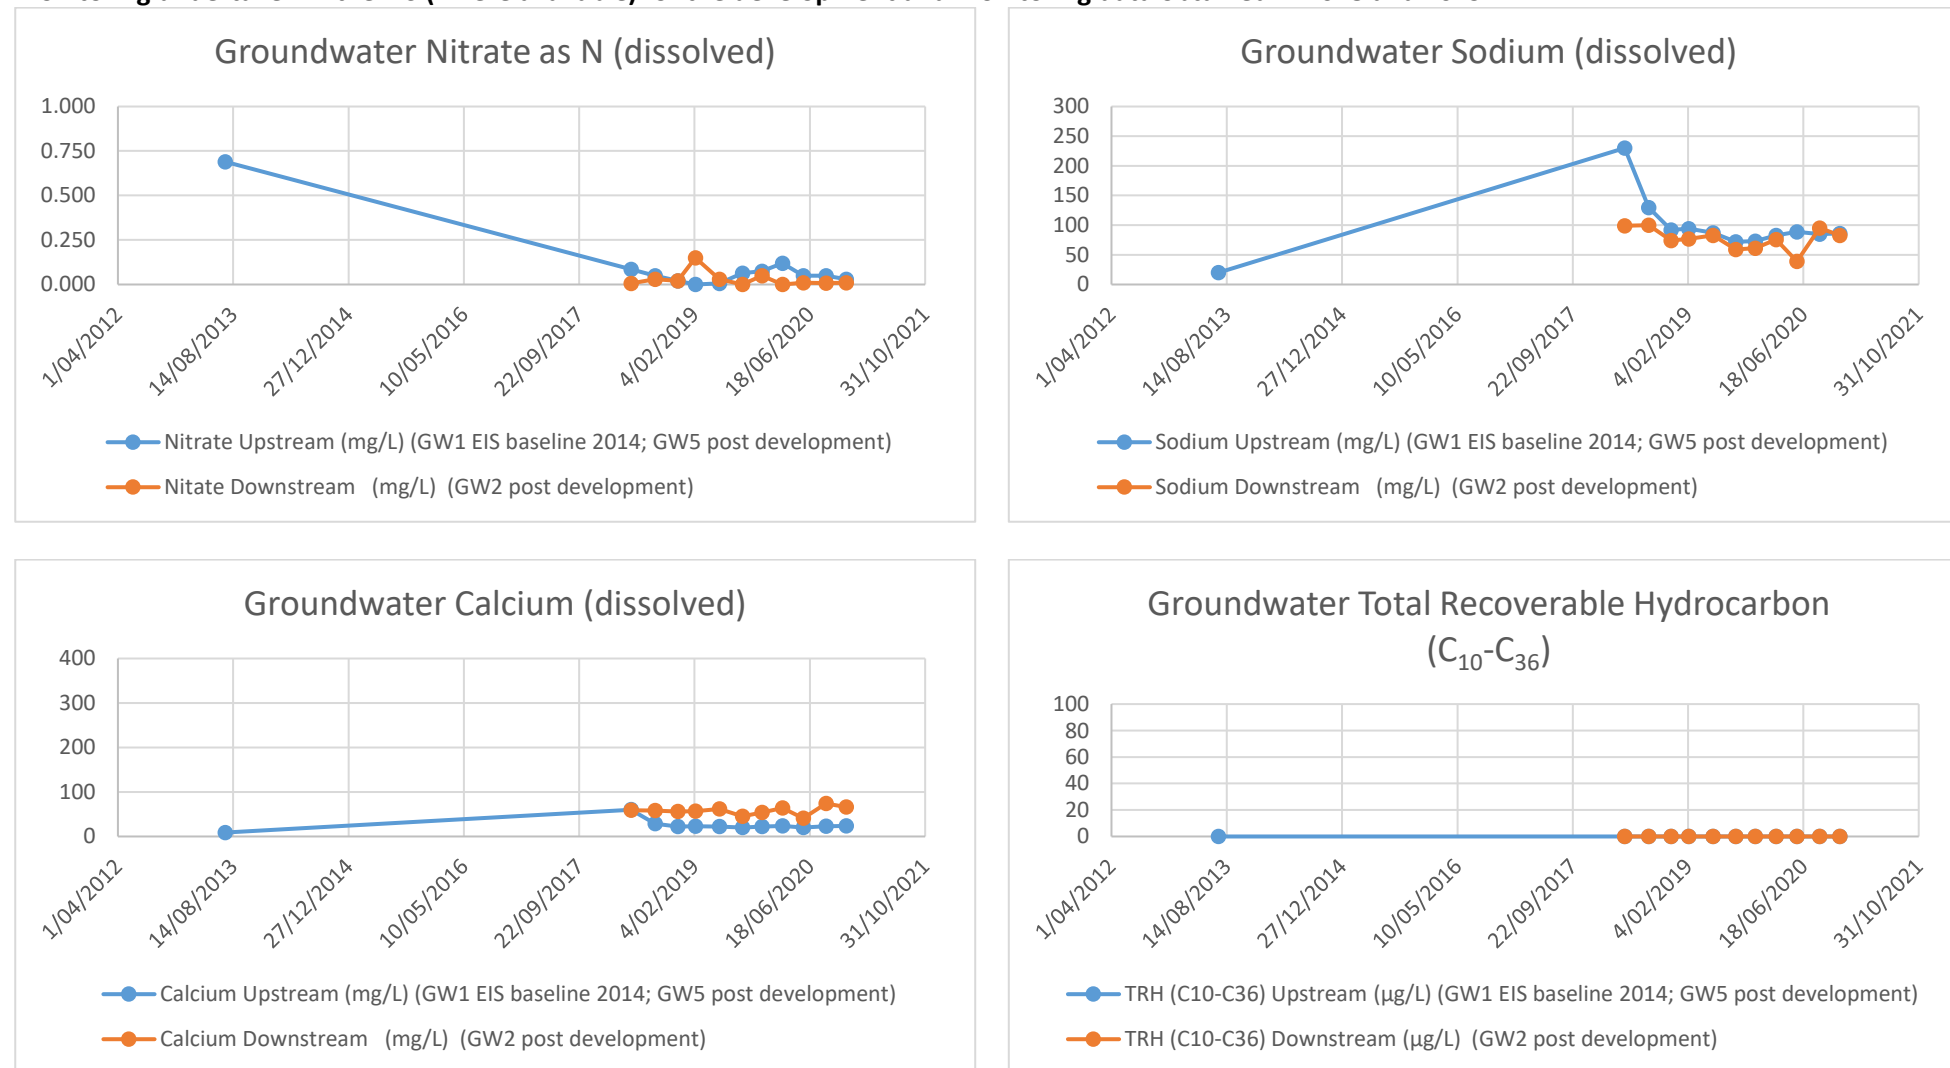

Figure 2.4 (continued). Groundwater quality testing results upstream and downstream of the development. Results have been compared to baseline groundwater monitoring undertaken in the EIS (where available) for the development and monitoring data obtained in 2018 and 2019.

2.3.7. Odour

During the reporting, no odour complaints were made in relation to the development.

2.3.8. Dust

An Air Quality Management Plan was approved on 19 August 2016 for the construction phase of the development, and a further updated Air Quality Management Plan was prepared and approved by the Secretary of the Department of Planning and Environment on 26 February 2018 (Table 1.1). A series of dust minimisation and mitigation measures are used on the site to ensure that dust does not leave the premises.

During the site inspection on 2 March 2021, it was observed that dust suppression sprinklers had been installed over concrete storage bays for incoming waste materials received. Advice from the operations manager suggested these sprinklers are operated manually and have helped in dust suppression during hot and dry weather.

Kembla Grange Recycling Pty Ltd recently purchased a new water truck which is used for effective dust suppression of the internal road network (see Figure 2.5 below).

Figure 2.5. New water truck used for dust suppression.

2.3.9. Incidents

During the reporting period, no incidents occurred in relation to the development.

2.3.10. Complaints

During the reporting period, no complaints were received in relation to the development. All complaints that are received are logged, published online² and are investigated.

2.4. Previous regulatory non-compliances

Table 2.4 provides an overview of actions that have been taken to address the outstanding regulatory non-compliances identified in the 2019 Annual Review and whether the non-compliance have been resolved.

² Bingo Industries Complaint Register for Kembla Grange is published at:
<https://www.bingoindustries.com.au/getattachment/recycling-centres/recycling-centres-sydney-and-surrounds/KEMBLA-GRANGE/COMPLAINTS-REGISTER-EPL20601-31-01-2020.pdf?lang=en-AU>

Table 2.4. Summary of non-compliances identified in the 2019 Annual Review and actions taken to ensure compliance.

Date of Notice	Regulatory Authority	Type of notice	Summary	Action taken to ensure compliance	Has this non-compliance been resolved?
20 December 2018	NSW Department of Planning and Environment	Development Control Order	The Development Control Order is given to Bingo, in accordance with Item 14 Part 1 of Schedule 5 of the EP&A Act to remedy a breach of a consent for State significant development. The terms of the Development Control Order are that Bingo must cease use of the sorting/picking station, identified in the aerial images in Attachment 1 of the Order, including infrastructure attached to the building.	A development application has been prepared for the use of the picking station and this was submitted for assessment on 31 August 2018. This application was amended and re-submitted in response to submissions on 14th June 2019 and again on 21 February 2020.	No – This matter is not considered resolved. Development Modification 2 was approved on 15 May 2020. In accordance with SSD5300 Condition A9 and A9A, a building information certificate is required for the rainwater and firewater storage tanks, pump room and fixed picking station which have already been installed. The building information certificates must be provided to the Planning Secretary with copies of all within 60 days from date of approval of MOD 2. At the time of this audit, the building information certificates had not been obtained, though an application to Wollongong City Council had been made.

2.5. Non-compliances from prior Annual Reviews and Independent Annual Audits

Table 2.5 provides a summary of the outstanding non-compliances reported in the 2019 Annual Review and Independent Environmental Audits³ as provided to the Department of Planning, Industry and Environment. The table also summarises actions that were implemented to ensure the non-compliances were satisfactorily resolved.

Table 2.5. Non-compliances from the 2019 Annual Review and the 2019 Independent Environmental Audit, and actions taken to ensure compliance.

Non-compliance	Action taken to ensure compliance ⁴	Has this non-compliance been resolved?
2019 Annual Review		
Consent Condition C9. Independent Environmental Audit	Independent Environmental Audit completed by Seventh Sense Sustainability Consultants Pty Ltd on 27/11/19. The audit was commissioned more than one year after the OEMS was approved by DPE on 26/02/18. Delay in appointment of auditor was due to difficulty in appointing an auditor due to lack of qualified personnel in sector.	Yes – It is noted that the next audit is required in three years' from the last audit. It was recommended this process is commenced early to avoid the report being submitted late to the Department
2019 Independent Environmental Audit by Seventh Sense Sustainability Consultants Pty Ltd		
NOC 14 – Air quality monitoring / meteorological station	The site has implemented the AQMP. The site effectively utilises the information available via Bureau of Meteorology website daily to proactively manage operational controls and can react when required to changing circumstances.	Yes – the meteorological station was not operational during the reporting period however a new weather station was installed on 4 February 2021.
B13 (SSD5300) requires implementation of the approved AQMP.	Visual assessment of conditions is the most appropriate and effective means of implementing and activating controls for activities that pose a dust risk of which not all are related to weather conditions.	
s6.2 'Meteorological monitoring' AQMP requires operation of a meteorological station to collect and analyse real time data and determine adverse weather conditions.	The meteorological station on site has been operational and will be replaced as soon as possible to ensure that KGRPL has access to monitoring data.	

³ It is noted that the first Independent Environmental Audit was completed 27/11/19.

⁴ Actions taken to address the non-compliance matters provided in Table 2.7 are taken from a letter by Kembla Grange Recycling Pty Ltd dated 29/11/19 to DPIE. This letter provides an overview of the applicant's response to the Independent Environmental Audit.

Non-compliance	Action taken to ensure compliance ⁴	Has this non-compliance been resolved?
<p>NOC 20 – Fire protection</p> <p>B27 (a-c) and B28 (SSD5300) -‘Bushfire protection’ requires existing buildings to be upgraded to be fire-proofed, and new buildings constructed to fire proofing standards; and building and landscaped areas close to riparian zone be managed to reduce risk of bushfires.</p>	<p>Vegetation around buildings 1 and 2 consists mostly of grass. KGRPL notes that the approved plans specify grass for this area which is maintained by a contractor.</p> <p>Future maintenance is subject to awarding of a new maintenance contract.</p> <p>An assessment of building upgrade requirements will be reviewed and any works required will be completed.</p>	<p>Yes – fire safety measures described in the Kembla Grange Fire System Upgrade Review dated 22 March 2020 prepared by EFWW Consulting will be implemented.</p>

2.6. Non-compliance over the year and actions to ensure compliance (Condition C11(c))

The 2020 Annual Review provides a summary of non-compliances recorded during the reporting period in Table 2.6. This table provides an overview of action that have been taken to address the non-compliance, and whether the non-compliance has been resolved.

Other non-compliances observed during the audit of operations on 13th February 2020 (for the 2019 Annual Review though falling within the 2020 Annual Review period) and 2nd March 2021 are given in Table 2.6. Action taken to resolve these non-compliances are also given in the table.

The results suggest that actions taken have addressed most non-compliances during the year, and operations are being undertaken in accordance with the approved Operational Environmental Management Plans.

Table 2.6. 2020 Annual Review non-compliances and recommendations to ensure compliance.

Non-compliance	Recommended actions / evidence required to ensure compliance
SSD5300 Condition A2 The Applicant shall carry out the Development in accordance with the: <ul style="list-style-type: none"> a. EIS; b. Response to Submissions; c. Site layout plans and drawings (Appendix A of SSD5300); d. Management and Mitigation Measure (Appendix B of SSD5300); e. The S96(1A) Modification Application to SSD5300 prepared by Jackson Environment and Planning, dated 2017; and f. the modification application SSD 5300 MOD 2 and supporting documentation. 	<p>The site inspection on 2/03/21 found that the site is not being operated consistent with consent documentation. Specifically, the following activities were being carried out on site:</p> <ul style="list-style-type: none"> • Use of the shed building approved for the crushing and grinding plant under Mod 2 is being used as a temporary workshop; • Asphalt processing plant and asphalt storage on the approved greenwaste storage area; • Storage of skip bins adjacent to the water quality ponds. <p>Recommendation:</p> <p>It is understood that the workshop activity in the shed building is limited to storage and repair of plant, and is a temporary activity. If this activity is ongoing, a development modification for the change in use is recommended.</p> <p>It is noted that the asphalt plant, whilst it is located on the green waste storage area, it is unlikely to be resulting in any impacts. Green waste storage and processing is not currently occurring on site.</p> <p>Storage of skip bins should occur in the approved area on the northwest corner of the site.</p>
SSD5300 Condition A9 and A9A A building information certificate is required for the rainwater and firewater storage tanks, pump room and fixed picking station which have already been installed. The building information certificates must be provided to the Planning Secretary with copies of all within 60 days from date of approval of MOD 2.	<p>Development Modification 2 was approved on 15 May 2020 however building information certificates have not been obtained. An application has been made to Wollongong City Council, though it is yet to be issued.</p> <p>Recommendation:</p> <p>The application for the certificates should be finalised as soon as possible.</p>

Non-compliance	Recommended actions / evidence required to ensure compliance
<p>SSD5300 Condition A13</p> <p>A suitable meteorological station is required to be installed on the site and operated for the life of the Development.</p>	<p>The meteorological station was decommissioned on 12/02/20 and was not operational throughout 2020.</p> <p>Recommendation: None - a new meteorological station was observed on 2/03/21.</p>
<p>SSD5300 Condition B7</p> <p>The Applicant shall operate a Water Management System for the site.</p>	<p>During a site inspection for the 2019 Annual Review conducted on 13/02/20, it was observed that runoff from northern part of site was not fully diverted around the NE corner of the facility. Vegetation of former access road around NE corner of site is required, and vegetated earth mound as per SSD 5300 Mod 1 plans is required to divert runoff from northern hillslope around the site and into the unnamed creek.</p> <p>Some surface ponding of water observed in operational areas, resulting mud to form due to vehicles operating within the area. Pad maintenance needed more regularly to avoid low spots forming to improve surface drainage and reduce sediment generation.</p> <p>The inspection also showed evidence of silt build-up on the crushed concrete pavement from recent wet weather and transfer into stormwater pits. More frequent cleaning of pad needed to avoid sediment build up, including changing the geotextile filter covers on pits is needed.</p> <p>During the site inspection on 02/03/21 for the 2020 Annual Review, all matters outlined above had been addressed. Improvements included rock armouring of the northern drainage channel, additional filter socks along drainage lines and geotextile fabric installed in pits.</p> <p>During the site inspection on 2/03/21, evidence of an oil spill was identified at the southern end of the main shed. The oil spill has been caused by inappropriate storage of decommissioned plant. This small spill was cleaned up on 18th March 2021.</p> <p>Recommendation:</p> <p>Oil spills should be identified and cleaned up immediately. The spill was cleaned up and evidence was provided on 18th March 2021. Matter is now resolved.</p>
<p>SSD5300 Consent Condition B8</p> <p>Erosion and Sediment Control.</p>	<p>During a site inspection for the 2019 Annual Review conducted on 13/02/20, it was observed that runoff from northern part of site was not fully diverted around the NE corner of the facility. Vegetation of former access road around NE corner of site is required, and vegetated earth mound as per SSD 5300 Mod 1 plans is required to divert runoff from northern hillslope around the site and into the unnamed creek.</p> <p>Some surface ponding of water observed in operational areas, resulting mud to form due to vehicles operating within the area. Pad maintenance needed more regularly to avoid low spots forming to improve surface drainage and reduce sediment generation.</p> <p>The inspection also showed evidence of silt build-up on the crushed concrete pavement from recent wet weather and transfer into stormwater pits. More</p>

Non-compliance	Recommended actions / evidence required to ensure compliance
	<p>frequent cleaning of pad needed to avoid sediment build up, including changing the geotextile filter covers on pits is needed.</p> <p>During the site inspection on 02/03/21 for the 2020 Annual Review, all matters outlined above had been addressed. Improvements included rock armouring of the northern drainage channel, additional filter socks along drainage lines and geotextile fabric installed in pits.</p> <p>Recommendation: None. Matter has been resolved.</p>
<p>SSD5300 Condition B25</p> <p>The Applicant shall ensure that... turning areas are kept clear of any obstacles, including parked cars, at all times</p>	<p>The site inspection on 2/03/21 identified that there was inadequate clearance around the site for the ring road and is not in accordance with the site plans as approved under as approved under SSD5300 and subsequent development modification. Specifically, there was storage and processing of brick and concrete on part of the truck turning area on the northern perimeter of the site and the asphalt processing plant and asphalt storage on the approved green waste storage area.</p> <p>Recommendation:</p> <p>The ring road must be maintained in accordance with Drawing No. C10 as approved under SSD5300 and subsequent development modifications. The ring road was re-established on 18th March 2021 and is now considered compliant.</p>

2.7. Trends in the monitoring data over the life of the development (Condition C11(d))

This report is the third Annual Review for the development following the increase of waste receipt at the site as approved under Condition A6 of SSD5300.

2.6.1 Waste receipt and authorised amounts

Trend data is available for the quantity of waste received on a monthly basis, as well as the quantity of waste held on site at the end of the month. Monitoring data is presented in Figure 2.6. Evidence suggests that waste receipt at the site increased slightly, rising from a total of 70,775 tonnes in 2019 to 98,958 tonnes in 2020. At no time across the three-year period did the site exceed its authorised amount of 45,00 tonnes per annum (see orange line in Figure 2.6).

Figure 2.6. Trends in the receipt and storage of waste by Kembla Grange Recycling Pty Ltd between 2018 and 2021.

2.6.2 Noise

No noise complaints were received by the development in 2018 and 2019, and as a result, additional noise monitoring has not been required. Should any complaints be received, noise monitoring will be commissioned.

2.6.3 Surface water quality (discharged)

Due to extended drought conditions, the availability of water within the on-site detention pond system at the site has been low or not available. As a result, little monitoring data is available on the quality of discharge water quality of the quality of pond currently stored in ponds.

With the wet weather in early February 2021, we expect that in the next annual review, substantially more data will be available on surface water quality that has been discharged from the site.

2.6.3 Surface water quality (reuse)

Consulting Earth Scientists (2020e) was commissioned to undertake a Tier 2 site specific human health risk assessment for the beneficial reuse of water from three dams at the Facility for onsite dust suppression purposes.

Previous reports (February, May and September 2020) found that the dam water onsite was suitable for use based on sampling undertaken in November 2019, and May 2020. However, water in the Water Recycling Pond and Detention Basin A was unsuitable for use based on sampling undertaken in February 2020 and water in Detention Basin A was unsuitable for use based on sampling undertaken in September 2020.

However, based on an Exposure Model, the contaminants of concern and the adopted screening criteria presented in the report, the waters contained in the three dams, the Shedding Runoff Pond, the Water Recycling Pond, the Detention Basin A, and the rainwater tank pose a low risk to human health when used as dust suppression water onsite.

Application of waters contained in the three dams for onsite dust suppression should be done in conjunction with the recommendations made in Consulting Earth Scientists report (2020e).

2.6.4 Groundwater quality

In section 2.3.6, we report on trends in the quality of groundwater upstream and downstream of the development. Trends in water quality are presented for a range of analytes in Figure 2.4.

Our analysis of groundwater characteristics upstream of the development (Groundwater well 5) and downstream of the development (Groundwater well 2) in Figure 2.4 similarly showed that water quality varied with season for all groundwater quality parameters including pH, nitrate, metals (arsenic, chromium, copper, zinc, lead and nickel), soluble salts (sodium and calcium) and hydrocarbons with little differences between upstream and downstream sampling points.

However, we note that, similar to 2019, ammonium concentrations and electrical conductivity levels were higher in downstream groundwater than upstream groundwater and may indicate that there is some interaction between surface water and groundwater on the lower part of the site. However, this finding is not supported by the trends in other data, particularly for soluble salts such as sodium and calcium. The concentrations of these soluble salts should be higher in groundwater with a high electrical conductivity; however, this is not the case based on test results presented in Figure 2.4. This was not detected in the report by Consulting Earth Sciences, and further assessment is required.

Continued groundwater monitoring in 2021 will help to validate the ongoing effectiveness of the pavement and water management systems on the site.

2.6.5 Odour

No odorous materials are permitted for receipt at the premises, and no odour issues or complaints have occurred in the past two years.

2.6.6 Dust

No ongoing dust monitoring is performed by the development, consistent with the Air Quality Management Plan. We note that no dust complaints have occurred over the past three years.

2.6.6 Incidents

No incidents have occurred at the premises over the past two years.

2.6.6 Complaints

No complaints have been received by the premises over the past two years.

2.8. Discrepancies between the predicted and actual impacts of the development and causes (Condition C11(e))

Monitoring in accordance with the approved OEMP has continued throughout the reporting period and there are no identified discrepancies between the predicted and actual impacts of the development.

2.9. Measures have or will be implemented in the current calendar year to improve the environmental performance of the development (Condition C11(f))

A summary of the measures that will be implemented to address the non-compliances found as part of this audit are presented in Table 2.7.

Table 2.7. Summary of additional measures that have or will be undertaken during 2021 to improve the environmental performance of the development. These are derived from non-compliances given in Table 2.8 and (Independent Environmental Audit findings) and Appendix 1 (Annual Review 2019 findings).

Non-compliance	Source	Additional measure / action that has or will be implemented
Development Control Order	Table 2.6 of this Annual Review	Development Modification 2 was approved on 15 May 2020 however building information certificates have not been obtained. The application for the certificates should be finalised as soon as possible.
SSD5300 Condition A2	Table 2.6 of this Annual Review	A development modification application should be prepared for any additional activities/structures that have been initiated/construction and that are to remain on site.

2.10. Summary of Audit Recommendations

The audit found that Kembla Grange Recycling Pty Ltd has complied with all management plans and procedures as required by SSD5300 except for the non-compliances as identified in Table 2.7. It is understood that action is underway to address these matters.

Generally, the audit found that the site is being operated in a manner consistent with the planning consent.

3. Conclusion

An Annual Review report has been prepared for Kembla Grange Recycling Pty Ltd, owner and operator of a construction and demolition waste recycling facility located at 50 Wyllie Rd, Kembla Grange. Under Condition C11 of development consent SSD5300 operating at the site, the proponent is required to report to the Secretary of the Department of Planning and Environment on the environmental performance of the development. An Annual Review is required by the end of March each year.

As per the requirements of Condition C11, the report provides an overview of the environmental performance of the development by describing the development that was carried out in the previous calendar year, and the development that is proposed to be carried out over the current calendar year. The report includes a review of the monitoring results and complaints records of the development over the last calendar year, including a comparison of the results against the:

- Relevant statutory requirements, limits or performance measures / criteria;
- Requirements of any plan or program required under the consent;
- Monitoring results of previous years; and
- The relevant predictions in the EIS.

The Annual Review also identifies any non-compliance over the last calendar year, and describe what actions were (or are being) taken to ensure compliance; identifies trends in the monitoring data over the life of the development; identifies and discrepancies between the predicted and actual impacts of the development and analyses the potential cause of any significant discrepancies. Furthermore, under the C11 consent condition, the proponent must describe what measures have or will be implemented in the current calendar year to improve the environmental performance of the development.

Please note that we have included observations from the site inspection done on 13th February 2020 for the 2019 Annual Review as these observations were made during the 2020 Annual Review period. We also note that a compliance audit was conducted on 2nd March 2021. This involved a detailed desktop assessment of all management documentation, and a site inspection across the entire facility.

Across the entire Annual Review period, we found eight non-compliances. Two of which were resolved prior to the inspection on 2nd March 2021. These include:

- Condition B7 (Water Management System). Diversion of surface runoff around the NE corner of the site, with rock armouring and revegetation of the area observed. Improved cleaning of pad and stormwater pits was observed, with more frequent changing of geotextile covers on pits;
- Condition B8 (Erosion and Sediment Control). See observation as per Condition B7 above.

Two non-compliances were resolved following the site inspection:

- Condition B7 (Water Management System). A small oil spill was found on the southern side of the main shed. This oil spill has been cleaned up and has been resolved;
- Condition B25 (Traffic and Access): The ring road around the site was partially blocked and must be maintained in accordance with Drawing No. C10 as approved under SSD5300 and subsequent development modifications. The ring road has been reinstated and the matter has been resolved.

The four non-compliances that still need to be resolved:

1. A building information certificate is required for the rainwater and firewater storage tanks, pump room and fixed picking station which have already been installed. It is noted that this certificate was sought

from Wollongong City Council, though it is yet to be issued. It is noted that the building information certificate must be provided to the Planning Secretary with copies of all within 60 days from date of approval of MOD 2. Once the building information certificates have been obtained, this issue will be resolved.

2. The use of the shed building approved for the crushing and grinding plant under Mod 2 is being used as a temporary workshop;
3. An asphalt processing plant and asphalt storage is currently located on the approved green waste storage area;
4. Empty skip bins are being stored adjacent to the water quality ponds.

Environmental monitoring data reviewed as part of the Annual Review found that the facility is being managed within the predictions in the Environmental Impact Statement. It is noted that no complaints were received in the past 12 months in relation to the operations at the site.

Appendix 1: Audit findings

A1.1 State Significant Development (5300) Conditions of Consent (including Mod 1 and Mod 2)

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
A5.	Statutory Requirements The Applicant shall ensure that all licences, permits, and approvals/consents are obtained as required by law and maintained as required through the life of the Development. No condition of this consent removes the obligation for the Applicant to obtain, renew or comply with such licences, permits or approvals/consents.	+ All approvals are in place for the development	+ Planning consent SSD5300 + EPA Licence 20601 + Department of Primary Industries Controlled Activity Approval	Yes
A6.	Limits of Consent The Applicant must not receive or process on the site more than 230,000 tonnes per year of waste, subject to Condition A8. Note: The reporting year is March 15 to March 14 to align with the EPL reporting period.	+ Facility currently complying with EPA Licence 20601 limit condition of 230,000 tpa + Audit of WARRP data, total waste received in 2020 was 95,958.71 tonnes and 19,755.99 tonnes for the first three (3) months of 2021	+ EPA Licence 20601 + EPA WARRP data for Jan-Dec 2020 + EPA WARRP data for Jan-Mar 2021	Yes
A7.	Despite Condition A7, the Applicant shall not receive or process on the site more than 30,000 tonnes per calendar year of waste until:	+ Facility has received final Occupation Certificate on 23/01/18 (Cert. No. 2306) + Secretary DPE approved OEMS on 26/02/18	+ Completed previously	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	a) a Final Occupation Certificate has been issued for Stage 1 of the Development; and b) the Secretary has approved the Operational Environmental Management Strategy for the Development (see Condition C3).			
A8.	The Applicant shall store no more than 45,000 tonnes of waste on the site at any one time, including: a) No more than 2,500m ³ of organic waste on the site at any one time; and b) No more than 500m ³ of the above limit on organic waste is to comprise compost product	+ Site inspection of stockpiles on 2/03/21 + Site is limited to <2,500 m ³ of organic waste and <45,000 tonnes of waste at any point in time (Condition L3.2 and L3.3 of EPL 20601) + Assessment of WARRP reports for 2020 calendar year + Assessment of WARRP reports for the first three (3) months of 2021	+ Visual inspection of stockpiles on 2/03/21 + Assessment of WARRP reports for 2019 calendar year + Stock on hand at end of month for Jan 2020 to Dec 2020 all less than 45,000 tonnes + Stock on hand at end of month for Jan 2021 to Mar 2021 all less than 45,000 tonnes	Yes
A9.	All new buildings and structures, and any alterations or additions to existing buildings and structures, that are part of the development,	+ A building information certificate is required for the rainwater and firewater storage tanks, pump room and fixed picking station which have already been installed.	+ Evidence could not be assessed as the	No

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)								
	<p>must be constructed in accordance with the relevant requirements of the BCA.</p> <p>Note:</p> <ul style="list-style-type: none">Under Part 6 of the EP&A Act, the Applicant is required to obtain construction and occupation certificates for the proposed building works.Part 8 of the EP&A Regulation sets out the requirements for the certification of the development.	+ It is noted that the fixed picking station is not currently operational.	application for this certificate is in progress.									
A9A.	<p>Within 60 days from date of approval of MOD 2, the Applicant must provide the Planning Secretary with copies of all necessary building information certificates from Council for all structures and items listed in Table A, in accordance with Section 6.26 of the EP&A Act.</p> <p>Table A: Alterations and Additions to Structures</p> <table><tr><th>Structure</th><th>Location</th></tr><tr><td>Picking Station, screens and crushers connected to partially enclosed storage bays and associated processing equipment</td><td>South eastern corner of the site as shown in Appendix A, Site Plan 1</td></tr><tr><td>Firewater storage tanks and pump room</td><td>Western side of the site as shown in Appendix A, Site Plan 1</td></tr><tr><td>Rainwater storage tanks</td><td>Northern side of the site located behind existing shed as shown in Appendix A, Site Plan 1</td></tr></table> <p>Note: If a structure or item in Table A is considered to be exempt development under the State Environmental Planning Policy (Exempt and Complying Development Codes) 2008 and Council agrees then a building information certificate may not be required</p>	Structure	Location	Picking Station, screens and crushers connected to partially enclosed storage bays and associated processing equipment	South eastern corner of the site as shown in Appendix A, Site Plan 1	Firewater storage tanks and pump room	Western side of the site as shown in Appendix A, Site Plan 1	Rainwater storage tanks	Northern side of the site located behind existing shed as shown in Appendix A, Site Plan 1	<p>+ A building information certificate is required for the rainwater and firewater storage tanks, pump room and fixed picking station which have already been installed.</p> <p>+ It is noted that the fixed picking station is not currently operational.</p>	+ Evidence could not be assessed as the application for this certificate is in progress.	No
Structure	Location											
Picking Station, screens and crushers connected to partially enclosed storage bays and associated processing equipment	South eastern corner of the site as shown in Appendix A, Site Plan 1											
Firewater storage tanks and pump room	Western side of the site as shown in Appendix A, Site Plan 1											
Rainwater storage tanks	Northern side of the site located behind existing shed as shown in Appendix A, Site Plan 1											
A12.	<p>Surrender of Consent</p> <p>In order for the development of land to proceed in a coordinated and orderly manner and to avoid potential conflicts with this consent, the Applicant shall and in the manner prescribed by clause 97 of the EP&A Regulation, surrender the development consent (DA-2009/1153, as</p>	+ Letter from Wollongong City Council dated 3/11/16 confirming surrender of DA-2009/1153	+ Letter from Wollongong City Council dated 3/11/16	Yes								

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	modified) issued by Wollongong City Council described in Table 1 (of SSD5300) within 14 days of the issue of the Construction Certificate for the Development			
A13.	Meteorological Monitoring Within 14 days of the issues of a Construction Certificate for the Development, the Applicant shall ensure that there is a suitable meteorological station on the site that complies with the requirements of the latest version of the Approved Methods for Sampling Air Pollutants in New South Wales. The Application shall operate the meteorological station for the life of the Development.	+ The meteorological station was decommissioned on 12/02/20 and was not operational throughout 2020. Data was only available from 04/02/21.	+ Meteorological data was observed from 04/02/21 onwards + The newly commissioned meteorological station was observed on 2/03/21.	No
B2	Waste Management The Applicant shall implement a Waste Monitoring Program for the Development within 14 days of the issue of a Construction Certificate for the Development. The program must: <ul style="list-style-type: none"> a) be prepared by a suitably qualified and experienced person(s); b) include suitable provision to monitor and record the: <ul style="list-style-type: none"> (i) quantity, type and source of waste received on site; and (ii) quantity, type and quality of the outputs produced on site. c) ensure that: <ul style="list-style-type: none"> (i) all waste that is controlled under a tracking system has the appropriate documentation prior to acceptance at the site; and 	+ Waste Monitoring Program as approved by the Secretary DPE on 26/02/18 + Bingo Training Needs Register sighted + SOP-YA003 Asbestos at Recycling Centres procedure sighted. + OPL-YA040 Unexpected asbestos finds – site sighted	+ Waste Monitoring Program (Appendix D of Operational Environmental Management Plan) + Bingo Training Needs Register with details on asbestos removal training	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	(ii) staff receive adequate training in order to be able to recognise and handle any hazardous or other prohibited waste including asbestos.		+ SOP-YA003 Asbestos at Recycling Centres procedure + OPL-YA040 Unexpected asbestos finds	
B4	Sewage Management The applicant shall obtain approval for the operation of an On-site Sewage Management System in Accordance with Section 68 of the <i>Local Government Act 1993</i> .	+ OS-2015/15 Approval to Operate On-site Management System sighted from Wollongong City Council (dated 10/04/19))	+ OS-2015/15 Approval to Operate On-site Management System approval	Yes
B5.	Water Management Plan Prior to re-commencing the operation of the fixed picking station and prior to the operation of the indoor processing plant as described in MOD 2, the Applicant must update its Water Management Plan to the satisfaction of the Secretary. The plan must be prepared by a suitably qualified and experienced person(s) in consultation with the EPA and DPI; a) be prepared by a suitability qualified and experienced person(s) in consultation with the EPA and the Department of Planning, Industry and Environment (Water) and Natural Resources Access Regulator; b) include a detailed site water balance; c) include a mass soil balance; d) include the details of: (i) retaining walls and soil cut and fill;	+ Soil and Water Management Plan as approved by the Secretary DPE on 26/02/18. + Pollution Incident Response Management Plan sighted + As the operation of the fixed picking station has not recommenced, the Soil and Water Management Plan has not been updated.	+ Soil and Water Management Plan Program (Appendix C of Operational Environmental Management Plan) + Pollution Incident Response Management Plan	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	<ul style="list-style-type: none"> (ii) expected groundwater interception and extraction; (iii) all-weather access to the site; (iv) clean water runoff areas that discharge without treatment (i.e. car parks and roofs) (v) the Water Management System for the site (see Condition B7); (vi) erosion and sediment controls (see Condition B8); (vii) bunding (see Condition B9); and (viii) water management, monitoring, testing and incident response arrangements. 			
B6.	<p>Water Management Plan</p> <p>The Applicant shall carry out the Development in accordance with the Water Management Plan approved by the Secretary (as revised and approved by the Secretary from time to time), unless otherwise agreed by the Secretary.</p>	+ Soil and Water Management Plan as approved by the Secretary DPE on 26/02/18	+ Soil and Water Management Plan (Appendix C of Operational Environmental Management Plan)	Yes
B7.	<p>Water Management System</p> <p>The Applicant shall operate a Water Management System for the site. The system must:</p> <ul style="list-style-type: none"> a) be designed by a suitably qualified and experienced person(s) in consultation with the EPA and Council; b) control surface water so that it does not mix with waste on the site; c) include surface water and leachate detention; d) be consistent with the guidance in Managing Urban Stormwater - Soils and Construction Vol. 1 (Landcom, 2004); 	<p>+ Soil and Water Management Plan Program as approved by the Secretary DPE on 26/02/18</p> <p>+ Groundwater wells in place (x6) and data reported quarterly to Office of Water (Feb, May, Aug and Nov 19)</p> <p>+ Daily Supervisor Checklist inspected for details on daily checks on water management system</p> <p>+ Roof water from main warehouse is connected to tanks now on northern side of shed.</p> <p>+ Inspection on 2/03/21 identified evidence of an oil spill at the southern end of the main shed. The oil spill has been caused by inappropriate storage of decommissioned plant</p>	<p>+ Soil and Water Management Plan Program (Appendix C of Operational Environmental Management Plan)</p> <p>+ Site inspection</p>	No

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	<ul style="list-style-type: none"> e) divert clean surface water around operational areas of the site; f) include water quality monitoring that can determine the performance of the water management system against any EPL discharge limits; and g) include water reuse based on a risk assessment of environment and human health impacts. 	<p>+ Five discharge events occurred throughout the reporting period. Sampling was carried out at sampling point for 1 analysis. Results are reported at: http://www.bingoindustries.com.au/getattachment/recycling-centres/policies/Pollutant-Monitoring-Results_EPL20601-updated-10-02-2021.pdf?lang=en-AU</p> <p>+ It is noted that as part of the 2019 Annual Review, the site inspection on 13 February 2020 (falling within this audit period) found that runoff from northern part of site was not fully diverted around the NE corner of the facility. Vegetation of former access road around NE corner of site is required, and vegetated earth mound as per SSD 5300 Mod 1 plans is required to divert runoff from northern hill slope around the site and into the unnamed creek.</p> <p>+ Some surface ponding of water observed in operational areas, resulting mud to form due to vehicles operating within the area. Pad maintenance needed more regularly to avoid low spots forming to improve surface drainage and reduce sediment generation.</p> <p>+ The inspection showed evidence of silt build-up on crushed concrete pavement from recent wet weather and transfer into stormwater pits. More frequent cleaning of pad is needed to avoid sediment build up, including changing the geotextile filter covers on pits.</p> <p>+ An update to the Soil and Water Management Plan (last updated March 2018) is required to set out additional soil and erosion control measures that need to be considered during</p>	<p>across entire site on 13/02/20 and 2/03/21</p> <p>+ Daily Supervisor Checklist</p>	

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
		<p>wet weather, to avoid excessive sediment load on the OSD ponds, in accordance with Landcom (2004) Managing Urban Stormwater – Soils and Construction Vol. 1. The plan update should include current practices such as pits and pipes cleaning by external contractor once a quarter including the Humeceptor.</p> <p>+ All other water management measures considered satisfactory.</p>		
B8.	<p>Erosion and Sediment Control</p> <p>The Applicant shall implement erosion and sediment control measures on-site in accordance with Managing Urban Stormwater: Soils and Construction Vol. 1 (Landcom, 2004).</p>	<p>+ Soil and Water Management Plan Program as approved by the Secretary DPE on 26/02/18</p> <p>+ Daily Supervisor Checklist inspected for details on daily checks on water management system</p> <p>+ Inspection on 2/03/21 showed evidence of silt build-up on crushed concrete pavement from recent wet weather and transfer into stormwater pits. Whilst pad maintenance is done regularly to reduce low spots on the pad, and to avoid pooling in wet weather, more frequent monitoring of pad condition will help to improve surface drainage and reduce sediment generation.</p> <p>+ It is noted that as part of the 2019 Annual Review, the site inspection on 13 February 2020 (falling within this audit period) found that more frequent cleaning of the pad is needed to avoid sediment build up, including more frequent changing of the geotextile filter covers on pits.</p> <p>+ Vegetation of former access road around NE corner of site is required to reduce sediment transfer into unnamed creek.</p> <p>+ Inspection on 13/02/20 showed evidence of silt build-up on crushed concrete pavement from recent wet weather and</p>	<p>+ Soil and Water Management Plan Program (Appendix C of Operational Environmental Management Plan)</p> <p>+ Site inspection across entire site on 13/02/20 and 2/03/21</p> <p>+ Daily Supervisor Checklist</p>	No

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
		<p>transfer into stormwater pits. Whilst pad maintenance is done regularly to reduce low spots on the pad, and to avoid pooling in wet weather, more frequent monitoring of pad condition will help to improve surface drainage and reduce sediment generation.</p> <p>+ More frequent cleaning of the pad is needed to avoid sediment build up, including more frequent changing of the geotextile filter covers on pits.</p>		
B9.	<p>Bunding The Applicant shall store all chemicals, fuels and oils used on-site in appropriately bunded areas in accordance with the requirements of all relevant Australian Standards, and/or EPA's Storing and Handling Liquids: Environmental Protection - Participant's Manual 2007.</p>	+ All fuels, oils and chemicals were appropriately bunded on spill containment pallets.	+ Site inspection on 2/03/21 + Pollution Incident Response Management Plan (Appendix F, of Operational Environmental Management Plan)	Yes
B10.	<p>Imported Soil The Applicant shall:</p> <ul style="list-style-type: none"> a) ensure that only VENM, or ENM, or other material approved in writing by the EPA is used as fill on the site; b) keep accurate records of the volume and type of fill to be used; and c) make these records available to the Department upon request. 	<p>+ This requirement is documented in the Construction Waste Management Plan dated 10 May 2016 for the development</p> <p>+ VENM and ENM used in construction occurred prior to Wollongong Recycling (NSW) Pty Ltd acquisition. No records are available to Wollongong Recycling (NSW) Pty Ltd and no evidence of non-compliance provided by previous site owner.</p>	+ Construction Waste Management Plan dated 10 May 2016	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
B11.	Odour The Applicant shall ensure the Development does not cause or permit the emission of any offensive odour (as defined under section 129 of the POEO Act).	+ Complaints register – no complaints in 12 months of reporting period (see: https://www.bingoindustries.com.au/recycling-centres/policies/~getattachment/recycling-centres/policies/SEQEnvironmental_ComplaintsRegister-KemblaGrange_2021-02-03-09-50-26.pdf?lang=en-AU) + Air Quality Management Plan (Appendix A, Operational Environmental Management Plan)	+ Complaints register. + Air Quality Management Plan + Site inspection on 2/03/21	Yes
B12.	Air Quality Management Plan Prior to the commencement of construction of the Development, the Applicant shall prepare an Air Quality Management Plan to the satisfaction of the Secretary. The plan must: <ul style="list-style-type: none"> a) be prepared by a suitably qualified and experienced person(s) in consultation with the EPA; b) describe the measures that would be implemented to ensure: <ul style="list-style-type: none"> (i) all reasonable and feasible measures are employed to minimise air emissions, including details of water sprays for stockpiles, exposed areas and the dust suppression system for the crushing plant; (ii) compliance with the relevant conditions of this consent; (iii) contingency measures are deployed to minimise impacts should adverse air emissions occur or appear likely to occur; c) include well defined triggers for the deployment of construction and operational air quality measures; d) include well defined triggers for ceasing or partially ceasing operations on site during adverse air quality conditions; and 	+ Air Quality Management (Appendix A, Operational Environmental Management Plan) is in place and addresses all requirements as per Condition B12 of the development consent + Plan has been approved by Department of Planning and Environment on 19 August 2016	+ Air Quality Management Plan	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	e) include a protocol to determine the occurrence of an exceedance of any criteria in the EPL should an exceedance occur.			
B13	The Applicant shall carry out the Development in accordance with the Air Quality Management Plan approved by the Secretary (as revised and approved by the Secretary from time to time), unless otherwise agreed by the Secretary.	+ Air Quality Management Plan in place and approved by the Secretary 26/02/2018 (Appendix A of Operational Environmental Management Plan) + Daily Site Supervisor Checklist sighted with details on air quality procedural checks	+ Air Quality Management Plan in place + Daily Site Supervisor Checklist	Yes
B14.	Air Emissions Mitigation The Applicant shall: a) operate the Development so that air emissions are minimised during all meteorological conditions; and b) implement best management practice, including all reasonable and feasible air and odour emissions mitigation measures to minimise emissions from the Development, including but not limited to: (i) carrying out all composting on the site inside a fully enclosed building under negative atmospheric pressure; (ii) covering all finished compost or mulch that is stored outside a building with a suitable rain-proof cover; (iii) ensuring all paper, cardboard or plastic that is stored outside a building is within a compacted bale or covered enclosure; (iv) ensuring any stockpile of organic waste stored outside a building is 3 metres in height or less; (v) ensuring any stockpile of inorganic waste stored outside a building is 5 metres in height or less;	+ All waste processing operations on-site inspection on 2/03/21 appears to be compliant with consent condition and Operational Environmental Management Plan and Appendix A – Air Quality Management. As approved by Secretary + No composting activities inside building are currently being performed. + Only mulching and temporary storage on bunded pad outdoors in designated storage area. + Surface wetting of piles observed for dust control. + Sprinkler system observed designated above waste storage bays.	+ Operational Environmental Management Plan and Appendix A – Air Quality Management. + Site inspection on 2/03/21.	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	<p>(vi) storing no more than 2,500 m³ of organic matter outside a building at any one time, comprising of no more than:</p> <ul style="list-style-type: none"> • 1,000m³ of unprocessed green waste; • 1,000m³ of mulches; and • 500m³ of compost; <p>(vii) storing no more than 300 tonnes of firewood outside a building at any one time; and</p> <p>(viii) dust suppression through the use of chemical suppressants, water sprays/misters.</p>			
B15.	<p>Construction Emissions Mitigation</p> <p>During construction, the Applicant shall ensure that:</p> <ol style="list-style-type: none"> all vehicles on site do not exceed a speed of 30 kilometres per hour; all loaded construction vehicles entering or leaving the site have their loads covered; and all construction vehicles leaving the site are cleaned of dirt, sand and other materials before they leave the site, to avoid tracking the materials on public roads. 	<p>+ Construction works completed prior to inspection on 2/03/21.</p> <p>+ Construction process managed as per approved Construction Environment Management Plan dated 9/05/16 by KFW.</p>	<p>+ Construction Environment Management Plan.</p>	Yes
B16	<p>Air Quality and Odour Audit</p> <p>The Applicant shall carry out an Air Quality and Odour Audit of the Development no later than three months after the Secretary has approved the Operational Environmental Management Strategy (refer to Condition C3) for the Development. The audit must:</p> <ol style="list-style-type: none"> be carried out by a suitably qualified and experienced expert whose appointment has been endorsed by the Secretary; audit the Development whilst it is in operation; include a summary of air and odour emission related complaints and any actions that were carried out to address the complaints; 	<p>+ Air Quality and Odour Report was undertaken by Consulting Earth Sciences on between 22 and 24 May 2018.</p>	<p>+ Air Quality and Odour Audit Report dated 25th May 2018.</p>	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	<ul style="list-style-type: none"> d) validate the Development against air quality and odour predictions in the EIS; e) review design and management practices of the Development against industry best practice for air emissions and odour management; and f) include an action plan that identifies and prioritises additional air and odour emission mitigation measures that may be necessary to reduce air emissions. 			
B18.	Construction and operation hours The Applicant shall comply with the construction and operation hours in Table 2 (of SSD-5300) unless otherwise agreed to in writing by the Secretary.	+ Construction works completed prior to inspection on 2/03/21. + Construction process managed as per approved Construction Environment Management Plan dated 9/05/16 by KFW.	+ Construction Environment Management Plan + Advice provided by Bingo Environmental Manager	Yes
B20.	Noise criteria The Applicant shall ensure that noise generated by the Development does not exceed the noise criteria in Table 3 (of SSD5300).	+ Noise managed in accordance with procedure OPL-YA027 Controlling Noise Emissions at Recycling Centres + Complaints register – no complaints in 12 months of reporting period (see: https://www.bingoindustries.com.au/recycling-centres/policies/~getattachment/recycling-centres/policies/SEQEnvironmental_ComplaintsRegister-KemblaGrange_2021-02-03-09-50-26.pdf?lang=en-AU)	+ OPL-YA027 Controlling Noise Emissions at Recycling Centres + Complaints Register	Yes
B21.	Noise compliance measurement Noise generated by the Development is to be measured in accordance with the relevant requirements and exemptions (including certain meteorological conditions) of the latest version of the NSW Industrial Noise Policy.	+ Noted.	+ No noise data required to be measured during 2019.	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
B22.	Vibration criteria The Applicant shall ensure that vibration resulting from the Development does not exceed the continuous or impulsive vibration criteria in EPA's Assessing Vibration: A Technical Guideline (February 2006) at residential receivers.	+ Vibration managed in accordance with procedure OPL-YA027 Controlling Noise Emissions at Recycling Centres + Complaints register – no complaints in 12 months of reporting period (see: https://www.bingoindustries.com.au/recycling-centres/policies/~getattachment/recycling-centres/policies/SEQEnvironmental_ComplaintsRegister-KemblaGrange_2021-02-03-09-50-26.pdf?lang=en-AU)	+ OPL-YA027 Controlling Noise Emissions at Recycling Centres + Complaints Register	Yes
B23.	Noise mitigation The Applicant shall: <ol style="list-style-type: none"> implement best management practice, including all reasonable and feasible noise management and mitigation measures to prevent and minimise operational, low frequency and traffic noise generated by the Development; minimise the noise impacts of the Development during adverse meteorological conditions; maintain the effectiveness of any noise suppression equipment on plant at all times and ensure defective plant is not used operationally until fully repaired; and regularly assess noise monitoring data and relocate, modify and/or stop operations to ensure compliance with the noise criteria in this consent. 	+ Noise managed in accordance with procedure OPL-YA027 Controlling Noise Emissions at Recycling Centres + Complaints register – no complaints in 12 months of reporting period (see: https://www.bingoindustries.com.au/recycling-centres/policies/~getattachment/recycling-centres/policies/SEQEnvironmental_ComplaintsRegister-KemblaGrange_2021-02-03-09-50-26.pdf?lang=en-AU)	+ OPL-YA027 Controlling Noise Emissions at Recycling Centres + Complaints Register	Yes
B24.	Noise monitoring The Applicant shall carry out any noise monitoring required by the EPL	+ No noise monitoring required under EPL 20601	+ EPL 20601	Yes
B24A.	The Applicant must prepare and submit a noise verification report to the EPA and the Planning Secretary within 3 months from recommencing the operation of the fixed picking station and prior to the operation of the indoor processing plant (as described in MOD 2). The report must be prepared by a suitably qualified and experienced acoustic consultant and include:	+ None - the operation of the fixed picking station has not recommenced, and the operation of the indoor processing plant has not commenced.	+ Site inspection on 2/03/21. + Traffic Management Plan in Appendix H of	Yes

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	<ul style="list-style-type: none"> a) an analysis of compliance with noise limits specified in Condition B20; b) an outline of management actions to be taken to mitigate any exceedances in noise limits; and c) a description of contingency measures in the event management actions are not effective in reducing noise levels to an acceptable. 		Operational Environmental Management Plan approved by the Secretary 26/02/18.	
B25.	<p>Traffic and access</p> <p>The Applicant shall ensure that:</p> <ul style="list-style-type: none"> a) a total of 26 car parking spaces, including one disabled car parking space are provided; b) site access, driveways and parking areas are constructed and maintained in accordance with the latest versions of Australian Standards AS 2890.1, AS 2890.2, AS 2890.6 and AS 1428.1; c) the swept path of the longest vehicle entering and exiting the subject site, as well as manoeuvrability through the site, is in accordance with AUSTROADS Guide to Road Design; d) the bridge is: <ul style="list-style-type: none"> (i) designed by a suitably qualified and experienced engineer in accordance with the current Australian Standards for bridge design; (ii) a minimum of 300mm freeboard above the estimated 1% Annual Exceedance Probability flood level to the underside of the bridge deck; and (iii) provided with flood warning signage and flood depth indicators for traffic; e) the Development does not result in any vehicles parking or queuing on the public road network; f) all vehicles are wholly contained on site before being required to stop; 	+ The site inspection on 2/03/21 identified that there was inadequate clearance around the site for the ring road and is not in accordance with the site plans as approved under as approved under SSD5300 and subsequent development modifications.	+ Site inspection on 2/03/21. + Traffic Management Plan in Appendix H of Operational Environmental Management Plan approved by the Secretary 26/02/18. 	<p>manufacturers' specification and used whenever dust from the crusher has the potential to be transported offsite in the direction of sensitive receptors.</p> <ol style="list-style-type: none"> 5) The size of storage piles will be minimised where possible. 6) Cleared areas of land will be limited and cleared only when necessary to reduce fugitive dust emissions. 7) On site traffic will be controlled by designating specific routes for haulage and access and limiting vehicle speeds to below 25 km/hr. 8) All trucks hauling material should be covered before exiting the site and should maintain a reasonable amount of vertical space between the top of the load and top of the trailer. 9) Material spillage on sealed roads will be cleaned up as soon as practicable. 10) A rumble-strip at the interface of the sealed road and the unsealed access road will be provided. 11) Excavating operations conducted in areas of low moisture content material will be suspended during high wind speed events or water sprays will be used. <p>The following odour mitigation measures will be implemented by Bicorp:</p> <ol style="list-style-type: none"> 12) Design and installation of an appropriate building ventilation system at negative pressure at all times during operation. 13) A site odour management plan be developed prior to commissioning the facility with the increased capacity. 14) On site storage times of organic material will be minimised prior to processing. 	<p>+ (13) Refer to Operational Environmental Management Plan as approved by the Secretary on 26/02/18 (Appendix A – Air Quality Management Plan).</p> <p>+ (14) Minimal stockpiles of organic materials were observed during site inspection on 2/03/21. Site supervisor advised stockpiles of materials are minimized and product moved off site to ensure compliance with consent conditions in terms of volumes stored and pile height.</p> <p>+ (15) No composting done on site, and no covers are needed on outdoor stockpile of shredded material.</p> <p>+ (16) No odour was detectable from leachate dam during site inspection on 2/03/21.</p> <p>+ (17) – (19) Not progressed as composting plant not currently used.</p>		

SSD5300 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant ? (Y/N)
	15) If the chosen composting process allows, the matured compost stockpiles will be covered to reduce the ingress of water and reduce odour. 16) If the leachate pond is a significant source of odour Bicorp will investigate the use of aerators to minimise odour, enhance biological degradation and encourage evaporation. 17) Validation sampling of odour from any key odour discharge points will be undertaken after commissioning. 18) Annual odour sampling of the building ventilation stack will be undertaken. 19) If required (as demonstrated by annual odour sampling), all air will be treated in an odour control system prior to discharge.			

A1.2 State Significant Development (5300) Mod 1 / Mod 2 Conditions of Consent

SSD5300 Mod 1 Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor	Compliant? (Y/N)
A2.	Terms of Consent The Applicant shall carry out the Development in accordance with the: <ol style="list-style-type: none"> EIS; Response to Submissions; Site layout plans and drawings (Appendix A of SSD5300); Management and Mitigation Measure (Appendix B of SSD5300); The S96(1A) Modification Application to SSD5300 prepared by Jackson Environment and Planning, dated 2017; and the modification application SSD 5300 MOD 2 and supporting documentation. 	+ The site inspection on 2/03/21 found that the site is not being operated consistent with consent documentation. Specifically, the following activities were being carried out on site: <ul style="list-style-type: none"> Use of the shed building approved for the crushing and grinding plant under Mod 2 is being used as a workshop Asphalt processing plant and asphalt storage on the approved green waste storage area; Storage of skip bins adjacent to the water quality ponds 	+ Site inspection on 2/03/21 + All consent documentation	No

A1.3 Department of Primary Industries Controlled Activity Approval

It is noted that compliance with the conditions of the Controlled Activity Approval have been indicated as 'Compliant', though this requires further consultation with the Department of Planning, Industry and Environment. This is based on legal advice provided by the applicant to the auditor that has indicated (see Appendix 2):

Pursuant to s 4.41 Environment Planning and Assessment Act 1979 (Act) a water use approval under section 89, a water management work approval under section 90 or an activity approval (other than an aquifer interference approval) under section 91 of the Water Management Act 2000, are not required for State significant development that is authorised by a development consent granted after the commencement of the Act.

Department of Primary Industries Controlled Activity Approval Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor – Jackson Environment and Planning Pty Ltd	Compliant? (Y/N)
2	The approval holder must not transfer this Controlled Activity Approval 10 ERM2009/1008 without the written approval of DPI Water.	+ Noted	+ N/a	Yes
3	The approval holder must keep a copy of the current Controlled Activity Approval 10 ERM2009/1008 on site at all times and make this approval available to officers from DPI Water on request.	+ Controlled Activity Approval not maintained + Applicant has cited legal advice that State Significant Developments are exempt from requiring approvals under the <i>Water Management Act</i> 2000. This is because water management considerations are included in the assessment of major projects and conditions of consent	+ Legal advice provided by Senior Legal Counsel of applicant (refer to Appendix 2). + This matter is to be resolved in discussions with DPIE and an amendment to the development consent made if required.	Yes
5	The approval holder must notify DPI Water in writing within 14 calendar days of any change (i) site management; (ii) land ownership; (iii) land occupation.	+ Noted	+ N/a	N/a – refer to Condition 3
6	The approval holder must comply with the requirements of each of the plans approved by DPI Water and stamped on 24/05/2016 as follows: i. Construction Civil Plans, Ref. KF110816, Sheets C300-C320, prepared by KFW, dated April 2016 ii. Landscape Management Plans, Ref. 1442, Sheets LC01-02, prepared by Ochre Landscape Architects, dated 22/04/2016	+ Facility has received final Occupation Certificate on 23/01/18 (Cert. No. 2306) + Site inspection on 2/03/21	+ Occupation certificate + Site inspection 2/03/21 + Vegetation management report from	Yes

15	The approval holder must not leave any material which could obstruct the flow of water or damage riverbanks on waterfront land at anytime	+ Site inspection 2/03/21 + Site compliant at time of inspection	+ Site inspection 2/03/21 + Site compliant at time of inspection	Yes
16	The approval holder must remove surplus material when operations cease and the controlled activity is completed	+ Site inspection 2/03/21 + Site compliant at time of inspection	+ Site inspection 2/03/21 + Site compliant at time of inspection	Yes
17	The approval holder must establish all drainage control works in accordance with Construction Civil Plans, Ref. KF110816, Sheets C300-C320 prepared by KFW dated April 2016, approved by DPI Water and stamped 24/05/2016	+ Works conducted as per approved plans + Facility has received final Occupation Certificate on 23/01/18 (Cert. No. 2306) as evidence of completion of works as per approved plans	+ Occupation Certificate	Yes
18	The approval holder must direct runoff from the site or from other river or drains of the base of the bank of the river or low flow water level by either a pipe or lined channel in accordance with Construction Civil Plans, Ref. KF110816, Sheets C300-C320 prepared by KFW dated April 2016, approved by DPI Water and stamped 24/05/2016	+ Works conducted as per approved plans + Facility has received final Occupation Certificate on 23/01/18 (Cert. No. 2306) as evidence of completion of works as per approved plans	+ Occupation Certificate	Yes
19	The approval holder must construct stormwater outlets so that they point downstream	+ Works conducted as per approved plans + Facility has received final Occupation Certificate on 23/01/18 (Cert. No. 2306) as evidence of completion of works as per approved plans	+ Occupation Certificate	Yes

Department of Primary Industries Controlled Activity Approval Condition	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor – Jackson Environment and Planning Pty Ltd	Compliant? (Y/N)
20	The approval holder must use only biodegradable materials for any erosion control matting in the riparian corridor	+ Works conducted as per approved plans + Facility has received final Occupation Certificate on 23/01/18 (Cert. No. 2306) as evidence of completion of works as per approved plans	+ Occupation Certificate	Yes
22	The approval holder must (i) implement erosion and sediment control measures in accordance with the requirements of the Managing Urban Stormwater Manual, Volume 1, Soils and Construction (Landcom, 4th Edition, March 2004) prior to any works commencing at the site, and (ii) maintain the control measures for the duration of the approval to prevent sediment and dirty water entering the waterway	+ Works conducted as per approved plans + Facility has received final Occupation Certificate on 23/01/18 (Cert. No. 2306) as evidence of completion of works as per approved plans	+ Occupation Certificate	Yes
23	The approval holder must only conduct works in the river during periods of low flow	+ Noted as per approved Construction Environment Management Plan	+ Construction Environment Management Plan	Yes
24	The approval holder must revegetate all areas identified in the approved Vegetation Management Plan (Version 7), prepared by Southern Habitat, dated October 2015, in accordance with Landscape Management Plans, Ref. 1442, Sheets LC01-02, prepared by Ochre Landscape Architects, dated 22/04/2016, stamped by DPI Water on 24/05/2016. The approval holder must monitor and maintain revegetation works for a period of 2 years in accordance with the approved vegetation management plan.	+ Works conducted as per approved plans + Facility has received final Occupation Certificate on 23/01/18 (Cert. No. 2306) as evidence of completion of works as per approved plans	+ Occupation Certificate	Yes

A1.4 Pollution Incident Response Management Plan

Pollution Incident Response Management Plan Chapter	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor – Jackson Environment and Planning Pty Ltd	Compliant? (Y/N)
3.1.1	Leachate Collection System all leachate generated from the indoor composting activities is collected and stored in leachate tanks, which will be pumped out and disposed of to sewer as required or reused as a moisture source for the composting operations.	+ Composting not currently done on site	+ Site inspection 2/03/21	Yes
3.2	Management of material to site Pre-emptive measures that are in place to prevent a pollution incident as a result of unscheduled or non-permissible material being deposited on site are: <ul style="list-style-type: none"> • signage to indicate the types of waste allowed and those prohibited; • entry via the weighbridge; • customer declaration of waste; • incoming waste is screened and classified at the weighbridge and CCTV is available to visually inspect loads within trucks; • screening and checking waste at tipping and processing areas; • recording of all information and archived for at least four years; • special waste to be immediately notified to the plant operator; and • regular training of staff supervising tipping and screening of waste in waste classification procedures. <p>If a material is to be delivered under a resource recovery exemption, the material is required to comply with the conditions of a current general exemption or a specific exemption designated for this material. All resource recovery exemptions are made under clauses 51 and 51A of the Protection of the Environment Operations (Waste) Regulation 2005.</p>	+ Site inspection on 2/03/21 and checking of induction procedures confirmed compliance with these requirements. + Training register sighted with details on Asbestos Awareness, POEO Act, EPA licence and EPA Minimum Standards for Managing Construction Waste in NSW training	+ Site inspection 2/03/21 + Bingo Training Needs Register	Yes

Pollution Incident Response Management Plan Chapter	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor – Jackson Environment and Planning Pty Ltd	Compliant? (Y/N)
10.2	<p>A review of ongoing training requirements should be conducted on an annual basis and established based on but not limited to:</p> <ul style="list-style-type: none"> • changes in procedures; • changes in regulations; • changes in equipment; • errors or deficiencies in job performance; and • errors in data reporting. 	<p>+ Bingo Training Needs Register sighted</p> <p>+ Daily and weekly toolbox talks occur and these items are addressed</p>	<p>+ Bingo Training Needs Register</p> <p>+ Interview with Site Supervisor</p>	Yes
10.3.2	<p>A simulated test of the PIRMP is to be undertaken annually.</p> <p>The planning of this exercise is to be undertaken by the Operations Manager.</p> <p>The goal of this exercise is to provide a situation that is reflective of an incident that may be encountered on site. Safety is paramount for this exercise and no actual hazard should be conducted (such as the lighting of a fire) these will include:</p> <ul style="list-style-type: none"> • Spill; or • Fire. 	<p>+ Interview with Site Supervisor advised this occurs at least once yearly</p> <p>+ Date of late test was 02/04/2020</p>	<p>+ Interview with Site Supervisor</p>	Yes
11.1	<p>Manner in which the plan is to be tested and maintained</p> <p>The testing of the plan is going to be based on an annual review of the plan in relation to the simulated testing, incident reporting for the past year and any changes in procedures and processes that occurs on site.</p> <p>The simulation and evacuation drill used to test the practical effectiveness of the plan and define areas of improvement. Reporting of incidents will be used to highlight areas of improvement in the plan. Annual reviews will be used to implement any changes that have occurred in the process of running the site or regulations of operating under this licence</p>	<p>+ Interview with Site Supervisor advised this occurs at least once yearly</p> <p>+ Date of late test was 02/04/2020</p>	<p>+ Interview with Site Supervisor</p>	Yes

Pollution Incident Response Management Plan Chapter	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor – Jackson Environment and Planning Pty Ltd	Compliant? (Y/N)
11.2	Review of the Plan The review is to be conducted annually from the date of the first version of the document: <ul style="list-style-type: none"> the document is to be reviewed if there is any significant change in process or operation on the site; the document is to be reviewed where there is a change in the legislation or the requirements of the Environmental Protection Licence; the document is to be reviewed where the testing of the plan identifies a failure or inefficiency; and a review is required to be completed within 30 days of a pollution incident. 	+ PIRMP last updated on 03/04/2020.	+ Operational Environmental Management Plan	Yes

A1.5 Soil and Water Management Plan

Soil and Water Management Plan	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor – Jackson Environment and Planning Pty Ltd	Compliant? (Y/N)
4.4	Site quarterly groundwater monitoring Groundwater wells to be sampled once every three months upstream and downstream of the development. Quarterly reports to be provided to the Office of Water.	+ Groundwater testing undertaken quarterly consistent with Appendix C - Soil and Water Management Plan as per Operational Environmental Management Plan approved by the Secretary 26/02/18.	+ Operational Environmental Management Plan	Yes
6.1	Inspections and Monitoring Surface water monitoring will be undertaken within the OSD immediately prior to the overflow point and every six months, in accordance with M2 of EPL 20601. Grab samples will be collected from the OSD and samples analysed for pH and total suspended sediment concentrations. Concentrations will be compared to the concentration limits specified for that pollutant under EPL 20601. Groundwater wells upstream and downstream of the development will be sampled and tested on a quarterly basis, with results provided to the Office of Water as required.	+ Soil and Water Management Plan as per the approved Operational Environmental Management Plan (Appendix C).	+ Operational Environmental Management Plan + Interview with Environmental Manager	Yes
6.2	Reporting A quarterly report will be produced by the Environment and Quality Manager to summarise all monitoring results.	+ Consultant appointed to conduct monitoring in accordance with Operational Environmental Management Plan	+ Advice from Environmental Manager	Yes

A1.6 Air Quality Management Plan

Air Quality Management Plan	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor – Jackson Environment and Planning Pty Ltd	Compliant? (Y/N)
6.2	Meteorological Monitoring Daily conditions will be recorded in the site diary and will be used to determine if/when unfavourable weather conditions might impact operational activities.	+ Meteorological station was in not operation throughout 2020 as it was decommissioned on 12/02/20 and was being replaced	+ None – no data was available	No
6.3	Reporting A quarterly report will be produced by the Environment and Quality Manager to summarise all monitoring results.	+ As per Operational Environmental Management Plan approval from DPE on 26/02/18	+ Operational Environmental Management Plan	Yes

A1.7 Operational Environmental Management Plan

Operational Environmental Management Plan Chapter	Consent Condition	Evidence of compliance	Evidence assessed and validated by auditor – Jackson Environment and Planning Pty Ltd	Compliant? (Y/N)
8.2	Review and Corrective Action The requirements for the document review are: <ul style="list-style-type: none"> • The review is to be conducted annually from the date of the first version of the document; • The document is to be reviewed if there is any significant change in process or operation on the site; • The document is to be reviewed where there is a change in the legislation or the requirements of the Environmental Protection Licence; • The document is to be reviewed where the testing of the plan identifies a failure or inefficiency; and • A review is required to be completed within 30 days of a pollution incident (as per the Pollution Incident Response Management Plan). 	+ Operational Environmental Management Plan finalized and approved by the Secretary on 26/02/18 + Annual review to be performed on as required following any incident	+ Operational Environmental Management Plan	YES
10	Complaints and Dispute Resolution All complaints are to be lodged into the Complaints Register. Once a complaint is lodged in the Complaints Register, the relevant personnel (as delegated by the Environment Manager) will provide an initial verbal response to the complainant (immediately if the matter is urgent or otherwise within 24 hour of the complaint) and will investigate or action the complaint if necessary.	+ Complaints register maintained as part of the company's intranet and published online (see https://www.bingoindustries.com.au/recycling-centres/policies/~getattachment/recycling-centres/policies/SEQEnvironmental_ComplaintsRegi)	+ Complaints register + Interview with Environmental Manager	Yes
