Subject: objection to da (SSD-4986)

NSW Planning & Infrastructure.

I wish to lodge my very strong objection to any further development on Kooragang Island.
Especially another Ammonium Nitrate Manufacturing Facility.

My reasons are:

Since the developments of various industries on Kooragang, I have developed Asthma, which is distressing to me and my family, especially during the SW & Westerly wind periods. (Would you like that hanging over you?)

I live in close proximity to the Stockton bridge so these industries are just across the river from me. Should there be an explosion at any of the Ammonium plants , Fern Bay would be blown away along with the bridge. (Would you like that hanging over you?)

The loud noises that come from the industries on the island, sometimes all night are a disruption to the ability to sleep. At times there are loud bangs that literally shake the house. The coal dust and canola oil residue combines to put a black film over everything and it is very hard to remove.

I have lived here for almost 50 years, I am 84 years old. When I bought my home here it was a quiet peaceful place, but now it just the opposite. At my age I am just not able to pack up and move, so I am asking you not to approve any more developments on Kooragang Island to make things worse for me. (You could always allow them in the heart of Sydney or Canberra.)

No I have never made any political donations, my pension doesn't stretch that far.

Thanking you,

Jean Edwards
