Subject:
crawfords ammonium nitrate storage and distribution facility

hi my name is [REDACTED] and i am letting you know that i am against your idea of having this so called ammonium nitrate storage at crawfords containers pty ltd. as usual nobody has taken into consideration the fact that this is right behind St Josephs home, along with the young people living in all the units behind it to. dont worry about our waterways, with all the different speices of fish, and other marine life, oh and our lovely wetlands, with all the speices of birds, and frogs, lizards, and our environment to take into consideration. but as the saying goes nothing will ever happen, and when it does its allways to late and nothing you or anyone can do to fix the situation. then there is the situation of the storing of this ticking time bomb, that you wish to store in these containers, an if you have ever had to work in one, you would know how much heat they actually hold, but oh sorry to tell you, that there is a service station located right nearby and another at Hexham, along with haveing several companies that store very volatile paints, and other gases, so not only would your ticking time bomb take out your supposed 5km range, but lets see, with these other companies to consider as well i dont think you would have much of a chance to do evacuations. but as the usual you people dont live here, and i am not amused that so many of us did not even receive your letter. as the saying goes " she be right mate" well its good to see you people think a great deal about storing this ammonium nitrate bomb in such an area thats so close to the water and so much wildlife, not at all amused with what and how our environment is treated, just remember that once this starts to leak theres no fixing our environment. well i also know the usual answers, thanks for your input and well take it into consideration, or the brush off , etc etc,etc, why do you think carrington stood so firm, oh the amount of factories, and the waterway may have something to do with it, and know you want to put the time bomb near the same situation. thanks for your time even though i know you wont read this or take any of it into consideration.
