Mr David Cannon
SET Consultants Pty Ltd
PO Box 495
Nowra NSW 2541

Our ref: SSD 13_5815
File: 13/05513-1

Dear Mr Cannon,

**State Significant Development – Director-General's Requirements
Trim Street Resource Recovery Facility (SSD 13_5815)**

I have attached the Director-General's environmental assessment requirements (DGRs) for the preparation of an Environmental Impact Statement (EIS) for the proposed Trim Street Resource Recovery Facility at South Nowra.

These requirements are based on the information you have provided to date and have been prepared in consultation with the relevant government agencies and Shoalhaven City Council (Council). Their comments which you should address appropriately in preparing the EIS are attached (see attachment 2). Please note that the Department may alter these requirements at any time, and that you must consult further with the Department if you do not lodge a development application and EIS for the development within two years of the date of issue of these DGRs. The Department will review the EIS for the development carefully before putting it on public exhibition, and will require you to submit an amended EIS if it does not adequately address the DGRs.

I wish to emphasise the importance of effective and genuine community consultation and the need for proposals to proactively respond to the community's concerns. Accordingly a comprehensive, detailed and genuine community consultation and engagement process must be undertaken during preparation of the EIS. This process must ensure that the community is both informed of the proposal and is actively engaged in issues of concern to them. Sufficient information must be provided to the community so that it has a good understanding of what is being proposed and of the potential impacts.

Your proposal may require a separate approval under the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act). This approval would be in addition to any approvals required under NSW legislation and it is your responsibility to contact the Department of Sustainability, Environment, Water, Population and Communities to determine if an approval under the EPBC Act is required for your development (<http://www.environment.gov.au> or 6274 1111).

I would appreciate it if you would contact the Department at least two weeks before you propose to submit the DA and EIS for the development. This will enable the Department to:

- confirm the applicable fee (see Division 1AA, Part 15 of the *Environmental Planning and Assessment Regulation 2000*);
- determine the number of copies (hard-copy and CD-ROM) of the EIS required for review; and

- determine consultation and public exhibition arrangements.

If you have any enquiries about these requirements, please contact Brendan Liew on (02) 9228 6310 or via email at brendan.liew@planning.nsw.gov.au

Yours sincerely

15.4.13

Chris Wilson
Executive Director
Development Assessment Systems and Approvals
as the Director-General's nominee

Director General's Environmental Assessment Requirements

Section 78A(8A) of the *Environmental Planning and Assessment Act 1979*

State Significant Development

Application Number	SSD 13_5815
Development	The Trim Street Resource Recovery Facility, which involves the construction and operation of a resource recovery facility (RRF) and on-site truck depot that would handle up to 150,000 tonnes of waste per annum.
Location	Trim Street, South Nowra (Lot 134 DP 1124258, Part Lot 133 DP 1124258 and Part Lot 137 DP 1124258)
Applicant	Mr Mark Nelson
Date of Issue	April 2013
General Requirements	The Environmental Impact Statement (EIS) must meet the minimum form and content requirements in clauses 6 and 7 of Schedule 2 of the <i>Environmental Planning and Assessment Regulation 2000</i>. In addition, the EIS must include a: • clear description of the existing operations carried out on the site and how the site operates lawfully under the <i>Environmental Planning and Assessment Act 1979</i> including any reliance on use rights and/or planning approvals; • detailed description of the development, including: – need for the proposed development; – justification for the proposed development; – likely staging of the development; – the nature and destination of materials to be received and distributed; and – plans of all proposed building works. • consideration of all relevant environmental planning instruments, including identification and justification of any inconsistencies with these instruments; ie. the aims, objectives, and guidance in the <i>NSW Waste Avoidance and Resource Recovery Strategy 2007</i>, <i>Shoalhaven Local Environmental Plan 1985</i>, relevant development control plans and section 94 plans; • risk assessment of the potential environmental impacts of the development, identifying the key issues for further assessment; • detailed assessment of the key issues specified below, and any other significant issues identified in this risk assessment, which includes: – a description of the existing environment, <u>using sufficient baseline data</u>; – an assessment of the potential impacts of all stages of the development, including any cumulative impacts, taking into consideration relevant guidelines, policies, plans and statutes; and – a description of the measures that would be implemented to avoid, minimise and if necessary, offset the potential impacts of the development, including proposals for adaptive management and/or contingency plans to manage any significant risks to the environment; • a consolidated summary of all the proposed environmental management and monitoring measures, highlighting commitments included in the EIS. The EIS must also be accompanied by a report from a qualified quantity surveyor providing: • a detailed calculation of the capital investment value (as defined in clause 3 of the <i>Environmental Planning and Assessment Regulation 2000</i>) of the proposed development, including details of all assumptions

	and components from which the CIV calculation is derived; • an estimate of the jobs that will be created during the construction and operational phases of the proposed development; and • certification that the information provided is accurate at the date of preparation.
Key issues	The EIS must address the following specific matters: • Waste Management – including: – the proposed size, location and management of stockpiles of unprocessed and processed waste; – details of the proposed source of waste; – details of the proposed classification and quantity of the likely waste streams that would be handled/stored/disposed of at the facility; – a description of how this waste would be stored and handled on site, and transported to and from the site; – details of the potential impacts associated with treating, storing, using and disposing of this waste and waste products; and – the measures that would be implemented to ensure that the development is consistent with the aims, objectives and guidelines in the <i>NSW Waste Avoidance and Resource Recovery Strategy 2007</i>. • Traffic and Transport – including: – details of all traffic types and volumes likely to be generated; – an assessment of predicted impacts on road safety and the capacity of the road network to accommodate the project; – detailed plans of the proposed layout of the internal road network and parking on site in accordance with the relevant Australian standards; and – detailed plans of any proposed road upgrades, infrastructure works or new roads required for the development. • Noise – including: – a quantitative assessment of potential construction, operational and transport noise and vibration impacts, including potential impacts on nearby sensitive receivers; and – details and justification of the proposed noise management and monitoring measures. • Air Quality – including a quantitative assessment of the potential air quality, dust and odour impacts of the project in accordance with relevant EPA guidelines. • Greenhouse Gas – including: – a quantitative assessment of the potential scope 1, 2 and 3 greenhouse gas emissions of the project, and a qualitative assessment of the potential impacts of these emissions on the environment; and – a detailed description of the measure that would be implemented on site to ensure that the project is energy efficient. • Soil & Water – including: – the proposed erosion and sediment controls during construction; – a site water balance, including a detailed description of the measures to minimise the water use at the site; – wastewater predictions, and the measures that would be implemented to treat, reuse and/or dispose of this water; – compliance with the rules in any relevant Water Sharing Plan (WSP) and legislation; – the proposed stormwater management system, including the capacity of onsite detention systems, and measures to treat, reuse or dispose of water; and – consideration of any potential salinity, contamination, flooding and acid sulfate soil impacts of the project. • Hazards and risk – including a preliminary risk screening undertaken in accordance with <i>State Environmental Planning Policy No. 33 – Hazardous and Offensive Development</i> (SEPP 33) and <i>Applying SEPP 33</i> (DoP, 2011), and if necessary, a Preliminary Hazard Analysis (PHA).

	• Flora and fauna – particularly threatened species, populations or ecological communities, or their habitats. • Visual – including an assessment of the potential visual impacts of the project on the amenity of the surrounding area. • Heritage – including potential Aboriginal and non-Aboriginal heritage impacts of the project.
Plans and Documents	The EIS must include all relevant plans, architectural drawings, diagrams and relevant documentation required under Schedule 1 of the <i>Environmental Planning and Assessment Regulation 2000</i> . These documents should be included as part of the EIS rather than as separate documents.
Consultation	During the preparation of the EIS, you must consult with the relevant local, State or Commonwealth Government authorities, service providers, community groups and affected landowners. In particular you must consult with the: • Shoalhaven City Council; • Endeavour Energy; • Environmental Protection Authority; • Office of Environment and Heritage (including the Heritage Branch); • NSW Department of Trade & Investment – Mineral Resources Branch; • NSW Roads and Maritime Service; and • the local community and stakeholders. The EIS must describe the consultation process and the issues raised, and identify where the design of the development has been amended in response to these issues. Where amendments have not been made to address an issue, a short explanation should be provided.
Further consultation after 2 years	If you do not lodge an EIS for the development within 2 years of the issue date of these DGRs, you must consult with the Director General in relation to the requirements for lodgement.
References	The assessment of the key issues listed above must take into account relevant guidelines, policies, and plans as identified. While not exhaustive, the following attachment contains a list of some of the guidelines, policies, and plans that may be relevant to the environmental assessment of this development.
