This document was prepared by AECOM Australia Pty Ltd (AECOM) for the sole use of Lend Lease (Millers Point) Pty Ltd, the only intended beneficiary of our work. Any advice, opinions or recommendations contained in this document should be read and relied upon only in the context of the document as a whole and are considered current to the date of this document. Any other party should satisfy themselves that the scope of work conducted and reported herein meets their specific needs before relying on this document. AECOM cannot be held liable for any third party reliance on this document, as AECOM is not aware of the specific needs of the third party. No other party should rely on the document without the prior written consent of AECOM, and AECOM undertakes no duty to, nor accepts any responsibility to, any third party who may rely upon this document.

This document was prepared for the specific purpose described in our proposal dated 16 April 2010 and as agreed to by Lend Lease (Millers Point Pty Ltd. From a technical perspective, the subsurface environment at any site may present substantial uncertainty. It is a heterogeneous, complex environment, in which small subsurface features or changes in geologic conditions can have substantial impacts on water and chemical movement. Uncertainties may also affect source characterisation assessment of chemical fate and transport in the environment, assessment of exposure risks and health effects, and remedial action performance.

AECOM's professional opinions are based upon its professional judgement, experience, and training. These opinions are also based upon data derived from the testing and analysis described in this document.. It is possible that additional testing and analysis might produce different results and/or different opinions. AECOM has limited its investigation to the scope agreed upon with its client. AECOM believes that its opinions are reasonably supported by the testing and analysis that have been done, and that those opinions have been developed according to the professional standard of care for the environmental consulting profession in this area at the date of this document. That standard of care may change and new methods and practices of exploration, testing, analysis and remediation may develop in the future, which might produce different results. AECOM's professional opinions contained in this document are subject to modification if additional information is obtained, through further investigation, observations, or validation testing and analysis during remedial activities.

All rights reserved. No section or element of this document may be removed from this document, extracted, reproduced, electronically stored or transmitted in any form without the prior written permission of AECOM.

Executive Summary

Introduction

AECOM Australia Pty Limited (AECOM) was engaged by Lend Lease (Millers Point) Pty Limited (LL) to undertake a Data Gap Investigation (DGI) for the area of land subject to NSW Department of Environment, Climate Change and Water (DECCW) Declaration Area 21122, as issued by the NSW Environment Protection Authority and gazetted on 15 May 2010. The Declaration Area is also known as the former Millers Point gasworks and includes parts of Block 3, Block 4, Block 5, Southern Cove and Hickson Road. For purpose of this report the "Site" is defined as the Declaration Area and selected monitoring wells in part of Block 5, west of the Declaration Area. The DGI was a recommendation of the data review conducted on previous available environmental reports related to the Site.

The majority of the Site has been historically used to manufacture gas from approximately 1840 to 1921. It is understood that some of the former gasworks infrastructure remains in place beneath the current slab and roadways (including Hickson Road). Contamination has been reported in fill material, natural soil and groundwater underlying the Site, other adjacent portions of Barangaroo, adjacent portions of Hickson Road and sediment in the nearby Darling Harbour. Barangaroo has been the subject of reclamation activities over the years, which appears to have consisted of placement of up to 17.5 metres of fill material in the Declaration Area (as defined in the declaration).

It is understood that Barangaroo Delivery Authority (BDA) has entered into a Voluntary Management Proposal (VMP) with DECCW, that addresses (and is limited to) those works required to remove the declaration. Separate to this, AECOM understands that LL intends to re-develop a portion of the Site for high density residential and commercial purposes, with public open space and roadway areas.

While all data related to Site have been combined into this DGI report, it is noted that actual remediation design documents (e.g. human health and ecological risk assessment, remedial action plan and remediation works plan) will be prepared separately for both the removal of the declaration and redevelopment purposes, to delineate the differing objectives and end requirements for these works.

Purpose and Objectives

The purpose of the DGI is to reduce uncertainties which exist in the current data set, confirm the characteristics of soil and groundwater underlying the site, provide the additional data required if a quantitative human health and ecological risk assessment (HHERA) is developed and facilitate the development of a Remedial Action Plan (RAP) and Remediation Works Plan (RWP) for the Site.

The subsequent objectives of the Declaration Area DGI are as follows:

- Complete investigations considering the proposed development incorporating the Site.
- Complete a detailed DGI with a scope, extent and test frequency that will provide a robust data set (including both current and new data) suitable for:
  - Qualification and quantification of soil and groundwater contamination (including assessment of acid sulfate soils [ASS]) to facilitate planning of the proposed remediation strategies.
  - Supporting the further development, refinement, costing and design of remediation strategies for the Site, including preparation of a detailed RAP and RWP.

Scope of Works

To achieve the objective of the investigation, the following scope of work was undertaken:

- A total of 24 boreholes were advanced across the Site, which were subsequently sampled;
- Conversion of nine boreholes to groundwater monitoring wells;
- Installation and sampling of seven soil vapour wells;
- Sampling of a further five groundwater monitoring well locations located down gradient of the Declaration Area.

- Monitoring of groundwater including completion of rising head tests and tidal fluctuation monitoring within selected groundwater monitoring wells; and
- Preparation of this DGI report, discussing the methodologies used, the investigation results and conclusions regarding future requirements for management and/or remediation of the Site.

Results

The results of the investigations conducted by AECOM and others across the Site indicated the following:

Fill and Soil

- The depth of fill materials encountered during the DGI was variable across the Declaration Area, with fill depths ranging from 0.43 m bgs (AECOM BH67) to 17.5 m bgs (AECOM BH56). Fill materials were generally shallower in the eastern portion of the Site closest to Hickson Road and deeper in the western portion of the Site. The thickness of fill material generally increased from east to west across the Site. Observed fill materials generally comprised unconsolidated gravels, sand, bricks, sandstone, timber, slag and steel in a variable gravelly sand to clayey sand matrix. Fill materials were present above natural silty sands, gravelly sands, clays, weathered sandstone and sand with components of clay overlying sandstone bedrock;
- Concentrations of contaminants of potential concern (CoPC) including lead, total petroleum hydrocarbons (TPH) (C6-C9 and C10-C36), benzene, toluene, ethylbenzene, xylene (BTEX) compounds, polycyclic aromatic hydrocarbons (PAHs) (including benzo(a)pyrene [B(a)P]) and sulfate variably exceeded the adopted Site investigation Criteria. Concentrations of some semi volatile organic compounds (SVOCs) exceeding the laboratory limit of reporting (LOR) were also reported. The reported results are generally consistent with the findings of previous investigations with respect to the identified CoPC.
- The maximum concentrations of CoPC were generally located in proximity to and down gradient of the former gasworks infrastructure in Block 4 and Hickson Road. Free tar was identified at eight locations within Hickson Road and Block 4 in the vicinity of the tar tank, purifying beds and 1870 gasholder indicating these locations are the main areas of contamination.

Soil Vapour

- Reported soil vapour results indicated some gasworks-derived impacts (indicated by the presence of naphthalene) in locations closest to the former gasworks area, and low concentrations of toluene, chloroform and tetrachloroethene (below soil vapour guidelines) in some locations. The reported results were below the Site investigation criteria.

Groundwater

- Groundwater is present beneath the site within the fill materials and underlying natural material. Groundwater was encountered at the Site at depths ranging from 1.38 to 2.92 m below ground surface (bgs) and is subject to tidal fluctuation. Water level monitoring within selected wells over a three day period confirmed that groundwater at the Site is tidally influenced, with the influence extending as far east (inland) as Hickson Road, although the degree of fluctuation is much less on the eastern portion of the Site towards Hickson Road.
- Dissolved-phase concentrations of contaminants were variably reported above the Site investigation criteria (e.g. lead, cadmium, chromium (III+VI), cobalt, copper, mercury nickel, zinc, benzene, naphthalene, phenol and ammonia).
- The most significant groundwater contamination was identified in the immediate vicinity of the former gasworks infrastructure and contamination is present in both dissolved and free phase forms. Concentrations of contaminants in excess of the assessment criteria were also identified in down-gradient wells, indicating the westerly migration of contamination. The results of the investigation indicate that the variable nature and distribution of fill materials at the Site cause localised variations in groundwater flow and associated contaminant migration, which is further complicated by tidal movements.

Conceptual Site Model Update

Based on the combined the ERM, Coffey and AECOM dataset, the following points provide an update to the conceptual site model:

- The majority of gasworks related contamination present underlying the Declaration area has been confirmed. With the exception of 4 locations outside of the Declaration Area (ERM BH169, ERM BH191,

AECOM BH40 and AECOM BH60), observations of tar and tarry/strong hydrocarbon odour with sheen on sampled material were entirely in boreholes within the Declaration Area.

- The deeper contamination reported in the Public Domain west of Block 5 has been confirmed as being present in the natural soil immediately underlying the fill material.
- The conceptual model depicted in ERM (2008) Figure 20 generally fits with the exception of deep bedrock contamination (discussed below). AECOM DGI boreholes did not generally extend into bedrock and therefore the deep bedrock contamination interpreted in ERM BH205, BH206 and BH209 has not been confirmed.

Review of the ERM borelogs and soil data indicates that the highly impacted zones of contamination appear to be in the natural soil at the bedrock interface and decrease with depth. Because the wells installed in BH206 and BH209 are screened across the natural soil and sandstone bedrock (as indicated in the borelogs) and there is no evidence for deep contamination in BH205 (other than tar in the well which could be related to well completion issues given the difficult nature of the drilling at the Barangaroo Site), AECOM considers that the dataset does not support the presence of deep bedrock contamination.

The combined dataset indicates that the highly impacted zone is generally at the base of the fill material, through the natural soil and into the top of the sandstone. This is would be expected at a DNAPL site where highly variable and permeable fill material overlies a relatively less permeable natural soil/bedrock. The DNAPL would migrate downwards and pool/adsorb on a less permeable underlying strata. It is also noted that given the high tidal connectivity of the fill material, lower concentrations in the fill material would be expected, with the higher concentrations remaining in the lower permeable material with less connectivity (supported by AECOM 2010c).

Conclusions and Recommendations

The DGI for the Declaration Area has identified elevated concentrations of CoPC exceeding the adopted Site investigation criteria. The reported results are considered to be primarily associated with the Sites former land use as a gas manufacturing plant and with the importation of fill materials to level the Site.

The Site has been declared a Remediation Site by the EPA (now known as DECCW) as it has been previously determined that the land is contaminated in such a way as to present a significant risk of harm to human health and the environment. The reported results of this DGI and previous investigations support this determination.

AECOM considers that the DGI has derived sufficient data to address identified existing data gaps and confirm the general characteristics of soil, fill, soil vapour and groundwater underlying the Site in order to allow:

- Planning of the proposed remediation strategies and commencement of remediation treatability trials;
- Development of contaminant fate and transport modelling;
- Development of a Site specific HHERA demonstrating what soil and groundwater contamination will represent an acceptable risk if reused as part of the development (including placement in Headland Park); and
- Further development and refinement of the proposed remediation strategies and associated environmental management measures, including preparation of a detailed remediation action plan (RAP) and final remediation works plan (RWP).

In order to achieve the objectives of removing the declaration which currently applies to the Site and making the Site suitable for the proposed land use, AECOM recommends completion of the following:

- A site-specific HHERA addressing the remediation required for removal of the Declaration;
- A separate HHERA addressing the remediation of the Declaration Area for the proposed future land use;
- A stand-alone RAP addressing Declaration removal detailing options for remediation and/or management and a recommended preferred strategy that will:
  - Facilitate removal of the DECCW Declaration only.
  - Detail validation requirements to be implemented to demonstrate successful completion of the remedial works.
  - Detail the requirement (if any) for potential future monitoring or management.
- A separate RAP detailing options for remediation and/or management and a recommended preferred strategy that will:
  - Render the areas suitable for their intended land use.

  - Detail validation requirements to be implemented to demonstrate successful completion of the remedial works.
  - Detail the requirement (if any) for potential future monitoring or management.
- Separate RWPs providing technical specifications of the work that must be completed to facilitate delivery of the remediation works prescribed by the RAPs for the Site; and
- An Acid Sulphate Soil Management Plan (ASSMP) for the management of PASS during future excavation works.

1.0 Introduction

AECOM Australia Pty Limited (AECOM) was engaged by Lend Lease (Millers Point) Pty Limited (LL) to undertake a Data Gap Investigation (DGI) for the area of land subject to NSW Department of Environment, Climate Change and Water (DECCW) Declaration Area 21122, as issued by the NSW Environment Protection Authority and gazetted on 15 May 2010. The Declaration Area is also known as the former Millers Point gasworks and includes parts of Block 3, Block 4, Block 5, Southern Cove and Hickson Road. For purpose of this report the "Site" is defined as the Declaration Area and selected monitoring wells in part of Block 5, west of the Declaration Area. The DGI was a recommendation of the data review conducted on previous available environmental reports related to the Site.

Figure F1 shows the location of the Site and **Figure F2** shows the layout of the site.

The majority of the Site has been historically used to manufacture gas from approximately 1840 to 1921. It is understood that some of the former gasworks infrastructure remains in place beneath the current slab and roadways (including Hickson Road). Contamination has been reported in fill material, natural soil and groundwater underlying the Site, other adjacent portions of Barangaroo, adjacent portions of Hickson Road and sediment in the adjacent Darling Harbour. Barangaroo has been the subject of reclamation activities over the years, which appears to have consisted of placement of up to 17.5 metres of fill material in the Declaration Area.

In May 2009, the NSW Environment Protection Authority (EPA) determined that the Declaration Area was contaminated in such a way as to present a significant risk of harm (SROH) to human health and the environment. As a consequence the EPA declared the Declaration Area to be a Remediation Site (Declaration Number 21122; Area Number 3221) under the then section 9 of the Contaminated Land Management Act, 1997.

It is understood that Barangaroo Delivery Authority (BDA) has entered into a Voluntary Management Proposal (VMP) with DECCW, that addresses (and is limited to) those works required to remove the Remediation Site declaration. Separate to this, AECOM understands that LL intends to re-develop a portion of the Site for high density residential and commercial purposes, with public open space and roadway areas.

This DGI represents the first step in the design, planning and remediation of contamination as part of the proposed Site Stage 1 Barangaroo Development.

While all data related to Site have been combined into this DGI report, it is noted that actual remediation design documents (e.g. human health and ecological risk assessment, remedial action plan and remediation works plan) will be prepared separately for both the removal of the declaration and redevelopment purposes, to delineate the differing objectives and end requirements for these works.

AECOM notes that similar data gap investigations are occurring in other designated portions of the Barangaroo Stage 1 area (Other Remediation Works North Area and Other Remediation Works South Area) and these will be reported separately.

1.1 Purpose and Objectives

The purpose of this DGI is to:

- Reduce uncertainties which exist in the current data set;
- Confirm the characteristics of soil and groundwater underlying the Site;
- Provide the additional data required for the development of separate quantitative human health and ecological risk assessments (HHERAs) addressing the remediation required for removal of the DECCW Declaration and remediation of the DECCW Declaration Area for the proposed future land use; and
- Facilitate the development of separate Remedial Action Plans (RAPs) and Remediation Works Plans (RWPs) which describe the remediation strategy to be implemented to address the remediation required for removal of the DECCW Declaration and remediation of the DECCW Declaration Area for the proposed future land use.

The subsequent objectives of the Declaration Area DGI are as follows:

- Complete investigations considering the proposed development of the Site (**Figure F3)**.
- Complete a detailed DGI with a scope, extent and test frequency that will provide a robust data set (including both current and new data) suitable for:

- Qualification and quantification of soil and groundwater contamination (including assessment of ASS) to facilitate planning of the proposed remediation strategies.
- Supporting the further development, refinement, costing and design of remediation strategies for the Site, including preparation of a detailed RAP and RWP.

1.2 Data Quality Objectives

In determining the type, quantity and quality of data needed to support decisions relating to the environmental condition of the Site, AECOM undertook the seven-step process to develop the DQOs in accordance with NSW DEC (2006) in the SAQP (AECOM, 2010a).

In developing the DQOs for the investigation, an initial phase of review was undertaken to appraise relevant and available background information and to develop a preliminary conceptual site contamination model identifying the areas of the Site that required investigation for the purpose of assessing the requirements for either the management and/or remediation during the re-development of the Site. The DQOs are discussed in **Appendix A**.

1.3 Scope of Work

The following scope of work was undertaken to achieve the DGI objectives:

- Underground service location was conducted across the Site, including the marking and clearing of proposed intrusive works locations;
- Following service clearance, all locations were concrete cored and air knifed to a depth of one metre below ground surface (m bgs) to further minimise the risk of striking underground services;
- A total of 24 boreholes were advanced across the Declaration Area at the locations shown on **Figure F4**;
- Soil samples were collected from each borehole location;
- Nine of the boreholes were converted to groundwater monitoring wells at the locations shown on **Figure F4**;
- An additional seven boreholes were advanced across the Site for the installation of seven soil vapour wells at the locations shown on **Figure F4**;
- A further five groundwater monitoring well locations located down gradient groundwater of the Declaration Area were sampled at the locations shown on **Figure F4** to evaluate the potential for migration of contamination (towards Darling Harbour) from the Declaration Area;
- Groundwater levels were gauged at each new AECOM location and existing ERM and Coffey monitoring well locations (where tar was not present);
- Laboratory analysis of samples was conducted by National Association of Testing Authorities (NATA) certified methods using NATA accredited laboratories (ALS, LabMark, SGS and Australian Soil Testing);
- A survey of soil, soil vapour and groundwater sampling locations was conducted; and
- Preparation of this DGI report, discussing the methodologies, the investigation results and conclusions regarding the requirements for management and/or remediation of the Site during the re-development works.

Fieldwork for other aspects of the overall Barangaroo Stage 1 investigations were conducted concurrently and included:

- Excavation of seven test pits for the collection of bulk samples to conduct treatability trials for preferred remedial technologies (surfactant enhanced in situ chemical oxidation and ex situ stabilisation); and
- Installation of multi-level piezometers down gradient of the Site and a stilling well in Darling Harbour.

The details of these works are reported separately (VeruTEK, 2010a, and b and AECOM 2010c) but observations and data are used in this report where relevant to help further develop the conceptual site model.

2.0 Site Identification

The following table provides Site identification details.

Table 1: Site Identification Details

Item	Description
Site Owner	Barangaroo: The Barangaroo Delivery Authority (BDA) Hickson Road: City of Sydney Council
Client	Lend Lease (Millers Point) Pty Ltd (LL)
Site Address	Wharf 8, Hickson Road (Sussex Street), Barangaroo, NSW 2000
Legal Description (Lot and DP)	Part Lot 5 and Part Lot 3 in Deposited Plan 876514 Section of Hickson Road in State Plan 118 and 162 (refer **Appendix B**)
County and Parish	County of Cumberland, Parish of Saint Phillip
Local Government Authority	City of Sydney
Current Zoning	Site within Hickson Road: Maritime and Transport Zone [a] Site within Barangaroo: Part zone B4 Mixed Use [b]
Current Land Use	Vacant. Partial access for public recreation (waking and bike riding).
Proposed Land Use	Block 3: High density residential (minimal access to soil) and commercial with basement car parking Block 4: High density residential (minimal access to soil) and commercial with basement car parking Block 5: High density residential (minimal access to soil) and commercial with basement car parking Southern Cove: Recreational Open Space Hickson Road: Roadway
Site Area**	Block 3: 183 m^2 Block 4: 10,718 m^2 Block 5: 4,583 m^2 Southern Cove: 2,984 m^2 Hickson Road: 5,729 m^2
Approximate Average Elevation	2 - 3 m AHD
Site Location	**Figure F1**
Site Layout	**Figure F2**

Notes:

** Derived from CAD plans provided by LL. Areas are based on Blocks and sub-areas within the prescribed Site boundaries only.

AHD – Australian Height Datum

3.0 Previous Investigations

A number of previous investigations have been undertaken at the Site. It is noted that these investigations also included areas of Barangaroo not included in this report. The reports considered relevant to the DGI include the following:

- NA&A .1996. Initial Environmental Assessment, Sydney Ports Corporation, Darling Harbour Berths 3-8 Hickson Road, Darling Harbour. June.
- Jeffery and Katauskas (J&K). 2006. Geotechnical Report development of Wharves 3-8 at East Darling Harbour. August.
- ERM. 2007. Environmental Site Assessment, East Darling Harbour, Sydney, NSW, Final Report. 21 June.
- Coffey Environments. 2008. Preliminary Environmental Investigation, 30-38 Hickson Road, Millers Point, NSW 2000. 12 May.
- ERM. 2008a. Additional Investigation Works at Barangaroo, Hickson Road, Millers Point, NSW. July.
- ERM. 2008b. Preliminary Sediment Screening Works at East Darling Harbour, Adjacent to Barangaroo, NSW, Draft, Rev 03. August.
- ERM. 2008c. Draft Stage 2 Remedial Action Plan for Barangaroo, Hickson Road, Sydney. September.
- ARUP. 2008. Barangaroo Development, East Darling Harbour Geotechnical Desk Top Study. 28 October.
- AECOM Australia Pty Ltd, 2009b. Revised Draft Remediation Work Plan, Stage 1 Development, Barangaroo, 30 November.
- AECOM Australia Pty Ltd 2010b. Data Gap Investigation, Other Remediation Works (South) Area Hickson Road, Millers Point NSW. 6 April.

These reports are summarised in **Sections 3.1** to **3.10** below.

Sample locations from the previous investigations are presented in **Figure F4**.

In addition to the above investigations, additional documentation which has been reviewed and considered during the preparation of the DGI report includes the following:

- LL supplied CD, 2010. BDA Supplied Historical Work As Executed Drawings for the Former Wharf Structures at Berths 3 to 8, Barangaroo. CD dated 21 January.
- LL supplied CD, 2010. Geotechnical Information - Barangaroo Area (including CBD Metro Geotechnical and Environmental Investigations, completed by Coffey). CD dated 21 January.
- LL Scheme CAD files provided to AECOM in December 2009.

AECOM notes that the DGI will facilitate the development of a RAP and RWP, which will describe the remediation strategy to be implemented for the Declaration Area. The Overarching Remedial Action Plan for the Barangaroo Project Site (ERM, 2010d) has been finalised, and provides guidance for remediation works across the entire Barangaroo Site. The Overarching RAP requires that specific RAPs be developed to address remediation to remove the Declaration and for development of various parts of the Barangaroo Site.

3.1 NA&A (1996)

Noel Arnold and Associates (NA&A) were commissioned by the Sydney Ports Corporation to undertake an Initial Environmental Assessment at Berths 3-8 Hickson Road, Darling Harbour, NSW.

The report details results of an initial contamination assessment and provides options for remedial management of the area investigated. Known and potential contamination was not determined to be a risk to the ongoing use by the then occupant providing subsurface materials were not disturbed. Impact was identified in the area of the former AGL Gasworks located to the north of the Site.

3.2 Coffey (1998)

Coffey was engaged by Sydney Ports Corporation to undertake an Environmental Soil Quality Assessment of Wharf 8, Darling Harbour.

The investigation was a limited site assessment including soil sampling at Wharf 8 to identify contamination and provide options for disposal of excavated soil associated with proposed development. The ESA reported limited

PAH contamination and identified material required for off-site disposal that would likely require industrial or hazardous waste classification.

3.3 URS (2001)

URS was commissioned by the Sydney Harbour Foreshore Authority (SHFA) to conduct a Contamination Review for Darling Harbour – Berths 3/8, which comprised a review of the contamination issues collated from 11 reports, produced between1993 to 2001. The review identified soil and groundwater contamination associated with the former gasworks, including off-site migration, and soil contamination associated with current vehicle maintenance operations.

3.4 J&K (2006)

Jeffery and Katauskas Pty Ltd (J&K) undertook a Geotechnical Investigation for the East Darling Harbour property (Barangaroo). The investigation was undertaken concurrently with the ERM (2007) Environmental Site Assessment (ESA) which is summarised in **Section 3.5** below.

Key geotechnical findings from the J&K investigation were:

- Fill was sandy and increased in clay content with depth and refusal occurred within fill at several locations across the Site;
- The fill contained large pieces of rubble and was poorly compacted;
- The alluvial sediments consisted predominantly of sandy clays which extended to sandstone bedrock; and
- Sandstone bedrock was generally shallower at the eastern portions of the Site and deepest over the western portion towards Darling Harbour.

3.5 ERM (2007)

Environmental Resources Management Australia (ERM) was commissioned by SHFA to undertake an ESA which consisted of a Stage 1 Preliminary Site Investigation (PSI) and Stage 2 Detailed Site Investigation (DSI) for the East Darling Harbour property (Barangaroo). The investigation was undertaken concurrently with the J&K (2006) investigation (summarised in **Section 3.5** above).

The PSI component of the investigation reported that the area of land which partially encompassed the Site was historically used for port/wharf activities and workshops. The former AGL gasworks site was located within the Site boundary and reclamation activities had historically occurred at Barangaroo for the construction of the wharfs.

Based on the historical information ERM concurred with URS (2001) investigation that the contaminants of potential concern (CoPC) for the Barangaroo Site were TPH, BTEX, heavy metals, PAHs, PCBs, cyanide, sulfates, OCPs and OPPS.

The ESA made the following conclusions:

- Impacts to soil and groundwater were identified predominantly within the area of the former gasworks infrastructure and the reclaimed northwest portion of the Site, with the primary contaminants of concern confirmed as lead, TPH/BTEX and PAH;
- No non aqueous phase liquids (NAPLs) were observed during the investigation, however concentrations of organic contaminants such as TPH indicated that NAPL was likely present in the vicinity of the former gasworks area;
- The groundwater regime was likely to be strongly influenced by tidal fluctuation;
- There appeared to be potential for both migration of contamination onto the Site from the east and migration of contamination from the site into adjacent properties and into Darling Harbour;

The ESA included the following key recommendations:

- The extent of the risks to human health and the environment should be assessed through further investigations and a quantitative risk assessment; and
- Additional delineation investigations and assessment of vapour flux from impacted areas and further assessment of hydrogeological conditions should be undertaken before developing a RAP.

A summary of soil and groundwater results from the ESA is included in **Section 3.7** along with the additional soil data from the 2008 ERM additional investigation.

3.6 Coffey (2008)

Coffey Environments Pty Ltd (Coffey) was commissioned by the Council of the City of Sydney to undertake a Preliminary Environmental Investigation (PEI) at the segment of Hickson Road (between numbers 30 to 38), Millers Point, NSW, which is located on the eastern portion of the Site.

- Soil samples were analysed for Heavy Metals, TPH, BTEX, PAH, phenols, chlorinated hydrocarbons and asbestos. Groundwater samples were analysed for Heavy Metals, TPH, BTEX, PAH, phenols, chlorinated hydrocarbons and ammonia.
- The general ground conditions encountered during the intrusive investigation comprised asphalt overlaying concrete and fill ranging in depth between 3.1 and 9.4 m bgs. The fill generally consisted of gravelly sand and sandy gravels with minimal anthropogenic inclusions. The fill was generally underlain by sandstone, with the exception of residual clayey sand and sand soils at two locations (BH3 and BH2).
- Tar was encountered in boreholes BH7 (4.6-5.4 m bgs) and BH10 (8.5 and 9.4 m bgs) which were located in the southern portion of the investigation area.
- Concentrations of heavy metals, phenols and chlorinated hydrocarbons were either less than the laboratory LOR or the adopted assessment criteria in all samples analysed. Asbestos fibres were not detected in any sample analysed.

Concentrations of TPH, BTEX and PAHs were detected at concentrations greater than the adopted assessment criteria in soil samples from the following locations:

- MW7 - reported the following exceedences:
  - TPH C6-C9 concentrations ranged between 227 mg/kg (3.5 m bgs) and 7890 mg/kg (5.1 m bgs);
  - TPH C10-C36 concentrations ranged between 2660 mg/kg (1.4 m bgs) and 126 300 mg/kg (5.1 m bgs);
  - BTEX concentrations with maximum concentrations of 2080 mg/kg of benzene, 1990 mg/kg of toluene, 154 mg/kg of ethylbenzene and 1863 mg/kg of total xylene;
  - Total PAH concentrations ranging between 267.7 mg/kg(1.4 m bgs) and 370081.9 mg/kg (5 m bgs); and
  - Benzo(a)pyrene concentrations ranging between 32.1 mg/kg (1.4 m bgs)and 677 mg/kg (5 m bgs).
- MW10 - reported the following exceedences:
  - TPH C6-C9 concentration of 7590 mg/kg at 8.6 m bgs;
  - TPH C10-C36 concentrations of 60200 mg/kg and 181 800 mg/kg at 4.9 m bgs and 8.6 m bgs respectively;
  - BTEX concentrations with maximum concentrations of 1510 mg/kg of benzene, 2650 mg/kg of toluene, 261 mg/kg of ethylbenzene and 261 mg/kg of total xylene;
  - Total PAH concentrations ranging between 101.2 mg/kg (1.9 m bgs) and 41 270.8 mg/kg (8.6 m bgs); and
  - Benzo(a)pyrene concentrations ranging between 8.6 mg/kg (1.9 m bgs) and 412 mg/kg (8.6 m bgs).
- MW3- reported the following exceedences:
  - TPH C10-C36 concentrations 4280 mg/kg (1 m bgs) and 9940 mg/kg (3 m bgs);
  - Total PAH concentrations of 360.6 mg/kg (3 m bgs) and 530.5 mg/kg (0.9 m bgs); and
  - Benzo(a)pyrene concentrations10.9 mg/kg (3 m bgs) and 11.7 mg/kg (0.9 m bgs).
- BH4 - reported the following exceedences:
  - TPH C10-C36 concentration of 8860 mg/kg at 2.6 m bgs;
  - Total PAH concentration of 169.7 mg/kg at 2.4 m bgs; and
  - Benzo(a)pyrene concentration 11.4 mg/kg at 2.4 m bgs.
- BH5- reported the following exceedences:
  - TPH C10-C36 concentration of 1700 mg/kg at 0.5 m bgs;
  - Benzene concentration of 2 mg/kg at 0.5 m bgs;
  - Total PAH concentration of 102.9 mg/kg at 0.5 m bgs; and
  - Benzo(a)pyrene concentration of 6.9 mg/kg at 0.5 m bgs.

- BH8- reported the following exceedences:
  - Total PAH concentration of 170.7 mg/kg and 332.9 mg/kg at 0.4 m bgs and 0.7 m bgs respectively; and
  - Benzo(a)pyrene concentration of 16.1 mg/kg and 31.3 mg/kg at 0.4 m bgs and 0.7 m bgs respectively.

Concentrations of TPH, PAH, BTEX, heavy metals and phenols variably exceeded the adopted assessment criteria [ANZECC (2000) Marine 95%)] in the groundwater samples analysed. The groundwater results are summarised below:

- TPH C_6-C_{36} concentrations ranged between 0.22 mg/L (MW6) and 907.87 mg/L (MW7);
- Benzo(a)pyrene concentrations ranged between 0.2 mg/L (MW6) and 709 mg/L (MW10);
- Naphthalene concentrations ranged between 0.6 mg/L (MW6) and 15 800 mg/L (MW10);
- Phenol concentrations ranged between 2 ug/L (MW3) and 249 000 ug/L (MW10);
- Heavy Metals:
  - Arsenic ranged between 5 ug/L (MW3) and 24 ug/L (MW10);
  - Cadmium ranged between 0.1 ug/L (MW10) and 1 ug/L (MW6);
  - Zinc concentrations ranged between 22ug/L (MW7) and 378 ug/L (MW10); and
  - Copper ranged between 1 ug/L (MW3) and 20 ug/L (MW6).

The Coffey PEI made the following conclusions and recommendations:

- High concentrations of soil and groundwater contamination were present in the former gasworks infrastructure, with the nature of the contamination typical of gasworks operations;
- Heavier fractions of hydrocarbons were present in bedrock and separate phase hydrocarbon have the potential to move slowly along fractures and joints in the sandstone bedrock;
- The extent of deeper contamination associated with the former main gas holder annulus could not be delineated as part of the investigation;
- The current use of the land as a public road was considered to be a low risk to human health as there was no direct contact with contaminated soils; and
- It was recommended that following additional investigations to reduce uncertainties and further delineate the impacted soils and groundwater that a Remedial Action Plan be developed.

3.7 ERM (2008a)

ERM was commissioned by SHFA to undertake additional soil and groundwater investigation works at Barangaroo. The objectives of the works were to fill in data gaps in soil and groundwater data to enable a RAP to be developed.

The findings of the ERM Additional Investigation were:

- Concentrations of lead, TPH, BTEX, PAH and sulphate exceeded the adopted assessment criteria in soil across the majority of the Site, with the highest concentrations occurring within the area known to contain historical gasworks infrastructure;
- Concentrations of dissolved TPH C_6-C_{36}, BTEX and PAH compounds exceeded the adopted groundwater assessment criteria within the declared gasworks remediation area. Exceedences within the area known to contain historical gasworks infrastructure were identified in wells screened across fill, natural clayey sand and sandstone bedrock;
- Free phase hydrocarbons or dense non-aqueous phase liquid (DNAPL) were located during drilling at several locations and was accumulated in completed monitoring well MW204D; and
- The likely contamination migration pathways in groundwater were identified by ERM to be through bedding planes in sandstone, the highly permeable fill aquifer and subsurface anthropogenic structures such as utilities or building related disturbances.

A summary of the results from within the Site are provided in **Table 2** below. The table also includes the relevant ERM (2007) ESA results.

Table 2: Summary of Soil Analytical Results from ERM 2007 and 2008 Investigations and ERM (2007) Groundwater Results

Analyte	No. Soil Results	Soil Results (Coffey and ERM)	Groundwater Results (All monitoring rounds, Coffey and ERM)
Heavy Metals	142	Concentrations of metals in samples were all less than NSW DECC (2006) SIL4 Criteria with the exception of lead in the following samples ERM locations listed. • BH201/10.3 (3190 mg/kg) • BH132_1.5-1.95 (12100 mg/kg) • BH074_1.5-1.95 (1930 mg/kg) • BH067-1.5-1.95 (13600 mg/kg) • BH062-1.5-1.95 (2870 mg/kg) Metal concentration ranges are listed below. • Lead (<5 to 13 600 mg/kg) • Arsenic (<5 to 33 mg/kg) • Cadmium (<1 to 2) • Chromium (III+VI) (<2 to 171 mg/kg) • Copper (<5 to 171 mg/kg) • Mercury (<0.1 to 5.2 mg/kg) • Nickel (<2 to 107 mg/kg) • Zinc (<5 to 4770 mg/kg)	Heavy metal concentration ranges are and exceedences are listed below. • Lead : <0.0002 to 0.037 mg/L (ANZECC [2000] 95% trigger value [ANZECC] exceedences in ERM MW15 and Coffey MW6 and MW7) • Arsenic: <0.0005 mg/L to 0.024 mg/L • Cadmium: <0.0001 to 0.007 mg/L • Chromium (III+VI): <0.0005 to 0.017 mg/L (ANZECC exceedences in Coffey MW10, ERM MW15, ERM MW198 and ERM MW204D) • Copper: <0.001 to 0.003 mg/L (ANZECC exceedences in Coffey MW7 and MW10) • Mercury: <0.0001 to 0.0011 mg/L (ANZECC [99%] exceedences in ERM MW15,MW198, MW204D, MW205 and Coffey MW7, MW15 and MW10) • Nickel: 0.005 to 0.158 mg/L (ANZECC exceedences in ERM MW205, MW198, MW15 and Coffey MW10) • Zinc: 0.009 to 0.373 mg/L (ANZECC exceedences in Coffey MW10, MW6, MW15 and MW3 and in ERM MW15, MW198, MW200 and MW205)
TPH C6-C9	137	TPH C6-C9 was detected in 35 samples and the concentration range was <2 to 7590 mg/kg. 19 samples exceeded the NSW EPA (1994) criteria of 65 mg/kg. The highest concentration was in sample MW10_8.6-8.7 (Coffey).	TPH C6-C9 concentrations ranged from <20 to 73600 µg/L The highest concentration was in ERM MW205 and the lowest in Coffey MW6.
TPH C10-C36	143	TPH C10-C36 was detected in 82 samples and the concentration range was <50 to 181 100 mg/kg. 19 samples exceeded the NSW EPA (1994) criteria of 1000 mg/kg. The highest concentration was in sample MW10_8.6-8.7(Coffey).	TPH C10-C36 concentrations ranged from <50 to 205 000 µg/L. The highest concentration was in Coffey MW15 and the lowest in Coffey MW6.

Analyte	No. Soil Results	Soil Results (Coffey and ERM)	Groundwater Results (All monitoring rounds, Coffey and ERM)
BTEX	137	Benzene, Toluene, Ethylbenzene and Total Xylene was detected in 27 to 31 samples and the concentration ranges and number of exceedences of the NSW EPA (1994) criteria were: • Benzene (<0.2 to 1510 mg/kg), 24 exceedences • Toluene (<0.2 to 2650 mg/kg), 4 exceedences • Ethylbenzene (<0.2 to 261 mg/kg), 2 exceedences • Total Xylene (<0.01 to 2576 mg/kg), 16 exceedences The highest concentration was in sample MW10_8.6-8.7 (Coffey).	The following BTEX concentration ranges have been reported: • Benzene: <1 to 40200 µg/L (ANZECC exceedences in ERM MW15,MW200, MW204D, MW205, MW209 and Coffey MW7, MW15 and MW10) • Ethylbenzene: <2 to 3020 µg/ L (highest concentration in MW205) • Toluene: <0.002 to 17.6 µg/L (highest concentration in ERM MW15) • Total Xylene: <4 to 6700 µg/L (highest concentration in ERM MW15)
PAHs	143	Total PAHs was detected in 35 samples and the concentration range was <0.5 to 29652.8 mg/kg. 102 samples exceeded the NSW DECC (2006) SIL4 Criteria for Total PAHs of 100 mg/kg. The highest concentration was in sample MW10_8.6-8.7. B(a)P was detected in 88 samples and the concentration range was <0.5 to 29652.8 mg/kg. 51 samples exceeded the NSW DECC (2006) SIL4 Criteria for B(a)P of 652 mg/kg. The highest concentration was in sample BH204D/1.5.	PAH concentration ranges are listed below. Total PAHs: 2.2 to 384000 µg/L (highest concentration in Coffey MW15) Naphthalene: 0.6 to 192000 µg/L (ANZECC exceedences in Coffey MW15, MW7 and MW3 and ERM MW210, MW209, MW206, MW205, MW204D, MW200 and MW15) B(a)P: <0.2 to 7750 µg/L (highest concentration in Coffey MW15)
Phenols	72	Concentrations of Phenol in all samples were all less than NSW DECC (2006) SIL4 Criteria of 42 500 mg/kg. Phenol was detected in nine samples and the concentration range of was <0.5 to 1720 mg/kg.	The concentrations of Phenol ranged between <1 µg/L to 249 000 µg/L. There were ANZECC exceedences in Coffey MW15, MW7 and MW3 and ERM MW15, MW200 and MW204D. The highest concentration was in ERM MW204D and the lowest in Coffey MW3.
PCBs	73	PCBs were only detected in 2 samples with concentrations of 0.43 mg/kg (BH115 1.5_1.95) and 0.74 mg/kg (BH062-3.0-3.45). Concentrations of PCBs in all samples were all less than NSW DECC (2006) SIL4 Criteria of 50 mg/kg.	Concentrations of PCBs were less than the laboratory LOR in all samples analysed.
OCPs/OPPs	2	OCPs and OPPs were not detected at concentrations greater than the LOR.	Not analysed.
Asbestos	12	Chrysotile and amosite asbestos fibres detected in BH203/1.5	Not applicable

The ERM Additional Investigation made the following recommendations:

- A quantitative human health and ecological risk assessment should be undertaken once further details of future redevelopment are known;
- Results of the investigation should be assessed with reference to previous investigations undertaken for Barangaroo;
- Routine groundwater monitoring should be considered to assess temporal variations in CoPC;
- Considering asbestos was identified in only one sample, it was unlikely that asbestos contamination was wide spread, however it was recommended that further work is required to determine the extent and nature of asbestos in fill; and
- A RAP should be developed and following completion of a RAP, a RWP should be developed.

3.8 ERM (2008b)

ERM was commissioned by SHFA to undertake Preliminary Sediment Screening Works at East Darling Harbour, adjacent to Barangaroo. The preliminary sediment screening works were conducted in East Darling Harbour to identify potential offsite migration of contamination from the Site to sediments in Darling Harbour.

Sediment cores were collected from the Harbour adjacent to Barangaroo along 7 transects. Screening identified PAH, tributyl tin (TBT) and metals exceeding ANZECC/ARMCANZ (2000) interim sediment quality guidelines (low). Elevated concentrations of TPH C_{10}-C_{36} were also reported. The report concluded that remediation of sediments in Darling Harbour would not be required.

3.9 ERM (2008c)

ERM was commissioned by SHFA to complete a RAP for Barangaroo. The RAP envisaged the following scope of works for the site remediation and management of various areas of the site:

- Completion of a Quantitative HHERA to develop Risk Based Cleanup Levels (RBCLs) for each area of the site;
- Preparation of a RWP, Remediation EMP, OH&S Plan, Community Consultation Plan, a Long Term EMP;
- Planning and approvals;
- Site establishment for remediation; and
- Demolition of and appropriate disposal of remaining structures.

The site was divided into four areas (Area 1 to Area 4) for the purposes of the RAP. The majority of the Site is located within Area 1. The following remedial works were envisaged within this area:

Area 1

- If the remediation of Hickson Road is to be completed separately to the remediation of the Site, construction of a barrier between the Site and Hickson Road will be required to minimise potential cross-boundary migration of contaminants;
- Excavation of all materials with concentrations of contaminants exceeding the site specific RBCLs (it is envisaged that sheet piling will be required prior to excavation in most areas to maintain excavation stability and reduce groundwater ingress);
- Abstraction and treatment of contaminated groundwater collecting within excavations;
- Stockpiling and classification of excavated materials according to material type and contaminant concentrations;
- On-site treatment of excavated materials which, following treatment/stabilisation, will be suitable, both geotechnically and chemically, for reinstatement in an appropriately engineered placement area, followed by confirmatory sampling to demonstrate the suitability of the materials;
- Loading, transport and off-site treatment of surplus material and/or material assessed as too heavily impacted to be treated and reused on-site (Restricted Solid or Hazardous Waste) followed by confirmatory sampling and off-site disposal at an appropriately licensed facility;
- Sampling and validation of the excavated surfaces, backfill materials (if required) and groundwater by a suitably qualified environmental consultant;

- Preparation of a Site Audit Report and Site Audit Statement by a NSW DECC Accredited Site Auditor certifying the suitability of the Area for the proposed purposes; and
- Ongoing monitoring of groundwater quality following completion of the remedial works.

3.10 AECOM (2010a)

AECOM was engaged by LL to undertake a Data Gap Investigation (DGI) for the proposed Blocks 1, 2 and 3 (including associated Public Domain areas) within Stage 1 of the Barangaroo redevelopment precinct, that is immediately south of the current Site.

The results of the DGI intrusive investigation are briefly summarised:

- Fill was encountered at the site overlying natural sands, gravelly sands, clays, weathered and sandstone bedrock. The fill was generally shallower (up to 3 m bgs) in the eastern portion of the Site (near Hickson Road) and trending deeper (up to 19.2 m bgs) towards Darling Harbour.
- Soil impacts appeared to be associated with the historical presence of the former gasworks north of Blocks 1 to 3 (located on the current Site) and the presence of fill materials used for land reclamation activities.
- Soil vapour results indicated some gasworks-derived impacts in locations closest to the former gasworks area, and low concentrations of CoPC (below soil vapour and ambient air guidelines) in some locations.
- Groundwater was present beneath the site within fill materials at approximately two metres below the ground surface and was subject to tidal fluctuation. Tidal influence extended as far east (inland) as Hickson Road.
- Groundwater impacts associated with the former gasworks and infrastructure were limited to the north-eastern corner of the Development Area. Groundwater contamination associated with the remaining gasworks infrastructure located to the north of the Site did not appear to be migrating into the harbour in the area of the Site.

The DGI assessment of risk presented the following findings based on considerations of future land use and environment:

- ***Residential/Commercial Land Use at the Development Area***: Whilst the current asphalt and concrete ground surface was considered adequate to limit exposure by Site users to underlying contamination, future earthworks/remediation/development at the Site may complete the exposure pathway.
- ***Passive Recreation Land Use at the Public Domain:*** The area designated as Public Domain is currently covered with concrete and/or asphalt with no complete exposure pathway to underlying soil or groundwater. Given the limited extent of contamination identified within the Public Domain, AECOM considered this area of the Site presents a low risk to human health in its current condition.
- ***Environment:*** The DGI identified potential risks to the down gradient environmental receptor (Darling Harbour). Based on the proposed development plan (i.e. excavation of basements), up gradient contaminant sources will be removed and therefore reduce the potential risk in the future.

The following recommendations were made:

- A RAP should be prepared to address hotspot remediation and potentially impacted materials that may be encountered during the excavation of the Site for future development.
- Additional assessment of the materials should be undertaken in accordance with the RAP in the event that the materials be encountered during the excavation and remediation works that are different to those found during the DGI and/or previous investigations.
- An Acid Sulfate Soil Management Plan may be required for the management of PASS during future excavation works in natural materials.

4.0 Site History and Regulatory Information

4.1 Site History

The history of the Millers Point area in which the Site is located, has been detailed in the publication *Land at Millers Point Ownership and Usage* (Broomham, 2007). It is understood that the study was commissioned by the former gasworks owners (Jemena) and focuses of that portion of Barangaroo. AECOM considers the information is relevant to understanding the development history of the area and associated potential for Site contamination.

The Site history has been discussed in detail in previous publications by Broomham (2007) and ERM (2007, 2008). The following summarises information from these documents:

- **1788-1839**: During early colonial times the shoreline was extended and a wharf and a cottage were constructed near the southern boundary of the original subdivision.
- **1839:** The land was occupied by the Australian Gas Light Company (AGL) in 1839. The gasworks were extended in 1869 to include a retort house and gasholder 100 feet in diameter. The gasworks were located at the Eastern boundary of Lot 5, and including part of Lot 3 and extended beyond the Site across Hickson Road. The remainder of the Site was used for shipping and manufacturing activities.
- **1882**: AGL acquired an additional land on the north side of the gasworks and constructed an additional retort house, demolished the first two gas holders and replaced them with a larger 152 foot diameter gas holder. A tramway system and hydraulic lift was also constructed to transport coke to a depot in Kent Street.
- **1897**: The waterfront was extended by a further 40 feet into Darling Harbour.
- **1899**: A building that housed a carburetted water gas plant was constructed.
- **1908**: Wharf frontages to the north of the gasworks were dredged to make way for the rat-proof sea wall.
- **1912**: The Sydney Harbour Trust Commissioners (SHTC) overtook the site and leased it to AGL until 1921.
- **1918**: Production at the gasworks was terminated.
- **1921**: SHTC gained possession of the gasworks site.
- **Mid 1920s**: The following activities occurred in the mid 1920s:
    - Portions of the gasworks (gasholder and purifier beds) were demolished. The previous gasholder was backfilled with reportedly impacted material. The Site was used by SHTC for workshop and storage facilities.
    - Hickson Road was constructed through the former gasworks site. At those locations where no rock foundation was identified, a 4-inch thick foundation of blue metal followed by an 8 inch thick foundation of concrete was present. A 6-inch thick foundation of concrete was placed in those locations where a rock foundation was identified;
    - New jetties and cross-wharf sections of new berths required the complete dismantling of the AGL's wharf and excavation into a significant part of the former gasworks;
    - The former gasworks site was covered with workshops, including blacksmiths, plumbers, carpenters and a motor garage at the northern end; and
    - There was a SHTC depot located on the western side of Hickson Road.
- **Late 1930s**: The Maritime Services Board (MSB) painted creosote on the wharf piles to protect them against insects.
- **1951**: Five finger wharfs with approximately a dozen east-west oriented narrow warehouse buildings were present along the west side of Hickson Road;
- **1952**: MSB constructed a two storey brick workshop on the southern extremity of the site.
- **1960s**: The wharfs were reconstructed, which included the construction of parallel berths with large cargo-moving areas, demolition and removal of some old wharf structures and formation of new sea walls by sinking caissons filled with concrete.
- **1968**: By 1968 the area behind (east of) the sea wall was in-filled (with unclassified fill) and the area was now a continuous wharf.
- **1970s and 1980s**: The wharves remained utilised for port activities. The 1972 aerial photograph indicated the finger wharfs had been filled in and the Site comprised a sealed area with two large warehouses, on the northern and western boundary. A smaller workshop building in the southeast corner of the Site.

- **1988**: Southern Cove filled in. Ownership of Lot 6 transferred to the Marine Ministerial Holding Corporation (MMHC). Sydney Ports Corporation (SPC) now the proprietor of Lots 3 and 5.
- **1995**: The longshore wharves were leased to Patrick Stevedores No 2 until 2006.
- **1999**: Wharf 8 Overseas Passenger Terminal constructed. The 2004 aerial photograph showed that the two large warehouses had been to make way for the Passenger Terminal building.
- **2007**: Declaration of Investigation Area for Wharfs 5 and 7 and Hickson Road (incorporating the Site) by NSW EPA (see **Section 4.4** below).
- **2008**: The wharf to the north of the Site vacated and warehouses demolished in preparation for development.
- **2009**: Declaration of Remediation Site, Wharves 5 and 7 and portion of Hickson Road (incorporating the Site).
- **2010**: Site remains in use as an Overseas Passenger Terminal for visiting cruise ships.

4.1.1 Gasworks Features

The former AGL gasworks occupied an area of land located within the current Site boundaries. Buried gasworks infrastructure is understood to remain underlying the Site. The footprint of the former gasworks is located within the Site boundary, including the adjacent section of Hickson Road (**Figure F2**). URS (2001) estimated the footprint of the former gasworks to encompass approximately 5,420 m^2 and comprised the following structures:

- Retort House;
- Meter House;
- Gasholders; and
- Purifier Beds.

Other historical structures associated with the former gasworks site include but are not limited to miscellaneous storage sheds, warehouses, and roadways. Gasworks infrastructure underlying Hickson Road include part of the annulus of the former gasholder, a smaller secondary gasholder and a tar well (Broomham 2007, Coffey 2008).

4.2 Planning Information

On 9 February 2007 the Minister for Planning approved the Barangaroo Concept Plan. Following approval of the Concept Plan, on 12 October 2007 Schedule 3 of the State Environmental Planning Policy (Major Developments) 2005 was amended and the Site was rezoned to part RE1 Public Recreation and part B4 Mixed Use.

Rygate and Company Pty Limited obtained the Planning Information from the City of Sydney Council in March 2010. AECOM determined the following areas apply to the Site:

- Part Lot 3 in DP 876514
- Part Lot 5 in DP 876514, and
- Section of Hickson Road across STP 118, and STP 162.

4.3 Historic Certificates of Title

A review of the title information obtained from ERM (2007) ESA indicated the following ownership history:

Table 3: Historical Ownership

Lot and DP	Year	Land Owner
Lot 3 DP 876514	1834-1880	Australian Gaslight Company (AGL)
	1880-1933	Part owned by individual merchants and part leased by AGL
	1933-1936	The Sydney Harbour Trust Commissioners
	1936-1997	The Maritime Services Board of NSW
	1997-2006	Sydney Ports Corporation
Lot 5 DP 876514	1810-1910	Owned by various merchants and a portion by AGL between 1834 and 1864.

Lot and DP	Year	Land Owner
	1910-1936	The Sydney Harbour Trust Commissioners (leases by AGL and North Shore Gas Company Limited)
	1936-1997	The Maritime Services Board of NSW
	1997-2006	Sydney Ports Corporation

4.4 Record of EPA Notices

A search of the Record of Environmental Protection Authority (EPA) Notices on the NSW Department of Environment and Climate Change (NSW DECC) website (http://www.environment.nsw.gov.au/prclmapp/searchregister.aspx) was conducted to evaluate if the Site or surrounding properties were listed under Section 58 of the Contaminated Land Management Act (1997). EPA notices specifically relating to the Site and areas adjacent to the Site are indicated below (refer **Appendix C**):

- **On Site:**
  - **Millers Point Gasworks, Hickson Road, Millers Point:**
    - Former notice to end significantly contaminated land declaration and management order (24 August 2009); and
    - Former Declaration of Investigation Area (28 May 2007 to 24 August 2009).
    - Current Declaration of Remediation Site (6 May 2009)
  - **Millers Point Gasworks, Wharves 5 and 7, Millers Point:**
    - Former notice to end significantly contaminated land declaration and management order (24 August 2009); and
    - Former Declaration of Investigation Area (28 May 2007 to 24 August 2009).
    - Current Declaration of Remediation Site No 21122 (6 May 2009).

The EPA determined that the land is contaminated in such a way as to present a significant risk of harm to human health and the environment for the following reasons:

- 'Groundwater on the site has been found to be contaminated by TPHs, PAHs, BTEX, ammonia, phenol and cyanide at concentrations significantly exceeding the relevant trigger values for the protection of human health and aquatic ecosystems in the Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZECC and ARMCANZ, 2000)'.
- 'These groundwater contaminants include human carcinogens and substances toxic to aquatic ecosystems'.
- 'The contaminated groundwater is impacting on the surrounding areas including the basement of a residential building adjacent to the site, potentially exposing humans in that building to harmful vapours; however it is currently being effectively controlled'.
- 'Contaminated groundwater is likely to be migrating from the site to Darling Harbour and could ultimately affect aquatic ecosystems'.

- **Off Site:**
  - Millers Point Gasworks, 36 Hickson Road, Millers Point (north of Site):
  - Former Declaration of Investigation Area No 15036 (28 May 2007 to 24 August 2009), and
  - Former notice to End Remediation Declaration (24 August 2009).

4.5 WorkCover Dangerous Goods Records

ERM (2007) included a search of NSW WorkCover Dangerous Goods Records, which indicated two licences for the greater Barangaroo site (35/032114 and 35/022097) by Patrick Stevedores Operations Pty Ltd and Union Bulkships Pty Ltd for the storage of above ground storage of Liquified Petroleum Gas (LPG). ERM (2007) stated that a WorkCover representative indicated that this may not adequately reflect historic and bulk storage of dangerous goods, as WorkCover was not the only relevant dangerous goods authority for the site.

"This page has been left blank intentionally"

5.0 Site Condition and Surrounding Environment

5.1 Current Land Use

The Site covers an irregular shaped area of approximately 2.1 ha (based on existing LL supplied site plans). The location of the Site is presented on **Figure F1** and the Site layout is illustrated in **Figure F2**.

The Site is used as a public road or open, currently vacant and variably paved with concrete and asphalt. The concrete ground surface was observed to be in generally good condition with some cracking noted on the surface of the asphalt. A two story building (referred to as the 'amenities building') is present on the eastern portion of the Site adjacent to Hickson Road. At the time of the AECOM DGI, the building was vacant although it is understood the upper floor is occasionally used for Site meetings by BDA personnel. A sewage pumping station, which ERM (2008c) indicated is identified on the NSW State Heritage List, is located immediately to the north of the amenities building. The northern portion of a second building, known as the 'former maintenance building', which is also located adjacent to Hickson Road falls within the south eastern portion of the Site. The building, which was historically used by Sydney Ports personnel for maintenance, is currently in use as a display building for the Barangaroo development.

Access to the Site (excluding Hickson Road) is limited by the presence of a cyclone wire fence on the eastern side. Three gatehouses are present along the fenced area to permit access to Barangaroo, which is controlled by a 24 hour security presence. During the field investigation undertaken as part of the DGI, a harbour walk was opened to the public. The publicly accessible area is controlled by the presence of temporary fencing.

A section of Hickson Road forms the easternmost portion of the Site. The road is actively used as a vehicle thoroughfare and for parking.

5.2 Surrounding Land Use

The Site is surrounded by the following land use:

- North: Barangaroo, including but not limited to the remainder of Block 5 (open space/concrete hardstand);
- South: Barangaroo Blocks 1 to 3, and the southern portion of Hickson Road followed by Sussex Street (public roads);
- East : Commercial and high density residential buildings with Jenkins Street beyond; and
- West: The remainder of Blocks 4, 5 and Southern Cove, followed by Darling Harbour.

5.3 Topography and Drainage

The topography of the Site is relatively flat having undergone significant historical cut and fill works. The Site abuts Darling Harbour at the western boundary. The entire Site is covered in hardstand (concrete and bitumen), with the exception of a number of trees running along either side of Hickson Road.

The majority of stormwater runoff would be captured by the various stormwater drains across the Site, which drain into Darling Harbour. Please refer to Section 2.8 of ERM (2008c) for more details.

5.4 Geology

Reference to the *1:100, 000 Geological Survey of NSW (Sydney) Sheet 9130 (Ed 1) (*Herbert 1983*)* indicates that the stratigraphy of the Site comprises man-made fill material, marine clays and Hawkesbury Sandstone.

Information from previous investigations indicates that the former 1880s shoreline ran approximately along the western edge of Hickson Road (i.e. along the eastern edge of the proposed Stage 1 Development). The area to the west of Hickson Road is understood to have been progressively reclaimed. Aerial photographs from the 1950s indicate that the area between Hickson Road and the current shoreline was occupied by a number of finger wharves, extending from Hickson Road. It is understood that the space between the historical finger wharfs and seawalls were infilled in several stages between the 1960s and 1980s with various types of material. The former Southern Cove is understood to have been filled in 1988.

ERM (2007) identified and summarised the following subsurface conditions across the wider Barangaroo precinct:

- Hardstand (0 to 0.46 m bgs): consisting of concrete, asphalt and bitumen, generally in good condition with minimal staining;
- Road Base Fill (0 to 0.5 m bgs);
- Fill (0 to 18 m bgs): Fill materials consisting of sandstone, building rubble, bricks and concrete, silty gravelly sand. Black staining and odours (particularly around the former gasworks);
- Marine Clay/Sand (3.0 to18.4 m bgs): Interbedded Clayey Sand and Sandy Clay, dark greyish brown, saturated, some shell fragments and organic matter, Sandy Clay (soft, high plasticity), Clayey Sand and Sand (lose to dense, low plasticity, fine to coarse sand, low to non plasticity);
- Marine Clay/Sand (4.9 to 32.75 m bgs): Interbedded Clayey Sand, Sandy Clay and Sand, pale yellowish brown, white, reddish brown or dark greyish brown. Sandy Clay-stiff to hard, medium to high plasticity. Clayey Sand and Sand – loose to dense, fine to coarse sand, low or no plasticity; and
- Bedrock (1.3 to 32.75 m bgs): Weathered Sandstone, white, light yellowish, brown, olive brown and reddish brown, white, wet, fine to coarse grained, some fracturing noted.

Recent intrusive investigations within Barangaroo Block 3 (located adjacent and south of the Site, AECOM 2010a) encountered the following lithological profile:

- Surficial hardstand consisting of asphalt;
- Fill extending to 3 m bgs on the eastern portion, and 17.3 m bgs on the western portion of Block 3. Fill consisted of mixed materials including road-base gravel, sandstone, building rubble, bricks and concrete, silt, clay, sand and gravels. Black staining and odours were noted in a number of borehole locations across Block 3, and to a lesser extent at Blocks 1 and 2;
- Interbeds of natural clays and sands extending to 14.2 m bgs across the centre of Block 3, and up to 24.0 m bgs on the western portion of Block 3; and
- Sandstone bedrock from 3.0 m bgs on the eastern portion, and from 20.4 m bgs on the western portion of Block 3. Shale bedrock was also encountered on the western portion of the block, from 12.5 m bgs.

Lithological profiles underlying the present Site are expected to be further influenced by the presence of the former gasworks infrastructure; however, lithological trends reported in AECOM (2010a) suggest the sandstone bedrock underlying the present Site slopes down to the west.

5.5 Hydrogeology

A search of the NSW Department of Natural Resources (DNR) groundwater bore data base as reported in ERM (2007) indicated that there were 32 registered groundwater bores within a 4 km radius of the Site. Groundwater bore information indicated that the bores were registered for either recreation, irrigation or monitoring purposes.

Groundwater conditions have been historically described at Barangaroo in ERM (2007). The ERM findings are summarised in AECOM (2010a). In brief, the water table across Barangaroo was reported to be influenced by tidal fluctuations. Potential subsurface service trenches and low permeability fill material were also reported to potentially present preferential pathways for transport of contaminants in groundwater.

More recently, the AECOM (2010a) DGI investigation further assessed tidal influence on groundwater, immediately south of the Site, underlying Barangaroo Blocks 1 to 3. The assessment made the following findings:

- Groundwater was present beneath the site within the fill materials and natural sediments. Groundwater within the fill was encountered at approximately two metres below the ground surface.
- Monitoring of water levels within selected wells over a three day period confirmed that groundwater underlying the Site is tidally influenced, with the influence extending as far east (inland) as Hickson Road. This is also supported by the presence of highly saline water in wells located within Hickson Road and along the eastern boundary of the Site. Tidal fluctuation was greatest in the well closest to Darling Harbour (AECOM MW26), which fluctuated more than 0.8 m over the three day period, and reduced with distance from the Harbour to a maximum fluctuation of 0.07 m in Hickson Road (AECOM MW61) over the same period.
- Groundwater at the Site was anticipated to ultimately flow towards and discharge to Darling Harbour; although tidal influence affected groundwater flow east (inland) and west (to the harbour) throughout the day
- Further to tidal influence, the presence of subsurface structures (including the caisson wall) was attributed to variability in gauging results.

- A hydraulic conductivity assessment of AECOM wells MW12, MW19 and MW26 identified conductivities indicative of a sandy and gravelly environment. Recharge of the wells following removal of a volume of water using a submersible electric pump was extremely rapid.
- Rising head aquifer tests conducted in a number wells across Blocks 4 to 5 indicated hydraulic conductivities were dependent on local lithological variability, with lower conductivities reported for wells screened across fill materials with increased clay content.

5.6 Potentially Sensitive Receptors

The nearest receptor for groundwater and surface water coming from the Site is Darling Harbour, which forms part of the larger Sydney Harbour and is classified in ANZECC (2000) as a '*highly disturbed system*'.

The Site is situated in a mixed commercial and residential area. No other environmentally sensitive receptors have been identified.

Potential human exposure to contaminants of potential concern in impacted soil/fill materials and/or groundwater may occur via the following potential exposure pathways:

- Direct dermal contact with impacted materials;
- Incidental ingestion of impacted materials;
- Inhalation of volatile potential contaminants of concern; and
- Inhalation of potential contaminants of concern sorbed to air-borne particulates.

The following potential human receptors were identified:

- Workers engaged in Site operational activities;
- Workers engaged in future redevelopment of the Site;
- Workers on the Site entering confined spaces or exposed to subsurface materials during maintenance work;
- Future residents inhabiting the Site;
- Off-site workers conducting construction, road or other sub-surface works in the vicinity of the Site;
- Residents in neighbouring properties and;
- Occupants within the day care facility located on Hickson Road.

"This page has been left blank intentionally"

6.0 Potentially Contaminating Activities and Contaminants of Concern

Based on the historical review of the Site as presented in the ERM (2007, 2008a) reports and the results of the environmental and geotechnical investigations conducted on the Site, the potentially contaminating activities and associated chemicals of potential concern (CoPC) have been identified and are summarised in the table below.

Table 4: Potential Potentially Contaminating Activities and CoPC

Description of Potentially Contaminating Activity	CoPC	Comments
Former gasworks	Metals, TPH, BTEX, PAHs, phenols, sulfate, cyanide, ammonia	Associated with gasworks waste. Gasworks contamination is likely to be concentrated in the vicinity gasworks infrastructure across the Declaration Area but may have also been relocated.
Importation of fill materials for reclamation activities	Metals, TPH, BTEX, PAHs, PCBs, OCPs, VOCs, SVOCs, Asbestos	Fill materials of unknown origin have been used for land reclamation the existing wharf areas.
Demolition of former buildings potentially containing hazardous materials	Lead, PCBs, Asbestos	Hazardous materials, including asbestos cement sheeting and lead based paints, may have been used in the construction of historical warehouses, buildings and/or industrial infrastructure on the Site and may have been introduced to the sub-surface during demolition works or as a result of leaching or weathering while the building structures were still in place.
Reclamation activities	ASS	Given the proximity of the Site to Darling Harbour the potential for ASS is present. Potential ASS (PASS) are likely to be present in the natural silts, sands and clays overlying the bedrock at depth on the Site.

Notes:

Metals – Arsenic (As), Copper (Cu), Chromium (Cr), Cadmium (Cd), Mercury (Hg), Lead (Pb), Nickel (Ni), Zinc (Zn)
PAHs – Polycyclic aromatic hydrocarbons
TPH – Total petroleum hydrocarbons
BTEX – Benzene, toluene, ethylbenzene and xylenes
OCPs – Organochlorine pesticides
OPPs – Organophosphorus pesticides
PCBs – Polychlorinated biphenyls
SVOCs – Semi volatile organic compounds
VOCs – Volatile organic compounds
ASS – Acid Sulfate Soils

6.1 Proposed Land Use

LL has divided the Site into sub-sites based on the proposed re-development and corresponding proposed land use as follows:

- Block 3: High density residential (minimal access to soil) and commercial with basement car parking.
- Block 4: High density residential (minimal access to soil) and commercial with basement car parking.
- Block 5 is proposed to be developed by others separate to Lend Lease. Proposed land use is currently assumed to be high density residential (minimal access to soil) with basement car parking.
- Southern Cove: Recreational Open Space, waterway open to Darling Harbour.
- Hickson Road: land use to remain public roadway.

The location and layout of the sub-sites are presented on **Figure F2**.

7.0 Field Investigation Methodology

Field investigations were undertaken in accordance with the methodologies described below.

7.1 Soil Investigation

7.1.1 Services Location and Clearance

All borehole locations were cleared for subsurface utilities as follows:

- Plans of underground utilities were requested from the Dial-Before-You-Dig service and relevant utility representatives were contacted to confirm proposed sample points were clear of subsurface utilities. CAD plans relating to the presence of subsurface utilities were also supplied by BDA and LL. All plans were reviewed by AECOM prior to the commencement of service location clearance. Any borehole locations potentially located in the vicinity of identified underground services were changed at this time;
- All sampling points were located in consultation with on-site personnel and previously obtained subsurface utility maps. All sample locations were suitably marked on the ground with spray paint. All locations were measured from nearby building reference points;
- Each sampling location was cleared using a Telstra accredited, underground services location contractor (Locators); and
- Each location was potholed by air-knifing (non-destructive drilling) by a competent subcontractor (Terra Test) to at least 1 m bgs or to refusal.

7.1.2 Intrusive Work

Terratest and Macquarie Drilling were engaged to carry out the drilling operations. The drilling techniques consisted of a combination of solid and hollow flight augers and/or push tube sampling methods, see **Plate No. 1**. Soil from boreholes drilled with augers, were collected using a split tube sampler. The push-tube samplers were hammered into undisturbed soil in one continuous uniform motion without rotating. Where the presence of sub surface obstructions prevented the advancement of boreholes, other techniques such as mud rotary drilling were used. The methodology varied based on the depth and nature of the identified obstruction. Geotechnical samples were collected using dedicated stainless steel U50 tubes by push tube or standard penetration test (SPT) depending on location and depth. Samples were collected based on their location, distribution within the soil/fill profile and suitability for sampling.

Boreholes were drilled into natural material or refusal (whichever was shallower). Where visual or olfactory observations of contamination were made in natural materials the borehole was continued until the contamination dissipated or refusal on bedrock (whichever was shallower).

Borehole locations that were not converted to monitoring or vapour wells were reinstated with grout or soil cuttings that had been drilled out from that location. In many instances, no grout or soil cuttings could be placed down the hole due to the collapse of fill materials following completion of drilling. All boreholes were reinstated to original surface level and condition. Any excess soil generated from the drilling process was placed in drums and stored on-site for future disposal.

As previously discussed a total of 7 test pits were excavated as part of the treatability trials for the collection of bulk samples. Bulk samples of contaminated fill materials were collected using a 20 tonne excavator. Samples were placed in heavy duty plastic bag lined 20 L buckets for the completion of treatability trials.

7.1.3 Soil Sampling

All boreholes were air-knifed to at least a depth of one metre (where possible) to expose underground services, see **Plate No. 2**. Soil samples were then collected from 1 m bgs and then where a significant change in physical characteristics was identified to the base of fill material (where encountered), during auger drilling. Where possible, soil samples were collected from the natural material, at the interface with any overlying fill and underlying bedrock.

Where push tube sampling techniques were employed, continuous soil samples were collected see **Plate No. 3**. The soil was collected in disposable plastic liners and representative soil samples were transferred from liners into laboratory supplied sampling containers using a decontaminated spatula or by nitrile-gloved hand.

Sub-surface soil samples were collected directly from the relatively undisturbed inner core of split spoon sampling device where solid or hollow flight augers or mud rotary drilling was used, see **Plate No. 4**.

All soil samples were placed in laboratory prepared glass sampling containers using single use disposable nitrile gloves. Field duplicates (intra laboratory) and triplicates (inter laboratory) were prepared in the field by splitting soil samples. In order to minimise the loss of volatiles, samples were not mixed or homogenised during collection or splitting and jars were filled so as to minimise the amount of headspace where sample recovery allowed.

Where materials potentially containing asbestos were noted, a sample of the material and the soil at the location that it was sampled will be collected in separate plastic zip lock bags for laboratory analysis for asbestos.

7.1.4 Soil Sample Labelling, Preservation, Storage and Transport

All samples were clearly labelled with unique sample identification numbers consisting of the date, sample location, depth of sample and samplers initials. In the case of field duplicates and triplicates, sample containers were labelled so as to not reveal their purpose or sample location to the laboratory. All samples were kept chilled in an ice-filled esky prior to dispatch to the NATA registered laboratory under chain of custody (COC) procedures.

All samples collected are stored at the laboratory (3 months for metals [28 days for mercury], or 14 days for organics).

7.1.5 Soil Sampling Equipment Decontamination

The decontamination procedures were performed before initial use of re-useable equipment and after each subsequent use.

The augers used in drilling were decontaminated using a pressurised water cleaner between each borehole location. All re-usable sampling equipment (split tube sampler and spatula) were decontaminated between each sample by scrubbing with a solution of Decon 90 (a phosphate-free detergent) followed by a rinse in potable water. For each day of sampling, following decontamination procedures, a rinsate blank was completed by running laboratory prepared deionised water over the re-usable sampling equipment for collection directly into laboratory prepared sampling containers for analysis. Drilling equipment which came into contact with tar was set aside for off-site decontamination using a high pressure steam cleaner. Tar impacted equipment was not utilised again during the drilling program.

At each sample location a new set of disposable nitrile gloves were used to directly collect soil samples from the re-useable sampling equipment for placement into the laboratory prepared glass sampling containers.

7.1.6 Field Screening

For each sample depth, additional soil was placed in a sealed plastic bag and screened for head space vapours and the presence of VOCs, using a calibrated photo-ionisation detector (PID). The headspace reading was taken at ambient temperature and was recorded on the borehole logs (**Appendix D**). The PID readings were considered when selecting soil samples for laboratory analysis.

The PID was calibrated with isobutylene gas at 100 ppm at the commencement of each day of sampling and, if necessary, during the day in accordance with the procedure provided by the supplier. Calibration records are provided in **Appendix E**.

7.1.7 Field Logging

Recording of logs for boreholes and in the field was conducted in accordance with AS1726-1993 and soils were classified in accordance with the Unified Soil Classification System (USCS), including observation of any anthropogenic material (i.e. odours, asbestos cement [AC] sheeting etc). Descriptions were recorded on AECOM's standard borehole and monitoring bore field log sheets for uniformity in descriptions, presentation and to aid in future interpretations.

The American Society for Testing and Materials (ASTM) system and the USCS are the general standards used by AECOM in classifying soil by visual and manual examination. The reference for the USCS system is *Procedure for Determining Unified Soil Classification (Visual Method)*, United States Department of the Interior, Bureau of Reclamation (USBR) 5005-86. The reference for the ASTM system is *Description and Identification of Soils (Visual-Manual Procedure)*, ASTM Standard Practice D 2488-90.

7.1.8 Survey of Boreholes

The borehole location and ground level were surveyed by a registered surveyor from Rygate & Company Pty Ltd.(Rygate) with reference to the Australian Height Datum (AHD) and Australia Map Grid (AMG).

The elevation and position of the boreholes are recorded on the borelogs provided in **Appendix D**.

7.2 Soil Vapour Investigation

7.2.1 Soil Vapour Well Installation

A total of seven soil vapour wells comprising 10 soil vapour ports were installed to a maximum depth of 1.8 m bgs, as outlined below:

- Three multi-level soil vapour probes were constructed with screens at 0.5 - 0.7 m bgs (SV05), 0.8 - 1.0 m bgs (SV07) and 0.3 - 0.5 m bgs (SV11) and 1.5 - 1.7 m bgs (SV05), 1.3 - 1.5 m bgs (SV07) and 1.3 - 1.5 m bgs (SV11).
- The remaining four were constructed with screens at 1.6-1.8 m bgs (SV06 and SV08), 0.8 - 1.0 m bgs (SV09) and 1.3 - 1.5 m bgs (SV10).

These depths were selected to assess vapour in the shallow fill materials and also vapour being generated from the Site's shallow groundwater system.

Based on the above, soil vapour samples were collected from 10 permanently installed AMS gas vapour tips from seven locations. For the purposes of QA/QC assessment two duplicate samples was also collected.

The installation and sampling for the vapour assessment was conducted in general accordance with guidance from the Interstate Technology & Regulatory Council (ITRC, 2007), Vapor Intrusion Pathway: A Practical Guideline, which is summarised in the table below.

Table 5: Soil Vapour Assessment Methodology

Activity	Details
Drilling	Boreholes were advanced using a small diameter push tube to enable the intake of the gas vapour tip to be placed immediately adjacent the side of the borehole.
Vapour Tip Installation	Gas vapour tips were permanently installed by lowering the deeper probe and accompanying 0.25 inch Teflon® tubing into the borehole to the required depth (approximately 1.3-1.7 m). Clean sand was placed around the probe to ensure adequate airflow and a bentonite grout seal was inserted between the probes to ensure the soil gas collected was from the specified depth. The second probes (on nested vapour probes) were installed above a grout plug (at approximately 0.3-1.0 m depth), surrounded by a sand filter, and grouted to surface. The sampling tubes from each of the vapour tips were labelled and left protruding from the well. The tubing was sealed with a vapour cap for a minimum period of seven days prior to sampling to allow for equilibrium with the soil gas.
Leak Testing	The sampling train was set up with a ball valve immediately prior to the Summa canister connector to enable purging and leak testing. Leak testing was conducted prior to sampling using isopropanol with Gastec detector tubes (reporting 0.02 to 5.0% isopropanol). An isopropanol soaked rag was wrapped around the top of the well and the sampling line purged and sampled with the Gastec hand pump via the purge line. The procedure was repeated for all connections and for each well prior to sampling.
Well Sampling	Samples were collected using stainless steel, six litre Summa canisters with stainless steel flow controller attachments provided and calibrated by the contract laboratory. The Summa canisters were fitted with an 8 hour regulator, allowing for collection of a soil vapour sample at a constant rate over the 8 hour sampling period. This method allowed for collection of a time-weighted average air concentration.

7.2.2 Survey of Soil Vapour Wells

The top of each soil vapour well casing and adjacent ground level were also surveyed by Rygate with reference to the Australian Height Datum (AHD) and Australia Map Grid (AMG).

The elevation and position of the soil vapour wells are recorded on the borelogs provided in **Appendix D**.

7.3 Groundwater Investigation

7.3.1 Monitoring Well Installation

Groundwater monitoring wells were constructed using machine slotted (0.5mm aperture), 50mm uPVC screens, variably placed from 1 m above the estimated standing water level (SWL) of groundwater to the base of the well. The wells were installed to depths between 2.8 m bgs (AECOM BH54/MW54) and 22.0 m bgs (AECOM BH60/MW60) and screened across the fill material in some cases. The final screen design was based on the fill and soils encountered, the depth at which groundwater was encountered and the type and extent of contamination, including the potential presence of non-aqueous phase liquids (NAPLs) that may have been noted during the drilling of the borehole. It is noted that the water quality of the entire saturated column is required for dewatering treatment information.

Prior to installation, the total depth of the borehole was measured with a weighted tape. The monitoring well casing was lowered in the borehole and suspended. Graded filter sand (2mm diameter) was added to the annulus between the uPVC casing and the wall of borehole to approximately 0.5 metres above the top of the screened interval. A minimum of 0.5 m hydrated bentonite seal was added above the filter sand. All wells were finished with a lockable metal cap and concrete encased steel cover that was traffic rated and flush to grade, see **Plate No. 5**.

7.3.2 Monitoring Well Development

Newly constructed groundwater monitoring wells were developed using both dedicated Teflon foot valves and low density polyethylene (LDPE) polytube and an electronic high volume submersible pump to entail the removal of accumulated sediment and groundwater from the monitoring well. Development proceeded until at least ten monitoring well volumes were removed or the wells were purged dry. The pumping process creates a surging action that promotes groundwater inflow to the monitoring well and maximising connectivity with the surrounding aquifer.

Monitoring wells were developed using dedicated Teflon foot valves and Low Density Polyethylene tubing (LDPE) and entailed the removal of accumulated sediment and introduced potable water from the monitoring well and surrounding aquifer. Extracted groundwater was placed in labelled and sealed drums for disposal.

7.3.3 Groundwater Purging and Sampling

After allowing the wells to equilibrate for a general period of seven days, water levels were measured using an oil/water interface probe and the standing thickness of any NAPLs were measured and recorded. The groundwater monitoring wells were then purged using low flow methods using a Micropurge submersible pump and dedicated Teflon footvalves and LDPE polytube, see **Plate No. 6**.

The submersible pump was generally positioned approximately 0.5 m from the base of the screened interval (or well where sediment has accumulated). If the pump screen became blocked due to sediment in the water column the pump was positioned further up the screen and recorded on field sampling sheets.

The water level was monitored during purging to ensure there was no significant draw-down of the water table and water quality parameters (dissolved oxygen [DO], oxidation-reduction potential [ORP], electrical conductivity [EC], temperature and pH) were monitored and recorded along with purge rate and volume. The flow rate was reduced if drawdown was observed until water level stabilised.

Purging of the monitoring wells continued until water quality parameters become relatively consistent between successive readings (generally 3 consecutive readings of ± 10% for DO, ± 3% for EC, ± 0.05 for pH, ± 10mV ORP and ± 0.2ºC), generally after purging between 3 and 6 litres. At the completion of purging, the water level was recorded with an oil/water interface probe. Purged water has been stored in drums for disposal as described in **Section 7.3.2.** Following stabilisation of water quality parameters, groundwater was sampled from each monitoring well.

Groundwater samples were carefully decanted into laboratory supplied, appropriately preserved containers as per the preferred analytical method. Sample containers were filled in the order of most volatile to least volatile.

Samples collected for metals analysis were field filtered using a 0.45um filter prior to collection into the sampling container. Field duplicates and triplicates were also prepared in the field.

7.3.4 Survey of Monitoring Wells

The location, top of each monitoring well casing and adjacent ground level were also surveyed by Rygate, with reference to the Australian Height Datum (AHD) and Australia Map Grid (AMG) to allow reliable calculation of groundwater levels including tidal fluctuations.

The elevation and position of the monitoring wells are recorded on the borelogs provided in **Appendix D**.

7.3.5 Hydraulic Conductivity Assessment

Hydraulic conductivity tests (rising head slug tests) were conducted on four AECOM installed monitoring wells located within (MW45, MW58) and down-gradient of the Site (MW56, MW60).

The slug tests involved removing a volume (slug) of water from the well using a submersible pump and monitoring the recovery of groundwater following withdrawal. The groundwater recharge following the cessation of pumping was measured using a Solinst® data logger installed within the well.

Data collected in the field was plotted using a computed based model which was used to calculate the aquifer conductivity using a slope-interception calculation (Hvorslev method). The plotted results and calculations for the hydraulic conductivity assessment are provided in **Appendix F**.

7.4 Tidal Fluctuation Assessment

The influence of tidal fluctuations on groundwater levels at the Site was assessed by installing data loggers in selected wells and monitoring water level fluctuations over a three day period. Data loggers were installed in AECOM monitoring wells MW60, MW61, MW62 and the Stilling Well, which provided coverage across the Site, including Darling Harbour and Hickson Road (Refer to **Figure F4**).

Information from the data loggers was downloaded and plotted to assess the extent and magnitude of tidal influence at the Site. The plotted results of the tidal assessment are detailed in **Appendix G** and discussed in **Section 10.7.**

7.5 Laboratory Methodology

Primary, intra-laboratory duplicate, triplicate, rinsate and trip blank soil and groundwater samples were submitted to either ALS Environmental laboratory located in Smithfield NSW or Labmark laboratory located in Asquith NSW for analysis. The selected laboratories are National Association of Testing Authorities (NATA) certified for the analysis required.

The selection of samples for analysis was based on field observations and was generally conducted in accordance with the analytical program presented in the SAQP (AECOM, 2010a)**Error! Reference source not found.**.

Laboratory analysis was conducted in accordance with the requirements of NEPM and is referenced to USEPA and APHA methods. The analytical schedule, laboratory methods, laboratory limits of reporting (LORs) and reference methods to be applied for the investigation are detailed in **Table 6** and **Table 7** below

Table 6: Soil Analytical Methods

Analysis	Labmark Limit of Reporting	Labmark Reference method	ALS Limit of Reporting	ALS Reference method
Metals suite comprising arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu),manganese (Mn), nickel (Ni), lead (Pb), vanadium (V) and zinc (Zn).	0.1 - 5.0 mg/kg	Acid Digestion/ICPAES (Alpha 20th 3120-(USEPA SW846, 6010)	1 - 5 mg/kg, Ba 10 mg/kg	Acid Digestion/ICPAES (Alpha 20th 3120-(USEPA SW846, 6010)

List of abbreviations to Table 6 and 7:
LL = Low Level
TL = Trace Level
UT = Ultra Trace
CV-FIMS = Cold Vapour-Flow Injection Mercury System
EC = Electron Capture
ECD = Electron Capture Detector
FID = Flame Ionisation Detector
GC = Gas Chromatography

GCFID = Gas Chromatography Flame Ionisation Detector
GCMS = Gas Chromatography Mass Spectrometry
ICP-AES = Inductively Coupled Plasma Atomic Emission Spectrometry
ICP-MS = Inductively Coupled Plasma Mass Spectrometry
MS = Mass Spectrometry
PLM = Polarised light microscopy
POCAS = Peroxide Oxidation Combined Activity & Sulfate
P&T or P-T = Purge and trap

7.5.1 Soil Vapour Methodology

Soil vapour samples were submitted to SGS Australia Pty Ltd (SGS) and analysed for the TO-14A list of analytes (VOCs), and for naphthalene. Analyses were undertaken by the USEPA Method TO-15.

It is noted that SGS is NATA accredited for analysis of the TO-14A analytes via the TO-15 method, but is not NATA accredited for analysis of naphthalene by this method. However, no Australian laboratory is currently NATA accredited for analysis of naphthalene in Summa canisters.

While the naphthalene analysis were not NATA certified, the naphthalene analytical results were subjected to the same rigorous QA/QC procedures as the NATA accredited TO-14A analytes, and quantification of naphthalene was based on freshly prepared naphthalene standards. The overall quality of the naphthalene results is therefore expected to be comparable to that for the NATA accredited target analyte list.

The soil vapour analytes did not include all CoPC at the Site. Rather, the analytical suite included a range of VOCs considered to be of most concern with respect to vapour intrusion, and included naphthalene as an indicator of volatile PAH impact. It is noted that naphthalene is the most volatile of the PAHs, and typically drives PAH-related risks with respect to vapour intrusion. Semi-volatile contaminants of concern (defined as having a Henry's law constant less than 1×10^{-5} atm-m^3/mol; USEPA, 2004) are generally not considered volatile enough to be of concern with respect to vapour intrusion pathways, and have therefore not been included in the soil vapour analytical suite.

8.0 Quality Assurance and Quality Control

The field and laboratory quality assurance and quality control (QA/QC) plan adopted for the investigation has been designed to achieve pre-determined data quality objectives (DQOs) that will be assessed using the data quality indicators (DQIs) that demonstrate the precision, accuracy, representativeness, completeness and comparability of the data set and that the data set is of acceptable quality to meet the objectives of the DGI.

8.1 QA/QC Data Validation

The QA/QC program implemented as part of this DGI was generated as the outcome of the seven-step DQO process, as described in the SAQP (AECOM, 2010a) and summarised in **Appendix A**.

Analyses of primary and intra-laboratory duplicate soil and groundwater samples were undertaken by Australian Laboratory Services Environmental (ALS). Triplicate samples were analysed by Labmark Laboratories. SGS undertook the analysis of soil vapour samples and Australian Soil Testing analysed samples collected for geotechnical purposes. All laboratories are NATA accredited for the analyses undertaken.

Details of the QA/QC data validation are presented in **Appendix H**. It is noted that as the fieldwork (including laboratory sample analysis) for both this DGI and the Other Remediation Works North Area DGI were completed and reported concurrently. As such, the reported QA/QC data validation presents an incorporated review of data from both investigations.

8.2 Data Useability

The data validation procedure employed for the assessment of the AECOM field and laboratory QA/QC data indicated that the reported analytical results are representative of soil conditions at the sample locations, and that the overall quality of the analytical data produced is acceptably reliable for the purpose of the DGI.

AECOM understands that the ERM dataset was reviewed by an independent expert on behalf of SHFA, including data quality. It is also understood that LL are able to rely on the ERM data. AECOM has randomly assessed and verified a portion of the ERM data and accepts the ERM dataset based on the random review and the review of SHFA's independent expert.

"This page has been left blank intentionally"

9.0 Basis for Assessment Criteria

In the absence of Site specific acceptance criteria (which are being developed as part of the HHERAs including risk associated with land use and removal of the declaration), generic assessment criteria for the soil, soil vapour and groundwater investigation have been adopted from the following guidance documents:

- NSW DEC, 2007. Guidelines for the Assessment and Management of Groundwater Contamination;
- NSW DEC, 2006. Guidelines for the NSW Site Auditor Scheme (2nd Edition);
- enHealth Council, 2005. Management of asbestos in the non-occupational environment;
- Australian and New Zealand Environment and Conservation Council and Agriculture and Resourced Management Council of Australia and New Zealand. (ANZECC), 2000. *Australian and New Zealand Guidelines for Fresh and Marine Water Quality;*
- National Environment Protection Council (NEPC), 1999. National Environment Protection (Assessment of Site Contamination) Measure (NEPM);
- NSW EPA, 1994. Guidelines for Assessing Service Station Sites; and
- US EPA, 2009. Regional Screening Levels (RSLs)'

9.1 Soil Investigation Criteria

Given the proposed soil analytical program for the Site and the proposed range of uses for the Site, a range of investigation criteria sourced from the guidance documents listed above are required to be applied. Application of these guidelines to the soil samples to be collected and analysed from the Site is described below.

9.1.1 Metals, Cyanide, PAHs, OCPs, OPPs, Phenol and PCBs

The current investigation criteria used in NSW to evaluate soil analytical results for metals, cyanide, PAHs, OCPs, OPPs, phenol and PCBs are provided in NSW DEC (2006) guidelines which are based on guidance provided in NEPC (1999). These guidelines present a range of Health-Based Soil Investigation Levels (SILs) and Provisional Phytotoxicity-based Investigation Levels (PILs) for soils, which are considered to be appropriate for a range of land uses on urban sites in NSW, as follows:

- SIL_1 Residential with gardens and accessible soil.
- SIL_2 Residential with minimal access to soil (including high-rise apartments/flats).
- SIL_3 Parks, recreational open space, playing fields (including secondary schools).
- SIL_4 Commercial or industrial.

The SIL_2, SIL_3 and SIL_4 criteria have been variably adopted for the purposes of the DGI.

It is noted that the PILs assume application to sandy loams with a pH 6 to 8 and the soils on the Site are generally characterised as fill clays and clayey sands to sandy clays. The application of the PILs has significant limitations as phytotoxicity depends on soil and species parameters in ways that are not fully understood. Therefore PILs will not be considered further.

9.1.2 TPH and BTEX

The NSW EPA (1994) *Guidelines for Assessing Service Station Sites* provides investigation criteria to evaluate soil analytical results for TPH and BTEX compounds. These criteria have been developed for sensitive land use scenarios and are the only currently NSW DECC endorsed criteria when considering the environmental impacts from these types of compounds.

The criteria provided in the NSW EPA (1994) guidelines are adopted as the site investigation criteria for TPH and BTEX in soils and are applicable across the entire Site.

9.1.3 SVOCs and VOCs

There are no current NSW DECC endorsed assessment criteria for a number of SVOCs and VOCs in soil. The USEPA (2009) *Regional Screening Levels (RSLs)* provide screening levels for a range of SVOCs and VOCs in soil. The RSLs are risk-based and are adopted for use screening purposes only, for selected SVOC and VOC compounds where Australian-based guidelines are not available and the RSL is greater than the LOR.

9.1.4 Sulfate

Sulfate results have been compared against the NEPM (1999), Schedule B1 - Ecological Investigation Levels Interim urban criterion.

9.1.5 Acid Sulfate Soils

The current assessment guidelines for the assessment and management of Acid Sulfate Soil (ASS) are provided in NSW Acid Sulfate Soil Manual (ASSMAC,1998). These guidelines have been developed primarily of proponents of activities that are likely to disturb acid sulfate soils. The guidelines provide action criteria that trigger the need for the preparation of a management plan for the acid sulfate soils and are based on the percentage of oxidisable sulfur for broad categories of soil types.

9.1.6 Asbestos

There are currently no national or NSW DECCW endorsed guidelines relating to human health or environmental investigation of material containing asbestos on sites. The NSW DEC (2006) guidelines require that auditors exercise their "*professional judgement when assessing whether a site is suitable for a specific use in light of evidence that asbestos may be a contaminant of concern*".

The enHealth Council (2005) guidelines provide some guidance on the assessment and management of asbestos in soil and recommend that, where fragments of asbestos cement are found, that the type of asbestos present should be confirmed by microscopy and that the whole area where fragments are located should be regarded as contaminated and action taken. The enHealth Council (2005) guidelines also state that, depending on where fragments are located and the proportion of fragments present, it may not be necessary to measure the actual concentration present, however, in New Zealand and Western Australia an average of 0.001 percent by weight asbestos in soil has been applied.

The approach of determining the weight of asbestos fibres within asbestos cement fragments over the affected soil by applying an average of 0.001 percent by weight calculation is considered to be a very conservative measure and may not be applicable for this stage of investigation on the Site. For the purposes of this investigation it is important to determine the presence, nature and extent of asbestos. If asbestos is found to be present, a management approach for the affected soils can be developed.

9.2 Aesthetic Conditions

In the decision-making process for assessing urban sites, presented in NSW DEC (2006), the assessment of sites that are to be used for purposes other than commercial/industrial requires the consideration of aesthetic issues in the assessment of contamination. Aesthetic issues include the generation of odours and any discolouration of the soil as a result of contamination.

In accordance with NSW DEC (2006) guidelines, consideration will be given to aesthetic issues such as odour and discolouration during the investigation of soil/fill across the Site.

9.3 Waste Criteria

The current criteria used in NSW to characterise waste materials for off-site disposal are provided in the NSW DECC (2008) Waste Classification Guidelines. The guidelines set different maximum total concentrations and leachable concentrations, for specific contaminants in order for waste to be classified as 'general', 'restricted' or 'hazardous'. This classification then affects the way in which the waste is handled and where the waste is able to be disposed.

For the purpose of characterising soil conditions at the Site for potential offsite disposal, soil analytical results, including TCLP analytical results, may be compared to NSW DECC (2008) guidelines if waste disposal is required.

9.4 Soil Vapour Investigation Criteria

There are currently no national or NSW DECCW endorsed guidelines for assessment of soil vapour concentrations. Investigation levels for assessment of soil vapour results were therefore derived based on relevant ambient air quality criteria and a generic attenuation factor (AF), in accordance with the approach recommended by USEPA (2002). The AF is defined as the factor by which subsurface vapour concentrations migrating into above ground air spaces are reduced due to diffusive, advective or other attenuating factors

(USEPA, 2002). The most conservative screening AF recommended by USEPA (2002) is 0.1 (i.e., ten-fold reduction from shallow soil vapour to above ground air), and this AF will be conservatively used for screening of both shallow and deep soil gas.

Ambient air quality criteria (to which the AF is applied) were adopted from Australian and international sources, in accordance with toxicity criteria source hierarchies recommended by NEPC (1999) and enHealth (2004). These air quality guideline sources, in order of preference, were the following:

- National Environment Protection Council (NEPC), 2004. *National Environment Protection (Air Toxics) Measure* (NEPC, 2004).
- World Health Organization (WHO), 2000a. *Air Quality Guidelines for Europe*
- World Health Organization (WHO), 2000b. *Guidelines for Air Quality*
- For non-genotoxic carcinogens:
  - Minimal Risk Levels (MRLs) published by the Agency for Toxic Substances and Disease Registry (ATSDR).
  - Reference Concentrations (RfCs) published by United States Environmental Protection Agency's (USEPA) Integrated Risk Information System (IRIS).
- For known or likely genotoxic carcinogens for which inhalation unit risk (IUR) values have been derived and published by WHO (2000a, 2000b) or IRIS, the air concentration corresponding to an excess incremental lifetime cancer risk (ILCR) of one in 1,000,000 (1×10^{-6}). This ILCR is consistent with that adopted by the National Health and Medical Research Council (NHMRC) for development of drinking water guideline values, and is considered to represent a negligible level of risk.
- Where no ambient air guideline value for protection of the general population was published, occupational exposure standards published by Safework Australia were adopted. In these cases, an additional safety factor of 30 was applied to convert the time-weighted average (TWA) concentration (which assumes a worker is exposed 8 hours per day, 5 days per week) to a concentration protective of continuously exposed receptors, and to account for sensate receptors within the exposed population. This uncertainty factor (30) is that used by the State of Victoria (2001) for derivation of ambient air design criteria from occupational TWA exposure standards. It is noted that occupational exposure guidelines are generally derived in a different manner than that used for derivation of guidelines for protection of public health, and the use of these guidelines is therefore associated with significant uncertainty. However, these guidelines have been adopted where no other guideline values were available from the above recognised sources.

Soil vapour investigation levels were calculated from adopted ambient air guidelines using the following equation:

$$IL_{sv} = IL_{aa} \times AF$$

Where:

IL_{sv}	=	Soil vapour investigation level (mg/m^3)
IL_{aa}	=	Ambient air guideline or investigation level (mg/m^3)
AF	=	Attenuation factor (soil vapour to above ground air) (unitless)

It should be noted that the use of generic AFs for soil vapour screening is not considered appropriate where shallow soil vapour sources are present (e.g., less than approximately 4 m from a building foundation) and buildings have significant openings to the surface, preferential pathways or very low air exchange rates (USEPA, 2002). Soil vapour results from locations where this may apply should therefore also be assessed by direct comparison with ambient air guideline values.

9.5 Groundwater Investigation Criteria

The ANZECC (2000) guidelines have been adopted for this investigation. ANZECC (2000) provides "Trigger Values" for chemicals within water, which represent the best current estimates of the concentrations of chemicals that should have no significant adverse effects on the aquatic ecosystem. The ANZECC (2000) guidelines indicate that an exceedence of a Trigger Value does not necessarily imply that there is an inherent risk, but that further assessment and monitoring may be required prior to implementing appropriate management actions. It is noted that according to ANZECC (2000), low reliability Trigger Values are Interim Levels only because "*low reliability guideline trigger values were derived, in the absence of a data set of sufficient quantity, using larger*

assessment factors to account for greater uncertainty", and "*low reliability values should not be used as default guidelines*". ANZECC (2000) stipulates that the identification of the receiving environment or the likely beneficial use of the water is essential for selection of the most applicable criteria.

Darling Harbour, located on the western boundary of the Site, can be further considered under the ANZECC (2000) guidelines as a "*highly disturbed system*" and, as such, for the majority of the COPC the Trigger Values for protection of 95% of marine water species have been adopted and 99% protection for the bio-accumulative COPC. There is currently insufficient data to derive high reliability Trigger Values for various COPC. Given the limitations associated with the use of low reliability Trigger Values, these criteria have not been adopted for the DGI.

There are no current NSW DECCW endorsed high reliability assessment criteria for TPH in groundwater, although an arbitrary aesthetic criterion of 10 000 μg/L (10 mg/L) is provided in NSW EPA (1994). The ANZECC (2000) guidelines provide an interim low reliability value for crude oil of 7 μg/L (0.007 mg/L), which is known to contain hundreds of hydrocarbon species, many of which are not present in refined petroleum hydrocarbon fuels. In addition, this criterion is not considered to be appropriate as current commercial laboratory techniques cannot quantify TPH to this concentration and it has been derived on a worst case pollution scenario such as a constant discharge to the environment at a rate that exceeds the losses from evaporation or dispersion (Tsvetnenko, 1998). In the absence of high reliability TPH trigger value, AECOM has adopted the laboratory limits of reporting (LOR) as the 'default' screening criteria for TPH.

10.0 Results

Descriptions of the fill and natural soil materials encountered during the drilling program are described in the following sections, and are also described in the borelogs provided in **Appendix D**.

10.1 Field Observations – Soil and Fill Conditions

Encountered stratigraphic conditions were variable across the Site, but generally comprised fill material overlying natural weathered sandstone with clay components. Sandstone bedrock was generally present underlying natural weathered bedrock materials or in some instances directly underneath fill materials. Cross sections detailing the encountered stratigraphic are detailed in **Figure F13 to Figure F15.** The observed field conditions which were indicative of potential contamination at the Site are summarised in **Table T1A**.

Observations of odours, staining and sheen were generally more common in the overlying fill materials, see **Plate No. 7**, although they were also noted at eight locations within the natural soil and bedrock present on the Site.

The depth of fill materials encountered during the DGI was variable across the Site, with fill depths ranging from 0.43 m bgs (AECOM BH67) to 17.5 m bgs (AECOM BH56). Fill materials were generally shallower in the eastern portion of the Site closest to Hickson Road and deeper in the western portion of the Site. The thickness of fill material generally increased from east to west across the Site.

Observations during the test pitting and drilling works identified unconsolidated, highly variable fill materials, which generally comprised unconsolidated gravels, sand, bricks, sandstone, timber, slag and steel. Visual signs of contamination including black staining, tar and surface sheen (where groundwater was present) were noted in several test pits, predominantly located in the footprint of the former Retort House and Purifying Beds within Block 4 in a variable gravelly sand to clayey sand matrix.

10.1.1 Natural Soil

Natural soils encountered across the Site comprised silty sands, gravelly sands, clays, weathered sandstone and sand with components of clay, see **Plate No. 8.** Gradual boundaries noted between the strength and extent of weathering reflects changes in the energy regime during deposition.

Bedrock encountered across the Site was sandstone in every instance. The depth to bedrock encountered during the DGI was variable across the Site, with depths to sandstone ranging from 0.43 m bgs (AECOM BH67) to 25.0 m bgs (AECOM BH60/MW60). Bedrock was generally shallower in the eastern portion of the Site closest to Hickson Road and deeper in the western portion of the Site. The depth to sandstone bedrock generally increased from east to west across the Site. PID Screening

Soil sub-samples from each sampling location were screened using a calibrated photoionization detector (PID). The PID results are presented on the borelogs provided in **Appendix D**.

PID readings were variable across the Site and ranged from 0.0 ppm (recorded at numerous locations) to 1530 ppm (recorded at BH53_4.0-4.4).

10.2 Soil Analytical Results

A summary of the AECOM sampling and analytical programme, including sample depths, material type and PID readings, is provided in **Table T1.**

All soil analytical results are provided **Table T1** to **Table T25** in the tables section of this report. These tables also include relevant data from previous investigations undertaken by ERM (2007, 2008a and 2008b) and Coffey (2008).

A tabulated summary of results from the Blocks 4 and 5, Hickson Road and the portion of Southern Cove included within the VMP and PDA area are provided in **Table 8** to **Table 10**. It is noted that only analytes which have reported concentrations above the adopted Soil Investigation Criteria have been summarised below. Two locations (AECOM BH33 and AECOM BH36) which are located within Block 3, but also fall within the boundary of the Declaration Area have also been considered in the assessment of results.

10.2.1 Blocks 4 and 5

Table 8: Blocks 4 and 5 Site Investigation Criteria Exceedence Summary

Chemical	Number (count)		Concentration Range (mg/kg)		Number of Adopted Criteria Exceedences *(and criteria mg/kg)*			Exceedence Location (consultant)

10.2.4 Site Wide Results

The following results relate to samples collected from across the Site.

10.2.4.1 Waste Classification

Selected soil samples were analysed for waste classification purposes (refer **Table 10).** The results were compared against the NSW DECC (2008) *Waste Classification Guidelines*. Based on the total results and Toxicity Characteristics Leachability Tests (TCLP) results (where analysed), the reported soil/fill results exceed the "General Solid Waste" at the following locations:

Table 11: Waste Classification Results

Notes:
SCC – Specific contaminant concentration
CT – Contaminant threshold
Where multiple contaminant exceedences were reported at the same location, the exceedence with the most concentration has been tabulated.

The TCLP testing undertaken to date is considered to provide a preliminary waste classification of the soil/fill present at the Site for remediation planning purposes. Further sampling and analysis of material excavated and stockpiled during remediation works would be required to confirm the waste classification prior to beneficial re-use on-site or off-site disposal.

10.2.4.2 ASLP Tests

ASLP tests were undertaken on selected soil samples to evaluate leaching potential (refer to **Table T20**). Concentrations of metals including As, Ba, Cr, Co, Cu, Pb, Mn, Ni, Vn, Zn and PAHs including acenpathene, acenapthylene, anthracene, fluoranthene, fluorene, naphthalene, phenanthrene and pyrene were reported to be leaching at concentrations above the laboratory LOR.

Based on the samples analysed, the soil and fill material at the Site are considered to have the potential to leach.

10.2.4.3 Asbestos

A total of five samples (collected from locations where buried fill and rubble were identified) were analysed for asbestos during the AECOM DGI. No asbestos was detected in the samples analysed. A single result (AECOM BH48_11.5-11.7) reported the presence of unidentified mineral fibres. The corresponding bore log notes for this sample noted the presence of plastic, minor silt, crushed brick and road base gravels. No visual evidence of bonded fibre cement or possible asbestos fibres was observed by AECOM during the DGI investigation. ERM (2008a) previously analysed a total of 39 samples (12 samples from the Declaration Area) and detected chrysotile and amosite asbestos in a single location (BH203_1.5). Consequently, asbestos containing materials are not considered to be widespread within fill materials at the Site.

10.2.4.4 Acid Sulfate Soils

A total of two samples were analysed for Suspension Peroxide Oxidation Combined Acidity & Sulfur (sPOCAS) by AECOM to evaluate the potential for potential or actual acid sulfate soils to be present. The reported results indicate that Actual Acid Sulfate (AAS) soils were not present in the samples analysed, however there is a low potential for acid sulfate soils (PASS) to be present.

Based on Table 4.4 of the ASSMAC Assessment Guidelines, the reported sulfur trail (% sulfur oxidisable) and Acid trail (mol H^+/tonne) exceeds the Action criteria (0.03% and 18 mol H^+/tonne respectively) if more than 1000 tonnes of soils are to be disturbed triggering the need for an Acid Sulfate Soils management plan. These results are presented in **Table 12**.

Table 12: Sample sulfur trail, acid trail and lime calculation

No	Sample ID	Area	Material Type	Depth interval (m)	Sulfur Trail %S oxidisable (S_{POS})	Acid Trail Titratable Peroxide Acidity (m H^+/t)	Lime calculation Kg $CaCO_3/m^3$
1	AECOM BH49	Block 4	Sandy Gravelly Clay FILL (stiff)	6.2-6.4	1.21	<2	<1
2	AECOM BH68	Block 5	Sandy Gravel FILL (loose to medium dense	7.3-7.5	0.04	83	5

10.2.4.5 Geotechnical Sample Analysis

Flexible wall permemeter tests were undertaken on a total of 13 samples for geotechnical purposes. Reported permeability results were highly variable depending on the nature of the material sampled and ranged between 8.07E-11 metres/second in silty clay at location AECOM BH35_17.5 to 17.8 m bgs to 1.88E-08 metres/second in gravelly sand at location AECOM BH36_10.5 to 10.95 m bgs. It is noted that due to the blocky and variable nature of the fill, undisturbed U50 samples could not be obtained at a number of locations due to the sample tube being crushed and/or bent.

The plotted results of the flexible wall permeameter tests are detailed in **Appendix I**.

Porosity calculations were also undertaken by Australian Soil Testing on three samples for geotechnical purposes. Reported results are summarised in the table below.

Table 13: Porosity Analysis

Borehole	Depth (m bgs)	Area	Porosity
33	5.3	Block 3	0.41
35	17.5	Block 4	0.38
36	10.5	Block 3	0.23

Note: porosity values are based on an assumed particle density of 2.65 $g/cm^{3.}$

10.3 Soil Vapour Analytical Results

Soil vapour analytical results are summarised and compared to adopted ambient air and soil vapour criteria in **Table T23**. Laboratory certificates are provided in **Appendix J**.

A total of 10 soil vapour samples were collected from seven soil vapour wells, all of which were located within the Site and a single location down gradient of Blocks 4 and 5.

Soil vapour analytes reported above the laboratory LOR included the following:

- Toluene was reported in eight of the ten soil vapour samples analysed at concentrations ranging between 10.6 µg/m^3 (SV08_1.6-1.8) and 56.5 µg/m^3 (SV05_0.8-1.0). The reported concentrations were below the adopted ambient air (380 µg/m^3) and soil vapour screening criterion (3,800 µg/m$^{3)}$.
- Chloroform was reported in SV07_1.4-1.6 and SV09_ 0.8-1.0 at concentrations of 12.2 µg/m^3 and 13.2 µg/m^3 respectively. The reported concentrations were below the adopted ambient air (53 µg/m^3) soil vapour screening criterion (530 µg/m^3).
- Tetrachloroethene was reported in SV05_1.5-1.7 at a concentration of 13.5 µg/m^3. The reported concentrations were below the adopted ambient air (680 µg/m^3) soil vapour screening criterion (6,800 µg/m^3).
- Naphthalene was reported in eight of the ten soil vapour samples analysed at concentration ranging between 21 µg/m^3 (SV09_ 0.8-1.0) and 383 µg/m^3 (SV05_1.5-1.7). The reported concentrations were below the adopted soil vapour screening criterion of 3,800 µg/m^3. The reported concentrations exceeded the ambient air screening level (3.7 µg/m^3) in eight locations and the adopted soil vapour screening criterion (37 µg/m^3) in five locations. The locations where naphthalene was reported in soil vapour were generally located closest to the location of the former gasworks infrastructure.

It is noted that laboratory LORs for some chemicals were greater than the adopted ambient air and soil vapour screening criteria. These chemicals included:

- 1,3-butadiene (screening criterion of 0.03 µg/m^3 and 0.3 µg/m^3 vs. reporting limit of 4.4 µg/m^3).
- 1,1,2,2-tetrachloroethane (screening criterion of 0.3 µg/m^3 and 3 µg/m^3 vs. reporting limit of 14 µg/m^3).
- 1,2-dichloroethane (screening criterion of 0.36 µg/m^3 and 3.6 µg/m^3 vs. reporting limit of 8 µg/m^3).
- Hexachlorobutadiene (screening criterion of 0.7 µg/m^3 and 7 µg/m^3 vs. reporting limit of 21 µg/m^3).
- 1,2-dibromoethane (screening criterion of 0.003 µg/m^3 and 0.03 µg/m^3 vs. reporting limit of 15 µg/m^3).

The elevated LORs are not considered to significantly impact the overall dataset given that:

- the chemicals for which LORs exceeded screening criteria are not CoPC at the Site, based on the results of past investigations (i.e., these compounds have not been reported in soil or groundwater at the Site and are not expected to be present at the Site based on the Site history, existing data set and surrounding land uses); and
- the reported exceedences were generally marginal, with the exception of 1,2-dibromomethane.

Overall, the soil vapour results indicated some gasworks-derived impacts (as indicated by naphthalene) in locations closest to the former gasworks area, and low concentrations of toluene, chloroform and tetrachloroethene (below soil vapour and ambient air guidelines) in some locations.

10.4 Field Observations - Groundwater

Groundwater was encountered within fill, natural soil and bedrock at the Site. Groundwater levels were relatively shallow (less than 3 m) which was expected given the Site's location adjacent Darling Harbour and results from the previous investigations. Groundwater was encountered in all 7 testpits within the fill material.

Free tar was observed as a DNAPL in wells ERM MW204D, ERM MW205, ERM MW206, AECOM MW53, Coffey MW15, Coffey BH7 and Coffey BH10, as well as testpits TP05 and TP07. It is noted that groundwater samples were not collected from the wells, however NAPL samples were collected from monitoring wells ERM MW205 and ERM MW206. All wells with free tar were located within the former gasworks area. Coffey BH1 was unable to be sampled as the well was dry. Down-gradient well ERM MW212 was filled with sand and unable to be sampled.

During purging and sampling it was noted that groundwater generally had low turbidity.

A hydrogen sulphide odour was noted during sampling of AECOM MW40, AECOM MW58, AECOM MW62, Coffey BH3, ERM MW22, AECOM MW52, AECOM MW54, AECOM MW60, AECOM MW68, AECOM MW69 and AECOM MW74.

A tar odour was noted during sampling of ERM MW204S, ERM MW15, ERM MW198, ERM MW200, ERM MW209, ERM MW210, AECOM MW61 and AECOM MW64.

Observations made during the purging and sampling of groundwater wells are provided on the field sheets.

10.4.1 Groundwater Level Gauging

Groundwater was encountered at the Site at depths ranging from 1.38 to 2.92 m below ground surface (bgs). Standing water levels (SWLs) were measured from the top of each casing and converted to metres Australian Height Datum (m AHD) to calculate groundwater elevations and enable assessment of the groundwater flow direction.

The groundwater level gauging produced variable results, with no distinct flow direction ascertained, as expected. Groundwater potentiometric surface contour plans were not developed for the following reasons:

- Groundwater at the Site is subject to tidal fluctuation (see Section **10.7)** and the groundwater potentiometric surface would change throughout the tidal cycle;
- Given the large number of groundwater monitoring wells present, there are limitations associated with obtaining depth to groundwater data in a sufficiently short time frame (e.g. at high or low tide) to negate the change in water level associated with tide fluctuations.
- Tthe nature and distribution of fill materials and the presence of subsurface structures (including the caisson wall) are likely to influence groundwater flow.

10.4.2 Groundwater Water Quality Parameters

Field water quality parameters were measured during purging and the results of the water quality measurements and field observations are presented in **Table T24** and are summarised below.

- Dissolved oxygen (DO) in groundwater ranged from 0.03 mg/L (AECOM_MW64) to 1.22 mg/L (Coffey_BH3) indicating generally anaerobic conditions.
- Electrical conductivity (EC) of groundwater ranged from 645 µs/cm (ERM_MW204S) to 47700 µs/cm (AECOM_MW52) indicating the presence of fresh to saline groundwater. Generally groundwater across the Site had the salinity of seawater, with a few exceptions of indicative of fresh to brackish conditions located in proximity to Hickson Road.
- The pH of groundwater ranged from 4.23 to 7.27 with the majority of wells reporting slightly acidic conditions.
- The Oxygen Reduction Potential (Redox) of groundwater ranged from -268 mV (ERM_MW209) to 120 mV (AECOM_MW62) and indicated a generally reducing environment.

10.5 Groundwater Analytical Results

All groundwater analytical results are provided in **Table T25** at the rear of this report. Laboratory certificates are provided in **Appendix J**.

A tabulated summary of groundwater results is provided in **Table 14** below. The tabulated results include both exceedences of the Site investigation criteria and for those analytes where no criteria exists, exceedences of the laboratory LOR.

Table 14: Summary of Groundwater Analytical Results

Chemical	Number (count)		Concentration Range			Adopted Criteria - ANZECC (2000) Marine 95% (99% Hg)

10.5.1 Groundwater Geochemical Parameters

The cation/anion chemistry of the groundwater obtained from wells across the Site it is dominated by chloride and sodium, with the proportion of sodium and chloride ions tending towards seawater composition. This is expected considering the Sites proximity to Darling Harbor and the saline groundwater encountered during the investigation.

There are some minor variations to this trend which is likely a result of the variable fill materials present at the Site.

10.5.2 Natural Attenuation Parameters

Biodegradation of hydrocarbons (natural attenuation) most commonly occurs by means of aerobic, nitrate-reducing, Fe (III)-reducing, sulphate-reducing, and methanogenic respiration. The analytical results indicate that degradation of contaminants is occurring, with increased alkalinity and TOC concentrations and significantly reduced sulphate and calcium concentrations reported for wells with elevated hydrocarbon concentrations.

Increased alkalinity often occurs in areas if microbial activity. Increases in alkalinity result from the dissolution of clays, known to be present in some areas of the Site, by the production of carbon dioxide from the metabolism of microorganisms. Alkalinity is important in the maintenance of pH as it buffers the groundwater system against acids generated during aerobic and anaerobic biodegradation.

Low redox readings, indicating reducing conditions, and a slightly acidic to neutral pH were reported across the Site, generally indicating a suitable environment to support the degradation of hydrocarbon contamination.

10.6 Hydraulic Conductivity Assessment

Assessment of the hydraulic conductivity was conducted at two locations within the Site (AECOM wells MW45, MW58), and two locations down-hydraulic gradient of the Site (AECOM wells MW56, MW60). The results of the data analysis is summarised in **Table 15** (below) and the data sheets and calculations are provided in **Appendix F**.

Table 15: Summary of Hydraulic Conductivity Results

Well ID	Hydraulic Conductivity (K) m/sec	Description of materials at screened interval
MW45	1.1×10^{-6}	Variety of fill materials including silty sands, gravelly clays and sandy gravels.
MW56	7.3×10^{-7}	Weathered sandstone with clay bands
MW58	1.7×10^{-5}	Loose sands and sandy gravels.
MW60	3.4×10^{-8}	Silty clay, sandy clay and weathered sandstone.

The calculated hydraulic conductivities were variable across the Site and ranged from 1.7×10^{-5} to 3.4×10^{-8} m/sec and averaged 4.71×10^{-6}. These results are consistent with literature values for a sandy, silty environment.

Variable hydraulic conductivities are expected due to the heterogeneous nature of the fill materials used to backfill the Site. Hydraulic conductivities were highest in units containing gravels and sands and were lower in units which displayed an increased level of compaction and/or clay content.

Groundwater flow paths and subsequent migration of groundwater contamination are likely to be complicated by the spatial variability in conductivities across the Site as well as subsurface structures such as the existing caissons.

10.7 Tidal Assessment

Standing water levels within AECOM wells MW60, MW61, MW62 and the Stilling Well were monitored over a three day period to assess the extent and amplitude of tidal influence across the Site. The data are presented graphically in **Appendix G** and summarised in **Table 16** below.

Table 16: Tidal Assessment Results

Well ID	Distance from Harbour (approx)	Maximum Water Level Fluctuation	Time Lag of High/Low Tide from Shoreline
Stilling Well	0 m	1.7933 m*	0
MW60	40 m	0.5743 m	12 mins
MW62	140 m	0.2428 m	168 mins
MW61	200 m	0.0716 m	231 mins

*Includes water level variations resulting from passing boats/ships

Tidal fluctuations were found to influence groundwater levels at the Site.

In unconfined aquifers, such as those present at the Site, tidal fluctuations cause changes in groundwater levels as the seawater enters or leaves the aquifer which outcrops or subcrops at the shoreline. Thus, a high tide next to an unconfined aquifer will result in a rising of groundwater levels as a result of the entering seawater.

Groundwater level fluctuations at the Site over the three day period ranged from 1.79 m in the Stilling Well (including waves caused by passing boats) to 0.072 m in MW61 located in Hickson Road. Groundwater level changes resulting from tidal changes decreased with distance from the harbour.

The time lag between rising tidal level and rising groundwater level at the Site increased with distance from the harbour, although the time lag was not consistent across the Site. The variation is likely a result of the anisotropic distribution of fill materials of differing permeability.

In summary, the results of the tidal assessment indicate the Site is tidally influenced, with the influence extending as far inland as Hickson Road. This is supported by the presence of highly saline water within wells across the Site. The amplitude of tidal induced groundwater fluctuations reduce with distance from Darling Harbour and the inconsistent nature of backfill materials appear to influence flow directions and velocity of groundwater movement at the Site.

10.8 Injection Tests

As part of the pre-injection monitoring to inform the S-ISCO Pilot Trials, AECOM completed injection tests on selected existing groundwater monitoring wells to:

- verify flow rates for injections well; and
- ensure injection wells will be efficient at injecting chemicals into the subsurface.

The injection tests included the collection of baseline depth to water measurements in observation wells located in the vicinity of the injection wells (as detailed in **Table 17**).

The injection testing methodology comprised the following:

- Installation of data loggers into each selected injection monitoring well, to log depth to water changes throughout the duration of the test;
- Pumping water from a water cart (provided by Terratest) via a hose fixed by an inflatable pressure seal to the injection well head.
- The water injection tests comprised the injection of potable water at increasing flow rates for approximately one hour duration at each flow rate. The tests commenced with the injection of water at a rate of 4 litres per minutes for approximately 1 hour. During this time pressure and flow rate at the well head were monitored every 5 minutes.

- This same methodology was followed for injecting at flow rates of 10 litres per minute, 20 litres per minute and 40 litres per minute, where subsurface conditions permitted. Following the test all data collected (pressure, flow rates, and elevation) was forwarded to VeruTEK for analysis.

A summary of the monitoring wells selected for injection testing purposes are detailed in **Table 17** :

Table 17: Injection Testing Well Details

Test Well	Date	Start Time	Finish Time	Observation Wells
MW68	30/03/2010	12:02 PM	4:56 PM	MW69, MW61, MW198, MW64, MW62
MW69	31/03/2010	7:49 AM	11:40 AM	MW68, MW61, MW198, MW64
MW64	31/03/2010	12:34 PM	4:01 PM	MW61, MW198, MW68, MW200
MW54	4/06/2010	10:00 AM	1:41 PM	MW58, MW42, MW204D (tar impacted)
MW62	4/06/2010	2:14 PM	5:15 PM	MW58, MW42, MW204D (tar impacted)

11.0 Site Characterisation/Site Conceptual Model

11.1 Fill Materials and Natural Soils

To evaluate the nature and distribution of CoPC at the Site and in accordance with the objectives of the investigation, AECOM results have been combined with previous consultant's data (ERM and Coffey) to fill in identified data gaps and update the site conceptual model. The results of the DGI indicate the following:

- Observed fill materials generally comprised unconsolidated gravels, sand, bricks, sandstone, timber, slag and steel in a variable gravelly sand to clayey sand matrix. Fill materials were present above natural silty sands, gravelly sands, clays, weathered sandstone and sand with components of clay overlying sandstone bedrock. These results are generally similar to the previous investigations and confirm the presence highly variable fill material underlying the Declaration Area, thickening to the west towards Darling Harbour.
- Concentrations of CoPC including lead, TPH (C_6-C_9 and C_{10}-C_{36}), BTEX compounds, PAHs (including B(a)P), and sulfate variably exceeded the adopted Site investigation criteria. Concentrations of some SVOC compounds exceeding the laboratory LOR (carbazole and dibenzofuran) and/or USEPA screening criteria (3,3 dichlorobenzidine) were also reported. The reported results are generally consistent with the findings of previous investigations with respect to the identified CoPC.
- The reported contamination was identified in fill and natural soils and at the bedrock interface. No rock coring was undertaken during this DGI but previous investigations (ERM 2007) have identified residual gasworks related material within bedrock underlying the Site.
- The presence of contamination was variably confirmed by the presence of odours, black staining, surface sheen on groundwater and the presence of tar.
- Elevated concentrations of lead (greater than the site assessment criteria) were primarily detected within shallow fill materials in Block 5 and a single location in Southern Cove. The lead was generally reported at depths of 1.5 to 3.5 m bgs and was not widespread across other areas of the Site. It is noted that lead can be associated with gasworks wastes (NSW DEC 2005), however the data indicate that only 3 of 8 the elevated concentrations were directly associated with the presence of gasworks-like contamination.
- Waste characterisation results indicated soil and fill materials variably meet either the Restricted Solid Waste or Hazardous Waste criteria across a large portion of the Site.
- TCLP and ASLP testing of samples collected by AECOM indicated that leaching of some metals and PAHs occurred under the test conditions. These results indicated that there is a potential for adverse impacts from the impacted fill to groundwater beneath the Site.

Based on the reported results, AECOM notes the following regarding the lateral and vertical extent of contamination in fill and natural material:

- The maximum concentrations of CoPC were generally located in proximity to and down gradient from the former gasworks in the Declaration Area. Free tar was identified in a number of additional locations in Hickson Road and Block 4 within and in the vicinity of the tar tank, purifying beds and 1870 gasholder, indicating these locations are source areas of contamination.
- Reported concentrations of TPH, BTEX and PAHs generally decreased with distance from the inferred source areas. The results indicate that lateral migration of contamination has and continues to occur.
- Asbestos was identified in a single sample during a previous investigation. A second sample reported the presence of unidentified mineral fibres. The reported results and visual observations during sampling indicate that asbestos is not widespread within fill materials at the Site.

11.2 Hydrogeological Conditions

The results of this investigation indicated that groundwater beneath the Site is present as an unconfined, shallow aquifer within the fill materials and the underlying natural sediments. Groundwater is also likely to occur as a deeper bedrock aquifer within the underlying sandstone bedrock. Groundwater within the bedrock would occur as a fractured bedrock aquifer, potentially confined by an overlying clay unit in some areas of the Site.

Due to the proximity of the Site to Darling Harbour, the depth to groundwater is shallow and the overall direction of groundwater flow is expected to be towards Darling Harbour. Groundwater at the Site is tidally influenced, resulting in the fluctuation of groundwater levels within the fill materials and natural sediments. Groundwater

chemistry at the Site is dominated by sodium and chloride ions, indicative of a saline environment. Variability in the groundwater chemistry and hardness was present in some areas of the Site, which is contributed to the presence of the fill materials.

The hydraulic conductivities reported for the Site were variable due to the inconsistent nature and distribution of fill materials. This variability in conductivity results in inconsistent lag times for tidal influence across the Site and creates a tortuous flow path for groundwater and associated contamination.

Based on the preliminary results reported in AECOM (2010c) there appears to be an efficient hydraulic connection between the saturated fill material and Darling Harbour indicating a significant exchange of water during tidal cycles. However groundwater flux in the underlying natural material was determined to be negligible. It is also noted that dissolved oxygen measurements in monitoring wells at the Site and surrounding area (Other Remediation Works South Area) were generally less than 2 mg/L, with an average of 0.45 mg/L, indicating oxygen depleted conditions. This may indicate that the hydraulic connection is heterogeneous across the Barangaroo Site owing to the various underlying caisson structures.

Contaminants associated with the former gasworks operation were present in groundwater within and down-gradient of the Site. The distribution of groundwater contamination across the Site appears to be influenced by tidal fluctuations and the variable nature and distribution of fill materials used to backfill the Site.

Free phase tar was reported in several wells located within the footprint of the former gasworks site. Tar was observed within wells installed at varied depths throughout the profile, indicating dense non aqueous phase liquid (DNAPL) is present at the Site within the fill materials, natural sediments and bedrock.

The migration of DNAPL occurs both vertically and horizontally through the profile under the influence of gravity. Changes in hydraulic conductivity (e.g. from a sand to a clayey sand) would slow the downwards migration of DNAPL and promote lateral dispersion. The slope of the bedrock interface at the Site towards the west is also likely to be influencing DNAPL migration.

Dissolved phase contamination associated with the former gasworks, were present across the Site and in down-gradient wells to the west. Significant concentrations of TPH, BTEX, PAH and ammonia were reported in groundwater across the former footprint of the gasworks infrastructure. Cyanide concentrations (free and weak acid dissociable) were reported in various wells in the Declaration Area but showed no correlation with naphthalene (considered a gasworks indicator CoPC) indicating that if the reported cyanide is related to the gasworks it does not appear to be as persistent as the organic contaminants.

Given the varied depth of DNAPL occurrence at the Site, it is likely that the associated dissolved phase contamination also exhibits significant spatial variability in terms of depth of occurrence and concentration.

Groundwater contamination appears to be migrating in a westerly direction towards Darling Harbour as monitoring wells located down-hydraulic gradient (west) of the Site reported the presence of contamination indicative of gasworks waste.

Contaminant concentrations reported in down-gradient well AECOM MW60, screened between 14 and 22 mbgs (-11.31 to – 19.31 m AHD) across the base of the fill and natural sediments immediately overlying bedrock, was an order of magnitude higher than concentrations reported for more shallow down-gradient wells. This suggests the most significant dissolved phase concentrations are at depth down-gradient of the Site and based on the depths to the harbour floor reported in ERM (2008b), which ranged between 10 m to 13.2 m below the water surface, are present at an elevation below the sea floor of Darling Harbour.

The northern and eastern extents of contamination were not defined by this investigation, with contamination extending beyond AECOM MW69 to the north and Hickson Road to the east. The assessment of adjacent Blocks 1 to 3 (AECOM, 2010a) indicated the southerly migration of groundwater contamination is limited, not extending past AECOM MW08, located within Block 3.

Heavy metals concentrations exceeding the guidelines were widespread across the Site. Compounds exceeding the criteria in numerous monitoring wells included cobalt, copper, lead, nickel and zinc. The slightly acidic nature of groundwater at the Site may also be contributing to the mobilisation of heavy metals from within the fill materials. Metals concentrations were generally consistent with previous investigations.

The assessment of natural attenuation parameters indicate that a suitable environment for biodegradation of hydrocarbons is present at the Site, and there is evidence the degradation processes is actively occurring. Evidence of this included reduced sulphate concentrations, increased alkalinity and higher TOC concentrations in wells reporting the presence on hydrocarbon contamination.

The assessment of natural attenuation parameters indicate that a suitable environment for biodegradation of hydrocarbons is present at the Site, and there is evidence the degradation processes is actively occurring. Evidence of this included reduced sulphate concentrations, increased alkalinity and higher TOC concentrations in wells reporting the presence on hydrocarbon contamination.

In summary, the most significant groundwater contamination was identified in the immediate vicinity of the former gasworks infrastructure and contamination is present in both dissolved and free phase forms. Concentrations of contaminants in excess of the assessment criteria were also identified in down-gradient wells, indicating the westerly migration of contamination. The results of the investigation indicate that the variable nature and distribution of fill materials at the Site cause localised variations in groundwater flow and associated contaminant migration, which is further complicated by tidal movements.

11.3 Conceptual Site Model Update

ERM (2008) provided a conceptual site model with the following salient points:

- Gasworks related contamination was generally present within the fill material, natural soil and bedrock underlying the Declaration Area.
- Primary pathways for contaminants "*are likely to be within the sandstone bedrock, to the east, and via highly permeable fill/service lines towards Darling Harbour*".
- With the exception of one location in the Public Domain west of Block 5 (described as Area 3 and 4 in ERM 2008) observations of tar were made in a number monitoring wells within the Declaration Area.

Based on the combined ERM, Coffey and AECOM dataset, the following points provide an update to the conceptual site model:

- The majority of gasworks related contamination present underlying the Declaration area has been confirmed. With the exception of 4 locations outside of the Declaration Area (ERM BH169, ERM BH191, AECOM BH40 and AECOM BH60), observations of tar and tarry/strong hydrocarbon odour with sheen on sampled material were entirely in boreholes within the Declaration Area.
- The deeper contamination reported in the Public Domain west of Block 5 has been confirmed as being present in the natural soil immediately underlying the fill material.
- The conceptual model depicted in ERM (2008) Figure 20 generally fits with the exception of deep bedrock contamination (discussed below). AECOM DGI boreholes did not generally extend into bedrock and therefore the deep bedrock contamination interpreted in ERM BH205, BH206 and BH209 has not been confirmed.

Review of the ERM borelogs and soil data indicates that the highly impacted zones of contamination appear to be in the natural soil at the bedrock interface and decrease with depth. Because the wells installed in BH206 and BH209 are screened across the natural soil and sandstone bedrock (as indicated in the borelogs) and there is no evidence for deep contamination in BH205 (other than tar in the well which could be related to well completion issues given the difficult nature of the drilling at the Barangaroo Site), AECOM considers that the dataset does not support the presence of deep bedrock contamination.

The combined dataset indicates that the highly impacted zone is generally at the base of the fill material, through the natural soil and into the top of the sandstone. This would be expected at a DNAPL site where highly variable and permeable fill material overlies a relatively less permeable natural soil/bedrock. The DNAPL would migrate downwards and pool/adsorb on a less permeable underlying strata. It is also noted that given the high tidal connectivity of the fill material, lower concentrations in the fill material would be expected, with the higher concentrations remaining in the lower permeable material with less connectivity (supported by AECOM 2010c).

"This page has been left blank intentionally"

12.0 Assessment of Risk

The following sections provide a qualitative evaluation of the potential for the reported concentrations of CoPC at the Site to pose a risk to human health or the environment by consideration of the extent and source(s) of contamination, pathways, exposure routes and receptors. The following tables provide the source-pathway-receptor assessment based on the understood declaration and for the current use of the Site. Specific exposure scenarios have been modelled in the HHERA(s).

Table 18: Source-pathway-receptor summary related to the declaration

Source/CoPC	Pathway	Receptor	Complete Pathway/Exposure Risk
Gasworks – TPH, PAHs, BTEX	Inhalation (vapour)	Human –adjacent properties	Possible – odours in basement of 38 Hickson Road when groundwater is not adequately removed.
Gasworks – TPH, PAHs, BTEX, cyanide, sulfate, heavy metals, ammonia Fill – heavy metals	Surface water	Environment (Darling Harbour)	No – concrete slab/asphalt and existing drainage infrastructure in place
Gasworks – TPH, PAHs, BTEX, cyanide, sulfate, heavy metals, ammonia Fill – heavy metals	Groundwater	Environment (Darling Harbour)	Yes – concentrations reported in groundwater (risk assessment pending) underlying the Site but decrease down gradient.

Table 19: Source-pathway-receptor summary related to current/approved land use

Source/CoPC	Pathway	Receptor	Complete Pathway/Exposure Risk
Gasworks – TPH, PAHs, BTEX	Inhalation (vapour)	Human – Site workers, visitors, public	No – concrete slab/asphalt in place. Vapour results less than Site investigation Criteria
Gasworks – TPH, PAHs, BTEX, cyanide, sulfate, heavy metals, ammonia Fill – heavy metals	Dermal contact	Human – Site workers, visitors, public	No – concrete slab/asphalt in place Assume existing services maintenance is undertaken via existing access infrastructure
Gasworks – TPH, PAHs, BTEX, cyanide, sulfate, heavy metals, ammonia Fill – heavy metals	Ingestion (soil, groundwater, dust)	Human – Site workers, visitors, public	No – concrete slab/asphalt in place, groundwater saline and not used
Gasworks – TPH, PAHs, BTEX, cyanide, sulfate, heavy metals, ammonia Fill – heavy metals	Surface water	Environment (Darling Harbour)	No – concrete slab/asphalt and existing drainage infrastructure in place

Source/CoPC	Pathway	Receptor	Complete Pathway/Exposure Risk
Gasworks – TPH, PAHs, BTEX, cyanide, sulfate, heavy metals, ammonia Fill – heavy metals	Groundwater	Environment (Darling Harbour)	Yes – concentrations reported in groundwater (risk assessment pending) underlying the Site but decrease down gradient.

AECOM notes that:

- The existing concrete and asphalt ground surface provides a barrier to contamination identified in subsurface soil and fill materials;
- Reported dissolved-phase concentrations of contaminants have been variably detected above the Site investigation criteria (e.g. cadmium, chromium, cobalt, copper, lead, mercury, nickel, zinc, naphthalene and ammonia) and above detection limits (e.g. TPH C_6-C_9, TPH C_{10}-C_{36}, BTEX, PAHs, phenols, SVOCs and VOCs). The contamination detected in groundwater is likely to be related to the presence of both gasworks waste and buried fill materials indicating there may be a potential risk to the environment if migration to off-site receptors is occurring; and
- Free tar has been reported at a number of locations and would represent an ongoing source of contamination and would likely need to be removed to the extent practical.

12.1 Declaration Related Risk

The Declaration states:

> *The EPA has considered the matters in s.9 of the Act and for the following reasons has determined that the site is contaminated in such a way as to present a significant risk of harm to human health and the environment:*
>
> - *Groundwater on the site has been found to be contaminated by TPHs, PAHs, BTEX, ammonia, phenol and cyanide at concentrations significantly exceeding the relevant trigger values for the protection of human health and aquatic ecosystems in the Australian and New Zealand Guidelines for Fresh and Marine Water Quality (ANZECC and ARMCANZ, 2000).*
> - *These groundwater contaminants include human carcinogens and substances toxic to aquatic ecosystems.*
> - *The contaminated groundwater is impacting on the surrounding areas including the basement of a residential building adjacent to the site, potentially exposing humans in that building to harmful vapours; however it is currently being effectively controlled.*
> - *Contaminated groundwater is likely to be migrating from the site to Darling Harbour and could ultimately affect aquatic ecosystems.*

Therefore the EPA is concerned with the particular contaminants reported in groundwater and the potential for these to migrate from the site. With the exception of point 3 the determination of significant contamination is related to migration of contaminated groundwater to Darling Harbour.

Based on the source-pathway-receptor analysis, a complete pathway exists for contaminated groundwater to enter Darling Harbour. Based on the contaminants (including known carcinogens such as benzene) and reported concentrations (i.e. greater than the assessment criteria) in this and previous investigations, a risk is likely to exist to the receptor. AECOM notes that the risk will be quantified in the HHERA(s).

12.2 Land Use Related Risk

AECOM understands the Site may be developed for a mix of high density residential (minimal access to soil), commercial (including basement level car parking) and open space land uses in the vicinity of the Southern Cove. Whilst the existing asphalt and concrete ground surface is considered adequate to limit exposure by Site users to underlying contamination, it is noted that any future earthworks/remediation/development at the Site is likely to complete the exposure pathway.

The site specific HHERA which is currently being prepared for the Site will consider in further detail the proposed future land use scenarios and provide and evaluate the potential risks associated with the identified contamination during future development works.

However, as with the Declaration related risk, there is a complete pathway for the migration of contaminated groundwater to Darling Harbour and therefore a likely risk to that receptor. AECOM notes that the risk will be quantified in the HHERA(s).

13.0 Conclusions and Recommendations

The DGI has identified elevated concentrations of contaminants exceeding the adopted Site investigation criteria within the Declaration Area. The reported results are considered to be primarily associated with the former land use as a gasworks, as well as the importation of fill materials during reclamation activities.

The Declaration Area has been declared a Remediation Site by the NSW EPA as it has previously determined that the land is contaminated in such a way as to present a significant risk of harm (i.e. significant enough to warrant regulation) to human health and the environment. The reported results of this DGI and previous investigations support this determination.

AECOM considers that the DGI has derived sufficient data to address identified existing data gaps and confirm the general characteristics of soil, fill, soil vapour and groundwater underlying the Site in order to allow:

- Planning of the proposed remediation strategies and commencement of remediation treatability trials;
- Development of contaminant fate and transport modelling;
- Development of a Site specific HHERA demonstrating what soil and groundwater contamination will represent an acceptable risk if reused as part of the development (including placement in Headland Park); and
- Further development and refinement of the proposed remediation strategies and associated environmental management measures, including preparation of a detailed RAP and final RWP.

In order to achieve the objectives of removing the declaration which currently applies to the Declaration Area and making the Site suitable for the proposed land use, AECOM recommends completion of the following:

- A site-specific HHERA addressing the remediation required for removal of the Declaration;
- A separate HHERA addressing the remediation of the Declaration Area for the proposed future land use;
- RAP detailing options for remediation and/or management and a recommended preferred strategy that will:
  - Facilitate removal of the DECCW Declaration;
  - Render the areas suitable for their intended land use;
  - Detail validation requirements to be implemented to demonstrate successful completion of the remedial works; and
  - Detail the requirement (if any) for potential future monitoring or management.
- RWP providing a technical specification that is suitable for issue by LL to its contractors, and that provides specific details of the work that must be completed to facilitate delivery of the remediation works prescribed by the RAP for the Site.

Table T1A
Observations in Soil

Location	Borehole ID	Depth	Lithology	PID	Observations
Block 3	BH36	14.5-15.0	Sandy CLAY	-	Tar odour.
		15.0-15.05	SANDSTONE	16.9	Tar odour.
Block 4	BH42	2.8-3.2	Clayey Sand (FILL)	3.1	Black staining. Moderate tar odour.
		3.2-3.4	Clayey Sand (FILL)	-	Strong tar and hydrogen sulphide odour. Sheen noted.
		3.4-3.5	SAND	-	Black staining. Strong tar odour. Sheen noted.
		3.5-3.6	SANDSTONE	-	Strong tar odour.
	BH44	4.5-5.5	SANDSTONE	407.0	Black staining. Moderate tar odour.
Proposed Southern Cove	BH45 / MW45	0.07-1.0	Gravelly Silty Sand (FILL)	1.3	Contains trace ash.
		1.0-3.2	Gravelly Sand (FILL)	4.3	Slight tar odour.
		3.2-4.4	Silty Gravelly Sand (FILL)	1.3	Trace black staining. Slight tar odour.
		4.4-5.6	Silty Sandy Clayey Gravel (FILL)	0.6	Slight tar odour.
		5.6-5.8	Silty Sandy Clayey Gravel (FILL)	0.8	Black staining. Moderate tar/hydrocarbon odour.
		5.8-7.2	Gravelly Sandy Clay (FILL)	0.7	Trace black staining. Slight tar odour.
		7.2-8.2	Clayey Sandy Gravel (FILL)	0.5	Very slight tar odour.
		10.5-11.2	SANDSTONE	0.6	Very slight gaseous odour.
		11.2-12.15	SANDSTONE	1.1	Very slight tar odour.
		12.15-12.2	SANDSTONE	1.1	Trace vein of tar. Black staining. Very slight tar odour.
		12.2-13.4	SANDSTONE	1.3	Very slight tar odour.
Block 4	BH48	1.0-2.5	Silty Sand (FILL)	0.4	Slight hydrocarbon odour.
		2.5-4.0	Sandy Clay (FILL)	-	Contains minor ash.
		8.5-11.5	Sand (FILL)	1.0	Contains minor ash.
		13.0-14.5	Sand (FILL)	0.7	Slight hydrocarbon odour.
		14.5-15.5	Clayey Silty Sand (FILL)	-	Contains crude tar. Black staining. Strong tar odour.
		15.5-17.0	SANDSTONE	260.8	Black staining. Strong tar odour.
	BH49	0.8-1.5	Silty Gravelly Sand (FILL)	2.5	Contains trace ash. Slight gaseous/chemical odour.
		1.5-2.5	Clayey Silty Sand (FILL)	0.9	Contains trace ash.
		2.5-3.2	Gravelly Clayey Silty Sand (FILL)	2.2	Slight gaseous/chemical odour.
		3.2-4.2	Silty Sand (FILL)	2.0	Black staining.
		4.2-4.8	Clayey Silty Sand (FILL)	2.2	Black staining.
		4.8-6.2	Clayey Silty Sand (FILL)	8.0	Moderate gaseous/chemical odour.
		6.2-7.2	Sandy Gravelly Clay (FILL)	8.0	Moderate gaseous/chemical odour.
		7.2-8.2	Sandy Gravel (FILL)	31.5	Black staining. Moderate gaseous/chemical odour.
		8.2-9.2	Sandy Clay (FILL)	125.4	Vein of tar. Black staining. Moderate to strong tar odour.
		9.2-10.2	Sandy Clay (FILL)	114.3	Veins of tar (20 %). Black staining. Moderate to strong tar odour. Slight sheen noted.
		10.2-11.2	Sandy Clay (FILL)	282.9	Minor veins of tar. Black staining. Tar odour. Sheen noted.
		11.2-12.2	Sandy CLAY	292.7	Minor veins of tar. Black staining. Moderate to strong tar odour.
		12.2-12.7	Clayey SAND	327.5	Minor veins of tar. Black staining. Moderate to strong tar odour.
	BH50	1.0-1.3	Silty Sandy Gravel (FILL)	0.6	Very slight gaseous odour.
	BH52 / MW52	0.95-2.2	Silty Gravelly Sand (FILL)	1.6	Contains minor ash. Slight gaseous odour.
		2.2-3.2	Clayey Sand (FILL)	0.9	Slight gaseous odour.
		3.2-4.2	Sand (FILL)	1.0	Black staining. Slight to moderate gaseous/tar odour.
		4.2-4.9	Clayey Gravelly Sand (FILL)	1.5	Black staining. Slight gaseous/tar odour.
		4.9-5.2	Silty Gravel (FILL)	1.9	Slight gaseous/tar odour.
Hickson Road	BH53 / MW53	2.8-5.0	Sandy Gravel (FILL)	32.7	Black staining. Slight tar odour. Sheen noted.
		5.0-5.4	Sandy Gravel (FILL)	1530.0	Black staining. Strong tar odour. Sheen noted.
		5.4-5.45	SANDSTONE	920.0	Black staining. Strong tar odour. Sheen noted.
Block 4	BH54 / MW54	0.06-1.0	Clayey Sandy Gravel (FILL)	1.7	Slight hydrocarbon odour.
		1.0-1.2	Clayey Silty Sand (FILL)	137.9	Moderate to strong tar odour.
		1.2-1.3	Clayey Silty Sand (FILL)	137.9	Black staining. Moderate to strong tar odour. Sheen noted.
		1.3-1.9	Clayey Silty Sand (FILL)	137.9	Moderate to strong tar odour.
		1.9-2.8	SAND	32.1	Black staining.
		2.8-3.0	SAND	32.1	Minor black staining. Slight to moderate tar odour.
	BH55	0.83-2.2	Silty Sand (FILL)	104.3	Minor tar. Black staining.
		2.2-2.7	Clayey Sand (FILL)	345.4	Black staining. Moderate to strong tar odour. Sheen noted.
		2.7-2.9	Silty Sandy Clay (FILL)	104.2	Black staining. Moderate to strong tar odour. Slight to moderate sheen noted.
	BH58 / MW58	1.0-2.2	Gravelly Silty Sand (FILL)	1.9	Contains minor ash. Slight gaseous/tar odour.
		2.2-4.2	Silty Sandy Gravel (FILL)	1.0	Black staining. Slight tar/chemical/gaseous odour.
		4.2-5.2	Silty Sandy Gravel (FILL)	1.3	Slight to moderate gaseous/tar odour.
		5.2-7.4	Clayey Silty Sandy Gravel (FILL)	2.3	Black staining. Moderate gaseous/tar odour.
		7.4-9.4	Silty Sandy Gravel (FILL)	2.3	Black staining. Slight to moderate gaseous/tar odour.
		9.4-10.2	Silty Sandy Clay (FILL)	1.8	Black staining. Slight to moderate gaseous/tar odour.
		10.2-10.8	Silty Gravelly Sand (FILL)	1.7	Very slight gaseous odour.
		10.8-11.4	Silty Sandy Gravel (FILL)	1.9	Very slight gaseous odour.
	BH59	1.9-3.5	Clayey Sand (FILL)	62.0	Moderate tar odour.
		3.5-3.9	Clayey Sand (FILL)	944.0	Black staining. Strong tar odour. Sheen noted.
		3.9-4.4	Clayey Sand (FILL)	197.0	Tar odour. Sheen noted.

Location	Borehole ID	Depth	Lithology	PID	Observations
Hickson Road	BH61 / MW61	1.0-2.0	Gravelly Sand (FILL)	11.1	Slight tar odour.
		2.0-3.0	Sandy Gravel (FILL)	0.9	Contains slag. Slight tar odour.
		3.0-3.45	Clayey SAND	105.0	Vein of tar. Black staining. Slight tar odour.
Block 5	BH62 / MW62	0.9-2.0	Silty Gravelly Sand (FILL)	6.3	Very slight tar odour.
		2.0-3.2	Sandy Gravel (FILL)	2.7	Black staining. Slight to moderate tar odour.
		3.2-4.7	Clayey Sandy Gravel (FILL)	1.8	Minor black staining. Slight gaseous odour.
		4.7-5.2	Gravelly Sand (FILL)	1.7	Slight gaseous odour.
		5.2-6.5	Gravelly Sand (FILL)	1.9	Black staining. Moderate gaseous odour.
		6.5-8.8	Silty Gravelly Sand (FILL)	1.3	Slight gaseous odour.
		8.8-9.9	Gravelly Sand (FILL)	0.9	Slight gaseous odour.
		9.9-11.0	Sandy Clay (FILL)	0.8	Minor black staining. Slight gaseous odour.
		11.0-11.8	Gravelly Sandy Clay (FILL)	1.0	Black staining. Slight gaseous odour.
		11.8-12.2	Sand (FILL)	1.3	Minor black staining. Slight gaseous odour.
Block 4	BH64 / MW64	0.8-2.5	Clayey Silty Sandy Gravel (FILL)	-	Contains slag and ash (20 %). Slight naphthalene/chemical odour.
		2.5-4.0	Silty Sandy Gravel (FILL)	3.5	Slight gaseous odour.
		5.3-6.7	Clayey Sandy Gravel (FILL)	2.1	Very slight gaseous odour.
	BH65	0.8-2.2	Silty Sandy Gravel (FILL)	0.4	Slight tar odour.
		2.2-3.2	Silty Sand (FILL)	-	Black staining. Slight to moderate tar odour.
		3.2-4.2	Gravel (FILL)	1.5	Black staining. Moderate tar odour. Moderate sheen noted.
		4.2-5.6	Gravelly Silty Clay (FILL)	1.7	Black staining. Moderate tar odour. Sheen noted.
		5.6-7.5	Silty Sandy Gravel (FILL)	2.6	Black staining. Moderate tar odour.
		7.5-8.6	Silty Sandy Gravel (FILL)	2.4	Slight to moderate tar odour. Very slight sheen noted.
		8.6-8.9	Silty Sandy Gravel (FILL)	2.2	Moderate tar odour. Slight to moderate sheen noted.
		8.9-9.5	Silty Sandy Gravel (FILL)	3.9	Black staining. Moderate tar odour.
		9.5-11.2	Sandy CLAY	3.9	Minor veins of tar. Slight black staining. Slight to moderate tar and naphthalene odour.
		11.2-12.5	Clayey SAND	176.7	Minor red/orange product. Moderate chemical/naphthalene odour. Moderate sheen noted.
		12.5-13.4	Sandy CLAY	10.7	Moderate to strong chemical/naphthalene odour. Slight sheen noted.
		13.4-13.6	Sandy CLAY	103.0	Moderate naphthalene odour.
Block 4	BH66	0.2-2.4	Gravelly Sand (FILL)	0.4	Slight tar odour.
		2.4-3.2	Silty Sandy Gravel (FILL)	1.0	Contains minor ash and slag (60 %). Slight tar/chemical odour.
		3.2-4.2	Silty Sand (FILL)	1.7	Slight tar odour.
		5.2-7.0	Sandy CLAY	1.3	Slight gaseous odour.
		7.0-7.2	SANDSTONE	0.4	Very slight gaseous odour.
Hickson Road	BH67	0.36-0.43	Gravelly Clayey Sand (FILL)	0.0	Slight tar odour.
Block 5	BH68 / MW68	0.07-2.5	Gravelly Clayey Sand (FILL)	0.9	Slight tar odour.
Block 4	SV05	0.07-1.0	Silty Sandy Gravel (FILL)	0.4	Contains minor ash.
		1.6-1.8	Gravelly Sand (FILL)	0.2	Contains band of ash and slag 200 mm thick.
	SV06	1.45-2.2	Silty Gravelly Sand (FILL)	-	Contains ash (40 %). Black staining. Slight gaseous odour.
	SV07	0.22-0.7	Silty Sandy Gravel (FILL)	-	Contains minor ash.
Block 5	SV09	0.09-1.3	Silty Sandy Gravel (FILL)	0.4	Contains ash (20 %) and slag (50 %). Slight gaseous/chemical odour.
		1.3-2.2	Clayey Sand (FILL)	0.6	Contains minor ash. Slight gaseous/chemical odour.
	SV10	0.08-1.2	Gravelly Sand (FILL)	1.6	Contains trace ash.
		1.2-1.6	Sandy Silty Clay (FILL)	0.9	Contains minor ash.
		1.6-2.2	Silty Sand (FILL)	1.8	Contains trace ash.
	SV11	0.07-1.0	Sandy Silty Gravel (FILL)	1.8	Contains minor ash.

Notes
mg/kg = milligrams per kilogram
Adopted Residential Criteria= NSW DEC SIL_2 (2006), * US EPA, 2009. Regional Screening Levels (Residential), ** NSW EPA (1994) Sensative Use
Adopted Commercial Criteria= NSW DEC SIL_4 (2006), * US EPA, 2009. Regional Screening Levels (Industrial), ** NSW EPA (1994) Sensative Use
LOR = Limit of Reporting
# denotes sum of concentrations not calculable as all <LOR
< denotes result less than LOR
- denotes not analysed
BTEX = Benzene, Toluene, Ethylbenzene and Total Xylenes
TPH = Total Petroleum Hydrocarbons
Shading = Exceedence of Criteria
*** There are two BH199_6 samples. Note the samples have different lab IDs.

Notes :
Pre: Pre-purge water quality parameter readings
Post: Post-purge water quality parameter readings
ERM: Monitoring wells installed by ERM
Coffey: Monitoring wells installed by Coffey
AECOM: Monitoring wells installed by AECOM
mg/L - milligrams per litre
mV -miilivolts
uS/cm - micro-siemens/cm
WQM - Water Quality Meter

Notes
Shading indicates criteria exceedence
mg/L - milligrams pre litre
µg/L - micrograms per litre
LOR - Laboratory Limit of Reporting
- denotes not analysed
< denotes result less than the LOR

Notes
Shading indicates criteria exceedence
mg/L - milligrams pre litre
µg/L - micrograms per litre
LOR - Laboratory Limit of Reporting
- denotes not analysed
< denotes result less than the LOR
** ANZECC (2000) Marine Water (99%) trigger value

Data Quality Objectives

"This page has been left blank intentionally"

1.0 Data Quality Objectives

In determining the type, quantity and quality of data needed to support decisions relating to the environmental condition of the Site, AECOM has undertaken the seven-step process to develop the DQOs in accordance with NSW DEC (2006). In developing the DQOs for the investigation an initial phase of review was necessary to appraise relevant and available background information and to develop a preliminary conceptual site contamination model identifying the areas of the Site that required investigation for the purpose of assessing the requirements for either the management and/or remediation during the re-development of the Site. These matters are addressed in the DQOs presented below.

1.1 Step 1 - State the Problem

The Site (refer Figure F2) was used to manufacture gas from approximately 1840 to 1921. It is understood that some of the former gas works infrastructure remains in place underlying the current slab and adjacent roadway (Hickson Road). Contamination has been reported in fill material, soil and groundwater underlying the Site, the remainder of Barangaroo and adjacent portions of Hickson Road, and sediment in the adjacent Darling Harbour. The Site has been the subject of reclamation activities over the years, which appears to have consisted of placement of greater than 20 metres of fill material.

The Site is proposed to be redeveloped for mixed open space, residential and commercial use.

AECOM has been provided with a number of reports on sub-surface investigations previously conducted at Barangaroo, including the following:

- ARUP. 2008. Barangaroo Development, East Darling Harbour Geotechnical Desk Top Study. 28 October.
- ERM. 2008c. Draft Stage 2 Remedial Action Plan for Barangaroo, Hickson Road, Sydney. September.
- ERM. 2008b. Preliminary Sediment Screening Works at East Darling Harbour, Adjacent to Barangaroo, NSW, Draft, Rev 03. August.
- ERM. 2008a. Additional Investigation Works at Barangaroo, Hickson Road, Millers Point, NSW. July.
- ERM. 2007. Environmental Site Assessment, East Darling Harbour, Sydney, NSW, Final Report. 21 June.
- Coffey Environments. 2008. Preliminary Environmental Investigation, 30-38 Hickson Road, Millers Point, NSW 2000. 12 May.
- Jeffery & Katauskas. 2006. Geotechnical Investigation for Proposed Redevelopment of Wharves 3-8 at Hickson Rd, Darling Harbour East NSW.
- AECOM Australia Pty Ltd, 2009. Revised Draft Remediation Work Plan, Stage 1 Development, Barangaroo, 30 November 2009;
- AECOM 2010. Barangaroo Data Gap Investigation, proposed Blocks 1 to 3, Hickson Road, Millers Point, NSW. DGI in progress;
- ARUP Geotechnics, 1986. Upgrading Wharf 7/8 Darling Harbour, Geotechnical Site Investigation. January 1986.
- ARUP (2008). Barangaroo Development, East Darling Harbour Geotechnical Desk Top Study. 27 October.
- LLD supplied CD, 2010. BDA Supplied Historical Work As Executed Drawings for the Former Wharf Structures at Berths 3 to 8, Barangaroo. CD dated 21 January.
- LLD supplied CD, 2010. Geotechnical Information - Barangaroo Area (including CBD Metro Geotechnical and Environmental Investigations, completed by Coffey). CD dated 21 January.
- Coffey Environments, 2008. Preliminary Environmental Investigation, 30-38 Hickson Road, Millers Point, NSW 2000. 12 May;
- ERM, 2008. Draft Stage 2 Remedial Action Plan for Barangaroo, Hickson Road, Sydney. September 2008;
- ERM, 2008. Preliminary Sediment Screening Works at East Darling Harbour, Adjacent to Barangaroo, NSW, Draft, Revision 03. August;
- ERM, 2008. Additional Investigation Works at Barangaroo, Hickson Road, Millers Point, NSW. July;

- ERM, 2007. Environmental Site Assessment, East Darling Harbour, Sydney, NSW, Final Report. 21 June;
- Headland Park Concept Plan http://majorprojects.planning.nsw.gov.au/page/project-sectors/residential--commercial---retail/?action=view_job&job_id=2636
- Jeffery and Katauskas, 2006. Geotechnical Report development of Wharves 3-8 at East Darling Harbour. August 2006.
- Lend Lease Scheme CAD files provided to AECOM in December 2008.
- Lend Lease concept plans relating to material / retention and reuse at Barangaroo.

The documents and reports listed above indicate that numerous environmental investigation and geotechnical assessment works have been undertaken at Barangaroo since 2007, which have identified contamination in soil and groundwater associated with the historical presence of a gas works, land reclamation activities and historical ship berthing activities. A number of subsurface features such as caisson walls have also been documented.

The ERM (2007) report included an investigation into the historical use of the Site. The report identified that the Barangaroo area has a long history of commercial and industrial land uses dating back to the early 19th century as summarised below.

Table 1: Barangaroo Site History Summary

Year	Site Ownership / Usage
1840-1921	A gas works operated by the Australian Gas Light (AGL) Company was present at Barangaroo. The identified gas works infrastructure is located in Blocks 4,5 and Hickson (refer Figure F2). The remainder of the Site was privately owned and understood to be in use for ship berthing and associated commercial activities.
1922 to 1925	Gas holders and purifier beds associated with the AGL gas works were demolished to ground level and gas holding tanks backfilled. Tarry residues were reportedly present in the gas holder pit. Following demolition, the former gas works area (which may have encompassed the northern portion of the Site) was reportedly used by the Maritime Services Board for workshops and stores.
1925-1936	The Site continued to be used for ship berthing and associated commercial activities.
1936 to 1988	Barangaroo continued to be used for a variety of commercial purposes. Finger wharves which were historically present on the Site were reclaimed with fill of unknown origin between 1951 and 1972.
1998 to 2009	The Site continued to be used by Sydney Ports Corporation for use as a Passenger Terminal. Since 1999 the Site has been used to host events including conventions, exhibitions and public entertainment when the facility is not in use as a passenger terminal.

The ERM (2007, 2008a) reports identified the following soil and groundwater conditions:

- Soil contamination: Concentrations of contaminants of potential concern (CoPC) above the adopted Site Assessment Criteria (SAC)[1] were identified for lead, total petroleum hydrocarbons (TPH), toluene, ethylbenzene and xylenes (BTEX), polycyclic aromatic hydrocarbons (PAHs) and sulfate in soil and fill material. The highest concentrations of reported contamination were identified in the vicinity of the former AGL gas works.

[1] Adopted Site Assessment Criteria were generally generic guidelines made or approved by NSW EPA.

- Groundwater contamination: Concentrations of CoPC above the adopted SAC were generally identified for dissolved TPH (C_6-C_{36}), BTEX, PAH and Metals. The highest reported concentrations were generally detected within the former gas works area.
- Given the above and the proposed redevelopment of the Site, the purpose of the DGI is complete a data gap investigation for Block 4, Block 5 and Hickson Road (including the declaration of remediation area) that sufficiently characterises the Site to allow preparation of a quantitive HHERA, development of a revised RAP which describes the remediation strategy to be implemented by LLD as part of its proposed Stage 1 Development of the Barangaroo precinct and Hickson Road (including the potential re-use of material in Headland Park, the Southern Cove and Stage 1 and the Stage 2 Public Domain areas).

The objectives of the VMP and PDA Remediation Works DGI are as follows.

- Complete a DGI considering the area declared by DECCW as a Remediation Site, which, for the purpose of this proposal has been taken to be:
  - Eastern portion of Block 4, including the adjacent areas of the Public Domain and Southern Cove;
  - Eastern portion of Block 5; and
  - Hickson Road, specifically with the DECCW declared remediation area adjacent to Blocks 4 to 5.

  The extent of the VMP and PDA Remediation Works DGI works is detailed on **Figure F1**.
- Complete a DGI with a scope, extent and test frequency that will result in a data set (including both current and new data) suitable for:
  - Developing an appreciation of soil and groundwater contamination (including assessment of acid sulfate soils - ASS) to assist planning of the proposed remediation strategies and commencement of remediation treatability trials;
  - Development of contaminant fate and transport modelling;
  - Development of a HHERA demonstrating what soil and groundwater contamination will represent an acceptable risk if reused as part of the development (including placement in Headland Park); and
  - Supporting the further development, refinement, costing and design of the remediation strategies and associated environmental management measures contemplated in the revised draft RWP, including preparation of a detailed RAP and final RWP.

The investigation needs to address the following issues:

- Historical use of the Site with respect to the presence of potentially contaminating activities;
- Identification of the potential areas of concern and potential chemicals of concern at the Site;
- Characterisation of the fill, soils, soil vapour, surface water and groundwater present at the Site with respect to contamination;
- Leachability of the different soil/fill types identified on the Site; and
- The presence, nature and extent of acid sulfate soils at the Site.

In summary, contaminated media at the site includes:

- Fill material;
- Natural Soil;
- Bedrock;
- Groundwater; and
- Soil vapour (likely but not confirmed in the current data set).

Potential receptors at the site and surrounding area include:

- Darling Harbour;
- Site workers;
- Site visitors;
- Surrounding/adjacent workers and residents; and
- Future residents and site occupants.

Data gaps include:

- Limited sampling in areas of the site on a development block by block basis;

- Vertical and lateral delineation of contamination requiring remediation/management; and
- Lack of soil vapour data.

The roles of the stakeholders involved in the overall project will be as follows:

- Barangaroo Delivery Authority – Authority responsible for delivering the overall Barangaroo site redevelopment project;
- Sydney Harbour Foreshore Authority – Land owner of the Barangaroo site;
- NSW Department of Environment, Climate Change and Water – Regulator for the declared Remediation Site and licensing authority for remedial action technology;
- The Council of the City of Sydney – Land owner of Hickson Road;
- Site Auditor (Graeme Nyland) – responsible for signing off on site remediation and site suitability;
- Jemena – Legacy owner of the former gas works;
- Other neighbouring properties;
- Lend Lease – For the purposes of this SAQP, the Developer of Stage 1; and
- AECOM – Environmental/remediation consultant/contractor for the Developer.

1.2 Step 2 - Identify the Decisions

The decisions to be made based on the results of the investigation program are as follows:

- Is there sufficient information on the distribution and characteristics of soil and fill requiring remediation and/or management to allow detailed remedial planning to progress?
- Do the findings of the investigation provide a data set that will be able to be used to assess the risk of material that will remain in-situ and the potential future liability of this material?
- Are there sufficient data to determine if an acid sulfate soil management plan is required and to develop such a plan if it is required?
- Do the findings of the investigation provide a higher level of understanding and certainty on the source of identified contamination (if any)?
- Do the findings of the investigation provide sufficient data that will enable an assessment of remedial screening options for contaminated soils and fills requiring management?
- Are there sufficient and definitive Site data to enable remedial cost estimates to be refined?
- What additional data are required to determine and support a preferred remedial solution?
- Are there sufficient and definitive Site data to enable the development of an excavation plan, including waste classification of the material to be excavated, for the redevelopment of the Site?
- Are there sufficient data to enable the subsequent development of a quantitive human health and ecological risk assessment?

1.3 Step 3 - Identify Inputs to the Decisions

The inputs required to make the above decisions are as follows:

- Geological data and information relevant to subsurface structures;
- Hydrogeological data;
- Concentrations of chemicals of concern in different fill/soil types;
- Concentrations of chemicals of concern in soil vapour near the former gas works;
- Concentrations of chemicals of concern in groundwater;
- Observation data for presence of building materials or other waste materials including materials potentially containing asbestos, separate phase liquids, staining, odours and discolouration of the soil media;
- Observation data for presence of separate phase liquids, odours and discolouration of the groundwater and surface water media;
- Distribution of identified contamination both laterally and vertically; and
- Identification of potential contamination below permanent structures.

1.4 Step 4 - Define the Study Boundaries

The boundaries of the investigation have been identified as follows:

- Spatial boundaries – The investigation boundary is limited to the proposed areas of Blocks 4,5 and Hickson Road (including associated Public Domain and Southern Cove areas) located within the study area (refer Figure F2) of the Barangaroo redevelopment Site in Hickson Road, Millers Point, NSW. For the purposes of re-development LLD has divided the Site into five sub-sites[2] detailed below:
  - Block 4 (approximately 6 500 m^2) – Mixed commercial/residential
  - Block 5 (approximately 4 100 m^2) – Mixed commercial/residential
  - The portion of Hickson Road located within the declaration of remediation area (approximately 3 584m^2) – Mixed commercial/residential
  - Public Domain (approximately 9 100 m^2) – Open space
  - Southern Cove (approximately 8 200 m^2) – Open space
- For the purposes of the investigation AECOM has adopted the same boundaries as listed above and as presented on Figure F2.
- Temporal boundaries – The temporal boundaries of the investigation have been determined based on an assessment of the reliability of the data from the previous investigations. As the data from the previous investigations will be relied upon for the purposes of the investigation then the temporal boundary of the investigation will be from 2007 to the date of the current investigation. Consideration has also been given to groundwater fluctuations associated with tidal variations resulting from the proximity of the Site to the adjacent harbour.
- Constraints within the study boundaries – The following issues present limitations upon the sampling strategy for the Site:
  - Access restrictions due to presence and operation of the Passenger Terminal;
  - Access restrictions associated with on-site buildings; and
  - Location of underground services and sub-surface structures (e.g. caissons, sea walls, blocky fill etc.).

1.5 Step 5 - Develop a Decision Rule

The decision rules for this investigation are as follows:

1 If a review of the data obtained from this and previous investigations indicate a degree of uncertainty on contamination delineation and distribution, then the proposed remedial strategies will be refined to provide remediation and/or management of those uncertainties and limitations with respect to the proposed redevelopment.

2 If it is determined that additional information is required to further reduce the uncertainties associated with the distribution and characteristics of soil and fill requiring remediation and/or management, with respect to the proposed redevelopment, then appropriate recommendations for further technical assessment or investigation will be provided.

1.6 Step 6 - Specify Limits on Decision Errors

The acceptable limits on decision errors to be applied in the investigation and the manner of addressing possible decision errors have been developed based on the Data Quality Indicators (DQIs) of precision, accuracy, representativeness, comparability and completeness (PARCC) and are presented in Section 2.8.3 of this SAQP.

The tolerable limits on decision errors are as follows:

- Probability that 95% of data will satisfy the DQIs, therefore a limit on the decision error will be 5% that a conclusive statement may be incorrect.
- In applying statistical analysis of a data set:
  - No individual sample result should have a concentration that exceeds 250% of Site assessment criteria;
  - A normal distribution will only be used if the coefficient of variance is not greater than 1.2; and

[2] Areas are based on supplied Lend Lease CAD plans.

- The standard deviation of a sample population should not exceed 50% of the Site assessment criteria.

- The potential for significant decision errors are to be minimised by completing a robust Quality Assurance/Quality Control (QA/QC) program and by completing an investigation that has an appropriate sampling and analytical density for the purposes of the investigation and that the representative sampling is undertaken.

1.7 Step 7 - Optimise the Design for Obtaining Data

The historical use of the Site for various industrial and commercial activities, including the presence of a former gas works facility in the Site and extensive filling and land reclamation works, present the potential for contamination to be present on the Site. Given the history of the Site, and based on information from previous environmental investigations and the general contamination history the chemicals of potential concern include, but may not be limited to, heavy metals, PAHs, TPH, BTEX, Polychlorinated biphenyls (PCBs), organochlorine pesticides (OCPs), Organophosphorus Pesticide (OPPs), Semi-Volatile Organic Compounds (SVOCs), cyanide and asbestos. Many of these chemicals may be mobile within the unconsolidated fill materials and able to migrate vertically to the bedrock and laterally to the waters of Darling Harbour. AECOM notes that the presence of contaminated sediment identified in the harbour adjacent to the Site (ERM, 2008b) supports this assertion. The overall design of the investigation on the Site requires considerations of these factors.

Information provided in the previous steps has been considered during the design of the investigation program and are further detailed in the scope of work section of the report and documented in the Sampling Analysis and Quality Plan (SAQP) (AECOM, 2009).

Environment Protection Authority

Notice to end significantly contaminated land declaration and management order

(Section 44 of the Contaminated Land Management Act 1997)

Notice Number 20094407; Area Number 3221 and 3265

Background

The land to which this notice applies was declared as "significantly contaminated land" (declaration no.15036) by the Environment Protection Authority ("the EPA")*. Investigation works were undertaken by the Sydney Harbour Foreshore Authority and the results have been made available to the EPA.

Repeal

Having reviewed the results of the investigation works, the EPA is satisfied that it no longer has reason to believe that the land to which this notice applies is contaminated and that the contamination is significant enough to warrant regulation under the Act.

Pursuant to section 44 of the Contaminated Land Management Act 1997, Declaration of significantly contaminated land number 15036, dated 28 May 2007, gazetted on 1 June 2007 ceases to be in force on the date of this notice in so far as the Declaration applies to the land to which this notice applies.

Land to which this notice applies (see attached map)

Description	Address
• Part Lot 5 and Lot 3 in Deposited Plan (DP) 876514, Hickson Rd, Millers Point (known as Wharves 5 and 7); • Lot 12 in DP 1065410 – 36 Hickson Rd, Millers Point; and • the part of Hickson Rd adjacent to the above	Hickson Road, Millers Point NSW 2000

Note (if necessary for partial revocation)
Declaration of significantly contaminated land no.21122 is still in force in so far as they apply to land other than to which this notice applies.

NIALL JOHNSTON
Manager Contaminated Sites
Department of Environment, Climate Change and Water

Date: 24 August 2009

NOTE:

Information recorded by the EPA

Section 58 of the Contaminated Land Management Act 1997 requires the EPA to maintain a public record. A copy of this notice will be included in the public record.

Information recorded by councils

Section 59 of the Act requires the EPA to give a copy of this notice to the relevant local council. The council may then make appropriate consequential modifications to the planning certificate issued in relation to the land to which this notice applies pursuant to s.149 of the *Environmental Planning and Assessment Act 1979*.

Relationship to other regulatory instrument

This repeal notice does not affect the provisions of any relevant environmental planning instruments which apply to the land or provisions of any other environmental protection legislation administered by the EPA.

Previous regulatory instrument

As of 1 July 2009, all current declarations for investigation area or declarations for remediation sites are taken to be declarations for significantly contaminated land, all current orders for investigation area and orders for remediation site are taken to be management orders and all current voluntary investigation and remediation agreements are taken to be voluntary management proposals.

*The DECCW exercises certain statutory powers in the name of the EPA.

Environment Protection Authority

Declaration of investigation area

(Section 15 of the Contaminated Land Management Act 1997)

Declaration Number 15036; Area Numbers 3221 and 3265

The Environment Protection Authority (EPA) declares the following land to be an investigation area under the Contaminated Land Management Act 1997 ("the Act"):

1. Land to which this declaration applies ("the site")

The site to which this declaration relates is part of the former Millers Point gasworks and is described as:

- Part Lot 5 and Lot 3 in Deposited Plan (DP) 876514, Hickson Rd, Millers Point (known as Wharves 5 and 7);
- Lot 12 in DP 1065410 - 36 Hickson Rd, Millers Point; and
- the part of Hickson Rd adjacent to the above area

in the City of Sydney local government area. A map of the site is available for inspection at the offices of the Department of the Environment and Climate Change, Level 14, 59-61 Goulburn Street, Sydney, NSW.

2. Nature of contamination affecting the site:

The EPA believes that the site is contaminated with the following substances ("the contaminants"): polycyclic aromatic hydrocarbons (PAHs); benzene, toluene, ethylene and xylene (BTEX); copper; cyanide; lead; and phenol.

3. Nature of harm that the contaminants may cause:

The EPA has considered the matters in s.9 of the Act and for the following reasons has determined that it has reasonable grounds to believe that the site is contaminated in such a way as to present a significant risk of harm to human health and the environment:

- Groundwater in the area has been found to be contaminated by PAHs, BTEX, copper, cyanide, lead and phenol at concentrations significantly exceeding the relevant trigger values for the protection of aquatic ecosystems in the *Australian and New Zealand Guidelines for Fresh and Marine Water Quality* (ANZECC and ARMCANZ, 2000).
- The groundwater contaminants include human carcinogens and substances toxic to aquatic ecosystems.
- Contaminated groundwater is likely to be migrating from the site to Darling Harbour and could ultimately affect aquatic ecosystems.
- Contaminated groundwater is migrating from the site into the basement of a residential building adjacent to the site and potentially could expose humans in that building to vapours; however it is currently being effectively controlled.
- Contaminated groundwater from the site may enter service trenches potentially exposing maintenance workers to vapours.

4. Further action under the Act

The making of this declaration does not prevent the carrying out of a voluntary investigation of the site and any person may submit a voluntary investigation proposal for the site to the EPA. If the proposal satisfies the requirements of s.19 of the Act, the EPA may agree not to issue an investigation order to the person or persons bringing the proposal.

5. Submissions invited

The public may make written submissions to the EPA on:

- Whether the EPA should issue an investigation order in relation to the site; or
- Any other matter concerning the site.

Submissions should be made in writing to:

Acting Manager Contaminated Sites
Department of Environment and Climate Change
PO Box A290
SYDNEY SOUTH NSW 1232

or faxed to 02 9995 5930

by not later than 2 July 2007

NIALL JOHNSTON
Acting Manager Contaminated Sites
Department of Environment and Climate Change

Date: 28 May 2007

NOTE:

Investigation order may follow

If investigation of the site or part of the site is required, the EPA may issue an investigation order under s.17 of the Act.

Variation/Revocation

This declaration may be varied by subsequent declarations. It remains in force until it is otherwise revoked. A declaration may only be revoked when the EPA does not have reasonable grounds to believe that land is contaminated in such as way as to present a significant risk of harm (s.44 of the Act).

Information recorded by the EPA

Section 58 of the Contaminated Land Management Act 1997 requires the EPA to maintain a public record. A copy of this investigation declaration will be included in the public record.

Information recorded by councils

Section 59 of the Act requires the EPA to give a copy of this declaration to the relevant local council. The council is then required to note on its planning certificate issued pursuant to s.149 (2) of the Environmental Planning and Assessment Act that the land is currently within an investigation area. The EPA is required to notify council as soon as practicable when the declaration is no longer in force and the notation on the s.149 (2) certificate is no longer required.

Relationship to other regulatory instrument

This declaration does not affect the provisions of any relevant environmental planning instruments which apply to the land or provisions of any other environmental protection legislation administered by the EPA.

Environment Protection Authority

Declaration of Remediation Site

(Section 21 of the Contaminated Land Management Act 1997)

Declaration Number 21122; Area Number 3221

The Environment Protection Authority (EPA) declares the following land to be a remediation site under the Contaminated Land Management Act 1997 ("the Act"):

1. Land to which this declaration applies ("the site")

The site to which this declaration relates is part of the former Millers Point gasworks and is described as:

- Part Lot 5 and Part Lot 3 in Deposited Plan (DP) 876514, Hickson Rd, Millers Point
- The part of Hickson Road adjacent to:
    - 30 – 34 Hickson Road being Lot 11 DP1065410;
    - 36 Hickson Road being Lot 5 DP873158 and Lot 12 DP1065410; and
    - 38 Hickson Road being SP72797, Millers Point

in the City of Sydney local government area. The site coincides with the known foot print of the former gasworks facilities. A map of the site is available for inspection at the offices of the Department of the Environment and Climate Change, Level 14, 59-61 Goulburn Street, Sydney, NSW.

2. Nature of contamination affecting the site:

The EPA believes that the site is contaminated with gasworks waste and particularly waste tar as a result of the previous use of the site as a gasworks plant. The chemical composition of gasworks waste includes the following substances ("the contaminants"): polycyclic aromatic hydrocarbons (PAHs); benzene, toluene, ethylbenzene and xylenes (BTEX); total petroleum hydrocarbons (TPHs); ammonia; phenol and cyanide.

3. Nature of harm that the contaminants may cause:

The EPA has considered the matters in s.9 of the Act and for the following reasons has determined that the site is contaminated in such a way as to present a significant risk of harm to human health and the environment:

- Groundwater on the site has been found to be contaminated by TPHs, PAHs, BTEX, ammonia, phenol and cyanide at concentrations significantly exceeding the relevant trigger values for the protection of human health and aquatic ecosystems in the *Australian and New Zealand Guidelines for Fresh and Marine Water Quality* (ANZECC and ARMCANZ, 2000).
- These groundwater contaminants include human carcinogens and substances toxic to aquatic ecosystems.
- The contaminated groundwater is impacting on the surrounding areas including the basement of a residential building adjacent to the site, potentially exposing humans in that building to harmful vapours; however it is currently being effectively controlled.
- Contaminated groundwater is likely to be migrating from the site to Darling Harbour and could ultimately affect aquatic ecosystems.

4. Further action under the Act

The making of this declaration does not prevent the carrying out of a voluntary remediation of the site and any person may submit a voluntary remediation proposal for the site to the EPA. If the proposal satisfies the requirements of s.26 of the Act, the EPA may agree not to issue a remediation order to the person or persons bringing the proposal.

5. Submissions invited

The public may make written submissions to the EPA on:

- Whether the EPA should issue a remediation order in relation to the site; or
- Any other matter concerning the site.

Submissions should be made in writing to:

Manager Contaminated Sites
Department of Environment and Climate Change
PO Box A290

or faxed to 02 9995 5930

by no later than 3 June 2009

[Signed]

NIALL JOHNSTON
Manager Contaminated Sites
Department of Environment and Climate Change

Date: 6 May 2009

NOTE:
Remediation order may follow
If remediation of the site or part of the site is required, the EPA may issue a remediation order under s.23 of the Act.

Variation/Revocation
This declaration may be varied by a subsequent declaration. It remains in force until it is otherwise varied or revoked. A declaration may only be revoked when the EPA does not have reasonable grounds to believe that land is contaminated in such as way as to present a significant risk of harm (s.44 of the Act).

Information recorded by the EPA
Section 58 of the Contaminated Land Management Act 1997 requires the EPA to maintain a public record. A copy of this remediation declaration will be included in the public record.

Information recorded by councils
Section 59 of the Act requires the EPA to inform the relevant local council that this declaration has been made, as soon as practicable. The council is then required to note on its planning certificate issued pursuant to s.149 (2) of the Environmental Planning and Assessment Act that the land is currently within a remediation area. The EPA is required to notify council as soon as practicable when the declaration is no longer in force and the notation on the s.149 (2) certificate can be removed.

Relationship to other regulatory instrument
This declaration does not affect the provisions of any relevant environmental planning instruments which apply to the land or provisions of any other environmental protection legislation administered by the EPA.

Environment Protection Authority

Notice to end significantly contaminated land declaration and management order

(Section 44 of the Contaminated Land Management Act 1997)

Notice Number 20094407; Area Number 3221 and 3265

Background

The land to which this notice applies was declared as "significantly contaminated land" (declaration no.15036) by the Environment Protection Authority ("the EPA")*. Investigation works were undertaken by the Sydney Harbour Foreshore Authority and the results have been made available to the EPA.

Repeal

Having reviewed the results of the investigation works, the EPA is satisfied that it no longer has reason to believe that the land to which this notice applies is contaminated and that the contamination is significant enough to warrant regulation under the Act.

Pursuant to section 44 of the Contaminated Land Management Act 1997, Declaration of significantly contaminated land number 15036, dated 28 May 2007, gazetted on 1 June 2007 ceases to be in force on the date of this notice in so far as the Declaration applies to the land to which this notice applies.

Land to which this notice applies (see attached map)

Description	Address
• Part Lot 5 and Lot 3 in Deposited Plan (DP) 876514, Hickson Rd, Millers Point (known as Wharves 5 and 7); • Lot 12 in DP 1065410 – 36 Hickson Rd, Millers Point; and • the part of Hickson Rd adjacent to the above	Hickson Road, Millers Point NSW 2000

Note (if necessary for partial revocation)
Declaration of significantly contaminated land no.21122 is still in force in so far as they apply to land other than to which this notice applies.

NOTE:

Information recorded by the EPA

Section 58 of the Contaminated Land Management Act 1997 requires the EPA to maintain a public record. A copy of this notice will be included in the public record.

Information recorded by councils

Section 59 of the Act requires the EPA to give a copy of this notice to the relevant local council. The council may then make appropriate consequential modifications to the planning certificate issued in relation to the land to which this notice applies pursuant to s.149 of the *Environmental Planning and Assessment Act 1979*.

Relationship to other regulatory instrument

This repeal notice does not affect the provisions of any relevant environmental planning instruments which apply to the land or provisions of any other environmental protection legislation administered by the EPA.

Previous regulatory instrument

As of 1 July 2009, all current declarations for investigation area or declarations for remediation sites are taken to be declarations for significantly contaminated land, all current orders for investigation area and orders for remediation site are taken to be management orders and all current voluntary investigation and remediation agreements are taken to be voluntary management proposals.

*The DECCW exercises certain statutory powers in the name of the EPA.

Environment Protection Authority

Declaration of investigation area

(Section 15 of the Contaminated Land Management Act 1997)

Declaration Number 15036; Area Numbers 3221 and 3265

The Environment Protection Authority (EPA) declares the following land to be an investigation area under the Contaminated Land Management Act 1997 ("the Act"):

1. Land to which this declaration applies ("the site")

The site to which this declaration relates is part of the former Millers Point gasworks and is described as:

- Part Lot 5 and Lot 3 in Deposited Plan (DP) 876514, Hickson Rd, Millers Point (known as Wharves 5 and 7);
- Lot 12 in DP 1065410 - 36 Hickson Rd, Millers Point; and
- the part of Hickson Rd adjacent to the above area

in the City of Sydney local government area. A map of the site is available for inspection at the offices of the Department of the Environment and Climate Change, Level 14, 59-61 Goulburn Street, Sydney, NSW.

2. Nature of contamination affecting the site:

The EPA believes that the site is contaminated with the following substances ("the contaminants"): polycyclic aromatic hydrocarbons (PAHs); benzene, toluene, ethylene and xylene (BTEX); copper; cyanide; lead; and phenol.

3. Nature of harm that the contaminants may cause:

The EPA has considered the matters in s.9 of the Act and for the following reasons has determined that it has reasonable grounds to believe that the site is contaminated in such a way as to present a significant risk of harm to human health and the environment:

- Groundwater in the area has been found to be contaminated by PAHs, BTEX, copper, cyanide, lead and phenol at concentrations significantly exceeding the relevant trigger values for the protection of aquatic ecosystems in the *Australian and New Zealand Guidelines for Fresh and Marine Water Quality* (ANZECC and ARMCANZ, 2000).
- The groundwater contaminants include human carcinogens and substances toxic to aquatic ecosystems.
- Contaminated groundwater is likely to be migrating from the site to Darling Harbour and could ultimately affect aquatic ecosystems.
- Contaminated groundwater is migrating from the site into the basement of a residential building adjacent to the site and potentially could expose humans in that building to vapours; however it is currently being effectively controlled.
- Contaminated groundwater from the site may enter service trenches potentially exposing maintenance workers to vapours.

4. Further action under the Act

The making of this declaration does not prevent the carrying out of a voluntary investigation of the site and any person may submit a voluntary investigation proposal for the site to the EPA. If the proposal satisfies the requirements of s.19 of the Act, the EPA may agree not to issue an investigation order to the person or persons bringing the proposal.

5. Submissions invited

The public may make written submissions to the EPA on:

- Whether the EPA should issue an investigation order in relation to the site; or
- Any other matter concerning the site.

Submissions should be made in writing to:

Environment Protection Authority

Declaration of Remediation Site

(Section 21 of the Contaminated Land Management Act 1997)

Declaration Number 21122; Area Number 3221

The Environment Protection Authority (EPA) declares the following land to be a remediation site under the Contaminated Land Management Act 1997 ("the Act"):

1. Land to which this declaration applies ("the site")

The site to which this declaration relates is part of the former Millers Point gasworks and is described as:

- Part Lot 5 and Part Lot 3 in Deposited Plan (DP) 876514, Hickson Rd, Millers Point
- The part of Hickson Road adjacent to:
    - 30 – 34 Hickson Road being Lot 11 DP1065410;
    - 36 Hickson Road being Lot 5 DP873158 and Lot 12 DP1065410; and
    - 38 Hickson Road being SP72797, Millers Point

in the City of Sydney local government area. The site coincides with the known foot print of the former gasworks facilities. A map of the site is available for inspection at the offices of the Department of the Environment and Climate Change, Level 14, 59-61 Goulburn Street, Sydney, NSW.

2. Nature of contamination affecting the site:

The EPA believes that the site is contaminated with gasworks waste and particularly waste tar as a result of the previous use of the site as a gasworks plant. The chemical composition of gasworks waste includes the following substances ("the contaminants"): polycyclic aromatic hydrocarbons (PAHs); benzene, toluene, ethylbenzene and xylenes (BTEX); total petroleum hydrocarbons (TPHs); ammonia; phenol and cyanide.

3. Nature of harm that the contaminants may cause:

The EPA has considered the matters in s.9 of the Act and for the following reasons has determined that the site is contaminated in such a way as to present a significant risk of harm to human health and the environment:

- Groundwater on the site has been found to be contaminated by TPHs, PAHs, BTEX, ammonia, phenol and cyanide at concentrations significantly exceeding the relevant trigger values for the protection of human health and aquatic ecosystems in the *Australian and New Zealand Guidelines for Fresh and Marine Water Quality* (ANZECC and ARMCANZ, 2000).
- These groundwater contaminants include human carcinogens and substances toxic to aquatic ecosystems.
- The contaminated groundwater is impacting on the surrounding areas including the basement of a residential building adjacent to the site, potentially exposing humans in that building to harmful vapours; however it is currently being effectively controlled.
- Contaminated groundwater is likely to be migrating from the site to Darling Harbour and could ultimately affect aquatic ecosystems.

4. Further action under the Act

The making of this declaration does not prevent the carrying out of a voluntary remediation of the site and any person may submit a voluntary remediation proposal for the site to the EPA. If the proposal satisfies the requirements of s.26 of the Act, the EPA may agree not to issue a remediation order to the person or persons bringing the proposal.

5. Submissions invited

The public may make written submissions to the EPA on:

- Whether the EPA should issue a remediation order in relation to the site; or
- Any other matter concerning the site.

Date: 6 May 2009

NOTE:
Remediation order may follow
If remediation of the site or part of the site is required, the EPA may issue a remediation order under s.23 of the Act.

Variation/Revocation
This declaration may be varied by a subsequent declaration. It remains in force until it is otherwise varied or revoked. A declaration may only be revoked when the EPA does not have reasonable grounds to believe that land is contaminated in such as way as to present a significant risk of harm (s.44 of the Act).

Information recorded by the EPA
Section 58 of the Contaminated Land Management Act 1997 requires the EPA to maintain a public record. A copy of this remediation declaration will be included in the public record.

Information recorded by councils
Section 59 of the Act requires the EPA to inform the relevant local council that this declaration has been made, as soon as practicable. The council is then required to note on its planning certificate issued pursuant to s.149 (2) of the Environmental Planning and Assessment Act that the land is currently within a remediation area. The EPA is required to notify council as soon as practicable when the declaration is no longer in force and the notation on the s.149 (2) certificate can be removed.

Relationship to other regulatory instrument
This declaration does not affect the provisions of any relevant environmental planning instruments which apply to the land or provisions of any other environmental protection legislation administered by the EPA.

Environment Protection Authority

Notice to end significantly contaminated land declaration and management order

(Section 44 of the Contaminated Land Management Act 1997)

Notice Number 20094407; Area Number 3221 and 3265

Background

The land to which this notice applies was declared as "significantly contaminated land" (declaration no.15036) by the Environment Protection Authority ("the EPA")*. Investigation works were undertaken by the Sydney Harbour Foreshore Authority and the results have been made available to the EPA.

Repeal

Having reviewed the results of the investigation works, the EPA is satisfied that it no longer has reason to believe that the land to which this notice applies is contaminated and that the contamination is significant enough to warrant regulation under the Act.

Pursuant to section 44 of the Contaminated Land Management Act 1997, Declaration of significantly contaminated land number 15036, dated 28 May 2007, gazetted on 1 June 2007 ceases to be in force on the date of this notice in so far as the Declaration applies to the land to which this notice applies.

Land to which this notice applies (see attached map)

NOTE:

Information recorded by the EPA

Section 58 of the Contaminated Land Management Act 1997 requires the EPA to maintain a public record. A copy of this notice will be included in the public record.

Information recorded by councils

Section 59 of the Act requires the EPA to give a copy of this notice to the relevant local council. The council may then make appropriate consequential modifications to the planning certificate issued in relation to the land to which this notice applies pursuant to s.149 of the *Environmental Planning and Assessment Act 1979*.

Relationship to other regulatory instrument

This repeal notice does not affect the provisions of any relevant environmental planning instruments which apply to the land or provisions of any other environmental protection legislation administered by the EPA.

Previous regulatory instrument

As of 1 July 2009, all current declarations for investigation area or declarations for remediation sites are taken to be declarations for significantly contaminated land, all current orders for investigation area and orders for remediation site are taken to be management orders and all current voluntary investigation and remediation agreements are taken to be voluntary management proposals.

*The DECCW exercises certain statutory powers in the name of the EPA.

Environment Protection Authority

Declaration of investigation area

(Section 15 of the Contaminated Land Management Act 1997)

Declaration Number 15036; Area Numbers 3221 and 3265

The Environment Protection Authority (EPA) declares the following land to be an investigation area under the Contaminated Land Management Act 1997 ("the Act"):

1. Land to which this declaration applies ("the site")

The site to which this declaration relates is part of the former Millers Point gasworks and is described as:

- Part Lot 5 and Lot 3 in Deposited Plan (DP) 876514, Hickson Rd, Millers Point (known as Wharves 5 and 7);
- Lot 12 in DP 1065410 - 36 Hickson Rd, Millers Point; and
- the part of Hickson Rd adjacent to the above area

in the City of Sydney local government area. A map of the site is available for inspection at the offices of the Department of the Environment and Climate Change, Level 14, 59-61 Goulburn Street, Sydney, NSW.

2. Nature of contamination affecting the site:

The EPA believes that the site is contaminated with the following substances ("the contaminants"): polycyclic aromatic hydrocarbons (PAHs); benzene, toluene, ethylene and xylene (BTEX); copper; cyanide; lead; and phenol.

3. Nature of harm that the contaminants may cause:

The EPA has considered the matters in s.9 of the Act and for the following reasons has determined that it has reasonable grounds to believe that the site is contaminated in such a way as to present a significant risk of harm to human health and the environment:

- Groundwater in the area has been found to be contaminated by PAHs, BTEX, copper, cyanide, lead and phenol at concentrations significantly exceeding the relevant trigger values for the protection of aquatic ecosystems in the *Australian and New Zealand Guidelines for Fresh and Marine Water Quality* (ANZECC and ARMCANZ, 2000).
- The groundwater contaminants include human carcinogens and substances toxic to aquatic ecosystems.
- Contaminated groundwater is likely to be migrating from the site to Darling Harbour and could ultimately affect aquatic ecosystems.
- Contaminated groundwater is migrating from the site into the basement of a residential building adjacent to the site and potentially could expose humans in that building to vapours; however it is currently being effectively controlled.
- Contaminated groundwater from the site may enter service trenches potentially exposing maintenance workers to vapours.

4. Further action under the Act

The making of this declaration does not prevent the carrying out of a voluntary investigation of the site and any person may submit a voluntary investigation proposal for the site to the EPA. If the proposal satisfies the requirements of s.19 of the Act, the EPA may agree not to issue an investigation order to the person or persons bringing the proposal.

5. Submissions invited

The public may make written submissions to the EPA on:

- Whether the EPA should issue an investigation order in relation to the site; or
- Any other matter concerning the site.

Submissions should be made in writing to:

Acting Manager Contaminated Sites
Department of Environment and Climate Change
PO Box A290
SYDNEY SOUTH NSW 1232

or faxed to 02 9995 5930

by not later than 2 July 2007

NIALL JOHNSTON
Acting Manager Contaminated Sites
Department of Environment and Climate Change

Date: 28 May 2007

NOTE:

Investigation order may follow

If investigation of the site or part of the site is required, the EPA may issue an investigation order under s.17 of the Act.

Variation/Revocation

This declaration may be varied by subsequent declarations. It remains in force until it is otherwise revoked. A declaration may only be revoked when the EPA does not have reasonable grounds to believe that land is contaminated in such as way as to present a significant risk of harm (s.44 of the Act).

Information recorded by the EPA

Section 58 of the Contaminated Land Management Act 1997 requires the EPA to maintain a public record. A copy of this investigation declaration will be included in the public record.

Information recorded by councils

Section 59 of the Act requires the EPA to give a copy of this declaration to the relevant local council. The council is then required to note on its planning certificate issued pursuant to s.149 (2) of the Environmental Planning and Assessment Act that the land is currently within an investigation area. The EPA is required to notify council as soon as practicable when the declaration is no longer in force and the notation on the s.149 (2) certificate is no longer required.

Relationship to other regulatory instrument

This declaration does not affect the provisions of any relevant environmental planning instruments which apply to the land or provisions of any other environmental protection legislation administered by the EPA.

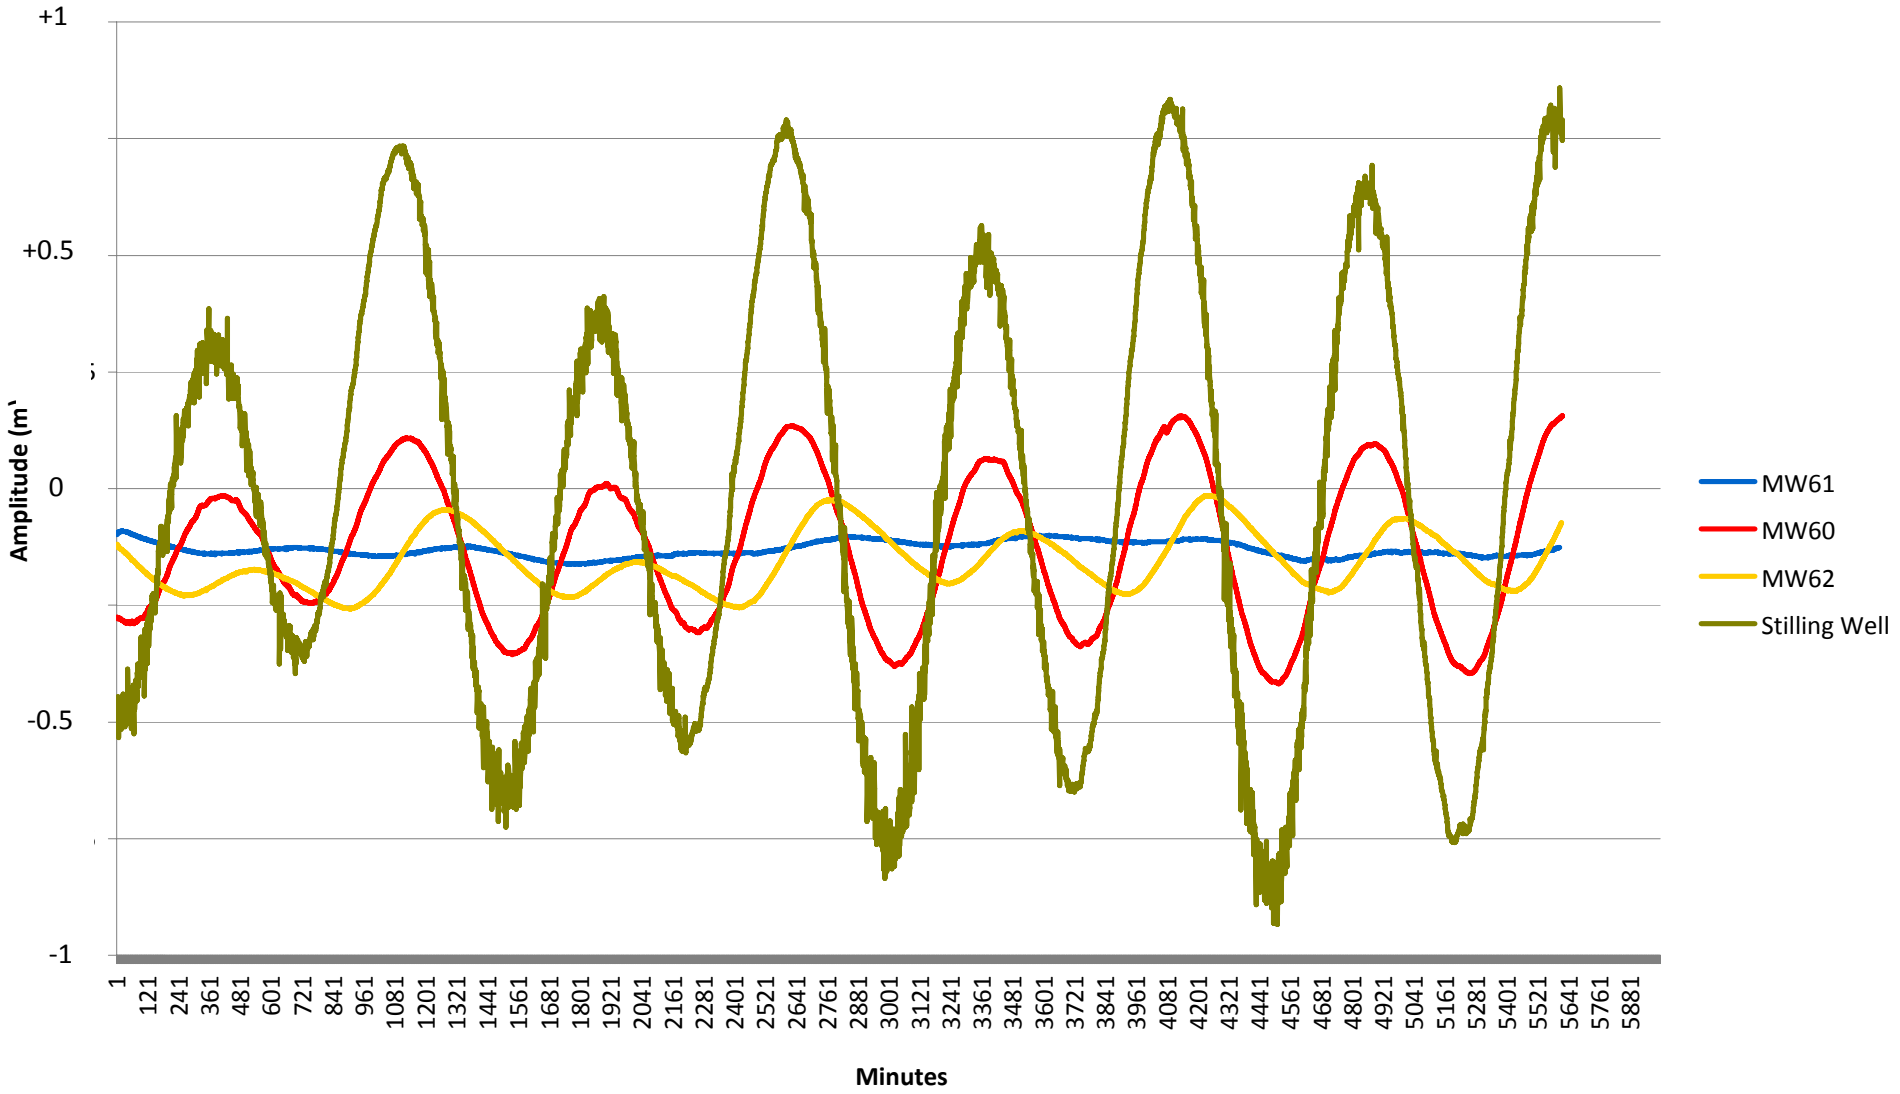
Finish: 29 March 2010 at 8:42am



Appendix H

Data Quality Indicators

"This page has been left blank intentionally"

1.0 Introduction

The following sections describe the components of the Quality Assurance and Control Plan that assess the achievement of the DQOs set out in **Appendix A**, by consideration of the data quality indicators – DQIs (precision, accuracy, reproducibility, completeness and comparability). It is noted that the following document relates to the areas of Barangaroo identified as the 'Other Remediation Works (North) Area' and the 'VMP and PDA' Remediation Works Area'.

1.1 Data Quality Indicators

The project DQIs have been established to set acceptance limits on field and laboratory data collected as part of this investigation. For both field and laboratory procedures acceptance limits are set at different levels for different projects and by the laboratories.

Non-compliances with acceptance limits are to be documented and discussed in the report. The DQIs are as follows:

DQI	Field	Laboratory	Acceptability Limits
Completeness	All critical locations sampled All samples collected (from grid and depth) Standard Operating Procedures (SOPs) appropriate and complied with Experienced sampler Documentation correct	All critical samples analysed and all analytes analysed according to Sampling and Analysis Plan (SAQP) Appropriate methods Appropriate Limits of Reporting (LORs) Sample documentation complete Sample holding times complied with	As per NEPC (1999) < nominated criteria As per NEPC (1999)
Comparability	Sample SOPs used on each occasion Experienced sampler Climatic conditions Same types of samples collected	Same analytical methods used Sample LORs (justify/quantify if different) Same laboratories (NATA accredited) Same units	As per NEPC (1999) < nominated criteria
Representativeness	Appropriate media sampled according to SAQP	All samples analysed to meet SAQP	
Precision	SOPs appropriate and complied with Collection of blind and split duplicate samples	Analysis of: Field intra-laboratory duplicate samples (1 in 10 samples) Field inter-laboratory duplicate samples (1 in 20 samples) Laboratory duplicate samples	RPD <50%

DQI	Field	Laboratory	Acceptability Limits
Accuracy	SOPs appropriate and complied with Collection of rinsate blanks	Analysis of: Field/trip blanks (1/day) Rinsate blanks (1/day/equipment) Inter-laboratory duplicate samples (1 in 20 samples) Method blanks Matrix spikes Matrix spike duplicates Surrogate spikes Laboratory control samples Laboratory prepared spikes Reagent blanks Reference materials	 Non-detect for CoPC Non-detect for CoPC RPD <50% (Non-detect for CoPC %R 70 to 130%* RPD of <30% %R 70 to 130%* %R 70 to 130 %* %R 70 to 130%* Non-detect for CoPC Varies

*If laboratory matrix spike, surrogate or laboratory control sample recoveries were outside the set acceptable limit of 70 to 130%, the results were compared to the Laboratory Analyte Specific Acceptance Criteria (ASAC).

All reporting must comply with NSW EPA (2000) *Guidelines for Consultants Reporting on Contaminated Sites*.

2.0 Field QA/QC

2.1 Sampling Team

Soil samples were collected between 12 February and 8 March 2010 by Kate Pigram, Sam Patel, Steven Masters, Geoff Tredinnick, Lauren Kontus and Kate O'Brien, suitably qualified and experienced AECOM Environmental Engineers/Scientists by reference to written Standard Operating Procedures for each task undertaken as part of the field program.

Groundwater samples were collected between 15 and 20 March 2010 by Kate Pigram, Kate O'Brien and Lauren Kontus.

Soil vapour samples were collected by Steven Masters between 17 and 18 March 2010.

2.2 Sample Collection

Soil, groundwater and soil vapour samples were collected in accordance with the AECOM SAQP (2009).

2.3 Sample Handling and Preservation

A new pair of disposable nitrile sampling gloves was donned between collection of each soil and groundwater sample. Soil samples were immediately placed into laboratory prepared and supplied, acid washed and solvent jars with screw top Teflon-lined lids. Sample jars were filled so that no headspace remained (where practical).

Soil and groundwater samples were placed either in a chilled, insulated container with ice or in a sample refrigerator between sampling and analysis. Soil and groundwater samples were preserved for the various contaminants of concern in accordance with the requirements of NEPC (1999) as detailed in the table below:

Matrix	Analyte	Container	Preservation
Soil	All analytes	250 mL Glass screw top jar	Unpreserved, 4ºC
	SPOCAS	Zip lock plastic bag	Unpreserved, 4ºC (24hr holding time) or freeze (indefinite holding time)
Water	Metals (Ultra Trace)	125 ml Clear Plastic Bottle	Field Filtered , Ultra Pure Nitric Acid, 4ºC
	Chromium VI	125 ml White Plastic Bottle (28 day THT) 125 ml Clear Plastic (24 hr THT)	Sodium Hydroxide, 4ºC (28 day THT) Unpreserved, 4ºC (24 hr THT)

Matrix	Analyte	Container	Preservation
	TPH(C_{10}-C_{36}), PAH	500 ml Amber Bottle	Unpreserved, 4ºC
	TPH(C_6-C_9), BTEX	2 x 40 ml Amber Vials	Hydrochloric Acid, 4ºC
	Cyanide	250 ml White Plastic Bottle	$Cd(NO_3)_2$, NaOH, 4ºC
	Methane	2 x 40 ml Amber Vials	Sodium Bisulphate, 4ºC
	TOC	1 x 40 ml Amber Vial	Sulphuric Acid, 4ºC
	Major Anions, Cations, pH, Sulphate, Alkalinity	1.25 L4ºC	Unpreserved, 4ºC
	Ammonia, Nitrogen	250 ml Clear Plastic	Sulphuric Acid, 4ºC
	Ferrous Iron	80 ml Clear Plastic	Filtered, Hydrochloric Acid, 4ºC

Sample numbers, depths, preservation and analytical requirements were recorded on the chain-of-custody documentation (signed copies provided with the laboratory reports in **Appendix I**), which accompanied the samples to the laboratory.

It is noted that the following primary sample batches reported temperatures greater than 4ºC ± 2 when received by the laboratory:

- ES1003046 – 6.4 ºC
- ES1003970 – 6.9 ºC
- ES1004014 – 6.8 ºC
- ES1004323 – 7.2 ºC
- ES1004027 – 7.4 ºC
- ES1004308 – 6.3 ºC
- ES1004323 – 7.2 ºC
- ES1004647 – 10.4 ºC
- ES1004782 – 6.3 ºC
- ES1004947 – 12.2 ºC
- ES1004994 – 8.1 ºC
- ES1005598 – 7.5 ºC

For all the batches listed above, some of the samples in each batch were received at the laboratory on the day they were collected in the field. Therefore, the samples had insufficient time to drop to or below 4 ºC±, but were stored in refrigeration when received by the laboratory.

Samples were placed in eskies with crushed ice immediately after collection and the laboratory reported that all batches were received with ice, AECOM therefore considers that the samples were appropriately stored and preserved.

2.4 Calibration

During the field investigation calibration of the photoionisation detector (PID) was undertaken in accordance with manufacturer's instructions. The PID was calibrated prior to delivery by the supplier, and at least once daily (at the start of each sampling day) with 100 parts per million (ppm) of isobutylene.

The water quality meters (TPS 90 FLMV) were calibrated to delivery by the supplier, and at least once daily (at the start of each sampling day) in the field with the required calibration solutions.

All calibration results were satisfactory. Details of calibration are provided in **Appendix K**.

2.5 Field Intra and Inter-laboratory Duplicate Samples

The purpose of duplicate samples are to estimate the variability of a given characteristic or contaminant associated with a population. For this assessment, intra-laboratory duplicate soil samples were collected in the

field at a rate of at least one in ten primary samples. Inter-laboratory duplicate soil samples were collected at a rate of at least one in twenty primary samples.

The field duplicate soil samples were obtained from similar soils of an identical depth and immediately adjacent to the primary sample by placing approximately equal portions of the primary sample into two sample jars. Samples were not homogenised due to potential loss of volatiles.

Duplicate samples were labelled so as to conceal their relationship to the primary sample from the laboratory and the key to the duplicate samples was recorded in the field note book.

It is common that significant variation in duplicate results is often observed (particularly for solid matrix samples) due to sample heterogeneity or low reported concentrations near the LOR. The overall precision of field intra-laboratory duplicates, inter-laboratory duplicate samples and laboratory duplicates is generally assessed by their Relative Percent Difference (RPD), given by:

$$RPD = \frac{|D1-D2|}{(D1+D2)/2} \times 100$$

where D1 is the primary sample measurement

D2 is the duplicate sample measurement

RPDs for soil duplicate samples were compared to criteria presented in the DQI table above. The field duplicate and corresponding primary sample results and calculated RPDs are presented in **Tables 1 to 8a** at the end of this report in **Appendix H**.

The following table provides summary of the field duplicate samples analytes and the RPD results which were above the DQIs.

Soil Duplicate Results

QA/QC Sample ID	Primary Sample			Duplicate Type	Analytes	RPD Exceedences
	Loc	Depth	Soil Type			
QC54	BH40	8.5-8.7	Fill	Intra	pH	No exceedences
QC56	BH46	1-1.2	Fill	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics	Cr (58%)
QC57	BH46	7-7.2	Fill	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics	Ba (86%), Co (67%)
QC58	BH46	7-7.2	Fill	Inter	Metals,TPH, BTEX, PAH, phenols, inorganics	Ba (78%), Cu (67%)
QC70	BH38	8.5-8.7	Fill	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics	No exceedences
QC71	BH38	8.5-8.7	Fill	Inter	Metals,TPH, BTEX, PAH, phenols, inorganics	Pb (55%)

QA/QC Sample ID	Primary Sample			Duplicate Type	Analytes	RPD Exceedences
	Loc	Depth	Soil Type			
QC74	BH47	18.6-18.8	Natural	Intra	Metals, inorganics	Cr (67%), Mn (140%), Ni (67%), V (71%), Zn (156%)
QC75	BH47	18.6-18.8	Natural	Inter	Metals, inorganics	Ba (108%), Cr (95%), Pb (75%), Mn (134%), Ni (67%), V (97%) and Zn (144%)
QC76	BH48	1-1.2	Fill	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics	No exceedences
QC77	BH48	1-1.2	Fill	Inter	Metals,TPH, BTEX, PAH, phenols, inorganics	Hg (102%), Ba (52%), TPH C_{15}-C_{28} (67%), Fluoranthene (52%) and Pyrene (57%)
QC78	BH48	14.5-14.7	Natural	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics, SVOCs, OCPs, OP	Ba (100%), Pb (67%), Zn (118%) and TPH C_6-C_9 (130%)
QC101	BH39	16-16.2	Natural	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics	Pb (75%), V (56%)
QC102	BH39	16-16.2	Fill	Inter	Metals,TPH, BTEX, PAH, phenols, inorganics	Ba (76%), Pb (67%)
QC105	BH75	4-4.2	Fill	Intra	Metals, inorganics	Ba (67%)
QC107	BH75	16-16.2	Fill	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics	Ba (67%), Cr total (93%), Fe (126%), Pb (67%) and Vn (146%)
QC108	BH75	16-16.2	Fill	Inter	Metals,TPH, BTEX, PAH, phenols, inorganics	Cr total (77%), Pb (53%) and Vn (78%)
QC110	BH60	7-7.2	Fill	Intra	Metals,TPH, BTEX, inorganics	Cu (114%)
QC111	BH63	13-13.3	Natural	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics	Cr total (117%), Fe (60%), Pb (90%), Vn (158%), and Naphthalene (80%)
QC120	BH60	17.5-17.7	Natural	Intra	Metals,TPH, BTEX, PAH, phenols, inorganics	As (77%), Ba (67%), Cr total (63%) and BTEX (67 to 90%)

QA/QC Sample ID	Primary Sample			Duplicate Type	Analytes	RPD Exceedences
	Loc	Depth	Soil Type			
QC121	BH60	17.5-17.7	Natural	Inter	Metals, TPH, BTEX, PAH, phenols, inorganics	As (120%), Ba (58%), Cr Total (70%), Vn (50%), TPH C_{10}-C_{36} (124%), Naphthalene (75%),
QC122	BH74	10-10.5	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics, VOCs, SVOCs, OCPs, OP	No exceedences
QC125	BH56	14.5-15	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics, VOCs, SVOCs, OCPs, OP	Cu (67%)
QC126	BH56	14.5-15	Fill	Inter	Metals, TPH, BTEX, PAH, phenols, inorganics, VOCs, SVOCs, OCPs, OP	TOC (100%), Fluoranthene (60%) and pyrene (59%)
QC169	BH70	16-16.2	Natural	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics, VOCs	Five VOC compounds (128% to 148%)
QC208	BH53	1.1-1.5	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics	Hg (67%), Cu (62%), Mn (81%), Zn (77%), TPH C_{10}-C_{36} (52%), PAHs (80%) and B(a)P (59%)
QC211	BH61	2-2.4	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics	Mn (118%) and BTEX (96-123%)
QC212	BH61	2-2.4	Fill	Inter	Metals, TPH, BTEX, PAH, phenols, inorganics	BTEX (70 to 86%)
QC220	BH52	2.2-2.6	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics, VOCs	Cr Total (127%), Fe (107%) and Mn (187%)
QC221	BH52	2.2-2.6	Fill	Inter	Metals, TPH, BTEX, PAH, phenols, inorganics, VOCs	Cr (127%), Fe (169%), Pb (150%), Mn (180%), V (104%) and Zn (164%)

QA/QC Sample ID	Primary Sample			Duplicate Type	Analytes	RPD Exceedences
	Loc	Depth	Soil Type			
QC223	BH49	6.2-6.4	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics, VOCs, SVOCs, OCPs, OP	Mn (67%), TPH C_{10}-C_{36} (81%), 2,4-dimethylphenol (83%) and Phenanthrene (85%)
QC224	BH49	6.2-6.4	Fill	Inter	Metals, TPH, BTEX, PAH, phenols, inorganics, VOCs, SVOCs, OCPs, OP	Mn (90%), Ni (127%), Zn (126%), TPH C_{10}-C_{36} (104%), TOC (141%), six SVOCs (56 to 129%) and BTEX (62% to 89%).
QC225	BH58	3.2-3.4	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics	Hg (100%), Co (67%) and Ni (67%)
QC226	BH58	3.2-3.4	Fill	Inter	Metals, TPH, BTEX, PAH, phenols, inorganics	Hg (67%), Co (100%), Cu (89%), Mn (81%), Ni (82%), V (55%), B(a)P (86%) and six PAH compounds (60 to 125%).
QC228	BH54	1-1.4	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics	Fe (99%), Mn (157%), TPH C_{10}-C_{36} (82%), TPH C_6-C_9 (99%), B(a)P (71%)and thirteen PAH compounds (54% to 94%)
QC230	BH45	3.2-3.4	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics	Phenanthrene (75%), Mn (90%), Ni (127%), Zn (126%), TPH C_{10}-C_{36} (104%), seven SVOCs compounds (56 to 129%) and six VOC compounds (62 to 89%).
QC231	BH45	7.2-7.4	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics	Fe (53%)
QC232	BH45	7.2-7.4	Fill	Inter	Metals, TPH, BTEX, PAH, phenols, inorganics	Fe (86%) and Mn (75%)
QC234	BH65	3.4-3.6	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics	Hg (67%), As (53%), Ba (103%), Cr (125%), Cu (84%), Pb (129%), Mn (58%), Zn (92%), TPH C_{15}-C_{28} (55%), B(a)P (133%),
QC240	BH34	1.8-2.2	Fill	Intra	Metals, TPH, BTEX, PAH, phenols, inorganics	No exceedences

QA/QC Sample ID	Primary Sample			Duplicate Type	Analytes	RPD Exceedences
	Loc	Depth	Soil Type			
QC241	BH34	1.8-2.2	Fill	Inter	Metals, TPH, BTEX, PAH, phenols, inorganics	-

RPDs for groundwater duplicate samples have been compared to criteria presented in the DQI table above and exceedences are presented below:

Groundwater Duplicates

QA/QC Sample ID	Primary Sample	Duplicate Type	Analytes	RPD Exceedences
QC237	MW58 (AECOM)	Intra	Metals, BTEX, TPH, PAH, Phenols, SVOCs, VOCs, Inorganics	No exceedences
QC320	MW08 (ERM)	Intra	Metals, BTEX, TPH, PAH, Phenols, SVOCs, VOCs, Inorganics	Cd (156%)
QC321	MW08(ERM)	Inter	Metals, BTEX, TPH, PAH, Phenols, SVOCs, VOCs, Inorganics	Co (168%), 2,4-dimethylphenol (108%), 2-methylphenol (96%), 3-&4-methylphenol (55%), carbazole (75%), naphthalene (89%), TPH C_{29}-C_{36} (61%), TPH C_{15}-C_{28} (53%), Total PAHs (89%).
QC323	MW198 (ERM)	Intra	Metals, BTEX, TPH, PAH, Phenols, SVOCs, VOCs, Inorganics	No exceedences
QC324	MW198 (ERM)	Inter	Metals, BTEX, TPH, PAH, Phenols, SVOCs, VOCs, Inorganics	Total PAHs (70%)
QC331	IT2MID	Intra	Metals, BTEX, TPH, PAH, Phenols, SVOCs, VOCs, Inorganics	Ba (158%), Pb (108%), TPH C_{10}-C_{36} (97%), PAHs (69%), Napthalene (83%), Bicarbonate (58%), Calcium (75%), Mg (126%), Sulphate (83%), Sulphur (110%), TOC (74%), Dibenzofuran (55%), Di-n-butyl phthalate (50%)
QC332	IT2MID	Inter	Metals, BTEX, TPH, PAH, Phenols, SVOCs, VOCs, Inorganics	Ba (153%), cobalt (143%), Nickel (94%), TPH C_{10}-C_{36} (189%), 2-Napthalene (122%)

RPDs for soil vapour duplicate samples have been compared to criteria presented in the DQI table above and exceedences are presented below:

Soil Vapour Duplicates

QA/QC Sample ID	Primary Sample	Duplicate Type	Analytes	RPD Exceedences

QC1	SV07/1.6	Intra	VOCs	No exceedences
QC2	SV08	Intra	VOCs	No exceedences

The majority of the above soil RPD exceeedences indicate variability of metal concentrations in fill material and can be attributed to either the sample heterogeneity of the fill material l or to low detected concentrations (<10x LOR). In some instances (QC78/BH48, QC208/BH53, QC211/BH61, QC223/BH49, QC228/BH54 and QC234/BH65) high RPS were calculated for one or more of the TPH, PAH or BTEX results where there were elevated concentration of these analytes. Given the elevated concentrations of the analytes in the samples, the high RPDs for these samples are not considered affect the overall the assessment of this data.

The water RPD exceedances for QC321, QC324, QC331 and QC332 can be attributed to the variation of concentrations of contaminants in the water column.

Variation in concentrations was noted for cobalt in the groundwater duplicate sample pair QC321 (intra-laboratory duplicate) and primary sample ERM MW08 and duplicate pair QC332 (intra-laboratory duplicate) and primary sample IT2MID. QC321 and MW08 reported concentrations of 11 µg/L and 1 µg/L respectively, with a calculated RPD of 167%. QC332 and IT2MID reported concentrations of 3 µg/L and 0.5 µg/L respectively, with a calculated RPD of 167%.

The adopted criteria (ANZECC [2000] 95% Marine) for cobalt is 1 µg/L, therefore QC321 and QC332 exceeded the criteria whereas the primary samples did not. The cobalt concentration variation will be considered when assessing ERM MW08 and IT2MID against the adopted assessment criteria.

The actual intra-laboratory duplicate sample frequency for this investigation was 10-12% (i.e. at least 1 duplicate sample per 10 primary samples). The actual inter-laboratory duplicate sample frequency for this investigation was 5 to 8% (i.e.at least 1 duplicate sample per 20 primary samples).

2.6 Decontamination Procedure

Sampling equipment (including SPT split spoon, interface meter and Micropurge submersible pump) was cleaned in phosphate free detergent (“Decon” 90) solution, rinsed in potable water and then finally rinsed in laboratory supplied water prior to use and between each sampling location.

Forty one rinsate blank samples were collected using laboratory supplied rinse water, which was run over the decontaminated sampling equipment at the end of each day’s fieldwork. The samples were used to evaluate whether contaminants were likely to have been introduced by contact of the sample medium with sampling equipment.

The rinsate results are presented in **Table 9** at the end of this report in **Appendix H**.

The table below presents a summary of the results of the blank samples collected and analysed:

Rinsate Sample ID	Date	Equipment	Results
QC26	16/02/10	SPT Split Spoon	All result less than LOR with exception Chromium (III+VI) (0.001 mg/L) equal to LOR
QC27	9/02/10	SPT Split Spoon	All result less than LOR
QC43	10/02/10	SPT Split Spoon	All result less than LOR
QC44	11/02/10	SPT Split Spoon	All result less than LOR
QC46	12/02/10	SPT Split Spoon	All result less than LOR
QC49	15/02/10	SPT Split Spoon	All result less than LOR
QC51	18/02/10	SPT Split Spoon	All result less than LOR
QC52	18/02/10	SPT Split Spoon	All result less than LOR
QC59	23/02/10	SPT Split Spoon	Copper (0.001 ug/L) equal to LOR
QC60	16/02/10	SPT Split Spoon	All result less than LOR

Rinsate Sample ID	Date	Equipment	Results
QC66	17/02/10	SPT Split Spoon	All result less than LOR
QC80	19/02/10	SPT Split Spoon	Nickel (0.002 ug/L)
QC100	23/02/10	SPT Split Spoon	All result less than LOR
QC103	24/02/10	SPT Split Spoon	All result less than LOR
QC104	25/02/10	SPT Split Spoon	All result less than LOR
QC114	2/03/10	SPT Split Spoon	All result less than LOR
QC115	3/03/10	SPT Split Spoon	All result less than LOR
QC142	4/03/10	SPT Split Spoon	All result less than LOR
QC166	5/03/10	SPT Split Spoon	All result less than LOR
QC167	8/03/10	SPT Split Spoon	All result less than LOR
QC209	6/03/10	SPT Split Spoon	All result less than LOR
QC213	7/03/10	SPT Split Spoon	All result less than LOR
QC227	22/02/10	SPT Split Spoon	All result less than LOR
QC233	24/02/10	SPT Split Spoon	All result less than LOR
QC239	24/02/10	SPT Split Spoon	All result less than LOR
QC243	25/02/10	SPT Split Spoon	All result less than LOR
QC246	26/02/10	SPT Split Spoon	All result less than LOR
QC249	2/03/10	SPT Split Spoon	All result less than LOR
QC250	3/03/10	SPT Split Spoon	All result less than LOR
QC251	4/03/10	SPT Split Spoon	All result less than LOR
QC252	5/03/10	SPT Split Spoon	All result less than LOR
QC303	27/02/10	Micropurge submersible pump	All result less than LOR
QC312	15/03/10	Micropurge submersible pump	All results < LOR with exception of ammonia as N (20 ug/L), cadmium (0.002 mg/L), nitrate (as N) (0.02 mg/L), nitrogen (total oxidised) (0.02 mg/L)
QC325	16/03/10	Micropurge submersible pump	All results <LOR with exception of metals; barium (0.0175 mg/L), cadmium (0.0546 mg/L) chromium (III+VI) (0.0002 mg/L, equal to LOR) cobalt (0.0009 mg/L), copper (0.001 mg/L, equal to LOR), lead(0.0002 mg/L, equal to LOR) manganese (0.008 mg/L), nickel (0.0008 mg/L), zinc (0.004 mg/L)

Rinsate Sample ID	Date	Equipment	Results
QC326	16/03/10	Micropurge submersible pump	All results <LOR with exception of metals; barium (0.0195 mg/L),chromium (III+VI) (0.0002 mg/L), cobalt (0.001 mg/L), copper (0.001 mg/L), lead (0.0001 mg/L) manganese (0.0079 mg/L), nickel (0.0009 mg/L)zinc (0.005 mg/L).
QC329	18/03/10	Micropurge submersible pump	All result less than LOR
QC330	19/03/10	Micropurge submersible pump	All result less than LOR
QC333	24/03/10	Micropurge submersible pump	Chromium (III+IV) (0.0027 mg/L), nickel (0.0011 mg/L)
QC340	20/03/10	Micropurge submersible pump	All result less than LOR

In summary, in soil sampling equipment rinsates there were only detections of metals (copper, chromium and nickel) in three rinsate samples out of a total of 31 rinsates.

The detections in four of the eight groundwater sampling equipment rinsate samples were relatively low. In the primary samples collected on the 16/03/10, all of the metals detected in the rinsate samples were detected in the primary samples, with the exception of copper.

With the exception of the metal detections from the rinsates on the 16/3/10, it is concluded that the decontamination procedures were adequate and that the contaminants were unlikely to have been introduced by contact of the sample medium with sampling equipment.

2.7 Trip Blanks

A trip blank assesses the potential for cross contamination during transit from the investigation site to the laboratory. Samples are typically analysed for the same contaminants targeted as part of the investigation.

Eighteen trip soil blank samples and seven water trip blank samples were utilised during storage and transport of the samples, which complied with the SAQP (AECOM, 2009). The trip blank results are presented in **Table 9 and 10** at the end of this report in **Appendix H.** The samples and results are summarised in the table below.

Batch	Field_ID	Sampled_Date	Matrix	Results
ES1003390	TB02	19/02/10	soil	All results < LOR
ES1003391	TB03	18/02/10	soil	All results < LOR
ES1003671	TB05	23/02/10	soil	All results < LOR
ES1003671	TB06	22/02/10	soil	All results < LOR
ES1003671	TB07	22/02/10	soil	All results < LOR
ES1003672	TB08	22/02/10	soil	All results < LOR
ES1003672	TB09	22/02/10	soil	All results < LOR
ES1003971	TB10	24/02/10	soil	All results < LOR
ES1004018	TB11	25/02/10	soil	All results < LOR
ES1004018	TB12	25/02/10	soil	All results < LOR
ES1004031	TB13	25/02/10	soil	All results < LOR

Batch	Field_ID	Sampled_Date	Matrix	Results
ES1004031	TB14	25/02/10	soil	All results < LOR
ES1004218	TB14	3/03/10	soil	All results < LOR
ES1004218	TB15	4/03/10	soil	All results < LOR
ES1004308	TB16	5/03/10	soil	All results < LOR
ES1004323	TB17	5/03/10	soil	All results < LOR
ES1004648	TB18	5/03/10	soil	All results < LOR
ES1003746	QC304	27/02/10	water	All results < LOR
ES1004947	TB301	16/03/10	water	All results < LOR
ES1004956	TB302	16/03/10	water	All results < LOR
ES1005244	TB303	16/03/10	water	All results < LOR
ES1005244	TB304	18/03/10	water	All results < LOR
ES1005391	TB306	20/03/10	water	All results < LOR
ES1005598	TB307	24/03/10	water	All results < LOR

The results indicate that there was no significant loss or gain of volatile constituents from soil and groundwater samples whilst in transit from the investigation site to the laboratory.

3.0 Laboratory QA/QC

3.1 Analytical Laboratory

Samples were submitted to the following laboratories:

- ALS Laboratory Group (ALS) in Smithfield, NSW (primary laboratory);
- LabMark Environmental Laboratories (LabMark) in Asquith, NSW (secondary laboratory);
- SGS Australia Pty Ltd (SGS) in Alexandria, NSW (soil vapour analysis); and
- Australian Soil Testing in Rockdale, NSW (soil permeability analysis)

The ALS NATA accreditation number is 825, and its analytical procedures are based on established internationally-recognised procedures such as those published by the US EPA, APHA, AS and NEPM (1999). In house procedures are employed by ALS in the absence of documented standards.

The Labmark NATA accreditation number is 13542, and its analytical procedures are based on methods referenced from NEPC, ASTM, modified USEPA / APHA.

The SGS NATA accreditation number is 2562.

The Australian Soil Testing accreditation number is 1459.

3.2 Analytical Methods

The laboratory analysis methods for soil and groundwater are provided on the laboratory certificates in **Appendix I** and summarised in following two tables:

Soil Analytical Methods

Analysis	ALS Limit of Reporting	ALS Reference method	Labmark Limit of Reporting	Labmark Reference method
Metals suite comprising arsenic (As), barium (Ba), beryllium (Be), cadmium (Cd), chromium (Cr), cobalt (Co), copper (Cu),manganese (Mn), nickel (Ni), lead (Pb), vanadium (V) and zinc (Zn). Selected samples Aluminium (Al), Antinomy (Sb), Selenium (Se) and Silver (Ag).	1 - 5 mg/kg, Ba 10 mg/kg, Al 50 mg/kg,	Acid Digestion/ICPAES (Alpha 20th 3120-(USEPA SW846, 6010)	0.1 - 5.0 mg/kg (Ba 10 mg/kg)	Acid Digestion/ICPAES (Alpha 20th 3120-(USEPA SW846, 6010)

3.3 Laboratory (Method) Blanks

Laboratory method or control blanks consist of reagents specific to each individual analytical method and are prepared and analysed by laboratories in the same manner as regular samples. The preparation and analysis of laboratory blanks enables the measurement of contamination within the laboratory.

Laboratory blanks are typically analysed at a frequency of 1 in 20, with a minimum of one analysed per batch. For this investigation, method blank was analysed in each soil and groundwater batch.

Review of the laboratory QA/QC reports indicated that the results for all method blanks were below the laboratory detection limit.

3.4 Laboratory Duplicates

Laboratory duplicate samples are prepared in the laboratory by splitting a field sample and analysing it as two independent samples. The analysis of laboratory duplicate samples provides an indication of analytical precision and may be influenced by sample heterogeneity. The laboratory duplicate RPDs are used to assess laboratory precision.

Laboratory duplicates are typically analysed at a frequency of 1 in 20, with a minimum of one analysed per batch. Laboratory duplicates were analysed at an appropriate frequency (1 in 5 to 1 in 7) in all batches.

Review of the laboratory QA/QC reports indicated that the RPDs for all laboratory duplicate samples were within the DQI acceptance criteria, with the following exceptions summarised in the table below.

Batch	Sample Code	Chemical Name	RPD (%)	Matrix
ES1004031	ES1004031-027 BH73_17.5-17.7	meta- & para-Xylene 1.2.4-Trimethylbenzene meta- & para-Xylene	85 75 86.2	soil
ES1004308	ES1004308-001 BH53_1.1-1.5	Acenaphthene Fluorene	59.7 76.3	soil
ES1004323	ES1004323-002 BH72_2.5-2.7	Phenanthrene	76.5	soil
ES1003672	ES1003672-039 BH54_1.0-1.4	ChryseneManganese Benzene	50.8 98.2 75.1	soil soil
ES1004018	ES1004018-002 BH64_1.0-1.2	Five PAH compounds	50.6 to 64.1	soil
ES1004323	ES1004323-002 BH72_2.5-2.7	Phenanthrene	76.5	soil

AECOM notes that laboratory duplicates were not analysed in the secondary laboratory (LabMark) batches.

All of the above samples were fill material and, therefore, the duplicate exceedences are likely due to sample heterogeneity, with the exception of ES1004031-027 (BH73_17.5-17.7). The RPD exceedences for ES1004031-027 can however be attributed to low concentrations (<10 times the laboratory LOR).

The laboratory duplicate RPD results indicate that the laboratory precision was acceptable for this investigation.

3.5 Laboratory Control Samples

Laboratory control samples (LCS) or Quality Control check samples are prepared within the laboratory by spiking an aliquot of an appropriate clean matrix reagent with known concentrations of specific analytes. The LCS sample is then analysed and the results are used to assess the laboratory performance on sample preparation and analysis procedure. Certified reference material may also be used to assess analytical accuracy independent of the investigations. Accuracy is assessed by calculation of percent recovery.

LCSs are typically analysed at a frequency of 1 in 20, with a minimum of one analysed per analytical batch. For this investigation, LCSs were analysed at an appropriate rate (1 per batch).

Review of the laboratory QA/QC reports indicated that the percent recoveries for LCSs were within the DQI acceptance criteria (70-130%) or the Laboratory Analyte Specific Acceptance Criteria (ASAC), with the exception of those listed in the below table.

Batch	Sample Code	Chemical Name	Result (%)	Matrix
ES1003183	1455863-007	Pentachlorophenol	27.4	soil
ES1003390	1462251-007	Pentachlorophenol	20.6	soil
		Indeno(1.2.3.cd)pyrene	68.4	soil

		Pentachlorophenol	26.6	soil
		trans-Isosafole	42	soil
	1462251-007	Pentachlorophenol	20.6	soil
ES1003971	1469384-002	2.4-Dimethylphenol	21.8	soil
		Pentachlorophenol	29.2	soil
	1463914-012	Tetrachloroethene	133	soil
		Vinyl Acetate	14.6	soil
	1464026-007	Pentachlorophenol	7.3	soil
	1464831-008	Pentachlorophenol	25.3	soil
	1469383-007	Pentachlorophenol	10.7	soil
	1466763-002	1-Naphthylamine	29.7	soil
	1463876-016	TPH C29 - C36 Fraction	131	soil
ES1003672	1466763-002	1-Naphthylamine	29.7	soil
	1464831-008	Pentachlorophenol	25.3	soil
	1465407-007	Pentachlorophenol	12.4	soil
ES1004308	1474285-002	Pentachlorophenol	7.8	soil
	1475249-002	Pentachlorophenol	10.8	soil
ES1004018	1470949-011	Pentachloroethane	28.3	soil
		Vinyl Acetate	27	soil
	1475249-002	Pentachlorophenol	10.8	soil
ES1004022	1469312-007	Pentachlorophenol	9.7	soil
ES1004031	1475249-002	Pentachlorophenol	10.8	soil
ES1004323	1476020-002	Pentachlorophenol	29.6	soil
ES1004218	1477035-007	2.4-Dimethylphenol	20.4	soil

Batch	Sample Code	Chemical Name	Result (%)	Matrix
		N-Nitrosodiphenyl & Diphenylamine	28.5	soil
ES1004648	1479805-007	Pentachlorophenol	23.1	soil
	1481174-007	2.4-Dimethylphenol	22.4	soil
		Pentachlorophenol	14.8	soil
	1479850-008	Vinyl Acetate	24.5	soil
ES1004782	1484522-016	4-Nitroquinoline-N-oxide	13.3	water
ES1004783	1488334-012	Pentachlorophenol	29.7	water
ES1004947	1486285-011	2-Picoline	24.4	water
ES1005598	1502167-002	TPH C_{15} - C_{28} Fraction	136	water

There were 25 out of 315 soil and 4 out of 154 water LCS samples with recoveries outside the acceptable DQI range for the compounds listed in the above table.

It is noted that the majority of low recoveries for LCS samples were for phenols in soil, which generally have poor recoveries. It is noted that five phenol compounds were detected in field soil samples, with 1 to 42samples with detections out of 174 samples (including field duplicate samples). The highest concentration of phenol was 540 mg/kg (BH53_4.0-4.4), which is calculated to be 3% of the most conservative criteria (NSW DECC [2006] SIL_3-17000 mg/kg) adopted in this investigation. It is therefore unlikely that a higher recovery would have resulted in an exceedence of the criteria.

Based on this the LCS recoveries indicate that the accuracy of the results is acceptable.

3.6 Matrix Spikes

Matrix spikes are samples prepared within the laboratory by dividing a field sample into two aliquots, then spiking each with identical concentrations of the analytes. The matrix spike and matrix spike duplicate are then analysed separately and the results compared to determine the effects of the sample matrix on the accuracy and precision of the analytes. Accuracy is assessed by the calculation of the percent recovery.

Review of the laboratory QA/QC reports indicated that the percent recoveries for matrix spikes were within the DQI acceptance criteria (70-130%) or the Laboratory Analyte Specific Acceptance Criteria (ASAC), with the exception of those listed in the below table.

Sample Code	Batch	Chemical Name	Recovery (%)	Matrix
ES1003390	1463077-005	Pentachlorophenol	14.4	soil
	1462936-005	Hexavalent Chromium	25	soil
ES1004323	1476902-055	Hexavalent Chromium	19	soil
ES1004648	1482929-030	Hexavalent Chromium	11	soil
ES1003671	1466763-005	Pentachlorophenol	20.4	soil
	1464026-009	Pentachlorophenol	24.7	soil
	1464831-010	Acenaphthene	138	soil
	1466763-005	Pentachlorophenol	20.4	soil
ES1004018	1470922-009	2-Nitrophenol	132	soil
	1477814-009	Pentachlorophenol	27.8	soil
	1475249-005	Pentachlorophenol	17.6	soil
ES1004323	1476020-005	Pentachlorophenol	23.8	soil
ES1004218	1477035-005	Pentachlorophenol	21.4	soil

Sample Code	Batch	Chemical Name	Recovery (%)	Matrix
ES1004648	1481174-005	Pentachlorophenol	24.6	soil
ES1004947	1486285-014	Pentachlorophenol	29.5	water
	1486285-014	Phenol	19.6	water
ES1003746	1466402-005	Weak Acid Dissociable Cyanide	25.1	water

There were only 14 out of 260 soil and two out of 114 water matrix spike samples with recoveries outside the acceptable DQI range for the compounds listed in the above table.

It is noted that as discussed in Section 3.5 above, the majority of low recoveries for matrix spike samples were for phenols in soil, which generally have poor recoveries. Based on the concentrations of the field soil samples, it is unlikely that a higher recovery would have resulted in an exceedence of the most conservative criteria.

Based on this the matrix spike recoveries indicate that the accuracy of the results is acceptable.

3.7 Surrogates

Surrogates are compounds which are similar to the organic analytes of interest in chemical composition, extraction, and chromatographic behaviour, but which are not normally found in field samples. Surrogates are generally spiked into all sample aliquots prior to preparation and analysis by chromatogaphic methods. Percent recoveries are calculated for each surrogate, providing an indication of analytical accuracy. US EPA methodology (SW – 846) requires that surrogate testing be performed whenever analysing by Gas Chromatography or HPLC.

Review of the laboratory QA/QC reports indicated that the percent recoveries for surrogates were within the DQI acceptance criteria (70-130%) or the Laboratory Analyte Specific Acceptance Criteria (ASAC), with the exception of those listed in the below table.

Batch	Sample Code	Chemical Name	Recovery (%)	Matrix
ES1003390	1460495-001	Phenol-d6	12.7	soil
		2-Chlorophenol-D4	14.9	soil
		2-Chlorophenol-D4	14.9	soil
		2.4.6-Tribromophenol	2.5	soil
		2.4.6-Tribromophenol	2.5	soil
ES1003391	1465195-001	Phenol-d6	17.2	soil
ES1003970	1471913-001	Phenol-d6	16.8	soil
	1471913-009	Phenol-d6	22.3	soil
ES1003971	1471913-009	Phenol-d6	22.3	soil
	1471913-001	Phenol-d6	16.8	soil
ES1003672	024	2.4.6-Tribromophenol	16	soil
	024	2.4.6-Tribromophenol	16	soil
	1465249-001	Phenol-d6	21.1	soil
ES1004018	015	2.4.6-Tribromophenol	138	soil
	1471913-001	Phenol-d6	16.8	soil
	1471913-009	Phenol-d6	22.3	soil
	015	2.4.6-Tribromophenol	138	soil
ES1004031	003	2.4.6-Tribromophenol	141	soil

Batch	Sample Code	Chemical Name	Recovery (%)	Matrix
	003	2.4.6-Tribromophenol	141	soil
ES1004218	1477035-007	2.4.6-Tribromophenol	10.9	soil
	1477508-001	Phenol-d6	15.5	soil
ES1004308	1475680-001	Phenol-d6	23.7	soil
ES1004323	1477508-001	Phenol-d6	15.5	soil
	ES1004323 006	2-Fluorobiphenyl	28.4	soil
ES1004782	002	2.4.6-Tribromophenol	136	water
	003	2.4.6-Tribromophenol	139	water
ES1004947	002	Phenol-d6	23	water
	1486285-014	Phenol-d6	23.8	water
ES1004956	003	Phenol-d6	22.3	water
ES1005598	1502206-001	Phenol-d6	22.7	water
ES1005244	004	Phenol-d6	16.3	water

There were only 12 out of 240 soil and 7 out of 36 water surrogate samples with recoveries outside the acceptable DQI range for the compounds listed in the above table. Based on this the LCS recoveries indicate that the accuracy of the results is acceptable.

It is noted that as discussed in Section 3.5 and 3.6, the majority of low recoveries for surrogate samples were for phenols in soil, which generally have poor recoveries. Based on the concentrations of the field soil samples, it is unlikely that a higher recovery would have resulted in an exceedence of the most conservative criteria.

It is also noted that the for surrogate samples listed in the table below, recoveries were not determined due to (target or non-target) matrix interferences (ie the background concentrations were greater than four times or more than the spike concentration and therefore the surrogate recoveries could not be determined).

Batch	Sample Code	Chemical Name

3.8 Holding Times

NEPC (1999), APHA 20th Edition and AS2031.1-1986 present recommended holding times for various analyses (under specified conditions, for example below 4°C in an airtight container), which must be met in order to consider the results valid. The holding times may vary slightly depending on the document referenced.

Review of the chain-of-custody documentation and the laboratory reports indicated that the holding time have been met for all analyses as presented in the table below"

Analyte	Matrix	Recommended Maximum Holding Time	Non Compliance
Metals	Soil / Water	6 months – metals 1 day - Ferrous Iron	**Ferrous Iron 1 day overdue:** MW200, MW209, MW198, QC323, MW210
Mercury	Soil / Water	28 days	-
TPH C_6-C_9	Soil / Water	14 days / 7 days	-
TPH C_{10}-C_{36}	Soil / Water	14 days / 7 days	**3 days overdue:** QC80 **5 days overdue:** QC115 **2 days overdue**: QC239 **1 day overdue**: QC243
BTEX	Soil / Water	14 days / 14 days (with HCl)	-
SVOCs	Soil / Water	14 days / 7 days	**1 day overdue:** MW205

The holding time exceedences for pH in water samples are attributed to the short holding time of six hours. In some instances it was not practicable to collect the groundwater samples, deliver to the laboratory and be analyse by the laboratory within a six hour time period, due to the sampling methodology, time constraints and distance between the Site and the laboratory. It is noted that pH was measured and recorded in the field with a

calibrated water quality meter at the time of sampling and may provide more accurate indications of groundwater pH where there were exceedences in holding time for laboratory measured pH. Reported laboratory pH results were used to check the reported field pH results.

The holding time exceedences for pH in the soil samples were between one and five days overdue for five soil samples. The small number of exceedences is not considered to significantly affect the quality of the data set.

The holding time exceedence for TPH is not considered to affect the quality of primary data as they were field QA/QC samples.

There were 72 out of 146 samples with holding time exceedences for free and/or WAD cyanide. The free and WAD cyanide holding time exceedences in soil are not considered to affect the assessment significantly as they have not been detected at concentrations greater than the LOR at the Site. Additionally concentrations of total cyanide at the Site has ranged between <1 mg/kg and 575 mg/kg and have been significantly less than the adopted assessment criteria of 2000 mg/kg. With the exception of the samples listed above, soil samples were extracted and analysed with the recommended holding times for total cyanide. As noted above, some samples were extracted one day outside the holding times for total cyanide. All samples were held in refrigeration in the laboratory and the given the results reported, the one day over extraction is not considered to affect the overall assessment of the data.

There were 46 samples overdue for analysis of organic matter (TOC). It is noted that samples were received by laboratory within holding times for cyanide and organic matter. Follow up with the laboratory (ALS) indicated that the reported holding time exceedences occurred due the amount of samples being analysed at the time by the laboratory.

4.0 Data Validation

The overall assessment of the quality of the data obtained during this investigation is discussed below in terms of the data quality indicators provided above.

Non-compliances are to be documented and discussed in the report. The DQIs are as follows:

DQI	Description	Compliance
Completeness	Completeness is a measure of the amount of usable data (expressed as %) from a data collection activity.	The completeness of data is defined as the percentage of analytical results that are considered valid. Valid chemical data are values that have been identified as acceptable or acceptable as qualified during the data validation process. The completeness is a comparison of the total number of samples accepted against the total number of samples, calculated as a percentage. The project goal for completeness is 95%. Completeness also includes checking that all entries in the data tables are correct, properly entered, and that any typographical errors are corrected and the data are re-entered properly, as required. Approximately 95% of the samples collected and analysed complied with the DQOs and DQIs, as such the data obtained is considered to be sufficiently quantitative and complete for the purposes of this investigation (i.e. >95%)

DQI	Description	Compliance
Comparability	Comparability is the confidence (expressed qualitatively) that data may be considered to be equivalent for each sampling and analytical event.	Comparability expresses the confidence with which one data set can be compared with another. In order to assess comparability, field sampling procedures, laboratory sample preparation procedures, analytical procedures, and reporting units must be known and similar to established protocols, as was the case during this investigation. Qualitatively, data subjected to strict QA/QC procedures will be deemed more reliable, and therefore more comparable, than other data. The sampling was conducted by AECOM environmental scientists in accordance with AECOM sampling and analysis procedures. Each analyte was analysed by the same analytical laboratory using identical methods, and laboratory LORs were consistent over each laboratory batch. Additionally, a check laboratory was used to assess variability between laboratories. Based on the above, the data obtained throughout the investigation is considered to be suitably comparable.
Representativeness	Representativeness is the confidence (expressed qualitatively) that data are representative of each media present on the site.	Representativeness expresses the degree to which sample data accurately and precisely represent a characteristic of parameter variations at sampling points or environmental conditions. Sample representativeness is controlled through selecting sampling locations that exemplify site conditions and obtaining suitable samples from these sites. Sample selection and analysis was conducted in order to meet the specific objectives of the project. Analysis for the contaminants of concern was selectively conducted on soil samples as indicated in analytical tables. Based on the sampling and analytical regime undertaken by AECOM, the results obtained are considered to be sufficiently representative of the subsurface conditions at the locations tested.
Precision	Precision is a quantitative measure of the variability (or reproducibility) of data.	All work was conducted in accordance with AECOM's documented SOPs. Precision or variability of the data was assessed by determining RPDs between the original and duplicate samples analysed. Based on results discussed above, AECOM considers that the precision of the data is sufficient for the purposes of this investigation. Two High RPD exceedences were noted where the primary sample did not exceed the adopted assessment criteria but the duplicate sample did, occurred in the following two duplicate pairs: • MW08 (ERM location) and QC321 (intra-laboratory duplicate) and primary sample– cobalt concentrations in groundwater ; and • BH60_17.5-17.7 (primary sample) and QC121 (inter-laboratory duplicate) – TPH C_6-C_9 concentrations in soil. The variation in concentrations will be taken into consideration when assessing these locations against the adopted assessment criteria. Both of these locations are within the Other Remediation Works (North) area.. In addition, the variation in concentrations for analyte which were below but close to the assessment criteria will be taken into consideration.

DQI	Description	Compliance
Accuracy	Accuracy is a quantitative measure of the closeness of reported data to the true value.	All work was conducted in accordance with AECOM's documented SOPs. Accuracy of the data was mainly assessed through review of the laboratory QA/QC results, though the rinsate blanks also contributed to the assessment of accuracy. Based on results discussed above, AECOM considers that the accuracy of the data is sufficient for the purposes of this investigation.

Based on an assessment of field and laboratory QA/QC data, the reported analytical results are considered, by achievement of the DQIs, to be reliable and representative of concentrations of the compounds analysed at the locations sampled.

Notes
mg/L - milligrams per litre
µg/L - micrograms per litre
meq/L - milliequivalents per litre
RPD - Relative Percent Differnce
- denotes not analysed
< denotes result less than the LOR
nc - not calcuable as one or more results < LOR

Sampler	: KOB+KP	Issue Date	: 24-MAR-2010
Site	: BARANGAROO		
		No. of samples received	: 3
Quote number	: SY/259/09 V2	No. of samples analysed	: 3

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

- **EP074: Level of reporting raised for toluene due to ambient background levels in the laboratory.**
- **EP074: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.**
- **EP075: Particular samples required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly. Poor surrogate recovery due to sample matrix interferences.**
- **LCS recovery for some elements falls outside ALS Dynamic Control Limit. However, they are within the acceptance criteria based on ALS DQO. No further action is required.**

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non -volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **WATER**

Evaluation: ✗ = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH	EA005	WATER	APHA 21st ed. 4500 H+ B. pH of water samples is determined by ISE either manually or by automated pH meter. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Standard Anions	* ED009	WATER	APHA 21st ed., 4110. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Alkalinity by PC Titrator	ED037-P	WATER	APHA 21st ed., 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Major Anions - Total	ED040T	WATER	APHA 21st ed., 3120 Samples are digested by USEPA 3005 prior to analysis. Sulfur content is determined by ICP/AES and reported as Sulfate after conversion by gravimetric factor.
Major Cations - Dissolved	ED093F	WATER	APHA 21st ed., 3120; USEPA SW 846 - 6010 The ICPAES technique ionises the 0.45um filtered sample atoms emitting a characteristic spectrum. This spectrum is then compared against matrix matched standards for quantification. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Mercury by FIMS	EG035F	WATER	AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45 um filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Hexavalent Chromium - Low Level	EG050F Low	WATER	APHA 21st ed., 3500 Cr-B. Samples are 0.45 um filtered prior to analysis. Hexavalent chromium is determined on filtered water sample as received by pH adjustment and colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ferrous Iron by Discrete Analyser	EG051G	WATER	APHA 21st ed., 3500 Fe-B. A colorimetric determination based on the reaction between phenanthroline and ferrous iron at pH 3.2-3.3 to form an orange-red complex that is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Saline Water -Suite A by ORC-ICPMS	EG093A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Fresh Water -Suite A by ORC-ICPMS	EG094A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Free CN by Discrete Analyser	EK025G	WATER	APHA 21st ed., 4500-CN-C&N Free Cyanide is determined on samples after distillation using a pyridine-barbituric acid colouring reagent followed with an Discrete Analyser finish. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Analytical Methods	Method	Matrix	Method Descriptions
Weak Acid Dissociable Cyanide By Discrete Analyser	EK028G	WATER	APHA 21st ed., 4500-CN-C&N WAD Cyanide is determined from aqueous solutions after distillation with acetic acid. The resultant distillate is then captured in a caustic absorber solution followed by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ammonia as N by Discrete analyser	EK055G	WATER	APHA 21st ed., 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite as N by Discrete Analyser	EK057G	WATER	APHA 21st ed., 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrate as N by Discrete Analyser	EK058G	WATER	APHA 21st ed., 4500-NO3- F. Nitrate is reduced to nitrite by way of a cadmium reduction column followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	APHA 21st ed., 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Cadmium Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ionic Balance by IC PCT and ICPAES	EN055 - IC ED009	WATER	APHA 21st Ed. 1030F. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Organic Carbon	EP005	WATER	APHA 21st ed., 5310 B, The automated TOC analyzer determines Total and Inorganic Carbon by IR cell. TOC is calculated as the difference. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH - Semivolatile Fraction	EP071	WATER	USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Volatile Organic Compounds	EP074	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Semivolatile Organic Compounds	EP075	WATER	USEPA SW 846 - 8270D Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH Volatiles/BTEX	EP080	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Free Cyanide	EK025-PR	WATER	APHA 21st ed., 4500 CN- C&N. The sample is distilled at natural pH. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Weak Acid Dissociable Cyanide	EK028-PR	WATER	APHA 21st ed., 4500 CN- I&N. The sample is distilled with Acetic acid, selectively releasing the weakly bound metal cyanides as HCN. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Digestion for Total Recoverable Metals	EN25	WATER	USEPA SW846-3005 Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Separatory Funnel Extraction of Liquids	ORG14	WATER	USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Date Samples Received	: 15-MAR-2010	Issue Date	: 17-MAR-2010 15:17
Client Requested Due Date	: 22-MAR-2010	Scheduled Reporting Date	: **22-MAR-2010**

Delivery Details

Mode of Delivery	: Carrier	Temperature	: 6.3'C - Ice present
No. of coolers/boxes	: 1 HARD	No. of samples received	: 3
Sercurity Seal	: Intact.	No. of samples analysed	: 3

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Requested Deliverables
- **Samples received in appropriately pretreated and preserved containers.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- **Breaches in recommended extraction / analysis holding times may occur. Please contact ALS for further information (Jacob Waugh).**
- **TPH C6-C9 added as per Anthony Davis 17/03/10.**
- **Appropriately preserved bottle not supplied for Cr6+ analysis, lab will subsample from natural bottle provided.**
- **pH analysis should be conducted within 6 hours of sampling.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Please direct any queries related to sample condition / numbering / breakages to Jacob Waugh
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (14 days), Solid (90 days) from date of completion of work order.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process neccessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

- **EK025G : FCN : Repeated result confirmed that the sample is positive for the analysis.**
- **EP074: Level of Reporting raised for toluene due to ambient background levels in the laboratory.**
- **EP074: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.**
- **EP075: Particular samples required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly. Poor surrogate recovery due to sample matrix interferences.**
- **EP075: 'Sum of PAH' is the sum of the USEPA 16 priority PAHs**
- **LCS recovery for some elements falls outside ALS Dynamic Control Limit. However, they are within the acceptance criteria based on ALS DQO. No further action is required.**

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non -volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **WATER**

Evaluation: ✗ = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH	EA005	WATER	APHA 21st ed. 4500 H+ B. pH of water samples is determined by ISE either manually or by automated pH meter. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Standard Anions	* ED009	WATER	APHA 21st ed., 4110. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Alkalinity by PC Titrator	ED037-P	WATER	APHA 21st ed., 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Major Anions - Total	ED040T	WATER	APHA 21st ed., 3120 Samples are digested by USEPA 3005 prior to analysis. Sulfur content is determined by ICP/AES and reported as Sulfate after conversion by gravimetric factor.
Major Cations - Dissolved	ED093F	WATER	APHA 21st ed., 3120; USEPA SW 846 - 6010 The ICPAES technique ionises the 0.45um filtered sample atoms emitting a characteristic spectrum. This spectrum is then compared against matrix matched standards for quantification. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Mercury by FIMS	EG035F	WATER	AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45 um filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Hexavalent Chromium - Low Level	EG050F Low	WATER	APHA 21st ed., 3500 Cr-B. Samples are 0.45 um filtered prior to analysis. Hexavalent chromium is determined on filtered water sample as received by pH adjustment and colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ferrous Iron by Discrete Analyser	EG051G	WATER	APHA 21st ed., 3500 Fe-B. A colorimetric determination based on the reaction between phenanthroline and ferrous iron at pH 3.2-3.3 to form an orange-red complex that is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Saline Water -Suite A by ORC-ICPMS	EG093A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Fresh Water -Suite A by ORC-ICPMS	EG094A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Free CN by Discrete Analyser	EK025G	WATER	APHA 21st ed., 4500-CN-C&N Free Cyanide is determined on samples after distillation using a pyridine-barbituric acid colouring reagent followed with an Discrete Analyser finish. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Analytical Methods	Method	Matrix	Method Descriptions
Weak Acid Dissociable Cyanide By Discrete Analyser	EK028G	WATER	APHA 21st ed., 4500-CN-C&N WAD Cyanide is determined from aqueous solutions after distillation with acetic acid. The resultant distillate is then captured in a caustic absorber solution followed by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ammonia as N by Discrete analyser	EK055G	WATER	APHA 21st ed., 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite as N by Discrete Analyser	EK057G	WATER	APHA 21st ed., 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrate as N by Discrete Analyser	EK058G	WATER	APHA 21st ed., 4500-NO3- F. Nitrate is reduced to nitrite by way of a cadmium reduction column followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	APHA 21st ed., 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Cadmium Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ionic Balance by IC PCT and ICPAES	EN055 - IC ED009	WATER	APHA 21st Ed. 1030F. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Organic Carbon	EP005	WATER	APHA 21st ed., 5310 B, The automated TOC analyzer determines Total and Inorganic Carbon by IR cell. TOC is calculated as the difference. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH - Semivolatile Fraction	EP071	WATER	USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Volatile Organic Compounds	EP074	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Semivolatile Organic Compounds	EP075	WATER	USEPA SW 846 - 8270D Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH Volatiles/BTEX	EP080	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Free Cyanide	EK025-PR	WATER	APHA 21st ed., 4500 CN- C&N. The sample is distilled at natural pH. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Weak Acid Dissociable Cyanide	EK028-PR	WATER	APHA 21st ed., 4500 CN- I&N. The sample is distilled with Acetic acid, selectively releasing the weakly bound metal cyanides as HCN. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Digestion for Total Recoverable Metals	EN25	WATER	USEPA SW846-3005 Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Separatory Funnel Extraction of Liquids	ORG14	WATER	USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EG093F: Dissolved Metals in Saline Water by ORC-ICP	1490793-003	----	**Manganese**	7439-96-5	89.8 %	90-122%	**Recovery less than lower control limit**
EG093F: Dissolved Metals in Saline Water by ORC-ICP	1490793-003	----	**Nickel**	7440-02-0	75.2 %	84-124%	**Recovery less than lower control limit**
EP075B: Polynuclear Aromatic Hydrocarbons	1490853-010	----	**7.12-Dimethylbenz(a)anthracene**	57-97-6	110 %	49.8-107%	**Recovery greater than upper control limit**
EP075C: Phthalate Esters	1490853-010	----	**bis(2-ethylhexyl) phthalate**	117-81-7	68.1 %	72.8-135%	**Recovery less than lower control limit**
EP075E: Nitroaromatics and Ketones	1490853-010	----	**1-Naphthylamine**	134-32-7	33.2 %	46.8-102%	**Recovery less than lower control limit**
EP075H: Anilines and Benzidines	1490853-010	----	**Aniline**	62-53-3	92.5 %	10.9-89.7%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
ED009: Anions	ES1004529-007	Anonymous	**Chloride**	16887-00-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
ED009: Anions	ES1004956-002	MW209	**Chloride**	16887-00-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
ED009: Anions	ES1004956-002	MW209	**Sulfate**	14808-79-8	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG094F: Dissolved Metals in Fresh Water by ORC-ICPI	ES1004956-005	QC323	**Manganese**	7439-96-5	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG094F: Dissolved Metals in Fresh Water by ORC-ICPI	EB1004762-001	Anonymous	**Manganese**	7439-96-5	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EP005: Total Organic Carbon (TOC)	EP1001463-008	Anonymous	**Total Organic Carbon**	----	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

- **For all matrices, no Method Blank value outliers occur.**
- **For all matrices, no Duplicate outliers occur.**

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics
Pabi Subba	Senior Organic Chemist (Semi-Volatile)	Organics
Sanjeshni Jyoti Mala	Senior Chemist Volatile	Organics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

- **EP074: Level of Reporting raised for toluene due to ambient background levels in the laboratory.**
- **EP075: Insufficient sample has been provided for standard analysis. Where applicable LOR values have been adjusted accordingly.**
- **EP075: 'Sum of PAH' is the sum of the USEPA 16 priority PAHs**

QUALITY CONTROL REPORT

Work Order	: **ES1004994**	Page	: 1 of 17
Client	: **AECOM Australia Pty Ltd**	Laboratory	: Environmental Division Sydney
Contact	: MR ANTHONY DAVIS	Contact	: Charlie Pierce
Address	: LEVEL 5, 828 PACIFIC HIGHWAY GORDON NSW, AUSTRALIA 2072	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
E-mail	: anthony.davis@aecom.com	E-mail	: charlie.pierce@alsenviro.com
Telephone	: +61 02 8484 8999	Telephone	: +61-2-8784 8555
Facsimile	: +61 02 8484 8989	Facsimile	: +61-2-8784 8500
Project	: S4150014	QC Level	: NEPM 1999 Schedule B(3) and ALS QCS3 requirement
Site	: Barangaroo		
C-O-C number	: ----	Date Samples Received	: 17-MAR-2010
Sampler	: KP	Issue Date	: 26-MAR-2010
Order number	: 1303951		
		No. of samples received	: 4
Quote number	: SY/259/09 V2	No. of samples analysed	: 4

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics
Pabi Subba	Senior Organic Chemist (Semi-Volatile)	Organics
Sanjeshni Jyoti Mala	Senior Chemist Volatile	Organics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH	EA005	WATER	APHA 21st ed. 4500 H+ B. pH of water samples is determined by ISE either manually or by automated pH meter. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Standard Anions	* ED009	WATER	APHA 21st ed., 4110. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Alkalinity by PC Titrator	ED037-P	WATER	APHA 21st ed., 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Major Anions - Total	ED040T	WATER	APHA 21st ed., 3120 Samples are digested by USEPA 3005 prior to analysis. Sulfur content is determined by ICP/AES and reported as Sulfate after conversion by gravimetric factor.
Major Cations - Dissolved	ED093F	WATER	APHA 21st ed., 3120; USEPA SW 846 - 6010 The ICPAES technique ionises the 0.45um filtered sample atoms emitting a characteristic spectrum. This spectrum is then compared against matrix matched standards for quantification. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Mercury by FIMS	EG035F	WATER	AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45 um filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Hexavalent Chromium - Low Level	EG050F Low	WATER	APHA 21st ed., 3500 Cr-B. Samples are 0.45 um filtered prior to analysis. Hexavalent chromium is determined on filtered water sample as received by pH adjustment and colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ferrous Iron by Discrete Analyser	EG051G	WATER	APHA 21st ed., 3500 Fe-B. A colorimetric determination based on the reaction between phenanthroline and ferrous iron at pH 3.2-3.3 to form an orange-red complex that is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Saline Water -Suite A by ORC-ICPMS	EG093A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Free CN by Discrete Analyser	EK025G	WATER	APHA 21st ed., 4500-CN-C&N Free Cyanide is determined on samples after distillation using a pyridine-barbituric acid colouring reagent followed with an Discrete Analyser finish. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Weak Acid Dissociable Cyanide By Discrete Analyser	EK028G	WATER	APHA 21st ed., 4500-CN-C&N WAD Cyanide is determined from aqueous solutions after distillation with acetic acid. The resultant distillate is then captured in a caustic absorber solution followed by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Analytical Methods	Method	Matrix	Method Descriptions
Ammonia as N by Discrete analyser	EK055G	WATER	APHA 21st ed., 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite as N by Discrete Analyser	EK057G	WATER	APHA 21st ed., 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrate as N by Discrete Analyser	EK058G	WATER	APHA 21st ed., 4500-NO3- F. Nitrate is reduced to nitrite by way of a cadmium reduction column followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	APHA 21st ed., 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Cadmium Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Reactive Phosphorus as P-By Discrete Analyser	EK071G	WATER	APHA 21st ed., 4500-P F Ammonium molybdate and potassium antimonyl tartrate reacts in acid medium with othophosphate to form a heteropoly acid -phosphomolybdic acid - which is reduced to intensely coloured molybdenum blue by ascorbic acid. Quantification is by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ionic Balance by IC PCT and ICPAES	EN055 - IC ED009	WATER	APHA 21st Ed. 1030F. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Organic Carbon	EP005	WATER	APHA 21st ed., 5310 B, The automated TOC analyzer determines Total and Inorganic Carbon by IR cell. TOC is calculated as the difference. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH - Semivolatile Fraction	EP071	WATER	USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Volatile Organic Compounds	EP074	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Semivolatile Organic Compounds	EP075	WATER	USEPA SW 846 - 8270D Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH Volatiles/BTEX	EP080	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Free Cyanide	EK025-PR	WATER	APHA 21st ed., 4500 CN- C&N. The sample is distilled at natural pH. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Weak Acid Dissociable Cyanide	EK028-PR	WATER	APHA 21st ed., 4500 CN- I&N. The sample is distilled with Acetic acid, selectively releasing the weakly bound metal cyanides as HCN. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Digestion for Total Recoverable Metals	EN25	WATER	USEPA SW846-3005 Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Separatory Funnel Extraction of Liquids	ORG14	WATER	USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EG093F: Dissolved Metals in Saline Water by ORC-ICP	1490793-003	----	**Manganese**	7439-96-5	89.8 %	90-122%	**Recovery less than lower control limit**
EG093F: Dissolved Metals in Saline Water by ORC-ICP	1490793-003	----	**Nickel**	7440-02-0	75.2 %	84-124%	**Recovery less than lower control limit**
EP075A: Phenolic Compounds	1492961-002	----	**2.4-Dimethylphenol**	105-67-9	58.8 %	61.7-110%	**Recovery less than lower control limit**
EP075E: Nitroaromatics and Ketones	1492961-002	----	**5-Nitro-o-toluidine**	99-55-8	115 %	58.3-106%	**Recovery greater than upper control limit**
EP075E: Nitroaromatics and Ketones	1492961-002	----	**4-Aminobiphenyl**	92-67-1	112 %	60.1-112%	**Recovery greater than upper control limit**
EP075H: Anilines and Benzidines	1492961-002	----	**Carbazole**	86-74-8	114 %	64.3-107%	**Recovery greater than upper control limit**
EP075I: Organochlorine Pesticides	1492961-002	----	**Endosulfan sulfate**	1031-07-8	115 %	52.8-114%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
ED009: Anions	ES1004990-016	Anonymous	**Chloride**	16887-00-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
ED009: Anions	ES1004990-016	Anonymous	**Fluoride**	16984-48-8	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EK059G: NOX as N by Discrete Analyser	ES1004988-002	Anonymous	**Nitrite + Nitrate as N**	----	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EP005: Total Organic Carbon (TOC)	EP1001463-008	Anonymous	**Total Organic Carbon**	----	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

- **For all matrices, no Method Blank value outliers occur.**
- **For all matrices, no Duplicate outliers occur.**

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Requested Deliverables
- **Samples received in appropriately pretreated and preserved containers.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- **Breaches in recommended extraction / analysis holding times may occur. Please contact ALS for further information (Jacob Waugh).**
- **Appropriately preserved bottle not supplied for Cr6+ analysis, lab will subsample from natural bottle provided.**
- **pH analysis should be conducted within 6 hours of sampling.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Please direct any queries related to sample condition / numbering / breakages to Jacob Waugh
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (14 days), Solid (90 days) from date of completion of work order.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process neccessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Laboratory Details
Lab. Name: ALS
Lab. Address: 277 Woodpark Rd, Smithfield
Contact Name:
Lab. Ref:
Tel: 87848555
Fax: 87848500
Preliminary Report by:
Final Report by:
Lab Quote No: SY-259-09

Project Name: Barangaroo
Project Number: s4150014
Purchase Order Number: 1303951

Sample collected by: Kate Pigram
Sample Results to be returned to: Anthony Davis and Kate Pigram

Specifications: * Bottles include 1 X 1L plastic, 1x 500ml Amber, 2xHCL vials, 2 x H2SO4 vials, 1 x TOC vial, 1 x ultra trace metals, 1 x ferrous iron, 1 x 250 ml Cn, 1 x 250 ml purple

	(Tick) Yes	No	N/A
1. Urgent TAT required? (please circle: 24hr 48hr _____days)			
2. Fast TAT Guarantee Required?	☐	☐	☐
3. Is any sediment layer present in waters to be excluded from extractions?	☐	☐	☐
4. Special storage requirements?	☐	☐	☑
5. Preservation requirements ☐ Fax ☐ Hard copy ☑ Email	☐	☐	☐
6. Other requirements?	☐	☐	☐

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

- **EG020A-F: LOR raised for Chromium due to matrix interference.**
- **EK055G LOR raised for Ammonia on the sample ID (MW52, MW45) due to sample matrix..**
- **EP074/EP080: Sample MW205 results invalidated due to sample matrix not suitable for volatile analysis.**
- **EP074: Level of Reporting raised for toluene due to ambient background levels in the laboratory.**
- **EP075: Particular samples required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly. Surrogate was not determined due to sample matrix interferences.**
- **EP075: 'Sum of PAH' is the sum of the USEPA 16 priority PAHs**
- **EP080/EP074: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.**

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non -volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **WATER**

Evaluation: ✗ = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH	EA005	WATER	APHA 21st ed. 4500 H+ B. pH of water samples is determined by ISE either manually or by automated pH meter. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Standard Anions	* ED009	WATER	APHA 21st ed., 4110. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Alkalinity by PC Titrator	ED037-P	WATER	APHA 21st ed., 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Major Anions - Total	ED040T	WATER	APHA 21st ed., 3120 Samples are digested by USEPA 3005 prior to analysis. Sulfur content is determined by ICP/AES and reported as Sulfate after conversion by gravimetric factor.
Major Cations - Dissolved	ED093F	WATER	APHA 21st ed., 3120; USEPA SW 846 - 6010 The ICPAES technique ionises the 0.45um filtered sample atoms emitting a characteristic spectrum. This spectrum is then compared against matrix matched standards for quantification. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	(APHA 21st ed., 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020): Samples are 0.45 um filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45 um filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Hexavalent Chromium-Low Level	EG050 Low	WATER	APHA 21st ed., 3500 Cr-B. Hexavalent chromium is determined directly on water sample as received by pH adjustment and colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Saline Water -Suite A by ORC-ICPMS	EG093A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Fresh Water -Suite A by ORC-ICPMS	EG094A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Free CN by Discrete Analyser	EK025G	WATER	APHA 21st ed., 4500-CN-C&N Free Cyanide is determined on samples after distillation using a pyridine-barbituric acid colouring reagent followed with an Discrete Analyser finish. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Analytical Methods	Method	Matrix	Method Descriptions
Weak Acid Dissociable Cyanide By Discrete Analyser	EK028G	WATER	APHA 21st ed., 4500-CN-C&N WAD Cyanide is determined from aqueous solutions after distillation with acetic acid. The resultant distillate is then captured in a caustic absorber solution followed by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ammonia as N by Discrete analyser	EK055G	WATER	APHA 21st ed., 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite as N by Discrete Analyser	EK057G	WATER	APHA 21st ed., 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrate as N by Discrete Analyser	EK058G	WATER	APHA 21st ed., 4500-NO3- F. Nitrate is reduced to nitrite by way of a cadmium reduction column followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	APHA 21st ed., 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Cadmium Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Reactive Phosphorus as P-By Discrete Analyser	EK071G	WATER	APHA 21st ed., 4500-P F Ammonium molybdate and potassium antimonyl tartrate reacts in acid medium with othophosphate to form a heteropoly acid -phosphomolybdic acid - which is reduced to intensely coloured molybdenum blue by ascorbic acid. Quantification is by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ionic Balance by IC PCT and ICPAES	EN055 - IC ED009	WATER	APHA 21st Ed. 1030F. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Organic Carbon	EP005	WATER	APHA 21st ed., 5310 B, The automated TOC analyzer determines Total and Inorganic Carbon by IR cell. TOC is calculated as the difference. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH - Semivolatile Fraction	EP071	WATER	USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Volatile Organic Compounds	EP074	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Semivolatile Organic Compounds	EP075	WATER	USEPA SW 846 - 8270D Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH Volatiles/BTEX	EP080	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Free Cyanide	EK025-PR	WATER	APHA 21st ed., 4500 CN- C&N. The sample is distilled at natural pH. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Weak Acid Dissociable Cyanide	EK028-PR	WATER	APHA 21st ed., 4500 CN- I&N. The sample is distilled with Acetic acid, selectively releasing the weakly bound metal cyanides as HCN. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Digestion for Total Recoverable Metals	EN25	WATER	USEPA SW846-3005 Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Separatory Funnel Extraction of Liquids	ORG14	WATER	USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP074E: Halogenated Aliphatic Compounds	1497999-002	----	**Pentachloroethane**	76-01-7	61.3 %	71.8-126%	**Recovery less than lower control limit**
EP075A: Phenolic Compounds	1495033-019	----	**3- & 4-Methylphenol**	1319-77-3	101 %	45-96.2%	**Recovery greater than upper control limit**
EP075E: Nitroaromatics and Ketones	1495033-019	----	**1-Naphthylamine**	134-32-7	31.3 %	46.8-102%	**Recovery less than lower control limit**
EP075E: Nitroaromatics and Ketones	1495033-019	----	**4-Nitroquinoline-N-oxide**	56-57-5	104 %	8.93-98.7%	**Recovery greater than upper control limit**
EP075H: Anilines and Benzidines	1495033-019	----	**Aniline**	62-53-3	102 %	10.9-89.7%	**Recovery greater than upper control limit**
EP075H: Anilines and Benzidines	1495033-019	----	**3-Nitroaniline**	99-09-2	101 %	51.5-96.9%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
ED009: Anions	EM1002851-001	Anonymous	**Chloride**	16887-00-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
ED009: Anions	EM1002851-001	Anonymous	**Sulfate**	14808-79-8	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG093F: Dissolved Metals in Saline Water by ORC-ICP	ES1005244-001	MW68	**Barium**	7440-39-3	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG093F: Dissolved Metals in Saline Water by ORC-ICP	ES1005244-001	MW68	**Manganese**	7439-96-5	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG094F: Dissolved Metals in Fresh Water by ORC-ICPI	ES1005244-003	MW54	**Manganese**	7439-96-5	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EK055G: Ammonia as N by Discrete Analyser	ES1005244-001	MW68	**Ammonia as N**	7664-41-7	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

- **For all matrices, no Method Blank value outliers occur.**
- **For all matrices, no Duplicate outliers occur.**

Dates

Date Samples Received	: 19-MAR-2010	Issue Date	: 23-MAR-2010 13:31
Client Requested Due Date	: 29-MAR-2010	Scheduled Reporting Date	: **29-MAR-2010**

Delivery Details

Mode of Delivery	: Carrier	Temperature	: 5.9'C - Ice present
No. of coolers/boxes	: 2 HARD	No. of samples received	: 14
Sercurity Seal	: Intact.	No. of samples analysed	: 13

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Requested Deliverables
- **Samples received in appropriately pretreated and preserved containers.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- **Breaches in recommended extraction / analysis holding times may occur. Please contact ALS for further information (Jacob Waugh).**
- **Sample id MW205 and TB303 received extra and conducted TPH/SVOC/VOC as per Anthony on 23/03/10**
- **pH analysis should be conducted within 6 hours of sampling.**
- **Reactive P , NO3 should be analysed within 48 hours of sampling.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Please direct any queries related to sample condition / numbering / breakages to Jacob Waugh
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (14 days), Solid (90 days) from date of completion of work order.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process neccessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Ankit Joshi	Inorganic Chemist	Inorganics
Ashesh Patel	Inorganic Chemist	Inorganics
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics
Sanjeshni Jyoti Mala	Senior Chemist Volatile	Organics
Sarah Millington	Senior Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

- **EG020A-F: ES1005391 #001 LOR raised for Chromium due to matrix interference.**
- **EG020A-F: LOR's for some samples have been raised due to matrix interference (High sample salinity)**
- **EG035F:LCS recovery for Mercury falls outside ALS Dynamic Control Limit. However, it is within the acceptance criteria based on ALS DQO. No further action is required.**
- **EK028G Spike failed for WAD due to matrix interference (confirmed by re-analysis).**
- **EK055G LOR raised for ammonia on the sample ID (BH6) due to sample matrix.**
- **EP074:Level of Reporting raised for toluene due to ambient background levels in the laboratory.**
- **EP075: 'Sum of PAH' is the sum of the USEPA 16 priority PAHs**

Quote number	: SY/259/09 V2	No. of samples analysed	: 8

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Hoa Nguyen	Inorganic Chemist	Inorganics
Sanjeshni Jyoti Mala	Senior Chemist Volatile	Organics
Sarah Millington	Senior Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non -volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Standard Anions	* ED009	WATER	APHA 21st ed., 4110. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Alkalinity by PC Titrator	ED037-P	WATER	APHA 21st ed., 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Major Anions - Total	ED040T	WATER	APHA 21st ed., 3120 Samples are digested by USEPA 3005 prior to analysis. Sulfur content is determined by ICP/AES and reported as Sulfate after conversion by gravimetric factor.
Major Cations - Dissolved	ED093F	WATER	APHA 21st ed., 3120; USEPA SW 846 - 6010 The ICPAES technique ionises the 0.45um filtered sample atoms emitting a characteristic spectrum. This spectrum is then compared against matrix matched standards for quantification. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	(APHA 21st ed., 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020): Samples are 0.45 um filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45 um filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Hexavalent Chromium-Low Level	EG050 Low	WATER	APHA 21st ed., 3500 Cr-B. Hexavalent chromium is determined directly on water sample as received by pH adjustment and colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Saline Water -Suite A by ORC-ICPMS	EG093A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Fresh Water -Suite A by ORC-ICPMS	EG094A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Free CN by Discrete Analyser	EK025G	WATER	APHA 21st ed., 4500-CN-C&N Free Cyanide is determined on samples after distillation using a pyridine-barbituric acid colouring reagent followed with an Discrete Analyser finish. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Analytical Methods	Method	Matrix	Method Descriptions
Weak Acid Dissociable Cyanide By Discrete Analyser	EK028G	WATER	APHA 21st ed., 4500-CN-C&N WAD Cyanide is determined from aqueous solutions after distillation with acetic acid. The resultant distillate is then captured in a caustic absorber solution followed by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ammonia as N by Discrete analyser	EK055G	WATER	APHA 21st ed., 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite as N by Discrete Analyser	EK057G	WATER	APHA 21st ed., 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrate as N by Discrete Analyser	EK058G	WATER	APHA 21st ed., 4500-NO3- F. Nitrate is reduced to nitrite by way of a cadmium reduction column followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	APHA 21st ed., 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Cadmium Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Reactive Phosphorus as P-By Discrete Analyser	EK071G	WATER	APHA 21st ed., 4500-P F Ammonium molybdate and potassium antimonyl tartrate reacts in acid medium with othophosphate to form a heteropoly acid -phosphomolybdic acid - which is reduced to intensely coloured molybdenum blue by ascorbic acid. Quantification is by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ionic Balance by IC PCT and ICPAES	EN055 - IC ED009	WATER	APHA 21st Ed. 1030F. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Organic Carbon	EP005	WATER	APHA 21st ed., 5310 B, The automated TOC analyzer determines Total and Inorganic Carbon by IR cell. TOC is calculated as the difference. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH - Semivolatile Fraction	EP071	WATER	USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Volatile Organic Compounds	EP074	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Semivolatile Organic Compounds	EP075	WATER	USEPA SW 846 - 8270D Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH Volatiles/BTEX	EP080	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Free Cyanide	EK025-PR	WATER	APHA 21st ed., 4500 CN- C&N. The sample is distilled at natural pH. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Weak Acid Dissociable Cyanide	EK028-PR	WATER	APHA 21st ed., 4500 CN- I&N. The sample is distilled with Acetic acid, selectively releasing the weakly bound metal cyanides as HCN. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Digestion for Total Recoverable Metals	EN25	WATER	USEPA SW846-3005 Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Separatory Funnel Extraction of Liquids	ORG14	WATER	USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EG035F: Dissolved Mercury by FIMS	1496304-002	----	**Mercury**	7439-97-6	116 %	86-116%	**Recovery greater than upper control limit**
EP075C: Phthalate Esters	1496344-002	----	**bis(2-ethylhexyl) phthalate**	117-81-7	69.5 %	72.8-135%	**Recovery less than lower control limit**
EP075H: Anilines and Benzidines	1496344-002	----	**4-Chloroaniline**	106-47-8	112 %	44.4-106%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
ED009: Anions	ES1005253-001	Anonymous	**Chloride**	16887-00-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EG094F: Dissolved Metals in Fresh Water by ORC-ICPI	EB1004570-001	Anonymous	**Manganese**	7439-96-5	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EK028G: Weak Acid Dissociable Cyanide By Discrete A	ES1005391-004	BH3	**Weak Acid Dissociable Cyanide**	----	47.0 %	70-130%	**Recovery less than lower data quality objective**
EK055G: Ammonia as N by Discrete Analyser	ES1005391-001	MW69	**Ammonia as N**	7664-41-7	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EP074A: Monocyclic Aromatic Hydrocarbons	ES1005391-001	MW69	**Benzene**	71-43-2	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
EP074A: Monocyclic Aromatic Hydrocarbons	ES1005391-001	MW69	**Toluene**	108-88-3	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

- **For all matrices, no Method Blank value outliers occur.**
- **For all matrices, no Duplicate outliers occur.**

Sercurity Seal	: Intact.	No. of samples analysed	: 8

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Requested Deliverables
- **Samples received in appropriately pretreated and preserved containers.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- **Breaches in recommended extraction / analysis holding times may occur. Please contact ALS for further information (Jacob Waugh).**
- **Sample ID on COC is QC240 but on jar is QC340, lab will follow the jar ID and will analyse. This has been confirmed correct by Anthony Davis.**
- **Received extra sample MW206 placed on hold as per Anthony Davis.**
- **Reactive P, NO2, NO3, should be analysed within 48 hours of sampling.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Please direct any queries related to sample condition / numbering / breakages to Jacob Waugh
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (14 days), Solid (90 days) from date of completion of work order.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process neccessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Celine Conceicao	Spectroscopist	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

- **EG020A-F: LOR's for some samples have been raised due to matrix interference (High sample salinity)**

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Sub-Matrix: **WATER**

				Laboratory Duplicate (DUP) Report					
Laboratory sample ID	*Client sample ID*	*Method: Compound*	*CAS Number*	*LOR*	*Unit*	*Original Result*	*Duplicate Result*	*RPD (%)*	*Recovery Limits (%)*
EG020F: Dissolved Metals by ICP-MS (QC Lot: 1293007)									
ES1005579-001	MW62	EG020A-F: Iron	7439-89-6	0.05	mg/L	<0.50	<0.50	0.0	No Limit
ES1005579-011	MW15	EG020A-F: Iron	7439-89-6	0.05	mg/L	0.97	0.88	9.2	0% - 50%

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

				Method Blank (MB) Report	Laboratory Control Spike (LCS) Report			
					Spike	Spike Recovery (%)	Recovery Limits (%)	
Method: Compound	CAS Number	LOR	Unit	Result	Concentration	LCS	Low	High
EG020F: Dissolved Metals by ICP-MS (QCLot: 1293007)								
EG020A-F: Iron	7439-89-6	0.05	mg/L	<0.05	0.5 mg/L	102	84	114

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) Results are required to be reported.**

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non-volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation
EG020F: Dissolved Metals by ICP-MS

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	(APHA 21st ed., 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020): Samples are 0.45 um filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW 846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

- **For all matrices, no Method Blank value outliers occur.**
- **For all matrices, no Duplicate outliers occur.**
- **For all matrices, no Laboratory Control outliers occur.**
- **For all matrices, no Matrix Spike outliers occur.**

Regular Sample Surrogates

- **For all regular sample matrices, no surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

This report displays Holding Time breaches only. Only the respective Extraction / Preparation and/or Analysis component is/are displayed.

- **No Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

The following report highlights breaches in the Frequency of Quality Control Samples.

- **No Quality Control Sample Frequency Outliers exist.**

Site	: ----		
Sampler	: ----	QC Level	: NEPM 1999 Schedule B(3) and ALS QCS3 requirement

Dates

Date Samples Received	: 25-MAR-2010	Issue Date	: 25-MAR-2010 19:21
Client Requested Due Date	: 26-MAR-2010	Scheduled Reporting Date	: **26-MAR-2010**

Delivery Details

Mode of Delivery	: Carrier	Temperature	: 5.6' C
No. of coolers/boxes	: REBATCH	No. of samples received	: 11
Sercurity Seal	: Not intact.	No. of samples analysed	: 11

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Requested Deliverables
- **Samples received in appropriately pretreated and preserved containers.**
- **Sample(s) have been received within recommended holding times.**
- **This is a rebatch of ES1004994, ES1004956 & ES1004782.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Please direct any queries related to sample condition / numbering / breakages to Jacob Waugh
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (14 days), Solid (90 days) from date of completion of work order.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process neccessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Matrix: **WATER**

Subject: AECOM - Barrangaroo- Re-batch for Dissolved Iron

Hi Fadi,

Can you please re-batch the following samples for Dissolved Iron by ICPMS (EG020F)? please note there will be a dissolved ORC metals bottle for each sample listed.

ES1004994 samples 1, 2 & 4.

ES1004956 samples 1, 2, 3, 5 & 8.

ES1004782 samples 1, 2 and 3.

Uma,
Can you please amend the invoice for each of the above batches and delete the ferrous iron charge? Unfortunately we were incorrectly logging ferrous iron instead of dissolved iron.

Jacob Waugh

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Ashesh Patel	Inorganic Chemist	Inorganics
Celine Conceicao	Spectroscopist	Inorganics
Sanjeshni Jyoti Mala	Senior Chemist Volatile	Organics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

- **EG020A-F: LOR's for some samples have been raised due to matrix interference (High sample salinity)**
- **EK055G LOR raised for ammonia on the sample ID (IT1_SHALLOW, IT1_MID, IT2_SHALLOW, STILLING WELL(SW), QC331) due to sample matrix.**
- **EP074/EP080: Positive results confirmed by re-analysis.**
- **EP074: Level of Reporting raised for toluene due to ambient background levels in the laboratory.**
- **EP075: Particular samples required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly. Poor surrogate recovery due to sample matrix interferences.**
- **EP075: 'Sum of PAH' is the sum of the USEPA 16 priority PAHs**

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Ashesh Patel	Inorganic Chemist	Inorganics
Celine Conceicao	Spectroscopist	Inorganics
Sanjeshni Jyoti Mala	Senior Chemist Volatile	Organics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non -volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Total Dissolved Solids	EA015	WATER	APHA 21st ed., 2540C A gravimetric procedure that determines the amount of `filterable` residue in an aqueous sample. A well-mixed sample is filtered through a glass fibre filter (1.2um). The filtrate is evaporated to dryness and dried to constant weight at 180+/-5C. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Standard Anions	* ED009	WATER	APHA 21st ed., 4110. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Alkalinity by PC Titrator	ED037-P	WATER	APHA 21st ed., 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Major Anions - Total	ED040T	WATER	APHA 21st ed., 3120 Samples are digested by USEPA 3005 prior to analysis. Sulfur content is determined by ICP/AES and reported as Sulfate after conversion by gravimetric factor.
Major Cations - Dissolved	ED093F	WATER	APHA 21st ed., 3120; USEPA SW 846 - 6010 The ICPAES technique ionises the 0.45um filtered sample atoms emitting a characteristic spectrum. This spectrum is then compared against matrix matched standards for quantification. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	(APHA 21st ed., 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020): Samples are 0.45 um filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45 um filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Hexavalent Chromium - Low Level	EG050F Low	WATER	APHA 21st ed., 3500 Cr-B. Samples are 0.45 um filtered prior to analysis. Hexavalent chromium is determined on filtered water sample as received by pH adjustment and colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Dissolved Metals in Saline Water -Suite A by ORC-ICPMS	EG093A-F	WATER	APHA 21st ed., 3125; USEPA SW846 - 6020 Samples are 0.45 um filtered prior to analysis. The ORC-ICPMS technique removes interfering species through a series of chemical reactions prior to ion detection. Ions are passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to measurement by a discrete dynode ion detector. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Free CN by Discrete Analyser	EK025G	WATER	APHA 21st ed., 4500-CN-C&N Free Cyanide is determined on samples after distillation using a pyridine-barbituric acid colouring reagent followed with an Discrete Analyser finish. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Weak Acid Dissociable Cyanide By Discrete Analyser	EK028G	WATER	APHA 21st ed., 4500-CN-C&N WAD Cyanide is determined from aqueous solutions after distillation with acetic acid. The resultant distillate is then captured in a caustic absorber solution followed by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Analytical Methods	Method	Matrix	Method Descriptions
Ammonia as N by Discrete analyser	EK055G	WATER	APHA 21st ed., 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite as N by Discrete Analyser	EK057G	WATER	APHA 21st ed., 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrate as N by Discrete Analyser	EK058G	WATER	APHA 21st ed., 4500-NO3- F. Nitrate is reduced to nitrite by way of a cadmium reduction column followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	APHA 21st ed., 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Cadmium Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Reactive Phosphorus as P-By Discrete Analyser	EK071G	WATER	APHA 21st ed., 4500-P F Ammonium molybdate and potassium antimonyl tartrate reacts in acid medium with othophosphate to form a heteropoly acid -phosphomolybdic acid - which is reduced to intensely coloured molybdenum blue by ascorbic acid. Quantification is by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Ionic Balance by IC PCT and ICPAES	EN055 - IC ED009	WATER	APHA 21st Ed. 1030F. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Organic Carbon	EP005	WATER	APHA 21st ed., 5310 B, The automated TOC analyzer determines Total and Inorganic Carbon by IR cell. TOC is calculated as the difference. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH - Semivolatile Fraction	EP071	WATER	USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Volatile Organic Compounds	EP074	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Semivolatile Organic Compounds	EP075	WATER	USEPA SW 846 - 8270D Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH Volatiles/BTEX	EP080	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Free Cyanide	EK025-PR	WATER	APHA 21st ed., 4500 CN- C&N. The sample is distilled at natural pH. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Weak Acid Dissociable Cyanide	EK028-PR	WATER	APHA 21st ed., 4500 CN- I&N. The sample is distilled with Acetic acid, selectively releasing the weakly bound metal cyanides as HCN. The CN is trapped in a caustic solution, and quanitified by colourimetry on FIA. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Digestion for Total Recoverable Metals	EN25	WATER	USEPA SW846-3005 Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Separatory Funnel Extraction of Liquids	ORG14	WATER	USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP075E: Nitroaromatics and Ketones	1502206-008	----	**5-Nitro-o-toluidine**	99-55-8	115 %	58.3-106%	**Recovery greater than upper control limit**
EP075H: Anilines and Benzidines	1502206-008	----	**3-Nitroaniline**	99-09-2	104 %	51.5-96.9%	**Recovery greater than upper control limit**
EP075H: Anilines and Benzidines	1502206-008	----	**4-Nitroaniline**	100-01-6	102 %	48.9-99.5%	**Recovery greater than upper control limit**
Matrix Spike (MS) Recoveries							
ED009: Anions	ES1005598-001	IT1_SHALLOW	**Chloride**	16887-00-6	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
ED009: Anions	ES1005598-001	IT1_SHALLOW	**Fluoride**	16984-48-8	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**
ED009: Anions	ES1005598-001	IT1_SHALLOW	**Sulfate**	14808-79-8	Not Determined	----	**MS recovery not determined, background level greater than or equal to 4x spike level.**

- **For all matrices, no Method Blank value outliers occur.**
- **For all matrices, no Duplicate outliers occur.**

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Requested Deliverables
- **Samples received in appropriately pretreated and preserved containers.**
- **Sample(s) have been received within recommended holding times.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- **Sample id QC332 sent to Labmark as per COC**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Please direct any queries related to sample condition / numbering / breakages to Jacob Waugh
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (14 days), Solid (90 days) from date of completion of work order.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process neccessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Organics
Hoa Nguyen	Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non -volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH (1:5)	EA002	SOIL	(APHA 21st ed., 4500H+) pH is determined on soil samples after a 1:5 soil/water leach. This method is compliant with NEPM (1999) Schedule B(3) (Method 103)
Moisture Content	EA055-103	SOIL	A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (1999) Schedule B(3) (Method 102)
Total Metals by ICP-AES	EG005T	SOIL	(APHA 21st ed., 3120; USEPA SW 846 - 6010) (ICPAES) Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (1999) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	AS 3550, APHA 21st ed., 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3)
Free Cyanide By Discrete Analyser	EK025G	SOIL	APHA 21st 4500 CN- C & N. Caustic leach extracts of the sample are distilled at natural pH. The distillates are analyzed for CN by Discrete Analyser.
WAD Cyanide By Discrete Analyser	EK028G	SOIL	APHA 21st 4500 CN - I & N. Sample are distilled with a weak organic acid, converting selected CN species to HCN. The distillates are analyzed for CN by Discrete Analyser.
TPH - Semivolatile Fraction	EP071	SOIL	(USEPA SW 846 - 8015A) Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C36. This method is compliant with NEPM (1999) Schedule B(3) (Method 506.1)
PAH/Phenols (SIM)	EP075(SIM)	SOIL	(USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 502 and 507)
TPH Volatiles/BTEX	EP080	SOIL	(USEPA SW 846 - 8260B) Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 501)

Preparation Methods	Method	Matrix	Method Descriptions
Free Cyanide Preparation Method	EK025 PR	SOIL	APHA 21st ed., 4500 CN C & N. Cyanides in the soil are directly distilled from the soil at natural pH using a steam distillation aparatus.
WAD Cyanide	EK028PR	SOIL	APHA 21st ed., 4500 CN- C & N. Cyanide is selectively distilled from the sample by the action of weak acetic acid. Only poorly bound metal complexed cyanides are released.
1:5 solid / water leach for soluble analytes	EN34	SOIL	10 g of soil is mixed with 50 mL of distilled water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	USEPA 200.2 Mod. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (1999) Schedule B(3) (Method 202)

Preparation Methods	Method	Matrix	Method Descriptions
Methanolic Extraction of Soils for Purge and Trap	* ORG16	SOIL	(USEPA SW 846 - 5030A) 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids (Option B - Non-concentrating)	ORG17B	SOIL	In-house, Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 20mL 1:1 DCM/Acetone by end over end tumble. The solvent is transferred directly to a GC vial for analysis.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EP075(SIM)A: Phenolic Compounds	1453371-007	----	**2-Chlorophenol**	95-57-8	79.1 %	80.2-115%	**Recovery less than lower control limit**
EP075(SIM)A: Phenolic Compounds	1453371-007	----	**2.6-Dichlorophenol**	87-65-0	117 %	74.8-115%	**Recovery greater than upper control limit**

- **For all matrices, no Method Blank value outliers occur.**
- **For all matrices, no Duplicate outliers occur.**
- **For all matrices, no Matrix Spike outliers occur.**

Regular Sample Surrogates

Sub-Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Requested Deliverables
- **Samples received in appropriately pretreated and preserved containers.**
- **Sample(s) have been received within recommended holding times.**
- **Sample(s) requiring volatile organic compound analysis received in airtight containers (ZHE).**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Please direct any queries related to sample condition / numbering / breakages to Jacob Waugh
- Analytical work for this work order will be conducted at ALS Sydney.
- Sample Disposal - Aqueous (14 days), Solid (90 days) from date of completion of work order.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exist.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process neccessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
		Inorganics
Alex Rossi	Organic Chemist	Organics
Celine Conceicao	Spectroscopist	Inorganics
Hoa Nguyen	Inorganic Chemist	Inorganics
Pabi Subba	Senior Organic Chemist (Semi-Volatile)	Organics
Sanjeshni Jyoti Mala	Senior Chemist Volatile	Organics
Sarah Millington	Senior Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When date(s) and/or time(s) are shown bracketed, these have been assumed by the laboratory for processing purposes. If the sampling time is displayed as 0:00 the information was not provided by client.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting

- **EG-020F: LCS recovery for Vanadium falls outside ALS Dynamic Control Limit. However, it is within the acceptance criteria based on ALS DQO. No further action is required**
- **EG048G:: Spike failed for Hexavalent Chromium by Alkaline Digest due to matrix interference.**
- **EP074: Level of Reporting raised for toluene due to ambient background levels in the laboratory.**
- **EP075: 'Sum of PAH' is the sum of the USEPA 16 priority PAHs**

Analytical Results

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

NATA Accredited Laboratory 825

This document is issued in accordance with NATA accreditation requirements.

Accredited for compliance with ISO/IEC 17025.

Signatories

This document has been electronically signed by the authorized signatories indicated below. Electronic signing has been carried out in compliance with procedures specified in 21 CFR Part 11.

Sanjeshni Jyoti Mala	Senior Chemist Volatile	Organics
Sarah Millington	Senior Inorganic Chemist	Inorganics
Wisam.Marassa	Metals Coordinator	Inorganics

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insuffient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR:- No Limit; Result between 10 and 20 times LOR:- 0% - 50%; Result > 20 times LOR:- 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. All pages of this report have been checked and approved for release.

This Interpretive Quality Control Report contains the following information:

- Analysis Holding Time Compliance
- Quality Control Parameter Frequency Compliance
- Brief Method Summaries
- Summary of Outliers

Analysis Holding Time Compliance

The following report summarises extraction / preparation and analysis times and compares with recommended holding times. Dates reported represent first date of extraction or analysis and precludes subsequent dilutions and reruns. Information is also provided re the sample container (preservative) from which the analysis aliquot was taken. Elapsed period to analysis represents number of days from sampling where no extraction / digestion is involved or period from extraction / digestion where this is present. For composite samples, sampling date is assumed to be that of the oldest sample contributing to the composite. Sample date for laboratory produced leachates is assumed as the completion date of the leaching process. Outliers for holding time are based on USEPA SW 846, APHA, AS and NEPM (1999). A listing of breaches is provided in the Summary of Outliers.

Holding times for leachate methods (excluding elutriates) vary according to the analytes being determined on the resulting solution. For non -volatile analytes, the holding time compliance assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These soil holding times are: Organics (14 days); Mercury (28 days) & other metals (180 days). A recorded breach therefore does not guarantee a breach for all non-volatile parameters.

Matrix: **SOIL**

Evaluation: ✗ = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(where) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH (1:5)	EA002	SOIL	(APHA 21st ed., 4500H+) pH is determined on soil samples after a 1:5 soil/water leach. This method is compliant with NEPM (1999) Schedule B(3) (Method 103)
Moisture Content	EA055-103	SOIL	A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (1999) Schedule B(3) (Method 102)
Leachable Metals by ICPAES	EG005C	SOIL	APHA 21st ed., 3120; USEPA SW 846 - 6010 The ICPAES technique ionises leachate sample atoms emitting a characteristic spectrum. This spectrum is then compared against matrix matched standards for quantification. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Metals by ICP-AES	EG005T	SOIL	(APHA 21st ed., 3120; USEPA SW 846 - 6010) (ICPAES) Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (1999) Schedule B(3)
Leachable Mercury by FIMS	EG035C	SOIL	AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the TCLP solution. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Total Mercury by FIMS	EG035T	SOIL	AS 3550, APHA 21st ed., 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3)
Hexavalent Chromium by Alkaline Digestion and DA Finish	EG048G	SOIL	USEPA SW846, Method 3060A. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Free Cyanide By Discrete Analyser	EK025G	SOIL	APHA 21st 4500 CN- C & N. Caustic leach extracts of the sample are distilled at natural pH. The distillates are analyzed for CN by Discrete Analyser.
Total Cyanide By Discrete Analyser	EK026G	SOIL	APHA 21st 4500 CN - C & N. Caustic leach extracts of the sample are distilled with sulphuric acid, converting all CN species to HCN. The distillates are analyzed for CN by Discrete Analyser. This method is compliant with NEPM (1999) Schedule B(3) (Method 403)
WAD Cyanide By Discrete Analyser	EK028G	SOIL	APHA 21st 4500 CN - I & N. Sample are distilled with a weak organic acid, converting selected CN species to HCN. The distillates are analyzed for CN by Discrete Analyser.
Organic Matter	EP004	SOIL	AS1289.4.1.1 - 1997., Dichromate oxidation method after Walkley and Black. This method is compliant with NEPM (1999) Schedule B(3) (Method 105)
TPH - Semivolatile Fraction	EP071	SOIL	(USEPA SW 846 - 8015A) Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C36. This method is compliant with NEPM (1999) Schedule B(3) (Method 506.1)

Analytical Methods	Method	Matrix	Method Descriptions
Volatile Organic Compounds	EP074	SOIL	(USEPA SW 846 - 8260B) Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 501)
Semivolatile Organic Compounds	EP075	SOIL	(USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (1999) Schedule B(3) (Method 502)
PAH/Phenols (SIM)	EP075(SIM)	SOIL	(USEPA SW 846 - 8270B) Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 502 and 507)
TPH Volatiles/BTEX	EP080	SOIL	(USEPA SW 846 - 8260B) Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Method 501)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	(APHA 21st ed., 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020): Samples are 0.45 um filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	AS 3550, APHA 21st ed. 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45 um filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
TPH - Semivolatile Fraction	EP071	WATER	USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)
Volatile Organic Compounds	EP074	WATER	USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
Alkaline digestion for Hexavalent Chromium	EG048PR	SOIL	USEPA SW846, Method 3060A.
Free Cyanide Preparation Method	EK025 PR	SOIL	APHA 21st ed., 4500 CN C & N. Cyanides in the soil are directly distilled from the soil at natural pH using a steam distillation aparatus.
NaOH leach for TCN in Soils	EK026PR	SOIL	APHA 21st ed., 4500 CN- C & N. Samples are extracted by end-over-end tumbling with NaOH.
WAD Cyanide	EK028PR	SOIL	APHA 21st ed., 4500 CN- C & N. Cyanide is selectively distilled from the sample by the action of weak acetic acid. Only poorly bound metal complexed cyanides are released.
Digestion for Total Recoverable Metals in TCLP Leachate	EN25C	SOIL	USEPA SW846-3005 Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2)

Preparation Methods	Method	Matrix	Method Descriptions
TCLP for Non & Semivolatile Analytes	EN33a	SOIL	(USEPA SW846-1311, ALS QWI-EN/33) The TCLP procedure is designed to determine the mobility of both organic and inorganic analytes present in wastes. The standard TCLP leach is for non-volatile and Semivolatile test parameters.
1:5 solid / water leach for soluble analytes	EN34	SOIL	10 g of soil is mixed with 50 mL of distilled water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	USEPA 200.2 Mod. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (1999) Schedule B(3) (Method 202)
Separatory Funnel Extraction of Liquids	ORG14	SOIL	USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container.
Methanolic Extraction of Soils for Purge and Trap	* ORG16	SOIL	(USEPA SW 846 - 5030A) 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids (Option A - Concentrating)	ORG17A	SOIL	In-house, Mechanical agitation (tumbler). 20g of sample, Na2SO4 and surrogate are extracted with 150mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids (Option B - Non-concentrating)	ORG17B	SOIL	In-house, Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 20mL 1:1 DCM/Acetone by end over end tumble. The solvent is transferred directly to a GC vial for analysis.
Separatory Funnel Extraction of Liquids	ORG14	WATER	USEPA SW 846 - 3510B 500 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (1999) Schedule B(3) (Appdx. 2). ALS default excludes sediment which may be resident in the container.

Summary of Outliers

Outliers : Quality Control Samples

The following report highlights outliers flagged in the Quality Control (QC) Report. Surrogate recovery limits are static and based on USEPA SW846 or ALS-QWI/EN/38 (in the absence of specific USEPA limits). This report displays QC Outliers (breaches) only.
