This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

• I have seen a map of proposed development of Santos Narrabri Gasfields. I believe the impact of any proposed farming land.

• This is a dry land area. Santos Gasfield development will impose on worth the will overdose affect astronomy.

• Drier tends existing water will be affected, has already been affected.

• Cool seat gas production will not be affected. Gas is being extirpated many small villages in Australia.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I object because I don't want the Great Artesian Basin depleted or destroyed. I am a resident of Leopold and work in the Warrumbungle Shire area. I came to live here because I walked around the Warrumbungle National Park in 1968 and wanted to live in this area at some time in my life. I object to the destruction of the billiga. The amount of salt produced is huge and will be stored in ponds. We are subjected to fires every year. Having a huge EIS well in our well the billiga is going to be even more destroyed when fires occur. Firestorms have occurred in the last 2 years. The last fires - 5 houses, over 100 aches and 10 homes destroyed. Gas wells are like having a permanent match in the-off limits to gas mining.

This is a submission to the Narrabri Gas Project EIS

I object to this project and believe it should be rejected.

- The project will extract over 35 billion litres of groundwater, much of it in the first five years. Gas is produced after groundwater is drained from the Great Artesian Basin at the site of significant recharge. This water resource is relied upon by farmers in rural communities from Dubbo to the Queensland border. Why put agriculture and associated regional jobs at risk, by lowering the water table on a regional level?
- The produced water is highly saline with dissolved mineral salts and/or organic compounds. There is no known method to re-use the tens of thousands of tonnes of salt. There is no safe disposal method for this salt. The use of reverse osmosis for beneficial re-use of water is questionable and I object to this water being discharged into the Bohena Creek entering the Murray Darling Basin. Extreme cases of sodic soil pollution and vegetation die back has already occurred in 2001, and remains a dead zone.
- The project will clear 850 drill sites, close to 1,000 hectares of the largest temperate woodland in New South Wales, home to unique wildlife such as the koala and threatened plant and bird species.
- Methane emissions from Gas wells, pipelines, flares and infrastructure will lead to increased methane emissions above the current baseline and contribute to climate change, resulting in increased regional bushfires and flooding, as we have seen in NSW in 2017.
- The fossil fuel project has no public interest justification, and no social licence with communities who use the Pilliga Forest. Our Prime Minister met with gas producers to insist that current gas projects put aside gas for local industry. Santos has sold our gas offshore and will do so again for company profits not the national interest.
- Dubbo and Narrmine Solar Farms are in progress, Dubbo had one of the highest uptake of solar panels on homes, public buildings and industry. We are moving from fossil fuels to renewables at a rapid rate and do not need a risky industry impacting on the people who use Dubbo as a regional centre.
- The project will cause light interference impacting on the international work conducted by astronomers at the Siding Springs complex. This area is Australia’s first Dark Sky Park. This status will be lost by light interference from flaring gas infrastructure.
- The project will cause harm to the population living in the area including the fly in fly out workforce. The harm is physical and psychological and documented in peer reviewed literature.
- Aboriginal culture is threatened by this project, which if approved to enter the production phase will cause more trauma to the Traditional Owners.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I, Neville Sampson, an elder and traditional owner of the Kamilaraay Nation, object for the following reasons:

* The gas project puts too high a risk of poisoning the water that all plants, animals, and people depend on.
* The gas project would desecrate our Country.
* The gas project would result in a bad health impact, no local economic benefits, drop in property prices, toxic emissions to the air, negatively affect the future generations association to Country.
* The Great Artesian Basin is recharged by rain in the Pilliga. This recharge area should not be drilled through 850 times.
* Our country is not to be further desecrated.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

Santos should be rejected solely on Environmental impacts that have occurred in previous case studies. Toxic pollution, death of fauna, flora, habitat integrity, health issues, to name a few. Surface and subsurface pollution of our water is the biggest risk and which is too great to allow the Santos project to go ahead.

DEATH OF OUR ENVIRONMENT AREA CANNOT BE JUSTIFIED FOR $ SIGNS No to Santos.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

The diversion of water from a recharge aquifer of the Great Artesian Basin is of great concern. The impacts will cause much trauma to the regional Aboriginal community. The agricultural industries that will put at risk in Narrabri and further.

The health concerns posed by this industry and exposing the so many great unknowns. The clearing of this priceless woodland.

The toxic ground water will be an ongoing problem long after its creator has gone. The rubbish the public is sold that this is needed and will reduce prices.

Climate change can only be increased with these emissions of methane. This country can’t afford this menace.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I'm concerned about the lack of detail provided in Santos' Environmental Impact Statement. There are no maps or plans where the wells will be. The Pilliga region is a spiritual and cultural area for the Gomeroi/Gamilaraay people. This will cut them off from their land and connects to country.

Groundwater, the Great Artesian Basin, Coal seam gas. It is expected to remove 37.5 GL of groundwater. Water is everything. Life! I'm concerned about the social and health impacts. Santos' impact assessment is 3 years old and inadequate. The evidence in the USA is huge regarding water contamination and illness through coal seam gas projects.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Kelli Howard

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I am Andrew Ross, 3rd generation Australian.
I have lived in N.S.W. my whole life. At present
I am a volunteer in the Eastside Community Group
working with the Wilderness Society’s movement
for life.

I am interested in the proposed Santos
Narrabri Gas field as I am part of the
growing community movement in N.S.W. that
opposes CSG mining in our state.

Key issues:
- Water: impact on the Great Artesian Basin
- Land: toxic effects on agricultural/indigenous
- Biodiversity: endangered wildlife of the Pilliga
- Air quality: poisonous gases
- Transport: increased traffic
- Visual, social, economic

I ask the Government to reject this project and make the Great Artesian Basin recharge
off-limits to gas mining.

Signed,

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

My two main concerns are the destruction of
farmland and the water supply. Arable land
is at a premium and what we have needs to
be used for farming. It is well known the
effect of CSS extraction on the water table
can be horrendous. Poison will destroy crops
and kill animals. Coupled with this is the
impact on the human population. Their
health can be impacted very adversely.
I say NO to CSS exploration and exploitation.

I ask the Government to reject this project and make the Great Artesian Basin recharge
off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

Firstly, the Pilliga is a wilderness area and should be left alone as such, for the preservation of every life that lives there - independent of mankind's influence over natural ecosystems.

But more so, my concern is the effect mining has on the underground water table. Underground water is a long term resource to be looked after. We do not need to tamper with the gift that time has provided to us, for the sake of short term dollars and making a mess of things, around any such mining site, and for our collective future.

It can be done with a guarantee of adversity affecting underground water resources, and there are plenty of experiences where I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Narrabri Gas EIS.
I object to this project and believe it should be rejected.

My objections are based on the following:-
It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.

It will clear close to 1,000 hectares of the Pilliga Forest fragmenting the largest temperate woodland in new South Wales, home to unique wildlife.

It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.

It will add to climate change through large deliberate and fugitive methane emissions.

It will cause trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay People.

It is not justified: Santos' own export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have dealt with the serious health effects appearing in peer-reviewed research in the US.

Furthermore I consider the methodology flawed in relation to the consultation processes and protocols, there are unanswered questions and unaddressed key concerns, there is failure to identify or recognise cultural significance and past harm and failed remediation. The evidence of previous social impact is being ignored and there is a failure to identify social impacts specific to the Gamilaraay People within the scope of study.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

With respect   Carol Horton

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

As a Queenslander I am concerned that this project will affect those of us that live on the border. Research has shown that fracking affects the health of people living close to the wells (i.e. Kingaroy & Blayney). This is beautiful agricultural land, I would hate to see it polluted by coal seam gas fields. We need to be looking at renewables, wind farms, solar as a viable alternative. Climate change is already visible lets not make it worse.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.  

I object to this project and recommend that it be rejected.

Growing up on the Liverpool Plains and managing a farm these days makes me very concerned about coal seam gas in our district. There is no way they can co-exist in the same area.

I ask the Government to reject this project and make the Great Artesian Basin recharge area off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I object to this project on many grounds, but mainly due to the speed of extraction which is of special concern.

Most importantly, the acceleration of climate change which will be caused by the project.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

Water is our most precious commodity. We are so blessed to have safe clean drinking water in Australia. Please do not risk this by allowing CSG mining to go ahead.

I have been a farmer in North West NSW all of my life and know that this area is one of the most valuable and productive agricultural areas in the world. It has contributed so much to our economy and without it Australia would not be where it is today.

Why risk this area to CSG mining when farming is sustainable, where as CSG mining has a very limited lifespan and will leave the country in a state of disrepair.

Our future generations are relying on us to make the right decisions for them. So please think of your children and their children and what we will be leaving them for the future.

Once the damage is done there is no going back!

Yours sincerely,

Julie Prowse

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

* Damage or destroy the Gt Artesian Basin
* Damage or destroy fragile ecosystem with the Collie Wolf

* We don't need any new gas wells in NSW - there is more than we can use coming from the NW Shelf gas Project in WA

* Supply Australian industry 1st before exploring even if it means litigation

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

The Pilliga Forest area is distinctly unsuited to coal seam gas mining development for the following reasons:

1. It is an iconic Australian landscape home to many unique species and their habitats which are worthy of protection.
2. It is also of historic, cultural and social value. Secondly, this area is close to agricultural land which some of the best of the Artesian Basin, and it is of the utmost value to the local community and its economy. Thirdly, this could cause significant ground water problems which the water table of this cannot be restored to such a place. Please look to the long-term in your decision-making.

Signed,

Simon Blair
This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

I am very concerned about the drilling process pertaining to the risk of gas leaks allowing contaminants to be lost to deep-seated real seas. Gaseous emissions, for the survival of communities in these areas, cannot allow any passage here. I decline to take place in the removal of this community’s future in progress.

The “ground water” contains large quantities of dissolved salts. The local ground water is a mixture of geysers and gas wells. The salt is very heavy. Is this a wise use of energy? How will they be disposed of? Is it even worse that they plan to pump this into underground fossa? I am quite doubtful of their plans about this.

I am very concerned about the loss of “nontoxic” Sidney. Any disturbance of national importance — I know they are very concerned about the effect of this development on the efficiency, money and resources developing renewable energy sources.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Marilyn Carter

I object to this project and recommend that it be rejected.

Renewables are a smarter more sustainable choice.
Ecology needs land and is valuable.
We need clean water & clean soils.
For the health of the people & for food.
Security. Let’s diversify our options & be the leaders in renewable energy.
This is the smartest choice economically.

I am a Youth Worker.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Santos Narrabri Gas EIS.

I object to this project and recommend that it be rejected.

...because the risk of damage to the Great Artesian Basin is high. Experience learned from the Queensland gasfields shows that the modelling of the risk factors were significantly underestimated.

In fact, the damage identified to date was never meant to happen.

The Government has a responsibility to protect water resources to the extent possible.

I ask the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed, [Handwritten]
Dear Sir/Madam,

This is a submission to the Narrabri Gas Project Environmental Impact Statement
I object to this project and believe it should be rejected.

I have spent six years researching, investigating and learning about coal seam gas, as well as visiting gas fields. Without doubt, from what I have learned, I would never raise my daughter in a gas field.

We are 4th generation farmers and never in 100 years have we seen an industry, run for the benefit of a few and not the well-being of Australia, put our farm, home, business and community at such a risk of pollution and water contamination. Your farms will become ghost towns.

I urge the Government to reject this project and make the Great Artesian Basin recharge off limits to coal seam gas extraction.
