Attn: Executive Director, Resource Assessments
Department of Planning and Environment
GPO Box 39
Sydney NSW 2001

This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos’ own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos’ own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed, Noel Mudford
This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos’ own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

- We don't need fossil fuel.
- Trump has ordered release of suppressed patents. Tesla, Bedini, Keale are already producing techs. Let them out!
- Retain miners in environmental rehab.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years.
- This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos’ own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge area off limits to gas mining.

As the global energy market becomes increasingly carbon constrained, fossil fuels are becoming less and less financially viable compared to renewable sources of energy. The health of the Great Artesian Basin needs to be protected to safeguard Australia's future massive energy potential from agricultural exports. The high remediation costs of the isolated water pollution will cause prime agricultural land to be put out of production.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,
This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos’ own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

I was born in Narrabri Hospital and spent the first twelve years of my life adjacent to Pilliga State Forest. It was a beautiful forest to live near. I also had the privilege of often bathing in bore baths in the vicinity. It would be a shame to lose the benefits of this area just so a corporation can make profits for themselves.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos’ own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

Alternative sources of renewable energy are available and are obviously the way short Australia should be looking to provide its populace with energy needs. Advances in Europe, China and India indicate that unless this country starts to address the future, we will be an archaistic and poisonous global joke.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

To whom it may concern,  

I am writing to object to the Narrabri Gas Project.  

I have never written a submission to object to anything in my life. I’m actually finding it quite surreal that I am writing this. But the more I have investigated this project, and coal seam gas in general, I just cannot understand how anyone would think this a safe practice for anything or anyone, and to allow it to go ahead. There is just so much evidence that clearly states fracking is not safe for humans or the environment. And when Australia obviously has unlimited renewable resources, such as wind and sun, again, I just don’t understand why our Government is not investing in these resources instead.  

I could’ve easily just signed and sent in the previous page, as I’m sure many conscientious objectors have done. But I feel so strongly about this, that it has caused me to write this submission. My daughter passed away 11 years ago, and it was due to malpractice. There are many things that could’ve avoided her death, if only things were done to prevent it from happening in the first place. But being our first child, we trusted the team of doctors and hospital staff around us, to deliver our baby safely to us. Never did I foresee the events that would take her life. None of us did. But again, it could’ve been avoided. I liken this to what is happening with coal seam gas. We are trusting our Government and the people that head these departments. We are trusting you and have elected you to do the right thing by us. The people, including professionals such as environmental scientists, that oppose this practice, are so passionate in their fight against fracking, that it has caused me to sit up and take notice. Why are they so passionate? The videos I have seen of children with headaches and bleeding noses, should NOT be going unnoticed. Do you want a class action against you? Is this going to be another James Hardy/asbestos case? You have been given an opportunity to foresee the risks involved with fracking. If you continue to ignore the risks, and allow such projects as the Narrabri Gas Project to go ahead, I have no doubt that this will end lives. Is money more important than a child’s life? I can assure you that no amount of money will ever replace a child’s life. And the
people to blame, who chose to turn their backs on such an obviously unsafe practice, are the ones who will forever carry this guilt. Not only will this end the lives of many children. But it will end the lives of people like George Bender. My heart breaks for him and his family. My Father committed suicide, so I very much can relate to this family. For a man to get to such a point in his life, that he sees no alternative than to take his own life, is beyond me. I still question why and how my Father got to this point. But he obviously saw no way out. The same for Mr Bender. He must’ve felt so robbed of all he had - that the gas companies could take what they wanted from him - and seemingly not care... how do the heads of these companies sleep at night?

I am not detracting from the issue here with my own ‘sob story’. I understand it may appear that way. I am simply trying to explain my own experiences and why I feel so strongly about this. I JUST CANNOT UNDERSTAND HOW ANYONE COULD ALLOW THIS TO GO ON - FRACKING - IT IS SO UNSAFE. And to be poisoning our water supply, especially for those in north western NSW who rely so heavily on the Great Artesian Basin, is beyond me. I have read about the process of fracking, and the chemicals used for this. I have seen documentaries on it. I have read so much evidence proving that leaks are inevitable. How can any of this continue to be ignored? And let’s mention deforestation - 1000 hectares of the Pilliga’s forest cleared - what happens to the unique wildlife that calls this home? Not to mention the gas emissions that will be created. I have never seen myself as an environmentalist, but after doing my own research on fracking, I am now so much more aware of the damage this causes our magnificent planet. If we allow 850 gas wells to be drilled in the Pilliga/Narrabri region, then this gives the green light for other areas nationally, and also internationally, to go ahead. I bought my home, my own piece of land, some years ago. If I had known for one moment that I only own the top part of the soil my home sits on, then I would’ve fought this back then. How dare the Government and gas companies feel they can come onto my land and take what they think necessary, solely for monetary profit. How unbelievably greedy. This is my home. As far as I’m concerned, I pay for this and the soil it sits on. Heaven forbid anyone should try and come on my land and tell me they’re going to drill into my land to frack for coal seam gas - they’ll have one hell of a fight on their hands. Who do these companies think they are? It’s beyond me. This is ruining lives. Have you ever seen anything so objected to internationally in your life? It’s global. And for obvious reasons. How can you sit on your hands and do nothing?

There is so much more I could write about. The Gamilaraay people, global warming, extracting toxic water, the safe disposal of salt, so much more... but where would my submission end? And I am more than sure that pages and pages of objections would be put on the too hard pile. All I am hoping is that my submission is read. I am a normal human being with grave concerns for fracking
in the Narrabri region. I understand the Government sees the jobs created from this project as a positive for them as a party. I also understand that it is not just the "Greens" that are opposed to this. I am not affiliated with any political party. And I am a normal, everyday citizen that has never been in trouble with the law, pays my taxes, and cares for my family. I work full time as a Paramedic. And I see myself as a caring human being. So again, I want to reiterate my concerns for fracking. Please don't let my submission fall on deaf ears. I am so genuinely concerned about the consequences, short and long term, of fracking, that it has caused me to sit up, take notice, take the time to write this submission, and even stick a bumper sticker on my car!!!

I anticipate the outcome of the Narrabri Gas Project/EIS and will continue to follow it closely.

Thank you for your time in reading this submission.

Sincerely, and in good faith,

[Signature]

Christine Westbury
This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.

This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

Time to focus on solar and wind energy!

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

This is a submission to the Narrabri Gas Field

I object to this project and believe it should be rejected.

☐ It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.

☐ It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

☐ It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.

☐ It will lead to large deliberate and fugitive emissions of methane, adding to climate change.

☐ It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Camilla cry people.

☐ It is unjustified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

☐ It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

☐ Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

☐ The rest of the world is moving away from fossil fuels, especially in markets such as China, India and Korea. The beauty of NSW does not need the devastation already inflicted on Queensland.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Attn: Executive Director, Resource Assessments
Department of Planning and Environment
GPO Box 39
Sydney NSW 2001

This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos’ own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

This is a submission to the Narrabri Gas EIS.

I object to this project and believe it should be rejected.

- It will extract over 35 billion litres of toxic groundwater, much of it in the first five years. This water will be treated and in the early years will generate tens of thousands of tonnes of salt, for which there is no safe disposal plan.
- It will clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.
- It will cause significant diversion of water from a recharge aquifer of the Great Artesian Basin, which is a water resource relied upon by rural communities across western NSW.
- It will lead to large deliberate and fugitive emissions of methane, adding to climate change.
- It will cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.
- It is not justified: Santos’ own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable. NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.
- It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.
- Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to coal mining.

Signed,
