

I am a resident of 8 Hickson Road opposite Bay 11 of the Campbell Stores.

As such I would like to protest at the installation of the SSD 7056 Modification 2 on the basis that it has not been subject to scrutiny by experts who could assess the impact of the mechanical exhaust and air conditionings noise control, fumes and visual acceptability on our building and those adjacent.

The roof of Bay 11 will be substantially altered and the mesh enclosing the black unit will be an unpleasant eyesore out of our fifth floor window. This alteration to the existing building does nothing for those of us forced to look at it each day but as a conservation and refurbishment project, does not project a positive resolution to an already badly resolved conclusion to the waste emission issue.
