To Whom It May Concern,

This is to state that for lights within the Spectrum from 380nm to 1100nm, the reflectivity of Talesun Poly and Mono PV modules, including all the products, will not exceed 6.2%*. As a leading PV manufacturer, Talesun always takes care of our customers and has never stopped optimizing our modules. By applying innovative lamination technology and improving material matching, the light reflectivity of our PV module reduces greatly.

*Total reflectivity, based on Talesun's lab testing results.

Sincerely,

Suzhou Talesun Solar Technologies Co., Ltd
