Dear Byron,

**RE: Loreto Kirribilli Innovation Centre – SSD Modifications
Statement of Electrical Services**

We can confirm that the electrical servicing strategies have not been changed for Loreto Kirribilli Innovation Centre.

Power

The site is currently solely fed from a 1000kVA onsite kiosk substation (ID No.50434) located at the south-eastern corner of the site. The electricity network is within Ausgrid's jurisdiction and the NMI (National Meter Identification) number is 4103803259. The proposed Innovation Centre will be fed from the existing site Main Switchboard. The application of connection of additional load to existing Ausgrid Kiosk Substation has been approved by Ausgrid with a Permission To Connect Letter. Minor upgrade works to existing Kiosk substation will be carried out Ausgrid Operation Team and funded by Loreto.

Telecommunication

Telstra is currently providing telecommunication services to the entire site.

No works on telecommunications incoming services as the existing incoming services has the capacity to accommodate future expansion. The Innovation Centre will be fed directly from the existing Main Server/Communications room with dedicated fibre and copper tie cables.

Yours sincerely,

Frank Liu
Senior Electrical Engineer
