1 INTRODUCTION

1.1 BACKGROUND

Fairfield City Council covers 102 km² in the south-western Sydney metropolitan area, and serves approximately 205,000 residents. The Fairfield Sustainable Resource Centre (SRC) is a Council-operated recycling centre which accepts waste building material comprising terracotta, brick, concrete and asphalt and supplies aggregate, sand, topsoil and crushed concrete for construction and landscaping. The SRC has been in operation since 1997 and processes in excess of 180,000 tonnes of material per year.

It is understood that the Council intends to expand the SRC licensed area to include approximately 2.8 hectares (ha) to the east of the current SRC operational area, including filling in a gully within a former road reservation (Canal Road) between the current facility and the proposed expansion. The project will also include expanding a paved carpark area and creation of a new sedimentation basin in the north of the facility.

A site plan is presented as Figure 1 in Appendix A. Fairfield City Council engaged WSP Australia Pty Ltd (WSP) to prepare an assessment of the proposed waste management procedures for the expansion, as part of the planning approvals process. The purpose of this assessment is to respond to the Planning Secretary's Environmental Assessment Requirements (SEARs) issued by the NSW Department of Planning and Environment, now the Department of Planning, Industry and Environment (DPIE) on 6 May 2019, for the project, in particular the requirements for the following:

- description of the waste streams that would be accepted at the site including the maximum daily, weekly and annual throughputs and the maximum size and heights for stockpiles
- description of waste processing operations, including a description of the technology to be installed, resource outputs, and the quality control measures that would be implemented
- details of how waste would be stored and handled on site, and transported to and from site including details of how
 the receipt of non-conforming waste would be dealt with
- details of the waste tracking system for incoming and outgoing waste
- details of the quality of waste produced and the final dispatch locations
- measures that would be implemented to ensure that the development is consistent with the NSW Waste Avoidance and Resource Recovery Strategy 2014-2021.

1.2 TECHNICAL FRAMEWORK

This report has been prepared with reference to the key NSW legislation and guidance governing waste, including:

- Waste Avoidance and Resource Recovery Act 2001 (NSW; WARR Act)
- Protection of the Environment Operations Act 1997 (NSW; POEO Act)
- Protection of the Environment Operations (Waste) Regulation 2014 (NSW; POEO (Waste) Regulation)
- NSW Environment Protection Authority (EPA) 2014, Waste Classification Guidelines
- NSW EPA 2014, Waste Avoidance and Resource Recovery Strategy 2014-2021 (WARR Strategy).

2 EXISTING OPERATIONS

2.1 DETAILS OF THE WASTE STREAM

Waste is brought to the site from roadwork, excavation and demolition projects that generate brick, concrete, asphalt, terracotta tile, soil and rock waste. Incoming material is sourced from sites around the Sydney metropolitan area. The redirection of these material to the facility for recycling has the following benefits:

- reducing waste volume to landfill
- reducing the need for new material production
- recycled materials can be provided at lower cost than new materials
- recycling suitable materials is in line with the WARR Strategy (NSW EPA, 2014).

The waste brought to site is processed through a variety of methods, detailed in Section 2.2, and provided as materials for construction including:

- graded aggregates of crushed or recycled materials
- densely graded base (DGB) and heavily graded base of natural or recycled materials
- cement-stabilised DGB of natural or recycled materials
- sand and cement mixtures of natural or recycled materials
- crushed and/or graded sandstone
- natural or recycled sand
- top dressing soil.

2.1.1 INCOMING WASTE TYPES

The site is licensed by the NSW EPA for waste storage and resource recovery. Under the site's environment protection licence (EPL), licence number 5713, the site is licensed to accept the following types of waste:

- virgin excavated natural material (VENM), as defined in Schedule 1 of the POEO Act
- building and demolition waste, as defined in Schedule 1 of the POEO Act
- asphalt waste, as defined in Schedule 1 of the POEO Act
- soils that meet the contaminant threshold (CT) for general solid waste, CT1, from the waste classification guidelines (NSW EPA, 2014), provided it also meets the additional limits listed
- waste that is below licensing thresholds in Schedule 1 of the POEO Act.

The details of the licensed waste types are provided in Table 2.1.

Table 2.1 Licensed wastes

WASTE TYPE	DEFINED BY	DEFINITION	
VENM	Schedule 1 of the POEO Act	Natural material, such as clay, gravel, sand, soil or rock fines, that has been excavated or quarried from areas that are not contaminated with manufactured chemicals, or process residues, as a result of industrial, commercial, mining or agricultural activities, and does not contain sulfidic ores or soils or any other waste.	
Building and demolition waste	Schedule 1 of the POEO Act	Unsegregated material (other than material containing asbestos waste or liquid waste) that includes materials such as bricks, concrete, paper, plastics, glass, metal or timber, including treated timber. The materials must result from: — the demolition, erection, construction, refurbishment or alteration of buildings other than chemical works, mineral processing works, container reconditioning works or waste treatment facilities — the construction, replacement, repair or alteration of infrastructure development such as roads, tunnels, sewage, water, electricity, telecommunications and airports	
Asphalt waste	Schedule 1 of the POEO Act	Waste asphalt, including asphalt resulting from road construction and waterproofing works	
Soil	Waste guidelines (NSW EPA, 2014) and other limits	waterproofing works Soil, not including actual or potential acid sulfate soil, with specific contaminant concentrations below the CT1 values provided in Table 1 the waste guidelines (NSW EPA, 2014) and below the limits provided the EPL, comprising: — arsenic 40 mg/kg — cadmium 2 mg/kg — copper 200 mg/kg — mercury 1.5 mg/kg — zinc 600 mg/kg — petroleum hydrocarbons; C ₆ -C ₉ 150 mg/kg, C ₁₀ -C ₃₆ 1,600 mg/kg — polycyclic aromatic hydrocarbons 80 mg/kg — polychlorinated biphenyls (individual) 1 mg/kg.	
Waste	Schedule 1 of the POEO Act	Material that below the licensing thresholds provided in the Act.	

2.1.2 THROUGHPUTS

Records of weekly incoming and outgoing tonnages for the Fairfield SRC from July 2018 to December 2019 have been provided to WSP for review. Incoming tonnage records for fiscal year 2018/2019 are provided in Appendix B. The incoming materials recorded are summarised in Table 2.2.

Table 2.2 Incoming material throughputs

MATERIAL NAME	WASTE TYPE	ı	NCOMING MATERIA	AL, FISCAL YEAR 2	2018/2019 (TONNES	6)
		DAILY AVERAGE	DAILY MAXIMUM	WEEKLY AVERAGE	WEEKLY MAXIMUM	ANNUAL
Asphalt deeplift	Asphalt waste	36	427	254	968	12,705
Asphalt profilings	Asphalt waste	84	2,031	587	3,123	28,159
Road excavations	Asphalt waste	0.5	7	3	6	10
Cement	Building and demolition waste	28	139	193	338	9,469
Clay bricks	Building and demolition waste	241	758	1686	2,923	84,301
Concrete (various amounts of steel)	Building and demolition waste	706	2,182	4943	9.564	247,097
Concrete agitator waste	Building and demolition waste	40	146	283	505	14,141
Concrete washout	Building and demolition waste	50	427	348	1392	17,073
Natural sand	VENM or soil	69	469	486	1,086	23,347
Sandstone	VENM or soil	8	222	53	304	525
Topsoil	VENM or soil	13	261	94	373	3,103
Mixed spoil/soil	VENM or soil	21	152	149	402	5,795
Bedrock	VENM or soil	14	82	99	212	1,425
Bedding sand	Soil	104	1,317	731	3,644	24,122
20 mm aggregate	Soil	76	389	534	748	2,668

Notes:

Daily average based on 7 day week, calculated from weekly figures.

Weekly average does not include weeks when no volume of a specific product was received

Total incoming and outgoing tonnages for fiscal years 2015/2016 to 2018/2019, provided by Council, are presented in Table 2.3.

Table 2.3 Yearly incoming and outgoing tonnages

PERIOD	TOTAL INCOMING TONNAGE	TOTAL OUTGOING TONNAGE
Fiscal year 2015/2016	454,289 tonnes	532,078 tonnes
Fiscal year 2016/2017	459,337 tonnes	504,559 tonnes
Fiscal year 2017/2018	451,285 tonnes	452,709 tonnes
Fiscal year 2018/2019	476,443 tonnes	534,818 tonnes

2.1.3 STOCKPILE AREAS AND VOLUMES

The current licence for the facility restricts material stockpiles at the site to a maximum of 250,000 tonnes and a maximum stockpile height of 8 m. No area restrictions for individual stockpile footprints have been set.

The currently licensed, main facility area has a number of areas for stockpiling incoming material, which cover approximately 16,450 m². These are shown on Figure 2 in Appendix A. A volumetric survey undertaken in 2020 for the site identified an approximate 94,481 tonnes of stockpiled material at the site, summarised in Table 2.4.

Table 2.4 Stockpiled material

STOCKPILE	TYPE OF MATERIAL	VOLUME (m³)	DENSITY (TONNES/m³)	DERIVED TONNAGE (TONNES)
1	Asphalt deeplift	4,648	2	9,296
2	Road profilings	2,441	1.4	3,418
3	20 mm crushed asphalt	125	1.431	179
4	20 mm crushed asphalt	328	1.431	470
5	20 mm recycled road base	983	1.431	1,407
6	20 mm aggregate	614	1.265	777
7	40 mm DGB	697	1.3	906
8	20 mm DGB	2,970	1.431	4,251
9	20 mm DGB	1,081	1.431	1,546
10	10 mm aggregate	1,229	1.265	1,554
11	20 mm DGB	831	1.431	1,189
12	20 mm aggregate	632	1.265	799
13	Bedding sand	1,943	1.13	2,196
14	Bedding sand	912	1.13	1,030
15	10 mm aggregate	812	1.265	1,028
16	Brick and concrete stockpile	18,826	2.2	41,418
17	Mixed spoil	15,728	1.3	20,447

STOCKPILE	TYPE OF MATERIAL	VOLUME (m³)	DENSITY (TONNES/m³)	DERIVED TONNAGE (TONNES)
18	75 mm sandstone	543	1.3	706
19	55 mm sandstone	890	1.3	1,156
20	Crushed sandstone	546	1.3	709
	Total	56,779	N/A	94,481

All stockpile areas have compacted DGB surfaces; no concrete stockpile pads are used for incoming material. Stockpiles are kept in the areas shown on Figure 2, and limited to the maximum allowable height of 8 m.

Procedures for incoming loads, stockpiling and quarantining are discussed further in Section 2.3.

2.2 WASTE PROCESSING

The SRC processes portions of the waste stream by screening, blending and crushing. The details of these processes are provided in the following sections. Documentation provided by Fairfield City Council is included in Appendix C.

2.2.1 SCREENING

Material is screened to produce outputs which have specific particle size requirements, e.g. road base, sands, aggregates. Screening is done by a moveable screening plant. The material is fed into the hopper of the screener using a front-end loader and screened material leaves the plant on a conveyor belt. The screening process is summarised in Figure 2.1.

SCREENING PROCESS FLOWCHART

2.2.2 BLENDING

Blending of materials using the pug mill is undertaken to combine recycled materials with water and cement to create stabilised products in accordance with customer specifications. Once a customer requests a material blend, the required mixture is input into the computer that controls the system and the required recycled material is tipped into the feeder bin with a front loader. The mill operator initiates the blending process, which is automated by the computer. A truck is positioned beneath the pug mill discharge chute to collect the finished blended product. The pug mill process is summarised in Figure 2.2.

Figure 2.2 Pug mill processing

PUG MILL MIXING PROCESS

2.2.3 CRUSHING

The crushing process is used to process concrete, brick, roof tiles and asphalt into aggregates. Any pieces too large for the crusher are broken up by a hammer/pulveriser. The material is then loaded into the mobile crusher. A magnet is used to remove steel from the material (e.g. reinforced concrete) before crushing.

Crushed material is then screened, and any remaining oversize material is returned for additional crushing or disposed of, depending on composition. The concrete and brick crushing processed are summarised in Figure 2.3.

Figure 2.3 Crushing processes

2.2.4 QUALITY CONTROL FOR WASTE PROCESSING

Quality control for the processed material includes procedures for the feedstock, before processing, and the output after processing. To ensure the processed product meets quality requirements, the feed stock must be free of contaminants, including asbestos, clay, rubbish, vegetation, etc. To maintain the feedstock quality, three stages of inspections are used before material is accepted to the site for processing:

- inspection via closed-circuit television (CCTV) at the weighbridge; if contaminants are identified the truck is turned around and not allowed to tip off
- visual inspection from the spotter's tower platform; if contaminants are identified the truck is turned around and not allowed to tip off
- physical inspection of material once it has been tipped and back bladed by a front-end loader in the designated stockpile area; if contaminants are identified the load is wetted and re-loaded onto the vehicle it was tipped from.

If potential contamination is identified in a stockpile of processed end-product, a physical inspection will be carried out of the stockpile, which may include collecting samples for analysis. Processed product that does not meet the specifications is quarantined by wetting the stockpile with water before transporting it to the quarantine bay. The SRC coordinator and the work health and safety, environment, quality and training (WHSEQT) officer are notified by the site supervisor to arrange removal of the contaminated stockpile within 24 hours to a suitably licensed landfill.

The stockpile is assessed for reprocessing; if contaminants can be removed from the stockpile the quarantine will be lifted following sampling and analysis at a National Association of Testing Authorities (NATA) accredited laboratory, provided results are acceptable.

2.3 WASTE STORAGE, HANDLING AND TRANSPORT

2.3.1 TRANSPORT TO SITE

Incoming material loads are weighed upon entrance to site to determine the amount of material and confirm they are within weight limits. There are two weight limits that are considered; the National Heavy Vehicle Law maximum weight, referred to as the gross mass limit (GML), and the manufacturer's maximum loaded weight, referred to as the gross vehicle mass (GVM). The GML is usually lower than the GVM. Loads that exceed the GML but do not exceed the GVM may be rejected or allowed to unload at the discretion of the SRC personnel, considering the number of previous overweight load notices they have received and a risk assessment. Loads exceeding the GVM are rejected. Overweight loads are recorded in a register whether or not they are allowed to unload.

The incoming weighbridge procedure is summarised in Figure 2.4.

Figure 2.4 Incoming weighbridge procedure

Fairfield City Council has provided records of overweight and other rejected loads for 2017 and 2018. Based on these records, in 2017 2,063 trucks were found to be overloaded when entering the facility. Of these, 1,112 were refused and 951 were allowed to unload. In 2018, 523 loads were reported to have been refused and 9 were allowed to unload. Records are included in Appendix D.

2.3.2 INCOMING MATERIAL INSPECTION

A CCTV system and a spotter in the spotter's tower are used to inspect each load for visible evidence of contaminants. Where visible contaminants are identified, the spotter will inspect the load. Loads rejected by the spotter for contaminants will not be allowed to unload and will remove the material from the site for appropriate disposal. The incoming material inspection procedures are summarised in Figures 2.5 and 2.6.

Figure 2.5 Incoming material inspection procedure

Figure 2.6 Secondary load inspection process

Rejected loads are recorded in a register. Records provided by Fairfield City Council showed that 1,308 loads were rejected for contamination in 2017 and 712 loads were rejected for contamination in 2018. Records are included in Appendix D.

2.3.3 TIPPING AND STOCKPILING

Loads cleared through CCTV and the initial spotter inspection will be directed to the designated stockpile location and a spotter will inspect the material before and during tipping. The tipped load will be spread out using a front-end loader to assess the potential for contamination. Any loads determined to be contaminated during this process will be reloaded and removed from site. Rejected material will be wetted before reloading to supress dust.

Stockpiling processes for incoming material and recycled material are summarised in Figures 2.7 and 2.8.

Figure 2.7 Stockpiling process for incoming material

Figure 2.8 Stockpiling process for recycled material

2.3.4 HANDLING AND STORAGE OF WASTE ON-SITE

Material accepted by the facility and unloaded may be wetted if it appears to be dry and have the potential to create dust. A loader will be used to form tipped material onto the stockpile. For concrete and brick, a 1 m and 1 m wide shelf should be maintained at the edge of the stockpile for safety. The stockpile area is to be left free of excess material and no hanging or protruding material should be present in the stockpile.

Material will be taken from the stockpiles for processing. Front-end loaders will transfer the material to the appropriate plant (see Section 5 for details of processing). Processed material will be moved by front-end loader to the designated stockpile location and added to the stockpile. Stockpiles will be kept free from hanging or protruding material and the area around the stockpile will be kept free of excess material.

2.3.5 QUARANTINE AND DISPOSAL OF MATERIAL

Where potential contamination of material is identified at the site, the stockpile will be inspected to determine what, if any, contamination is present. This may include collecting samples for analysis, based on the inspection, and moving the stockpile to the quarantine bay. If the stockpile is moved to the quarantine bay, it is wetted using a water cart to supress dust while it is transported. The SRC coordinator and WHSEQT officer will be informed and will arrange for disposal within 24 hours at a suitably licensed landfill if the stockpile is determined to be non-compliant.

The material will be assessed to determine if it can be reprocessed and if so this will be undertaken. If contaminants can be removed from the stockpile, the quarantine will be lifted once the stockpile is validated by sample analysis at a NATA accredited laboratory. If not, material will be disposed of at an appropriate landfill.

2.3.6 TRANSPORT FROM SITE

The outgoing material procedure is summarised in Figure 2.8.

Figure 2.9 Outgoing material procedure

Processed or unprocessed material leaving site is loaded by front-end loader to either an SRC truck or customerorganised truck. The truck will be weighed on the weighbridge to confirm product weight and compliance with weight restrictions. If the vehicle exceeds the GML it will be returned to the appropriate stockpile to tip a portion of the load, and reweighed to confirm it is below the GML before leaving site.

3 PROPOSED EXPANSION

The proposed expansion of the licensed operations will bring the facility's license in line with the current site operations.

3.1 WASTE STREAM

The proposed license changes are to the processing capacity of the facility only. No changes to the types of material accepted or processed are proposed.

3.1.1 THROUGHPUTS

The maximum proposed throughput for the facility on a daily, weekly and annual basis are presented in Table 3.1.

Table 3.1 Potential maximum throughput

MATERIAL	MAXIMUM INCOMING MATERIAL (TONNES)			
	DAILY	WEEKLY	ANNUAL	
VENM	216	1,400	65,000	
Building and demolition waste	1,791	10,500	430,000	
Asphalt waste	166	1,080	50,000	
Soil	20	120	5,000	
Total for all materials types	2,193	13,100	550,000	

The weekly throughputs are calculated based on an average of the daily maximums and annual maximums, operating 7 days a week for 50 weeks a year in keeping with the current and proposed operation. As such, these should be considered average throughputs over each operating year.

The proposed maximum production capacity of 550,000 tonnes per year is consistent with the current production levels, which have ranged from 451,285 tonnes to 476,443 tonnes incoming and 452,710 tonnes to 534,818 tonnes of outgoing material over the last four fiscal years.

3.1.2 STOCKPILE AREAS

The expansion area includes approximately 5,000 m² for stockpiling material, in the areas shown on Figure 2 in Appendix A.

3.2 WASTE OPERATIONS

3.2.1 WASTE PROCESSING

The proposed expansion of the facility will include only screening, blending and crushing of received material; no additional processing or treatment is proposed. The processing descriptions detailed in Section 2.2 will remain applicable to the proposed expansion.

The proposed processing in the expansion area will be screening of material. The screening plant is proposed to be moved into the expansion area from the existing facility.

3.2.2 STORAGE, HANDLING AND TRANSPORT

The storage, handling and transport procedures will be as per the current operation. No changes are proposed to the procedures for the site. Additional stockpiling area will be located in the expansion area, as is currently the case.

3.3 COMPLIANCE WITH NSW RESOURCE RECOVERY STRATEGY

The WARR Strategy (NSW EPA, 2014) was prepared to set targets for avoiding and reducing waste, increasing recycling rates, diverting more waste from landfills, improving waste management and reducing litter and illegal dumping.

By providing an alternative to landfill for construction and demolition waste, recycling and providing recycled product for future construction works, the facility not only facilitates the key result areas of recycling and diverting waste from landfill, it also effects waste avoidance and reduction by providing a source of material for new construction other than quarrying or otherwise producing new material that will ultimately become waste in future. Additionally, by providing a lower-cost alternative to waste disposal at landfill, the facility may result in a reduction of illegal dumping.

The Fairfield SRC facility is well aligned with the WARR Strategy and expansion of the facility will increase its utility with respect to the goals set by the NSW EPA for waste policy.

3.4 POTENTIAL IMPACT

Potential impacts from the expansion of the licensed operations are primarily increased dust, noise, traffic, water quality and water usage; these are detailed in other reports prepared for the application. With regards to waste, no potential impacts were identified. The proposed increased capacity will bring the license in line with the current operation of the facility. The current processes and procedures have been prepared to manage this operational capacity. No mitigation measures are considered necessary.

The current maximum stockpile capacity of 250,000 tonnes is still considered appropriate for the facility. Even with the expanded capacity this is close to the maximum potential storage at the site, and it is unlikely that it would be exceeded under normal operation.

4 LIMITATIONS

This Report is provided by WSP Australia Pty Limited (WSP) for Fairfield City Council (Client) in response to specific instructions from the Client and in accordance with WSP's proposal dated 23 September 2019 and agreement with the Client dated 13 December 2019 (Agreement).

4.1 PERMITTED PURPOSE

This Report is provided by WSP for the purpose described in the Agreement and no responsibility is accepted by WSP for the use of the Report in whole or in part, for any other purpose (*Permitted Purpose*).

4.2 QUALIFICATIONS AND ASSUMPTIONS

The services undertaken by WSP in preparing this Report were limited to those specifically detailed in the Report and are subject to the scope, qualifications, assumptions and limitations set out in the Report or otherwise communicated to the Client.

Except as otherwise stated in the Report and to the extent that statements, opinions, facts, conclusion and / or recommendations in the Report (*Conclusions*) are based in whole or in part on information provided by the Client and other parties identified in the report (*Information*), those Conclusions are based on assumptions by WSP of the reliability, adequacy, accuracy and completeness of the Information and have not been verified. WSP accepts no responsibility for the Information.

WSP has prepared the Report without regard to any special interest of any person other than the Client when undertaking the services described in the Agreement or in preparing the Report.

4.3 USE AND RELIANCE

This Report should be read in its entirety and must not be copied, distributed or referred to in part only. The Report must not be reproduced without the written approval of WSP. WSP will not be responsible for interpretations or conclusions drawn by the reader. This Report (or sections of the Report) should not be used as part of a specification for a project or for incorporation into any other document without the prior agreement of WSP.

WSP is not (and will not be) obliged to provide an update of this Report to include any event, circumstance, revised Information or any matter coming to WSP's attention after the date of this Report. Data reported and Conclusions drawn are based solely on information made available to WSP at the time of preparing the Report. The passage of time; unexpected variations in ground conditions; manifestations of latent conditions; or the impact of future events (including (without limitation) changes in policy, legislation, guidelines, scientific knowledge; and changes in interpretation of policy by statutory authorities); may require further investigation or subsequent re-evaluation of the Conclusions.

This Report can only be relied upon for the Permitted Purpose and may not be relied upon for any other purpose. The Report does not purport to recommend or induce a decision to make (or not make) any purchase, disposal, investment, divestment, financial commitment or otherwise. It is the responsibility of the Client to accept (if the Client so chooses) any Conclusions contained within the Report and implement them in an appropriate, suitable and timely manner.

In the absence of express written consent of WSP, no responsibility is accepted by WSP for the use of the Report in whole or in part by any party other than the Client for any purpose whatsoever. Without the express written consent of WSP, any use which a third party makes of this Report or any reliance on (or decisions to be made) based on this Report is at the sole risk of those third parties without recourse to WSP. Third parties should make their own enquiries and obtain independent advice in relation to any matter dealt with or Conclusions expressed in the Report.

4.4 DISCLAIMER

No warranty, undertaking or guarantee whether expressed or implied, is made with respect to the data reported or the Conclusions drawn. To the fullest extent permitted at law, WSP, its related bodies corporate and its officers, employees and agents assumes no responsibility and will not be liable to any third party for, or in relation to any losses, damages or expenses (including any indirect, consequential or punitive losses or damages or any amounts for loss of profit, loss of revenue, loss of opportunity to earn profit, loss of production, loss of contract, increased operational costs, loss of business opportunity, site depredation costs, business interruption or economic loss) of any kind whatsoever, suffered on incurred by a third party.

TONNAGE RECORDS PROVIDED ELECTRONICLY

APPENDIX C FACILITY PROCEDURES

Quality Management - Sustainable Resource Centre

QMP-SRC-056

INCOMING AND OUTGOING MATERIALS PROCEDURE

1. INTRODUCTION

Sustainable Resource Centre (SRC) is a recycling facility for demolition and construction waste. Incoming materials such as concrete, brick and asphalt are charged per tonne upon entering the facility. The incoming charges also vary depending on the type of material.

Outgoing material is the result of uncontaminated incoming material that is recycled to make materials such as concrete roadbase, bedding sand, cement stabilised sands, recycled asphalt and aggregates. These outgoing materials are also charged per tonne and are charged upon exiting the facility.

2. PURPOSE

This document sets out the procedure for the operations of the Weighbridge in regard to weighing incoming and outgoing vehicles to enable calculation of costs for material and to ensure vehicles entering SRC do not enter with contaminated material.

3. SCOPE

This procedure is part of the commercial operations of SRC and encompasses the roles and responsibilities of the Weighbridge Operator, Loader Operators, Spotters, Customer Service Officer and SRC Coordinator.

Quality Management - Sustainable Resource Centre

QMP-SRC-056

INCOMING AND OUTGOING MATERIALS PROCEDURE

5. DEFINITIONS

Term(s) or Phrase(s)	Definition(s)
Tare Weight	Is the weight of an empty vehicle
Gross Weight	Total weight of the vehicle and its material.

6. ROLES AND RESPONSIBILITIES

Roles	Responsibilities
Weighbridge Operator	Weighing all vehicles entering SRC with incoming and outgoing material. Inputting the material into the clearweigh system and preparing dockets for invoicing and record keeping.
Spotter	Checking loads and completing visual risk assessments for contaminated loads
Loader Operator	Assisting Spotter in spreading loads that have been tipped off
Customer Service Officer	Ensuring correct details are recorded into the clearweigh system, preparing invoices and reporting any discrepancies to the SRC Coordinator. Dealing with customer complaints.
Coordinator Sustainable Resource Centre	To ensure operations are running smoothly and all operators are trained and competent in all weighbridge processes and procedures.

7. RISK

- Contaminated Loads may pose a risk to SRC worker's health such as asbestos exposure.
- Contaminated product may be a risk to the quality of the product and result in low sales and noncompliance of EPA Licence conditions.
- Drivers may become violent or aggressive towards Weighbridge Operators when rejected for contaminated loads.

8. PROCEDURE

8.1 Incoming Load Inspections - Weighbridge

Customers entering Sustainable Resource Centre (SRC) to tip of concrete, brick, asphalt must enter the weighbridge lane, stop at white line, de-tarp their vehicle and wait for a green traffic light before entering the weighbridge. Once the vehicle is on the weighbridge, the traffic light automatically changes to red.

The Weighbridge Operator must visually inspect the incoming load via CCTV, record all necessary customer, vehicle registration details, photographs of loads as well as any further load requirements or instructions into the ClearWeigh System.

If the vehicle has been rejected due to contaminants a rejected load notification will be provided to the customer before being asked to leave the site.

If no contaminants are found in the load, the spotter is notified via CB two-way radio that a load is heading to the Spotter's tower for a second inspection.

8.2 Incoming Load Inspections – Spotters Tower

The spotter will conduct a visual risk assessment from the spotter's tower to determine if any contaminants are found in the load. If none have been identified, the spotter will wet down the load and instruct the driver to tip off the material five metres from the stockpile for the loader

Page: 2 of 3

Date Effective: August 2019

Review Date: August 2021

QMP-SRC-056

INCOMING AND OUTGOING MATERIALS PROCEDURE

to spread the load for another inspection. If no contaminants found, the loader will move the load to the relevant stockpile.

When the Spotter rejects an incoming load due to contaminants in the load, the Spotter will contact the Weighbridge via CB two-way radio and notify registration number of vehicle.

The Weighbridge Operator will cancel the transaction for that vehicle if it was rejected before tipping off. If the vehicle had tipped off and had to be reloaded the vehicle will be charged a re-loading fee of \$150.

8.3 Outgoing Loads

If a customer wants to pick up material (this may be a customer that has brought in material and wants to purchase recycled product or a customer entering SRC to purchase material)

The vehicle is to enter weighbridge lane, stop at white line, de-tarp their vehicle and wait for a green traffic light before entering the weighbridge. The Weighbridge Operator will notify the Loaders the type of recycled material the driver is collecting and instruct them to the appropriate stockpile or pug mill.

8.4 Payment at Weighbridge, Docket Reconciliation and Reporting

All customers make payment upon exiting the weighbridge unless approved payment arrangements have been made.

COD transactions will be issued with the weighbridge docket once eftpos/credit card payment has been accepted. No cash or cheque payments are accepted.

At the close of business each day the Weighbridge Operator is to reconcile the weighbridge dockets from incoming and outgoing materials and print the end of day settlement from the ClearWeigh Terminal. The settlement report is given to the Customer Service Officer. It is the Weighbridge Operators responsibility to ensure that all dockets are accounted for.

9. MONITORING

The incoming and outgoing materials, payments and invoices are monitored via the ClearWeigh Terminal by the Customer Service Officer and Fairfield City Council's Financial and Accounting Services Branch. All rejected loads are kept on a rejected load register for accessibility by relevant Regulators.

10. REVIEW AND EVALUATION

This procedure shall be reviewed and updated every (two) 2 years or more often as necessary to ensure relevance and compliance to Council's QMS requirements.

- 10.1 Review may be carried out at any stage following integration with the core business activities, and can take many forms such as:
 - 10.1.1 During audit of a particular service group or branch;
 - 10.1.2 As a feedback mechanism from workers, contractors, customers or any other stakeholders;
 - 10.1.3 Following Corrective action;
 - 10.1.4 Change in legislative requirements; and
 - 10.1.5 Task or process has changed due to enhancements.
- 10.2 Following completion of any review, the document will be reviewed and updated in order to correct any deficiencies and non-conformances.
- 10.3 Any changes to this procedure shall be conducted in consultation with workers as appropriate and with the CBIU Branch

Date Effective: August 2019

Review Date: August 2021

QMP-SRC-061

PROCEDURE FOR HANDLING INCOMING OVERLOADED VEHICLES

1. INTRODUCTION

Sustainable Resource Centre (SRC) operates a demolition and construction waste (concrete, brick, asphalt) recycling facility. SRC on average services several hundred vehicle movements a day. All vehicles carrying materials both incoming and outgoing must go over SRC's weighbridge. Using the guide published by the NSW Roads & Maritime Services (RMS) and in compliance with the National Heavy Vehicle Law NSW checks are made of vehicle weights.

This Procedure relates to incoming vehicles that are carrying in excess of the Gross Mass Limit (GML) published by the RMS. This procedure does not cover vehicles that are in excess of their Gross Vehicle Mass (GVM), which are rejected and not permitted to tip off.

2. PURPOSE

This document sets out the procedure for allowing a vehicle that is carrying in excess of its GML, as ascribed by the RMS, but less than its GMV to tip off of its load.

3 SCOPE

This Procedure is part of the commercial operations of Sustainable Resource Centre (SRC) and encompasses the roles and responsibilities of SRC operators (weighbridge; loaders and Spotters) and SRC's crushing contractors, Concrete Recyclers.

4 REFERENCES

- Guidelines published by NSW Roads & Maritime Services on Total Mass Limits
- National Heavy Vehicle Law NSW
- QM-004 Document Control Procedure)

5 DEFINITIONS

Term(s) or Phrase(s)	Definition(s)
Gross Mass Limit (GML)	The maximum weight of a loaded truck as set out in the NSW Roads and Maritime Services guidelines under the National Heavy Vehicle Law NSW
Gross Vehicle Mass (GVM)	The maximum weight of a loaded truck as set out by the manufacturer of the vehicle – this is usually higher than the GML

6 ROLES AND RESPONSIBILITIES

Roles	Responsibilities
Weighbridge Operators	Weigh vehicles carrying material and dealing with drivers whose vehicle is overloaded
Spotter	Checking loads and completing Risk Assessments. Inspecting loads for contaminants

7 RISK

Overloaded vehicles may become unstable due to load shifting while travelling to Sustainable Resource Centre (SRC) and therefore could have a propensity to rollover when tipping. Particularly if ground is uneven.

A risk assessment is carried out for every overloaded vehicle allowed to tip off at SRC. Vehicles must tip off on even ground and Spotter is required to stand and observe at least 5 metres and opposite the cab of vehicle while it is tipping off.

Page: 1 of 5

Date Effective: February 2017 Review Date: February 2019

QMP-SRC-061

PROCEDURE FOR HANDLING INCOMING OVERLOADED VEHICLES

8. PROCEDURE

The Weighbridge Operator records the registration number of a vehicle when it is entering the weighbridge and makes a visual inspection via the CCTV of the incoming load prior to commencing any weighing or data collection activity.

8.1 VEHICLE'S WEIGHT IS IN COMPLIANCE WITH HEAVY VEHICLE LAW (NSW) AND RMS GUIDELINES

If the vehicle's weight is in compliance with The Heavy Vehicle National Law (NSW) and the guidelines published by the RMS the driver will be instructed to proceed to the appropriate stockpile to tip off its load and to return to the weighbridge after tipping off.

8.2 VEHICLE'S WEIGHT IS NOT IN COMPLIANCE WITH THE HEAVY VEHICLE LAW (NSW) AND THE RMS GUIDELINES

If the weight of the vehicle is in excess of the Heavy Vehicle National Law (NSW) and RMS Guidelines (ie over the Gross Mass Limit (GML)) the Weighbridge Operator will check to see if the vehicle is below the vehicle manufacturer's Gross Vehicle Mass (GVM).

If vehicle's weight is over its GVM the driver will be advised accordingly and instructed the load is not accepted and vehicle is to exit SRC. The Weighbridge's computer system will be noted that the vehicle is over its GVM and it will be noted in the Overloaded Vehicles Entering SRC Register.

If vehicle's weight is over the GML but under its GVM the driver will be advised accordingly, issued with a (first, second or third notice) and an overload docket advising the vehicle is over the GML as set out below. The Weighbridge's computer system will be noted that the vehicle is over the GML and the Overloaded Vehicles Entering SRC Register noted accordingly.

8.2.1 NOTIFICATION OF OVERLOADED VEHICLE

- 8.2.1.1 Weighbridge Operator will issue the vehicle driver a Notification of Overloaded Vehicle docket and a letter advising of Fairfield City Council's "three strikes and your out" regime.
- 8.2.1.2 Weighbridge to notify Spotter by CB two way radio that an overloaded truck was coming to tip off. The driver is to show the Docket to the Spotter who will sign it as evidence that the Spotter was made aware the truck was overloaded. After tipping the truck will return to the Weighbridge and driver will show sign off docket to Weighbridge Operator.
- 8.2.1.2 A copy of the docket will go the SRC office for recording in the Overloaded Vehicle Register and one copy will stay in the book.
- 8.2.1.3 Weighbridge Operator will record details of the overload on the Weighbridge System under "Notes" for future reference ie this note will appear each time the vehicle enters the Weighbridge in the future.
- 8.2.1.4 Weighbridge Operator will advise the Coordinator Sustainable Resource Centre if driver has not shown a docket signed by Spotter and when a vehicle is issued with a third notice and a one ban is in force.

Page: 2 of 5

Date Effective: February 2017

Review Date: February 2019

QMP-SRC-061

PROCEDURE FOR HANDLING INCOMING OVERLOADED VEHICLES

8.3 OVERLOADED VEHICLE REGISTER

Each preceding day's Overloaded Vehicle docket will be entered into the Overloaded Vehicle Register on a daily basis including details of the number of occasions the vehicle has entered overloaded.

The Coordinator Sustainable Resource will be advised of vehicles that have been issued a second notice for consideration and determination of future action/s.

8.4. "THREE STRIKES AND YOUR OUT"

8.4.1 STRIKE ONE:

If a vehicle enters Sustainable Resource Centre (SRC) over the GML but under its GVM it will be allowed to tip off and issued with a Notification of Overloaded Vehicle that sets out details of overload and a First Notice letter.

Further the First Notice letter advises that repeated overloads could result in the vehicle/ company being banned from accessing SRC.

8.4.2 STRIKE TWO:

Should, after the issue of the First Notice letter, the vehicle again arrives over the GML but under its GMV a Second Notice letter and a Notification of Overloaded Vehicle docket will be given to the driver. The Second Notice letter will advise that a further overload would result in the vehicle being banned from accessing SRC for one month and the owner of the vehicle is invited to meet with SRC management.

8.4.3 STRIKE THREE:

8.4.3.1 One Month Ban -

If the overloading continues after two warnings the vehicle will be allowed to tip its load and will not be accepted for further loads at SRC for one month.

8.4.3.2 Meeting with Sustainable Resource Centre Management -

The owner of the vehicle will be invited to meet with SRC's management to discuss the repeated violation of the RMS GLM guidelines and the .National Heavy Vehicle Law NSW. If the owner does not meet with SRC management, the ban will continue until the owner meets with SRC management

8.4.3.3 Overloaded Vehicle Administration Fee

In addition to the one month ban the vehicle will also be levied an Overloaded Vehicle Administration Fee

9 REVIEW AND EVALUATION

This procedure shall be reviewed and updated every (two) 2 years or more often as necessary to ensure relevance and compliance to QMS and RMS requirements.

- 9.1 Review may be carried out at any stage following integration with the core business activities, and can take many forms such as:
 - 9.1.1 During audit of a particular service group or branch;
 - 9.1.2 As a feedback mechanism from workers, contracts, customers or any other stakeholders;

Page: 3 of 5

- 9.1.3 Following Corrective and Preventive action;
- 9.1.4 Change in legislative requirements; and
- 9.1.5 Task or process has changed due to enhancements.

QMP-SRC-062

Quarantining of Contaminated Stockpile Procedure

1. INTRODUCTION

Fairfield City Council operates a facility known as Sustainable Resource Centre (SRC). SRC accepts construction and demolition waste in the form of concrete; brick; roof tiles; asphalt etc. SRC crushes and screens this waste material into saleable recycled products such as bedding sand, aggregates (10mm and 20mm) and road bases resulting in a consistent product that meets the Sustainable Resource Centre (SRC) and customer specifications.

The specifications are based on Australian and ISO Standards, RTA test methods and Resource NSW Standards. These standards are maintained through regular testing by an external, independent NATA accredited Laboratory.

Some of these recycled materials can be processed through SRC's Pug Mill, mixing in cement and/ or water in various strengths to make "stabilised" products.

The aim is also to maintain a consistent cost for production.

To ensure the quality of the end product the raw feed stock must be without contaminants such as asbestos, clay, rubbish, vegetation etc. To meet the required quality of raw feed stock SRC has implemented three inspections of incoming material:

- i) Visual inspection via CCTV at the weighbridge If contaminants are identified at the Weighbridge, the load is turned around and not allowed to tip off.
- ii) Visual inspection at the 'Spotter's" tower platform If contaminants are identified at the spotter's tower, the load is turned around and not allowed to tip off.
- iii) Physical inspection of material after it has been tipped off and back bladed by a front-end loader If contaminants have been identified at the physical inspection, the tipped load is wet down and re-loaded on the vehicle, which it was tipped off from.

2. PURPOSE

The purpose of this Procedure relates to those instances where contaminants are identified in the end product after passing through the screening or crushing processes.

This procedure sets out the action/s to be taken with respect to ensuring such material is isolated and cannot contaminate more end product, pending its removal to an authorised land fill facility.

3. SCOPE

This procedure is part of the commercial operations of SRC and encompasses the roles and responsibilities of SRC staff (Site Coordinator, WHSEQT Officer, Weighbridge Operators, Loaders, and Spotters) as well as SRC's crushing contractors, Concrete Recyclers.

The scope of this procedure is all processed materials at Sustainable Resource Centre.

5. **DEFINITIONS**

Term(s) or Phrase(s)	Definition(s)		
Contaminants	Foreign matter found in incoming material. It includes but not restricted to asbestos, clay, vegetation, rubbish, soil, compressed materials etc		
End product	Is the result of screening or crushing raw feed stock into aggregates, bedding sand and concrete and asphalt road base		
Raw feed stock	Incoming material such as concrete, bricks, roof tiles from construction and demolition sites and asphalt from road works		
Spotter	Incoming load inspection workers who visually and physically inspect loads for contaminants before and after they are tipped off		
SRC	Fairfield City Council's Sustainable Resource Centre		

6. ROLES AND RESPONSIBILITIES

Roles	Responsibilities
Weighbridge Operator	Record details of incoming and outgoing vehicles and visually check incoming loads for contaminants via CCTV.
Spotter	Visually and physically inspect loads for contaminants before and after they are tipped off.
Loader Operator	Operate front end loaders used to load vehicles with end products or re-load tipped material found to be contaminated.
SRC Coordinator	Organise for contaminant material to be sent to an approved tipping facility.
WHSEQT Officer	Report contaminant on Hazard Incident Report Form and assist SRC Coordinator in organising contaminant to be sent to an approved tipping facility.

7. RISK

The risks for not complying with this procedure could include:

Non-compliance breaches of relevant legislation and EPA Licence 5713

UNCONTROLLED DOCUMENT WHEN PRINTED - FirstCall Current Page: 2 of 3 Date Effective: Mar 2020 Review Date: Mar 2022

QMP-SRC-062

Quarantining of Contaminated Stockpile Procedure

- Contaminated end product resulting in financial loss and loss of customers from low quality product
- Financial loss as a result from the stockpile having to be taken to a tipping facility
- Health risks to workers that have to handle contaminated stockpiles

8. PROCEDURE

If a possible contaminant is found in a stockpile of processed end product. An inspection is carried out of the suspect stockpile to determine the type of contaminant identified in the stockpile.

The stockpile is quarantined by wetting the stockpile with the water cart and the loader transporting it the contaminated bay. The Site Supervisor notifies the WHSEQT Officer and the SRC Coordinator so they can arrange the contaminated stockpile to be taken to an approved tipping facility within 24 hours.

If contaminants can be successfully picked out of the stockpile then the quarantine can be lifted once the NATA Laboratory passes the end product. Once it passes, signs are removed and product made available for sale.

9. REVIEW AND EVALUATION

This procedure shall be reviewed and updated every 2 years or more often as necessary to ensure relevance and compliance to Council's QMS requirements.

- 9.1. Review may be carried out at any stage following integration with the core business activities, and can take many forms such as:
 - 9.1.1. During audit of a particular service group or branch;
 - 9.1.2. As a feedback mechanism from workers, contractors, customers or any other stakeholders;
 - 9.1.3. Following Corrective action;
 - 9.1.4. Change in legislative requirements; and
 - 9.1.5. Task or process has changed due to enhancements.
- 9.2. Following completion of any review, the document will be reviewed and updated in order to correct any deficiencies and non-conformances.
- 9.3. Any changes to this procedure shall be conducted in consultation with workers as appropriate and with the CBIU Branch.

QMP-SRC-063

Pug Mill Procedure

6. ROLES AND RESPONSIBILITIES

Roles	Responsibilities
Manager Waste and Cleansing Services	Responsible for the management of the Sustainable
	Resource Centre and answerable to the Group Manager
	City Operations
Coordinator Sustainable Resource	Responsible for the day to day management of operations
Centre	of Sustainable Resource Centre
Pug Mill Operator	Responsible for the operations including cleaning of the Pug
	Mill and for ensuring that there is always an adequate
	supply of cement in the silo and communicating with the
	Loader Operator filling the feeder bins and the customer
	(truck driver)
Front End Loader (Loader) Operator	Responsible for providing the quantity of material requested
	by the Pug Mill Operator through Channel 18 of the CB two-
	way radio

7. RISK

- **7.1.** Incorrect strength and/ or incorrect material provided to customers resulting in customers sourcing their stabilised materials elsewhere.
- **7.2.** Incorrect cleaning (must be done on a daily basis) of Pug Mill will cause a build-up of material in various areas of the Pug Mill (E.g. the Mixer Chamber; around conveyor belts etc. resulting in the Pug Mill shutting down resulting in loss of revenue during the shutdown period.
- **7.3.** Incorrect maintenance of Pug Mill resulting in Pug Mill breaking down loss of revenue during the repair period.
- **7.4.** Incorrect application of safety controls resulting in damage to the Pug Mill and injury sustained to Pug Mill Operator and possibly other workers.
- **7.5.** Financial loss from the Pug Mill requiring to be shut down due to malfunction.

8. PROCEDURE

The Pug Mill is operated by the pug mill operator who uses a computer software program to blend correct quantities of each relevant product resulting in a high quality product for SRC's customers.

A start up process and safety check is conducted each day to ensure the pug mill is operational. If for any reason a shutdown directive has been given, the pug mill operator will notify all customers that operations have ceased and the timeframe expectations.

8.1. Pre - Production

At the pre-production stage, the pug mill operator communicates via two way CB radio, the truck drivers' product request and will set the blend formula in the computer software accordingly. The truck driver lines up in the wait bay until the formula and product has been loaded

8.2. Batching

The pug mill operator will communicate with the loader operator on the two way radio with the product required to be loaded into the feed bins. Once loaded, the pug mill operator via the two way, will instruct the truck to move towards the safety cones located under the pug mill gob hopper. The pug mill operator will check via CCTV to ensure the truck is aligned properly. The pug mill operator will load the product into the truck and will ensure the truck does not exceed the NSW Gross maximum load limit.

8.3. Cleaning Pug Mill

At the end of each day the pug mill has to be cleaned with a high pressure washer to remove excess material. Before cleaning begins appropriate PPE must be worn and inspection on the pressure washer must be completed. All areas of the pug mill must be cleaned and signed off on the pre start check that this has been completed. Refer to SWMS-CO-SRC-003 Pug Mill Operations

UNCONTROLLED DOCUMENT WHEN PRINTED - FirstCall Current Page: 2 of 3 Date Effective: Mar 2020 Review Date: Mar 2022

QMP-SRC-063

Pug Mill Procedure

8.4. Maintenance

Weekly, monthly and yearly maintenance is required to ensure that the pug mill is operating per its manufacturers requirements. Maintenance is completed by the Pug Mill Operator or relevant contractors who specialise in that specific work. A record of maintenance is kept within our record keeping system Objective.

9. REVIEW AND EVALUATION

This procedure shall be reviewed and updated up to 2 years or more often as necessary to ensure relevance and compliance to Council's QMS requirements.

- **9.1.** Review may be carried out at any stage following integration with the core business activities, and can take many forms such as:
 - 9.1.1. During audit of a particular service group or branch;
 - 9.1.2. As a feedback mechanism from workers, contractors, customers or any other stakeholders;
 - 9.1.3. Following Corrective action;
 - 9.1.4. Change in legislative requirements; and
 - 9.1.5. Task or process has changed due to enhancements.
- **9.2.** Following completion of any review, the document will be reviewed and updated in order to correct any deficiencies and non-conformances.
- **9.3.** Any changes to this procedure shall be conducted in consultation with workers as appropriate and with the CBIU Branch.
