BROADWAY NSW 2007

Reference: ACCESS REPORT – STATE SIGNIFICANT DEVELOPMENT APPLICATION (SSDA) MUDGEE HOSPITAL

Attention: Mr Adam Durnford

Dear Adam

Thank you for inviting iAccess Consultants to undertake this access assessment of the State Significant Development Application proposal for the redevelopment of Mudgee Hospital.

This access report has been structured in accordance with the provisions of the Disability (Access to Premises) Standard 2010 as well as the provisions of the relevant Australian Standards.

Please feel free to contact us should you wish to discuss any aspect of this Access Report.

Yours sincerely,

[Signature]

ABBREVIATIONS

The following abbreviations are employed in this Checklist:

- **ACAA**: Association of Consultants in Access Australia
- **AS**: Australian Standard
- **BCA**: Building Code of Australia
- **NCC**: National Construction Code
- **USAT**: Unisex Accessible Toilet
- **AFFL**: Above Finished Floor Level
- **TGSI**: Tactile Ground Surface Indicator
1. EXECUTIVE SUMMARY

This access report has been prepared at the request of BM+G to provide access commentary on the State Significant Development Application documentation for the redevelopment works of the Mudgee Hospital, Mudgee NSW 2850.

The purpose of this access report is to highlight and review key accessible topics as they relate to design elements of the proposed redevelopment. The key accessible areas are mainly in relation to the requirements of the NCC Section D, Access and Egress and AS1428.1:2009 Design for access and mobility.

Development proposal

The Mudgee Hospital currently includes a series of buildings and carparking.

The scope of this access report is limited to the redevelopment works highlighted in the following plan extract:

![Figure 1 – Extract from Site Plan](image-url)
The redevelopment works include the following:

**Lower Ground Floor:**
- Lobby/waiting
- Pharmacy
- Health information
- Pathology
- Back of House
- Staff Administration and Amenities
- Physiotherapy / occupational therapy
- Renal Dialysis
- Oral health
- Chemotherapy
- Therapy garden and outdoor courtyards

**Ground Floor:**
- Set down and entrance from parking area
- Front of house and concourse
- Emergency Department and emergency entrance
- Medical imaging
- Maternity
- Perioperative
- Sterilising services
- Maternity
- In-patient Unit
1.1. Site Plan

The Mudgee Hospital is located at Meares Street, Mudgee, NSW 2850.

![Figure 2 – Extract from Google Maps](image)

1.2. Building Classification

The following Access Report has adopted the headings of the Disability (Access to Premises) Standard 2010. The Standard provides a framework for analysis when coupled with the technical provisions of the National Construction Code and the provisions of Australian Standards AS1428. Australian Standards provide certainty and direction to address accessibility compliance.

The NCC classification for this Development is:

*Class 9a – a health-care building*

1.3. Exclusions from this Access Report

The assessment discussed in this report is limited to the scope of works highlighted in the above Executive Summary and does not include existing areas within the site not affected by these works.

This report does also not address accessibility of any Early Works undertaken as part of any decanting required to be undertaken for the implementation of the main works.

The scope of the decanting works will need to be provided so that an accessibility assessment can be undertaken.
1.4. **Performance Solutions**

The proposed design presently does not rely upon any performance solutions.

1.5. **Access Declaration**

This report confirms that the provisions for compliance with the accessible requirements nominated in the Disability (Access to Premises – Building) Standard 2010 where possible have been incorporated into the design proposed by this State Significant Development Application documentation.

1.6. **NCC Clause D3.4 Concession**

The NCC Clause D3.4 notes a concession for accessibility to particular areas/rooms:

(a) An area where access would be inappropriate because of the particular purpose for which the area is used.

(b) An area that would pose a health or safety risk for people with a disability.

(c) Any path of travel providing access only to an area exempted by (a) or (b).

The new hospital building has several rooms of which the NCC D3.4 concession applies:

- Plant rooms
- Store rooms
- Clean and dirty utility rooms
- Equipment stores
- Cleaners areas
- Rooms where access is only permitted by specialist technicians.

The following plan extracts highlight these areas:
Figure 3 – Extract from Lower Ground Floor Plan
Figure 4 – Extract from Ground Floor Plan
2. STATUTORY FRAMEWORK

2.1. Disability Discrimination Act 1992

Section 23 of the Disability Discrimination Act 1992 states:

It is unlawful for a person to discriminate against another person on the ground of the other person’s disability:

a) by refusing to allow the other person access to, or the use of, any premises that the public or a section of the public is entitled or allowed to enter or use (whether for payment or not); or

b) in the terms or conditions on which the first-mentioned person is prepared to allow the other person access to, or the use of, any such premises; or

c) in relation to the provision of means of access to such premises; or

d) by refusing to allow the other person the use of any facilities in such premises that the public or a section of the public is entitled or allowed to use (whether for payment or not); or

e) in the terms or conditions on which the first-mentioned person is prepared to allow the other person the use of any such facilities; or

f) by requiring the other person to leave such premises or cease to use such facilities.

The Disability Discrimination Act 1992 is complaints based legislation and the Commissioner once having heard and assessed the level of discrimination may issue orders to rectify.

2.2. Legislative Framework

The legislation addressing accessibility is documented in the following Act, Code and Standards:

- Disability Discrimination Act 1992
- National Construction Code (BCA 2016)
- AS1428.1:2009 Design for access and mobility - General requirements for access - New building work
- AS1428.2:1992 Design for access and mobility - Enhanced and additional requirements - Buildings and facilities
- AS1428.4.1:2009 Design for access and mobility - Means to assist the orientation of people with vision impairment - Tactile ground surface indicators
- AS1428.5:2010 Design for access and mobility - Communication for people who are deaf or hearing impaired
- AS1680.2.1:2008 Interior and workplace lighting - Specific applications - Circulation spaces and other general areas
- AS1735.12:1999 Lifts, escalators and moving walks - Facilities for persons with disabilities
- AS2890.6:2009 Parking facilities - Off-street parking for people with disabilities
- HB198:2014 Guide to the specification and testing of slip resistance of pedestrian surfaces
### 2.3. Architectural Documentation

This Access report references the following architectural documentation prepared by Silver Thomas Hanley Architects.

### 2.4. Access Report

Australian Standards provide certainty and direction to address accessibility compliance.
3. ACCESS REPORT

3.1. Paths of Travel and Circulation

NCC Reference: D3.2 Access to buildings  
D3.3 Parts of buildings to be accessible

Australian Standard Reference: Clause 6 (Continuous Accessible Paths of Travel) of AS1428.1 2009  
AS 1428.4.1 2009 Design for access and mobility - Means to assist the orientation of people with vision impairment

3.1.1. Accessible Paths of Travel

The site plan indicates a path of travel from the Meares Street frontage to the new principal pedestrian entrance to this hospital extension. Details as to the gradients, paving materials or other elements located along the path of travel are unknown at this stage.

A continuous accessible path of travel to accessible facilities will need to be provided to enable people to ‘approach the building from the road boundary’ so that they can ‘access work and public spaces, accommodation and facilities for personal hygiene’ in accordance with the requirements of DP1 of the National Construction Code 2016.

The NCC Clause D3.2(a) identifies that

An accessway must be provided to a building required to be accessible—

(i) from the main points of a pedestrian entry at the allotment boundary; and  
(ii) from another accessible building connected by a pedestrian link; and  
(iii) from any required accessible carparking space on the allotment.

The new building entrance is via a carpark on site. Access to the carpark area is via Meares or Lewis Street.

The design proposes the location for accessible parking spaces adjacent to the principal pedestrian entrance.

The plan indicates a set down area for the new main pedestrian entrance.

3.1.2. Setdown Areas

The plan indicates a set down area adjacent to the principal pedestrian entrance. The detailing of the set down area is unknown at this stage.

If a kerb is provided separating the drop-off area from the pavement, a compliant kerb ramp will need to be provided. The detailing of the parallel set down zone will need to satisfy the provisions of AS2890.6:2009. The sketches following indicate an extract from the Australian standard as to how to detail such set down areas.

Where the pedestrian pathway and the driveway is at the same grade it will be necessary to achieve a 30% luminous contrast between the walkway and the driveway. Details of the paving materials, colour and texture will need to be provided as part of the detailed architectural documentation.
If the set down is flush with the pavement, tactile indicators and bollards are required as per Figure 2.5B of AS1428.4.1:2009:

---

**Figure 5 – Extract from AS2890.6 outlining accessible requirements for parallel parking.**

---

**Figure 6 – Extract from AS1428.4.1:2009 – Figure 2.5B**
3.1.3. Kerbs

Details of the landscaping and parking will need to be provided at a later stage.

The following information on Kerbs is provided for reference:

The requirements for kerb ramps are identified at Clause 10.7 of AS1428.1:2009:

Kerb ramps shall have—

(a) a maximum rise of 190 mm;
(b) a length not greater than 1520 mm; and
(c) a gradient not steeper than 1 in 8, located within or attached to a kerb.

The profile of ramps shall comply with the following:

(i) The design and construction of kerb ramps shall be as shown in Figures 24(A), 24(B) and 24(C).
(ii) The sloping sides of a kerb ramp shall be tapered or splayed as indicated in Figures 24(A) and 24(B).
(iii) The angle at the base of the kerb ramp shall be a minimum of 166° as shown in Figures 24(A) and 24(B).

The slip resistance of the ramps shall be in accordance with Table 3B of HB198:2014, which identifies a rating of P5/R10 for a ramp steeper than 1:14.

The following relevant extracts from the Standard are referenced below.
Figure 7 – Fig. 23 of AS1428.1:2009

NOTES:
1. Centre-line of kerb ramps and pedestrian refuges shall align across the road or vehicular driveway within the building/property alignment.
2. Top and bottom of kerb ramps shall have a sharp gradient transition.
3. For requirements for tactile ground surface indicators see AS 1428.4.1.
4. For requirements for pedestrian lights and push-button assemblies see AS 1742.14.

(b) 45° road intersection
Figure 8 – Fig. 24A of AS1428.1:2009

NOTE: Where there is no turn involved, top landing may be reduced to 1200 mm min. in length.
The slip resistance of the surface of the kerb ramps will need to be P5 or R12 to satisfy the requirements of NCC table D2.14.

The lighting level along path of travel will need to achieve a minimum level of 150lx as noted at Clause 19 of AS1428.2:1992 or the minimum lighting levels noted at AS1680.2.1:2008.

3.1.4. Grated Drains

Any grated drains located within the external paths of travel will need to be fitted with compliant heel guard grates (Clause 7.5).

7.5 Grates

Grates shall comply with the following:

(a) Circular openings shall be not greater than 13 mm in diameter.

(b) Slotted openings shall be not greater than 13 mm wide and be oriented so that the long dimension is transverse to the dominant direction of travel.
3.1.5. Luminance Contrast of Pavement Finishes

Where there is alignment between the pavement and driveway, as a minimum, the luminance contrast between the finishes will need to be a minimum of 30%.

3.1.6. Internal Accessible Paths of Travel and Circulation Spaces.

Where the length of the Paths of Travel is longer than 20m, a 1800 x 2000mm passing bay is required to be provided in accordance with the provisions of Clause 6.4 of AS1428.1:2009.

A minimum pathway of 1m width is required throughout all accessible areas.

The design also requires locations where a wheelchair user can make a 180deg turn (1540 x 2070mm) at corridor/pathway ends in accordance with the provisions of Fig. 5, Clause 6 of AS1428.1 2009 as well as 1500x1500 circulation zones where the path of travel changes direction.

Specific attention is directed to be enclosed Beverage Bay locations where the resultant area between the edge of the counter and the wall opposite is often less than the required 1540 mm clear distance.
Upon our review of the State Significant Development Application documentation, the internal paths of travel reflect compliant circulation zones as per the above requirements. This will need to be reassessed once furniture plans are provided.

3.1.7. Visual Indicators on Glazing

Where full height glazing is proposed, visual indicators will need to be fixed to the glazing in accordance with Clause 6.6 of AS1428.1:2009.

6.6 Visual indicators on glazing

Where there is no chair rail, handrail or transom, all frameless or fully glazed doors, sidelights, including any glazing capable of being mistaken for a doorway or opening, shall be clearly marked for their full width with a solid and non-transparent contrasting line. The contrasting line shall be not less than 75 mm wide and shall extend across the full width of the glazing panel. The lower edge of the contrasting line shall be located between 900 mm and 1000 mm above the plane of the finished floor level.

Any contrasting line on the glazing shall provide a minimum of 30% luminance contrast when viewed against the floor surface or surfaces within 2 m of the glazing on the opposite side.
The following are some compliant examples of the application of Visual Indicators on glazing.

In considering the statutory requirements for Visual Indicators on glazing, it is important to note other contextual factors; such as glare, lighting, floor finishes, furniture placement and casted shadows from building lines.
The following are some non-compliant examples of the application of Visual Indicators on glazing as a result of these contextual factors.

Luminance contrast is not achieved due to glare and shadow cast.

Luminance contrast is not achieved due to floor finish colour.

Luminance contrast is not achieved due to shadow cast.

Future documentation will need to be provided detailing the application of Visual Indicators if full-height glazing is proposed to any wall or doorway.
3.2. Carparking and Line Marking

NCC Reference:  
DP1(a)(i)  
DP8(a) and (b)  
D3.5 Accessible Parking  

Australian Standard Reference: AS 2890.6 2009 Car parking

3.2.1. General

Carparking is shown in the overall ground floor plan, indicating the adjacent public carpark with the inclusion of what appears to be six (6) accessible carparking spaces.

The minimum number of accessible parking spaces will need to be provided in accordance with the provisions of NCC Table D3.5.

- Outpatient Hospital: 1 space for every 50 parking spaces provided or part thereof
- Non-Outpatient Hospital: 1 space for every 100 parking spaces provided or part thereof

The line marking associated with the accessible parking spaces will need to satisfy the provisions of Section 3 of AS2890.6:2009. The international symbol for access shall be marked in accordance with Figure 3.1 of AS2890.6:2009. Refer to the extracts from the Standard below.

![Diagram of carparking and line marking]

3.3. **Floor Finishes**

NCC Reference: NCC Table D2.14
Australian Standard Reference: Clause 7 of AS1428.1:2009
HB198:2014 (slip resistance)

3.3.1. **Slip Resistance**

The slip resistance of the floor finishes will need to satisfy the minimum requirements of NCC Table 2.14 and the slip resistance ratings noted within Australian Standard HB198. Certification indicating compliance with the slip resistance provisions will need to be provided from the respective tile suppliers.

The table following summarises the minimum slip resistance levels of flooring materials to be achieved within this development.

<table>

### 3.3.2. Carpet

The finishes schedule may propose carpet finishes within this development. It will be necessary that the specification and application of the carpet satisfy the provisions of:

- NCC Clause D3.3 (g) & (h) and
- AS1428.1:2009 Clause 7.4

Clause 7.4.1 of AS1428.1:2009 states:

> Where carpets or any soft flexible materials are used on the ground or floor surface—

(a) the pile height or pile thickness shall not exceed 6 mm and the carpet backing thickness shall not exceed 4 mm;

(b) exposed edges of floor covering shall be fastened to the floor surface and shall have a trim along the entire length of any exposed edge; and

(c) at the leading edges, carpet trims and any soft flexible materials shall have a vertical face no higher than 3 mm or a rounded bevelled edge no higher than 5 mm or above that height a gradient of 1 in 8 up to a total maximum height of 10 mm

![Figure 18 – Examples of carpet joints on an accessible path of travel](image)
3.3.3. Floor transitions

Transitions between floor finishes will need to comply with Clause 7.2 of AS1428.1:2009.

Figure 19 – diagrams indicating the acceptable tolerances between pavement finishes

3.3.4. Recessed Matting

The plan may propose the installation of recessed matting. The installation will need to satisfy the following requirements from Clause 7.4.2 of AS1428.1:2009

Matting recessed within a continuous accessible path of travel—

(a) where of metal and bristle type construction or similar, its surface shall be no more 3 mm if vertical or 5 mm if rounded or bevelled, above or below the surrounding surface; and

(b) where of a mat or carpet type material, shall have the fully compressed surface level with or above the surrounding surface with a level difference no greater than 3 mm if vertical or 5 mm if rounded or bevelled.

Figure 20 – Recessed matting height tolerances
3.4. Signage

The requirements are referenced in the following legislation:

NCC Reference: D3.6 Signage
Specification D3.6

Australian Standard Reference: Clause 8 – Signage, AS1428.4.1 2009 Design for access and mobility - Means to assist the orientation of people with vision impairment
Clause 16 – Symbols, AS1428.4.2 1992 Design for access and mobility - Enhanced and additional requirements - Buildings and facilities
Clause 17 – Signs, AS1428.4.2 1992 Design for access and mobility - Enhanced and additional requirements - Buildings and facilities
DR AS1428.4.2-2017 Design for access and mobility – Wayfinding

3.4.1. Statutory Signage Requirements

The statutory requirements for signage apply to entrances, toilets, hearing augmentation and exits.

The applicable clauses to the topic of entrances of the NCC Section **D3.6 Signage** states:

*In a building required to be accessible—*

(a) braille and tactile signage complying with **Specification D3.6** must—
   
   (i) incorporate the international symbol of access or deafness, as appropriate, in accordance with AS 1428.1 and identify each—

   (A) sanitary facility, except a sanitary facility within a sole-occupancy unit in a Class 1b or Class 3 building; and

   (B) space with a hearing augmentation system; and

   (ii) identify each door required by E4.5 to be provided with an exit sign and state—

   (A) “Exit”; and

   (B) “Level”; and either

   (aa) the floor level number; or

   (bb) a floor level descriptor; or

   (cc) a combination of (aa) and (bb); and

(b) signage including the international symbol for deafness in accordance with AS 1428.1 must be provided within a room containing a hearing augmentation system identifying—

   (i) the type of hearing augmentation; and

   (ii) the area covered within the room; and

   (iii) if receivers are being used and where the receivers can be obtained; and

(c) signage in accordance with AS 1428.1 must be provided for accessible unisex sanitary facilities to identify if the facility is suitable for left or right-handed use; and
(d) signage to identify an ambulant accessible sanitary facility in accordance with AS 1428.1 must be located on the door of the facility; and

(e) where a pedestrian entrance is not accessible, directional signage incorporating the international symbol of access, in accordance with AS 1428.1 must be provided to direct a person to the location of the nearest accessible pedestrian entrance; and

(f) where a bank of sanitary facilities is not provided with an accessible unisex sanitary facility, directional signage incorporating the international symbol of access in accordance with AS 1428.1 must be placed at the location of the sanitary facilities that are not accessible, to direct a person to the location of the nearest accessible unisex sanitary facility.

DR AS 1428.4.2-2017, The Australian Standard for design for access and mobility – Wayfinding, specifies the minimum wayfinding sign requirements to enable pedestrians, particularly those who are blind, deafblind or have low vision, to enter and to navigate within buildings and/or sites, including a return route, in a safe and independent manner.

This Standard will also be of use to people with other disabilities who require enhanced information to communicate wayfinding information within buildings.

Extracts from the Standard are appended in this report.

3.4.2. Entrances

In a building required to be accessible, the accessible entrance shall be not more than 50m from the main pedestrian entrance (NCC D3.2 (b)(ii)).

The main hospital entrance is accessible.

3.4.3. Exit Signage

AS2293.1:2005 outlines details for illuminated exit signs.

6.6 SIZE OF PICTORIAL ELEMENT

The minimum allowable size of any pictorial element on an exit sign shall be determined by the maximum viewing distance intended under the design as follows:

(a) For viewing distances not greater than 32 m, in accordance with Table 6.1.

<table>
<thead>
<tr>
<th>Maximum viewing distance (m)</th>
<th>Minimum pictorial element height (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>16</td>
<td>100</td>
</tr>
<tr>
<td>24</td>
<td>150</td>
</tr>
<tr>
<td>32</td>
<td>200</td>
</tr>
</tbody>
</table>

(b) For viewing distances greater than 32 m, in accordance with the following equation:

Minimum element height = \( \frac{\text{Maximum viewing distance}}{160} \)
Braille tactile Exit signage will need to be provided at each level of the building associated with the fire egress door.

Examples of Braille Tactile Signage include:

3.4.4. WC Signage
Braille tactile WC signage will need to be provided at each public sanitary facility entrance.

Examples of Braille Tactile Signage include:

NB: Text “Unisex Toilet RH” to be used where the toilet is configured adjacent to a wall on the right, and similarly text “Unisex Toilet LH” is to be used where the toilet is adjacent to a wall on the left of the toilet pan.

3.3.7. Hearing Augmentation Signage
Braille tactile hearing augmentation signage will need to be provided in a room or area in which an inbuilt communication system is installed.

Examples of Braille Tactile Signage include:

Figure 21 – Examples of Braille Tactile Signage from www.brailletactilesigns.com.au

The documentation provided indicates compliance with the above requirements (as per review of drawings A-6200-A6202)

Clause 8 of AS128.4.1:2009 and Clause 16 & Clause 17 AS1428.4.2 1992 specify the requirements of the Braille Tactile Signage. They are appended to this report as Appendix 1 and 2.

3.4.5. General Signage Information

The following information applies to all signage principles including non-statutory signage such as wayfinding and room identification.

3.4.5.1. Signage Maintenance
The maintenance of signage is vital. All signage should have a maintenance plan, including:

- Prohibiting of sticking posters/flyers up over permanent signage
- Incorporating a cleaning schedule
- Incorporating a maintenance schedule to review condition of signage

Vegetation should be continually trimmed and upkeep is to be reviewed as part of the cemetery’s landscape maintenance to ensure signage is not hidden behind vegetation.

### 3.4.5.2. Signage Size

The recommended size of signage is dependent on the distance by which it is aiming to be identified. The following summary is a recommended guideline:

<table>
<thead>
<tr>
<th>Type</th>
<th>User</th>
<th>Distance</th>
<th>Letter Size (ref. Table 2 of AS1428.2:1992)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Gate/Building</td>
<td>Ped. &amp; Drivers</td>
<td>50m</td>
<td>150mm</td>
</tr>
<tr>
<td>Building</td>
<td>Pedestrians</td>
<td>25m</td>
<td>80mm</td>
</tr>
<tr>
<td>Building</td>
<td>Pedestrians</td>
<td>12m</td>
<td>40mm</td>
</tr>
<tr>
<td>Building</td>
<td>Pedestrians</td>
<td>6m</td>
<td>20mm</td>
</tr>
</tbody>
</table>

*Figure 22 – View range and lettering height (Source City of Sydney signage manual)*
3.4.5.3. Icon Sizing

The size of target boards shall be relative to the icon size.

Appendix D of AS1319:1994 (Safety Signs for the Occupational Environment) indicates the sizing of icons relative to their target board:

**Appendix D**

(b) Single and multiple signs with target board.

The dimensions of the target board relative to the size of the symbolic sign(s) is shown in Figure D1.

The target board should be white or yellow for warning signs, and white only for other signs. Black may also be used for warning signs (see Clause 2.3.3(b)).

As appropriated from AS1319:1994 (Safety Signs for the Occupational Environment) Appendix D, the size of the sign (target board) shall be 1.2 x Diameter of the icon, with a minimum boarder of 0.07 x Diameter of the icon.

The following Sketch indicated the minimum sizing of icons and relative target board size surrounding the icons.
The minimum size of an icon should be 100mm for overhead signage in accordance with Exit Sign requirements.

The size of icons should be in proportion to the size of the sign itself, as per the following recommendations:

<table>
<thead>
<tr>
<th>Sign Size (appropriated from AS1319:1994)</th>
<th>Icon Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>60mm x 60mm (with boarder of 3.5mm)</td>
<td>50mm x 50mm</td>
</tr>
<tr>
<td>90mm x 90mm (with boarder of 5.2mm)</td>
<td>75mm x 75mm</td>
</tr>
<tr>
<td>120mm x 120mm (with boarder of 7mm)</td>
<td>100mm x 100mm</td>
</tr>
</tbody>
</table>

3.4.5.4. Mounting Heights

The mounting heights of signage will need to incorporate the viewing zones as identified in AS1428.2:1992.
3.4.5.5. Luminance & Colour Contrast

Signs should be matt in colour, instead of a gloss finish to avoid any glare.

The minimum recommended luminance contrast for lettering on signage to the sign background is 30%.

The minimum recommended luminance contrast of a sign to its context is 30%.
3.5. **Walkways, Ramps and Landings**

NCC Reference: NCC Clause D3.3(a)(i)
Australian Standard Reference: Clause 10 of AS 1428.1:2009

3.5.1. **General**

The NCC Clause D3.3(a)(i) identifies that:

*In a building required to be accessible*—

(a) every ramp and stairway, except for ramps and stairways in areas exempted by D3.4, must comply with—

(i) for a ramp, except a fire-isolated ramp, clause 10 of AS 1428.1

The works to not propose any ramps.

The following extracts have been provided by way of information should a ramp be proposed at a later design stage.

Ramp setout specifications for ramps of gradient 1:14 are provided at Figure 14 of AS1428.1:2009.

![Figure 26 – Figure 14 of AS1428.1:2009](image)
3.6. **Fire Stairs**

NCC Reference: Table D2.14 Slip Resistance Classification
D3.3 Parts of buildings to be accessible
   (a)(ii) for a stairway

Australian Standard Reference: Clause 11 Stairways AS1428.1:2009
Clause 12 Handrails AS1428.1:2009

3.6.1. **Stairs - General**

There are two sets of fire stairs within the new building and one set of circulation stairs. The following plan extract highlights the location of fire stairs and circulation stair.

![Figure 27 – Extract from Ground Floor Plan](image-url)
3.6.2. Fire Stairs

The detailing of fire stairs will need to satisfy the requirements of Clauses 11.1 (f) & (g) of AS1428.1:2009.

Specific attention is directed to the following:

f) At the nosing, each tread shall have a strip not less than 50 mm and not more than 75 mm deep across the full width of the path of travel. The strip may be set back a maximum of 15 mm from the front of the nosing. The strip shall have a minimum luminance contrast of 30% to the background. Where the luminous contrasting strip is affixed to the surface of the tread, any change in level shall comply with Clause 7.2 and Clause 7.3.

g) Where the luminance contrasting strip is not set back from the front of the nosing then any area of luminance contrast shall not extend down the riser more than 10 mm

The provision of the nosing strip may be an applied paint finish. An example of a suitable product is the Berger Jet Dry Non-Slip Product. (Link to Berger Jet Dry Product)

The detailing of the handrail provided within the fire stairs will need to satisfy the provisions of Clause 11.2(c) which requires that there be no vertical sections in the handrail design and that the handrail follow the angle of the stairway nosing. Details will need to be provided prior to the issue of the Final Access Certification and Crown Certificate.

The details of the handrail design will need to be provided as part of the Construction Certificate documentation.

Figure 28 – Fig. 28 of AS1428.1:2009

Appropriate exit Braille Tactile Signage is required. Refer to the Signage section of this report.

A detailed plan for fire emergency exit is required, including the provision of stair sleds or the like.

3.6.3. Circulation Stairs

The circulation stairs will need to comply with the provisions noted at Clause 11 and 12 of AS1428.1:2009.

Specific attention is directed to the following:

a) Compliant handrail designs

b) Compliant handrail extensions to the top and bottom of each flight

c) Non-slip finish to going (Refer to NCC Table D2.14)
d) Non-slip 50-75 nosing fixed to each going

e) Opaque risers

f) Compliant TGSIs located at the top and bottom of each flight. TGSIs are not required at mid-landings where no additional pedestrians are added to the stair system

Note: TGSIs shall be 600mm in width (or 300mm wide where the stair is closer than 3m to an adjacent wall.)

g) Minimum lighting level of 150 lx to be achieved

The following extract Figures below highlight the main features of a compliant stair design.
The following information is provided by way of information:

12 HANDRAILS

The design and construction of handrails shall comply with the following:

(a) Handrails and balustrades shall not encroach into required circulation spaces.

(b) The cross-section of handrails shall be circular or elliptical, not less than 30 mm or greater than 50 mm in height or width for not less than 270° around the uppermost surface as shown in Figures 29(a) and 29(b). Elliptical handrails shall have the greater dimension in the horizontal axis.

(c) Exposed edges at ends and corners of handrails shall have a radius of not less than 5 mm.

(d) The top of handrails shall be not less than 865 mm nor more than 1000 mm above the nosing of stairway tread or the plane of the finished floor of the walkway, ramp or landing.

(e) The height of the top of the handrail, measured in accordance with Item (d), shall be consistent through the ramp (or stairs) and any landings.

(f) If a balustrade is required at a height greater than the handrail, both shall be provided.

(g) Handrails shall be securely fixed and rigid, and their ends shall be turned through a total of 180°, or to the ground, or returned fully to end post or wall face.

(h) The clearance between a handrail and an adjacent wall surface or other obstruction shall be not less than 50 mm. This clearance shall extend above the top of the handrail by not less than 600 mm.

(i) Handrails shall have no obstruction to the passage of a hand along the rail.

(j) The inside handrail at landings shall always be continuous.
3.7. **Doorways and Circulation at Doorways**

NCC Reference: D3.2 Access to buildings
D3.3 Parts of buildings to be accessible

Australian Standard Reference: Clause 13 (Doorways, Doors and Circulation Spaces at Doorways) of AS1428.1 2009

---

3.7.1. **Clear Door Width**

The minimum clear width of all doorways (including swing and sliding doorways) to rooms required to be accessible is to be not less than 850mm clear.

Where double doors are proposed, the active leaf is to have a minimum clear width of 850mm.

Provide confirmation of all door clear open widths.

Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.

---

3.7.2. **Luminance contrast**

Rooms that are not required to be accessible do not need to satisfy the requirements for doorway luminance contrast.

All other rooms, required to be accessible, such as nursing stations, offices etc. require compliance with doorway luminance contrast requirements noted at Clause 13.1 of AS1428.1:2009:

*All doorways shall have a minimum luminance contrast of 30% provided between—*

(a) door leaf and door jamb;
(b) door leaf and adjacent wall;
(c) architrave and wall;
(d) door leaf and architrave; or
(e) door jamb and adjacent wall.

The minimum width of the area of luminance contrast shall be 50 mm

The prevailing view is that option (b) — indicating luminance contrast between the *door leaf and adjacent wall* is the preferred option.

A table indicating wall colour and door colour with the associated luminance contrast level achieved will need to be prepared and provided to demonstrate compliance with the requirements.
of Clause 13.1 of AS1428.1:2009. Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.

3.7.3. Successive Doorways
Where there are successive doorways, a clear distance of 1450mm minimum is required between each doorway, in accordance with Figure 34 of AS1428.1:2009.

3.7.4. Door Controls
The Australian Standard requires that door hardware be located within 900-1100mm AFRL.
If lever hardware is proposed to be utilised it will be necessary for the design of the lever to comply with the provisions of Clause 13.5 of AS1428.1:2009.

![Figure 35 – Fig. 35 Section 13 AS1428.1:2009](image)

The hardware will need to be a “D” handle style fixed to both sides of the door assembly as required by Clause 13.5.2(c) of AS1428.1:2009.

3.7.5. Circulation at doorways
Clause 13.3 of AS1428.1:2009 provides direction as to the required circulation space to approach and enter rooms required to be accessible. Doorways to rooms that are not required to be accessible do not need to comply with the requirements for circulation at doorways.
If the furniture arrangement of the rooms precludes compliant circulation from being achieved, the commitment by the hospital will be to modify the work space to meet the specific needs of the employee. The work-place policy statement will need to be provided to substantiate this approach.
We have reviewed the drawings provided and based on the information contained within the State Significant Development Application drawings it appears that the circulation at doorway provisions noted at Clause 13.3 of AS1428.1:2009 are able to be achieved, with the exception of a several doorways noted below.
Once a furniture layout plan is provided we will be able to assess the circulation at doorways more thoroughly.
Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.

</tbody>
</table>

The following extracts from the Standard is provided by way of information.
Figure 38 – Figure 31 of AS1428.1:2009
3.7.6. Doors – Door Closers

Where door closers are fitted to doors, other than fire doors associated with the fire stairs, the maximum force required to be applied to the door to open the door is not to be greater than 20N force. (Clause 13.5.2(e) AS1428.1:2009).

3.7.7. Doorway Thresholds

Doors to all accessible rooms require a level threshold whereby the maximum lip shall be 3mm high for a straight edge or 5mm high for a bevelled edge. Specific attention is drawn to the doorways leading to outdoor areas. The following photograph is an example of a level threshold transition.
Figure 40 – Photograph of door threshold
3.8. Switches

Australian Standard Reference: Clause 14 (Switches and General Purpose Outlets) of AS1428.1 2009

Requirement to be Satisfied: All switches and controls on an accessible path of travel, other than general purpose outlets, shall be located not less than 900 mm nor more than 1100 mm above the plane of the finished floor and not less than 500 mm from internal corners.

3.8.1. General

The operation of many of the doors within this building will be connected to the building access control system. The nature of the activities undertaken will necessitate the overlay of restricted access to some areas.

3.8.2. Video Intercoms

Any video intercom units will need to be installed in accordance with the manufacturer’s instructions. The video intercom unit will need to be installed not closer than 5000mm to an internal corner.

3.8.3. Access Control

Access control swipe or fob readers will need to be installed between 900-1100mm AFFL and not closer than 500mm to an internal corner.

Door release buttons will need to be located between 900-1100mm AFFL and not closer than 500mm to an internal corner. The door release button will need to be the large format switches (35 x 35mm rocker switch) or the “mushroom” push button type.

The setout of video intercoms will need to be in accordance with the manufacturer’s instructions.

![Diagram of heights for switches and door handles](image1)

3.9. Sanitary Facilities

NCC Reference: NCC Clause F2.4 Accessible Sanitary Facilities
NCC Clause D3.6
NCC Specification D3.6

Australian Standard Reference: Clauses 15 & 16 of AS1428.1:2009

3.9.1. General

There are several accessible sanitary facilities within the new building. The mark up of the plan indicates a number of areas where WC facilities are planned to be provided.

There are a number of single WC facilities some of these facilities will need to be designated and detailed as ambulant WC facilities.

There are also a number of locations where showers are provided and yet there is no access to an accessible shower as required by the provisions of the building code. It will be necessary to undertake a review of the type and allocation of the toilet and shower facilities provided in addition to those associated with patient rooms.

The following plan extract highlights their locations:
3.9.2. Accessible Sanitary Facilities Review

The internal layouts as well as the position of fixtures of each accessible sanitary facility will need to be provided for our assessment. Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.

3.9.3. NCC Requirements

The table following summarises the NCC requirements to be satisfied.

<table>
<thead>
<tr>
<th>Accessible WC requirements as nominated at NCC Clause F2.4</th>
<th>Additional criteria to be satisfied</th>
<th>Criteria satisfied by the proposed design</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) accessible unisex sanitary compartments must be provided in accessible parts of the building in accordance with Table F2.4(a); and</td>
<td>Accessible WC facilities are to be provided (a) 1 on every storey containing sanitary compartments; and (b) where a storey has more than 1 bank of sanitary compartments containing male and female sanitary compartments, at not less than 50% of those banks.</td>
<td>Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.</td>
</tr>
<tr>
<td>Accessible WC requirements as nominated at NCC Clause F2.4</td>
<td>Additional criteria to be satisfied</td>
<td>Criteria satisfied by the proposed design</td>
</tr>
<tr>
<td>----------------------------------------------------------</td>
<td>-----------------------------------</td>
<td>-----------------------------------------</td>
</tr>
<tr>
<td>(b) accessible unisex showers must be provided in accordance with Table F2.4(b); and</td>
<td>Where 1 or more showers are provided, not less than 1 for every 10 showers or part thereof.</td>
<td>Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.</td>
</tr>
<tr>
<td>(c) at each bank of toilets where there are one or more toilets in addition to an accessible unisex sanitary compartment at that bank of toilets, a sanitary compartment suitable for a person with an ambulant disability in accordance with AS 1428.1 must be provided for use by males and females; and</td>
<td></td>
<td>Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.</td>
</tr>
<tr>

### Accessible WC requirements as nominated at NCC Clause F2.4

1. **Additional criteria to be satisfied**

   - **Criteria satisfied by the proposed design**

     | Criteria satisfied by the proposed design |
     |--------------------------------------------|
     | (i) an accessible unisex sanitary compartment or an accessible unisex shower need not be provided on a storey or level that is not required by D3.3(f) to be provided with a passenger lift or ramp complying with AS 1428.1. | Not applicable |

Details of the non-slip floor finish to the bathrooms will need to be provided.
Position of TMV details are to be provided as part of the Construction Certificate documentation.
Tap sets will need to be specified with lever or capstan handles.

**3.9.4. Wall Reinforcement**

Provision of wall strengthening for grabrails will need to be provided adjacent to the WC and shower of all accessible sanitary facilities.
3.9.5. **Shower Compartment**

The shower compartment will need to have an area of 1160 x 1100mm. The position of the shower rose, tapware and the soap holder recess will need to be compliant to the provisions of Clause 15 of AS1428.1.

Specific attention is directed to the requirement of the length of the hose associated with the shower rose. The Standard requires the length of the hose to be 1500mm. The placement of the hose connection point results in the possibility of the shower head reaching the WC bowl which is prohibited by the Australian Standards. The detailing of this configuration will need to be resolved as part of the detailed documentation of detailed construction certificate documentation.
3.9.6. **Handbasins**

A wash basin with compliant circulation to AS1428.1 will need to be provided.

3.9.7. **Toilet Roll Dispensers**

The location of toilet roll dispensers shall be fixed within the zone specified in Figure 41 of AS1428.1:2009.

Clause 17-Handrails of AS1428.1:2009 specifies the clearance requirement for grabrails.
The clearance between a grabrail and the adjacent wall surface or other obstruction shall be not less than 50 mm and not more than 60 mm. The clearance above a horizontal grabrail shall extend above the top of the grabrail by not less than 600 mm. The clearance below a horizontal or angled rail shall be a minimum of 50 mm except at fixing points.

Grabrails shall be fixed so that there is no obstruction to the passage of the hand along the top 270° arc of horizontal and angled grabrails. There shall be no obstruction to the passage of the hand for the full length of vertical grabrails.

The toilet roll dispenser shall therefore not be installed less than 50mm from underneath the grabrail.

3.9.8. Checklist of Accessible WCs

A checklist of the spatial arrangements to be satisfied for the design of the accessible bathroom is attached to this access report.

The following is a summary of requirements to satisfy the WC provisions of AS1428.1:2009:

- **Entry Door**
  The detailing of the circulation at doorways shall comply with the provisions of Clause 13 of AS1428.1:2009

- **Entry door**
  The luminance contrast provisions at the doorway shall comply with the provisions of Clause 13.1 of AS1428.1:2009

- **Force required to operate door**
  The force required to operate the door if fitted with a door closer is a maximum of 20N. It is assumed that autodoors will not be installed

- **Door hardware**
  The position of door hardware is to be located between 900-1100mm AFFL.

- **WC pan circulation**
  1900×2300mm

- **hand basin circulation**
  850×1500mm, the basin may encroach a maximum of 100 mm into the circulation space of the adjacent WC pan circulation

- **WC pan offset from side wall**
  450/460 mm

- **WC pan offset from rear wall**
  800±10 mm

- **WC pan backrest**
  to code requirements

- **WC pan toilet seat**
  The toilet seat will need to be the full round type, securely fixed in position, be rated 250 KG and have a minimum limits contrast of 30% with the background pan, wall or floor against which it is viewed.

- **WC pan grab rails**
  Grab rail to be mounted 800 mm above finish floor level, length of grab rail to be 1050 mm from rear wall, install 300 mm grab rail to left-hand side of the WC pan. It is assumed that the walls to which the grab rails are fixed will have the required 1100N force rating wall reinforcement required by the standard

- **Hand basin mounting height**
  Top of hand basin to be 800/830 mm above finish floor level

- **Hand basin clearances**
  The clearances around and under the hand basin need to comply with the provisions of clause 15.3 of AES 1428.1:2009. Specific attention is drawn to the plumbing installation where the required clearances under the hand basin necessitate special consideration of the bottle trap associated with the hand basin

- **Hand basin selection**
  The detailing of the hand basin requires the installation of a shelf unit. It may be possible to specify a hand basin that incorporates a shelf section thereby eliminating an additional component to be installed in the USAT

- **Hand basin mirror**
  The mirror is to be flush mounted on the wall above the sink the bottom of the mirror is to be no more than 900 mm above the finish floor level and the top of the mirror is to be a minimum of 1850 mm above the finish floor level
• Hand basin tap  It is recommended that a lever hand basin tap be installed in lieu of the capstan type
• Toilet roll holder  The position of the toilet roll holder is to be in accordance with code requirements
• Coat hooks  Coat hooks can be installed 1200 to 1350 mm above finish floor level and not closer than 500 mm from an internal corner. The coat hook can be installed on the wall or on the back of the door
• Soap dispensers/hand towel  These items are to be able to be operated by one hand and shall be installed so that the tap or dispenser is not less than 900 and not more than 1100 mm above the finish floor level.
• Baby change facility  The plan does not indicate if there is a baby change facility located within this USAT. If a baby change table is installed within this facility, then the unit will need to be installed outside of the WC circulation zone
• Braille Tactile Signage  The detailing of the Braille Tactile Signage will need to comply with the provision of NCC Clause D3.6 and NCC Specification D3.6. The location of the Braille Tactile sign is to be mounted on the latchside wall. The sign is to indicate the handing of the grabrails to the WC Pan. The following is an example of the type of information to be provided in the Braille Tactile Sign.
Details of Braille tactile signage are highlighted in the above Signage section of this report.

3.9.9. Ambulant Sanitary Facilities

Where a single toilet or a bank of toilets are provided, ambulant sanitary facilities are required.

If, for example, two unisex single toilets are collocated, only one ambulant sanitary facility is required but if the two single toilets are allocated separately to male and female use then both will need to be ambulant sanitary facilities.

The drawing set does not reflect compliance with this requirement. Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.

Refer to the State Significant Development Application plan mark-ups to review the relevant locations.

The ambulant sanitary facilities require compliance with Clause 16 of AS1428.1:2009.
Figure 51 – Fig.53A AS1428.1 2009
Figure 52 – Fig.53B AS1428.1 2009
3.10. Furniture

NCC Reference: D3.3 Parts of buildings to be accessible
Australian Standard Reference: 24 (Furniture and Fitments) of AS1428.2 1992

3.10.1. Counters

All reception counters associated with the building entrance and triage areas are to include a portion of the counter that is accessible.

The following plan extract highlights this location.

![Figure 53 – Extract from Ground Floor Plan](image)

The height of clearance beneath the unit from the finished floor should be 820 ±20 mm. Where there are two tables/counters provided, the following dimensions apply:

(a) **Height from the finished floor to the top of the unit:**
   (i) 1st unit: 750 ± 20 mm.
   (ii) 2nd unit: 850 ± 20 mm.

(b) **Height of clearance beneath unit, from the finished floor:**
   (i) 1st unit: 730 ± 20 mm.
   (ii) 2nd unit: 820 ± 20 mm.
3.10.2. Seating

If a staff member who is part of the hospital staff has mobility requirements, the hospital policy of modifying the work environment will be implemented.

Note: where possible, the furniture shall not be built in to allow for accommodation of different seating opportunities and spatial allowances for any users who may require enhanced circulation space.

3.10.3. Waiting Areas

All waiting areas require a location for a wheelchair of minimum 1300 x 800mm.

Refer to the plan mark-ups to review these relevant locations.

3.10.4. Lockers

At least one or two lockers in each bank of lockers should be designated for someone with a mobility impairment.

The designated accessible lockers are to be reflected in drawings, with the key opening, locks and handle between 900 – 1100mm AFFL. Refer to the following Sketch that illustrates this zone in blue.
If a staff member requires a locker within a certain reach range, they should be allocated an appropriate locker that best meets their needs.

3.10.5. **Beverage Bays**

If beverage bays are located within a room, the circulation space within the room will need to comply with the provisions noted in section 3.14.18 of this report, with zones of 1500 x 1500mm to ensure the ability to make a 180deg turn is provided.

The distance between the beverage bay counter and any adjacent wall shall be no less than 1540mm.

Where the beverage bay is located adjacent to a doorway, door circulation requirements apply which are noted in the Doorways section report.

Water ZIP taps shall be located not closer than 500mm from an internal corner.

The following photograph is an example of a ZIP tap that is not 500mm from an internal corner (i.e. is not compliant).
3.10.6. Work Stations

The distance between tables within work stations is to be a minimum of 1650mm.
3.11. **Lighting Levels**

Australian Standard Reference: Clause 19 of AS1428.2:1992

Appendix D of AS1680.2.1:2008

### 3.11.1. General

The plans presently do not indicate the minimum lighting levels to be achieved. It will be necessary that the Construction Certificate documentation confirm that the minimum lighting levels nominated by the Australian Standards are achieved.

In addition to the minimum lighting levels identified at Clause 19 of AS1428.2:1992 the provisions of Table D1 of AS168.2.1:2008 which nominates interior light levels to be achieved must be considered.

The following table schedules the lighting levels nominated within the Australian Standards for accessibility:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Entrances, passages &amp; walkways</td>
<td>150lx</td>
<td>160lx</td>
</tr>
<tr>
<td>Waiting rooms</td>
<td>-</td>
<td>160lx</td>
</tr>
<tr>
<td>Corridors Passageways</td>
<td>-</td>
<td>40lx</td>
</tr>
<tr>
<td>Ramps</td>
<td>150lx</td>
<td>40lx</td>
</tr>
<tr>
<td>Toilets and locker Rooms</td>
<td>200lx</td>
<td></td>
</tr>
<tr>
<td>Counter tops</td>
<td>250lx</td>
<td>320lx</td>
</tr>
<tr>
<td>General displays</td>
<td>200-300lx</td>
<td></td>
</tr>
<tr>
<td>Telephones</td>
<td>200lx</td>
<td></td>
</tr>
<tr>
<td>Accessible parking spaces</td>
<td>-</td>
<td>40lx</td>
</tr>
</tbody>
</table>

The electrical documentation will need to indicate compliance with these minimum lighting levels.
3.12. **Hearing Augmentation**

NCC Reference:  
- NCC Clause D3.7  
- NCC Clause D3.6  
- NCC Specification D3.6  

Australian Standard Reference:  
- AS1428.5:2010 Design for access and mobility - Communication for people who are deaf or hearing impaired  
- AS1428.4.1:2009  

Requirement to be Satisfied:  
NCC D3.7 Hearing Augmentation  

A hearing augmentation system must be provided where an inbuilt amplification system, other than one used only for emergency warning, is installed—

ii. in an auditorium, conference room, meeting room or room for judicatory purposes; or

iii. at any ticket office, teller's booth, reception area or the like, where the public is screened from the service provider.

---

3.12.1. **General**

A hearing augmentation system is to be provided in locations where a built-in amplification system is provided.

A built-in amplification system is a system where either speakers are installed within a room or the wall mounted monitor has built-in speakers. Such installations are typically found in meeting rooms, training rooms and waiting areas.

Where the wall mounted screen is not capable of broadcasting sound and any audio is provided by way of the speakers attached to a laptop or that are portable, the hearing augmentation provisions will not need to be applied.

**Rooms with inbuilt communication systems will need to provide with a hearing augmentation system. Additional Information to be provided prior to the issue of the Final Access Certificate and Crown Certificate.**

Section 2.3 of AS1428.1:2010 highlights the types of hearing augmentation system:

- **Persons with a hearing loss may or may not have a personal hearing aid or a cochlear implant fitted. When choosing an ALS the outcome should enable communication by all people with hearing impairment whether they wear hearing aids, or have hearing aids or cochlear implants without a telecoil (T-switch), or have hearing aids or cochlear implants with a telecoil (T-switch).**

- **ALS types include—**
  - (a) audio frequency induction loop systems (AFILSs);
  - (b) modulated radio systems (commonly referred to as FM systems); and
  - (c) infra-red (IR) systems.

Details of the proposed method of hearing augmentation to be installed will need to be provided as part of the detailed documentation provided for this project.

Where hearing Augmentation systems are installed, a Braille Tactile Sign incorporating the international symbol of deafness will need to be provided.
NCC D3.6 identifies the requirement for Braille Tactile Signage to be implemented where a hearing augmentation system is installed.

(b) signage including the international symbol for deafness in accordance with AS1428.1 must be provided within a room containing a hearing augmentation system identifying –

(i) the type of hearing augmentation; and
(ii) the area covered within the room; and
(iii) if receivers are being used and where the receivers can be obtained

Refer to the previous section of this report for details of Braille Tactile Signage requirements.
3.13. Vertical Transport

NCC Reference: D3.3 Parts of buildings to be accessible  
E3.6 Passenger Lifts  

3.13.1. General  
The new building includes two (2) passenger lifts.

3.13.2. Lift Car Dimensions

The minimum lift car dimensions to satisfy the requirements of NCC Part E is as follows:

- Passenger Lifts 1100 x 1400mm (Lift travel less than 12m)

Details of the lift are to be provided. Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate.

3.13.3. Call buttons

The detailing of the lift cars will need to satisfy the requirements of NCC Clause E3.6, the provisions of AS1735.12 and the placement of call buttons to comply with Clause 14 of AS1428.1:2009.

Attention is directed to the placement of the lift call button at each level. Many lift suppliers are locating the call button for single lift car installations in the jamb of the lift door assembly. If this surface is not flush with the adjoining wall the position of the button is not compliant with the provisions of Clause 14 of AS14281:2009. This clause requires switches not to be located within 500mm of an internal corner.

The lift call button in this case should be located on the right of the lift door as indicated in the plan extract below:

Image References:
For placement of buttons, handrails and the like, we rely upon verification of compliance with AS1735.12 from the lift manufacturer.
## 4 DISABILITY (ACCESS TO PREMISES) STANDARDS 2010- COMPLIANT REPORT

| D3.12         | Glazing on an accessway  
On an accessway, where there is no chair rail, handrail or transom, all frameless or fully glazed doors, sidelights and any glazing capable of being mistaken for a doorway or opening, must be clearly marked in accordance with Clause 6.6 of AS 1428.1. | Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate. | If full-height glazing is provided, visual indicators are required. |
| Part D4       | Braille & Tactile Signs                                                | Satisfied  | The signage detailing will need to comply with the provisions of Clause D3.6 and Specification D3.6 of the BCA as well as Clauses 16.3 and 17 of AS1428.2 which addresses the size of the pictogram as well as the height of lettering. |
| Part E3       | Lift Installation                                                      | Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate. | |
| Part F2       | Sanitary and other facilities                                          | Additional Information to be provided prior to the issue of the Final Access Certification and Crown Certificate. | |
5 APPENDIX

Appendix 1 – Clause 16 & Clause 17 AS1428.4.2 1992

The Australian Standard addressing design for access and mobility Clause 16 Symbols and Clause 17 Signs (AS1428.4.2:1992) specifies the dimensions and placement of signage:

16.1 International symbol for access The form and use of the international symbol for access shall comply with AS1428.1.

16.2 International symbol for deafness The form of the international symbol for deafness shall be as follows:

(a) The symbol for deafness shall consist of two elements, viz. a stylized ear and diagonal slash on a plain square background.

(b) The proportional layout of the symbol for deafness shall be in accordance with Figure 19.

(c) The colour of the symbol shall be white on a blue background. The blue shall be B21, UltraMarine of AS 2700 or similar.

*Table 2: Height of letters for varying viewing distances

For further information on the heights of letters for different situations, reference should be made to AS 1744.

NOTE: Helvetica Medium typeface is preferred.

17.3 Illumination of signs

Illumination of signs shall be provided in accordance with Clause 19 for general displays.

Lighting shall be placed so that unwanted reflections shall not occur on the sign.

The luminance factor of the surface of numbers, letters or symbols shall be not less than 0.3 (30 percent) different from their background.

17.4 Location of signs

Signs including symbols, numbering and lettering shall be located as follows:

(a) Where they are clearly visible to people in both a seated and standing position (see Clause 25).

NOTES:

1 Signs should be placed within a zone at a height not less than 1400 mm and not more than 1600 mm above the plane of the finished floor. Where space in this zone is used up, the zone for placement of signs may be extended downward to not less than 1000 mm from the plane of the finished floor. This height assists people to read from either a seated or a standing position, and also assists people with low vision to read the information on the sign. Letters and symbols in relief assist people with severe visual disabilities.
Appendix 2 – Clause 8 AS1428.4.1 2009

The Australian Standard addressing design from access and mobility (AS1428.4.1:2009) Clause 8

**Signage**

**8.1 Form of signs**

The BCA contains requirements for Braille and tactile signage in Specification D3.6.

Where signs are required, the form of signs shall be as follows:

(a) Where required, raised tactile and/or Braille signage shall be provided as follows:

   (i) Sanitary facilities shall be identified with the following:

      (A) Raised and visual versions of the international symbol of access.
      (B) Raised and visual versions of the male and female symbols.
      (C) Raised text that shall be in title case (e.g. Male Toilet).

      **NOTE:** Title case has the first letter of each word capitalized and the rest are lower case. Short articles, prepositions and conjunctions are not capitalized.

      (D) Braille that fully describes the visual information displayed by symbols and raised text.

      **NOTES:**
      1 For example, a sign for a male accessible toilet will include the words Male Toilet as visual, raised text and Braille as well as the raised visual male symbol.
      2 An example of a sign is given in Figure 9(a).

   (ii) Signs for unisex accessible facilities shall be provided with the letters LH or RH to indicate a left-hand or right-hand side transfer onto the WC pan. The minimum font size shall be 20 mm san serif.

      **NOTES:**
      1 An example of right-hand side (RH) transfer is shown on Figure 9(a).
      2 Helvetica and Arial are san serif fonts.

   (iii) Entry doors to airlocks serving areas containing sanitary facilities shall be identified by the use of raised text and Braille, together with raised and visual symbols identifying each sanitary facility within.

      **NOTES:**
      1 One symbol for each facility need only be used.
      2 Where the facilities for male and female are separate, a dividing line should be placed between each symbol.

(b) **Elements of a sign shall be set out singularly, or in a modular form.**

   **NOTE:** Examples of modular form are shown in Figures 9(a), 9(d), 9(e) and 9(f).

(c) **Elements of a sign shall be arranged horizontally or vertically and shall include raised text and Braille, together with raised and visual symbols.** Where words
are used, they shall be displayed horizontally.

NOTE: Other symbols may be used in association with the text.

(d) Facilities shall be identified by the use of raised text, Braille, and symbols if required. The identification shall be between 1200 mm and 1600 mm above finished floor levels.

(e) A sanitary compartment for people with ambulant disabilities shall be identified in accordance with Figure 9(c).

Braille shall be Unified English Braille (UEB), Grade 1, uncontracted, and shall be in accordance with the technical specifications set out by the Australian Braille Authority (ABA). Braille numerals shall be preceded by a Braille numerical sign.

The International Symbol of Access and the International Symbol for Deafness (see Clause 8.2.2) may be used without raised explanatory text such as ‘accessible’ or ‘hearing loop installed’.

(a) Example of identification sign for a unisex accessible toilet with a right-hand (RH) transfer

NOTES:
1. The Braille indicator is only used where there are multiple lines of text. It indicates the location of the first line of Braille.
2. Visual message: The sign displays a unisex accessible toilet with right-hand (RH) transfer.

FIGURE 9 (in part) MODULAR FORM OF SIGNS
(b) Example of identification signs for male and female toilets

NOTES:

(c) Example of identification signs for ambulant accessible male and female toilets

NOTES:

FIGURE 9 (in part) MODULAR FORM OF SIGNS
8.2 Symbols indicating access for people with disabilities

8.2.1 International symbol of access

The form of the international symbol of access shall be as follows:
(a) The symbol of access shall consist of two elements: a stylized figure in a wheelchair pointing to the right on a plain square background.

(b) The proportional layout of the symbol of access shall be in accordance with Figure 10.

(c) The colour of the Figure shall be white on a blue background in accordance with Figure 11. The blue shall be B21, ultramarine, of AS 2700, or similar.

(d) For signs indicating the direction to a facility, an arrow shall be used in combination with the international symbol of access.

NOTE: Signs identifying a facility may be used either with or without directional arrows.

8.2.2 International symbol for deafness

The form of the international symbol for deafness shall be as follows:

(a) The symbol for deafness shall consist of two elements: a stylized ear and diagonal slash on a plain square background.

(b) The proportional layout of the symbol for deafness shall be in accordance with Figure 12.

(c) The colour of the symbol shall be white on a blue background. The blue shall be B21, ultramarine, of AS 2700, or similar.
Each dedicated space shall be identified by means of a white symbol of access in accordance with AS 1428.1 between 800mm and 1000mm high placed on a blue rectangle with no size more than 1200mm, placed as a pavement marking in the centre of the space between 650mm and 850mm from its entry point.

The blue background shall be B21-Ultramarine of AS2700 or similar.

1. ACCESSIBLE PARKING SPACES
   PLAN VIEW SCALE: 1:5000M

   ACCESSIBLE PARKING SIGN TO BE POLE FIXED OR MOUNTED ON WALL, BOTTOM OF SIGN TO BE MOUNTED 1200mm AFFL. THE BLUE BACKGROUND SHALL BE B21-Ultramarine OF AS2700 OR SIMILAR.

   SIGNS MAY BE EQUAL TO RMS STANDARDS SIGNAGE.

   NOTE: The grid is for positional purposes only.

2. ACCESSIBLE PARKING SIGN

3. ACCESSIBLE SYMBOL SETOUT
ACCESSIBLE DOOR SIGN

THE LOCATION OF THE SIGN IS PREFERRED TO BE LOCATED ON THE LATCH SIDE OF THE DOOR, WHERE THIS IS NOT POSSIBLE THE SIGN MAY BE LOCATED ON THE DOOR.
Extract from AS 1422.2:1992
11.6.2 Glazing in Joinery Doors or Flush Doors

Provisions of AS 1422.2:1992

- The installation of vision panels in fire rated doors must comply with the installation of standard 600 x 100 mm fire resistant vision panel to comply with the minimum glazed area for vision panel in the total area for vision panel in the total area for vision panels tested as assemblies.

The manufacturers tested the assemblies to comply with the installation of standard.

Contacting the glass,

Footnotes of a weatherstrip of glazing are set to avoid the outer side of the lower perimeters. Avoiding the door from the landlord to the upper perimeters provides a view or a user.

To people with disabilities, all areas of the glazing in doors must be useful.

Note: Glazing in doors shall not extend more than 100 mm above the bottom edge of the door. The upper edge of the glazing shall be not less than 100 mm above the bottom edge of the door.

160 mm wide door and shall not less than 250 mm wide.
