BLP - Responses to SSDA Submissions

Item	BLP Response
Government Architect Comment: <i>Further use of the Aboriginal consultation through using place naming and planting of local species to educate the students about the Aboriginal heritage of the site.</i>	<p>Agree. Consultation with a Local Aboriginal Representative has been undertaken and will be ongoing throughout the duration of the project.</p> <p>Refer to Indigenous Species Graphics and Signage Package for further details about the proposed integration of the local species.</p>
Central Coast Council Comment: <i>A north-south tree canopy corridor (preferably eastern side) is to be provided through the site to link with the vegetation and oval on the northern side of Warnervale Road. The corridor is to include native trees whose canopy provides a linkage for fauna through the site to Warnervale Road and should include replacement street tree planting with a large canopy to allow for a squirrel glider link between the tree canopies and vegetation located on either side of Warnervale Road. This corridor currently exists on site and needs to be retained to minimise potential for the existing squirrel glider population to be adversely impacted by the proposal.</i>	<p>BLP and Kleinfelder have prepared a proposed canopy corridor to address this comment.</p> <p>Refer to Squirrel Glider Canopy Link Diagram.</p>
