Dear Aditi

**RE: Modification to the State significant development application for Alesco Senior College Argenton | PMA-669**

This is a request for modification to our SSD application requirements for PMA-669.

As this is a minor project with no external construction work proposed, we are applying to utilise a:

- Contamination Site Validation Report and;
- Long Term Environmental Management Plan.

The provision of the above audit reports ensures we meet the requirements of the modification request.

The area identified as containing contaminated led is very small in relation to the overall site. 95% of the site is reinforced with hard stand concrete.

Alesco Senior College is a small school that works with young people with mental health concerns. The young people who attend the site for education purposes are aged 16 years and above. They do not utilise the space for external activities on site. This ensures there is minimal impact to the young people when attending the site.

Grateful for your consideration.

With regards,

Therese Pantalone  
Principal
