1.0 General

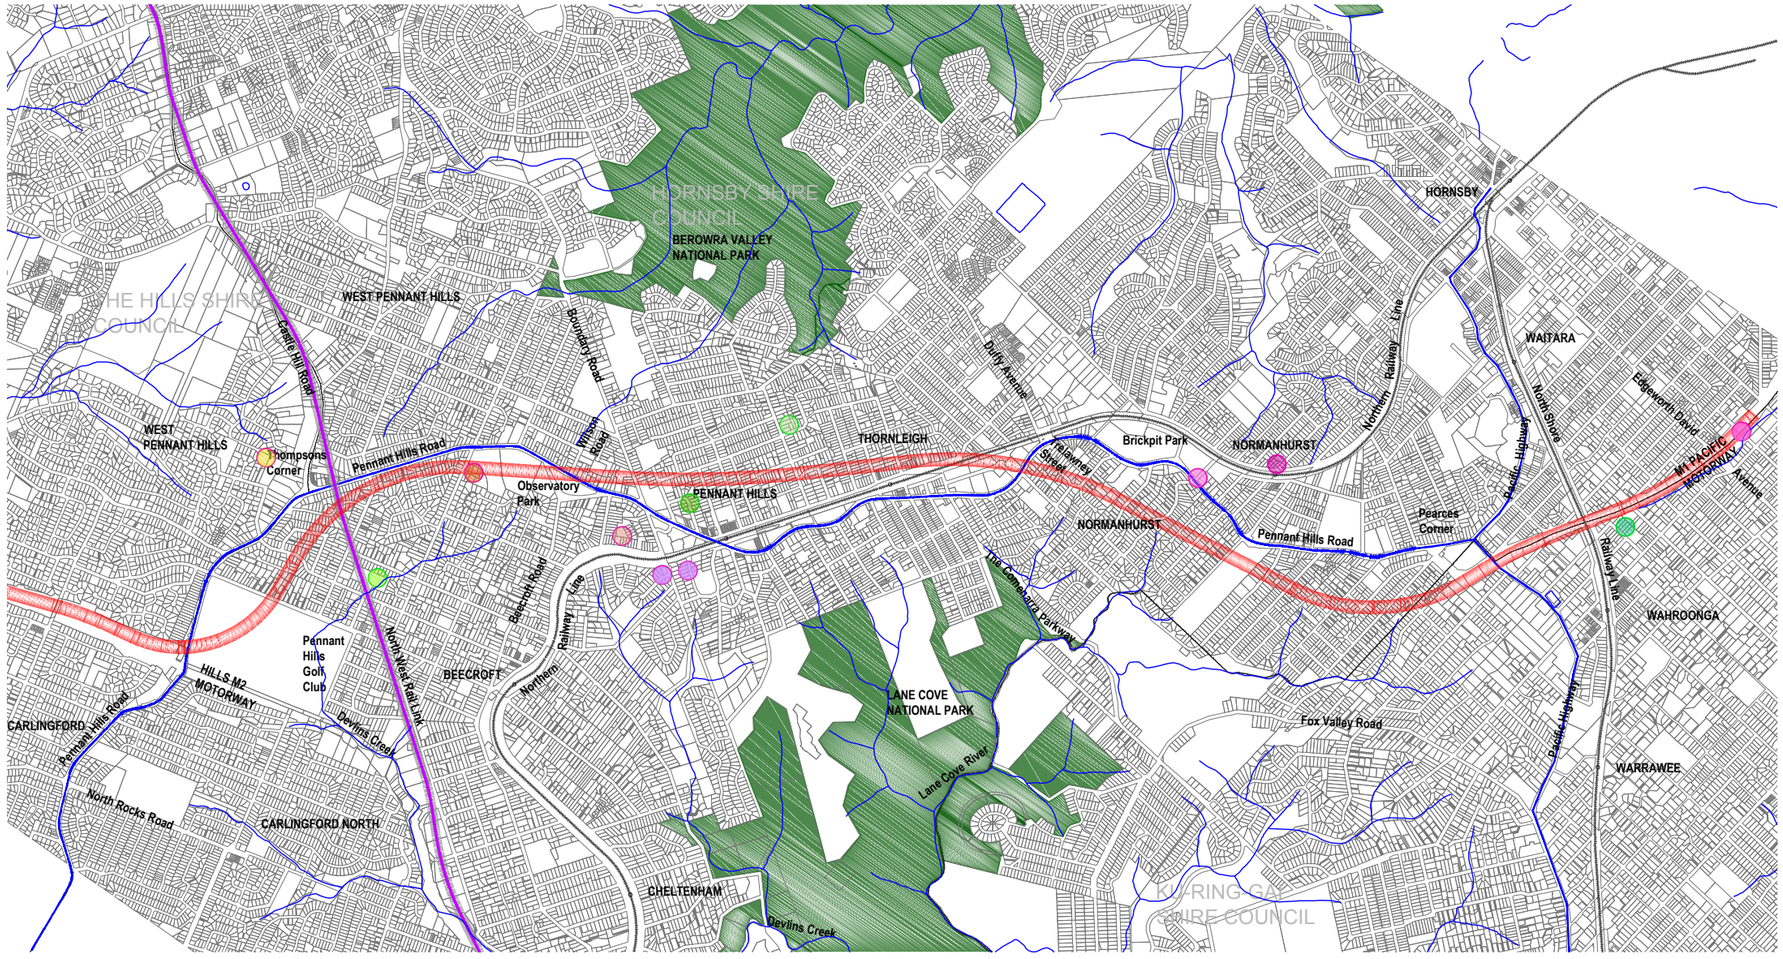
1.4.6 Existing Vegetation and Landscape Typology

Identify and assess the value of existing vegetation types and ecologies in order to determine their location and the compatibility of the proposed vegetation communities with the existing.

Design Implications:

The analysis would enable the proposition of planting palettes which:

- Derive appearance and shape from existing native and cultural vegetation forms and associations;
- Integrate responsively with existing vegetation and soil landscape types; and
- Provide for the planting of trees in streets, parks and freeway corridor areas where appropriate to create a canopied corridor.



LEGEND

Threatened Flora

- Epacris purpurascens var. purpurascens
- Tetratheca glandulosa
- Melaleuca biconvexa
- Syzygium paniculatum

Threatened Fauna

- Miniopterus schreibersii oceanensis
- Anthochaera phrygia
- Lathamus discolor
- Callocephalon fimbriatum
- Pteropus poliocephalus
- Ninox strenua

1.4.7 Existing and Proposed Land Use

The analysis has identified major and proposed land use patterns along the corridor.

Design implications:

These land use patterns:

- Influence the locations of built forms, including; tunnel ventilation structures, shared path bridges, viaducts, noise walls and public facilities;
- Influence the visual qualities of the corridor landscape;
- Demonstrate the need for, and nature of, lateral connections; and
- Identify opportunities related to public open spaces such as parks.
