

Submission to DP & E Project Number: SSI 14 6788 WestConnex New M5 : Date 23-24 Jan 2016

I make this submission in response to the Westconnex M5 Environmental Impact Statement (EIS). I object to the project and the whole WestConnex because:

- a) The suggestion that tunneling activities would need to be conducted 24 hours per day, seven days a week, including associated activities such as spoil handling and haulage is not justified. This will place great pressure on significant numbers of nearby residents throughout day and night-time periods.
- b) Tunnelling would cause vibration and damage to homes. The EIS says it will only be for a short period but does not say what a short period is.
- c) The EIS repeatedly says that threats to the liveable environment of residents during construction and operation would be subject to plans developed later. These plans should be available in the EIS.
- d) AECOM's analysis of 'alternatives' provides no solid evidence. A combination of demand management of traffic and new public transport projects, especially for the western Sydney should have been explored.
- e) Unfiltered ventilation stacks should not be used when safer filtered stacks are being used in other parts of the world. I am particularly concerned about residents on hills and in high buildings in Kingsgrove, St Peters, Arncliffe and Alexandria.
- f) The flaws and optimistic assumptions in the traffic modelling mean that toll revenue is likely to be significantly lower than forecast. AECOM has a history of providing over-optimistic traffic forecasts for toll roads, resulting in previous financial failures (e.g., Clem7).
- g) Tollways are not a solution. The average daily travel time in Sydney has been stable at about 80 minutes per person for decades, while the average trip distance has increased substantially. In this time, billions have been spent on tollways. Travellers are spending more than ever on tolls, yet are not spending any less time travelling.
- h) The project will cause immense social harm. It will destroy long-established communities. It will cause an increase in air pollution-related deaths and illnesses. The increase in air pollution will further inhibit lung and nervous system development in children.
- i) Tunnelling would expose residents to property damage and in some cases would occur only 20 metres below the house. This is not acceptable.
- j) There are numerous ways of spending \$17 billion that would deliver a much greater social and economic benefit, and would not cause so much destruction.
- k) The social impact study is little more than a 'cut and paste' job and is insulting to communities where hundreds of tenants and owners have lost homes and others will live in decimated communities.
- l) Usage of the M5 is not growing, and has not grown for some years. This project only makes an existing road more expensive for commuters. It will save little time, if any, and at an exorbitant price. As the EIS acknowledges, the tolls are going to force drivers off the M5 and onto local roads, and no wonder. The Updated Strategic Business Case shows that for almost all of its users, the Value of Time saved is less than the cost of using WestConnex.

Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong commercial stake in the project.
- The appalling standard of community consultation for this project.
- The complete failure of WestConnex to consult with the business community of Newtown, Enmore, St Peters, Arncliffe and Kingsgrove.
- The superficial analysis of alternatives to WestConnex, which fails to properly consider how options such as improved traffic management and public transport, especially in the western suburbs, could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat WestConnex poses to the endangered Green and Golden Bell Frogs at Arncliffe, which are unlikely to survive being so close to the pollution stack and portal planned for their Kogarah Golf Club habitat.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area and Sydney Park, and is unacceptably close to local schools, homes and businesses.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

3411

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

3422

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

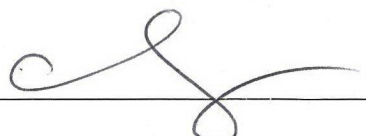

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.

- The appalling standard of community consultation for this project.
- The complete failure of WestConnex to consult with the business community of Newtown, Enmore, St Peters, Arncliffe and Kingsgrove.
- The superficial analysis of alternatives to WestConnex, which fails to properly consider how options such as improved traffic management and public transport, especially in the western suburbs, could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat WestConnex poses to the endangered Green and Golden Bell Frogs at Arncliffe, which are unlikely to survive being so close to the pollution stack and portal planned for their Kogarah Golf Club habitat.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area and Sydney Park, and is unacceptably close to local schools, homes and businesses.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

 Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and to the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong commercial stake in the project.
- The appalling standard of community consultation for this project.
- The complete failure of WestConnex to consult with the business community of Newtown, Enmore, St Peters, Arncliffe and Kingsgrove.
- The superficial analysis of alternatives to WestConnex, which fails to properly consider how options such as improved traffic management and public transport, especially in the western suburbs, could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.

- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat WestConnex poses to the endangered Green and Golden Bell Frogs at Arncliffe, which are unlikely to survive being so close to the pollution stack and portal planned for their Kogarah Golf Club habitat.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area and Sydney Park, and is unacceptably close to local schools, homes and businesses.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and to the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- The appalling standard of community consultation for this project.
- The complete failure of WestConnex to consult with the business community of Newtown, Enmore, St Peters, Arncliffe and Kingsgrove.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- The monstrous St Peters Interchange, which would destroy the character of the local area and Sydney Park, and is unacceptably close to local schools, homes and businesses.
- The superficial analysis of alternatives to WestConnex, which fails to properly consider how options such as improved traffic management and public transport, especially in the western suburbs, could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat WestConnex poses to the endangered Green and Golden Bell Frogs at Arncliffe, which are unlikely to survive being so close to the pollution stack and portal planned for their Kogarah Golf Club habitat.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong commercial stake in the project.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

3456

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

3466

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.

- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- AECOM being paid millions to do this EIS when it has a poor history of traffic modelling and a strong commercial stake in the project.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before the EIS was lodged. Work shouldn't have begun until after any planning approval was granted. I call on the government to halt this work.
- The monstrous St Peters Interchange, which would destroy the character of the local area and Sydney Park, including significant trees and heritage buildings and is unacceptably close to local schools, homes and businesses.
- The appalling standard of community consultation for this project and the complete failure of WestConnex to consult with the business community of Newtown, Enmore, St Peters, Arncliffe and Kingsgrove.
- The superficial analysis of alternatives to WestConnex, which fails to consider how a combination of options such as improved traffic management and public transport, especially in the western suburbs, could be a better use of \$15.4 billion.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat WestConnex poses to the endangered Green and Golden Bell Frogs at Arncliffe, which are unlikely to survive being so close to the pollution stack and construction works planned for their Kogarah Golf Club habitat.
- Hundreds of people being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused many people.
- The increase in toxic pollution WestConnex will cause in local areas, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to consider the negative impacts of the whole project.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

Submission to DP & E Project Number: SSI 14_6788 WestConnex New M5

3477

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong commercial stake in the project.
- The appalling standard of community consultation for this project.
- The complete failure of WestConnex to consult with the business community of Newtown, Enmore, St Peters, Arncliffe and Kingsgrove.
- The superficial analysis of alternatives to WestConnex, which fails to properly consider how options such as improved traffic management and public transport, especially in the western suburbs, could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat WestConnex poses to the endangered Green and Golden Bell Frogs at Arncliffe, which are unlikely to survive being so close to the pollution stack and portal planned for their Kogarah Golf Club habitat.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area and Sydney Park, and is unacceptably close to local schools, homes and businesses.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.

I make this submission in relation to the Environmental Impact Statement (EIS) for the WestConnex New M5 project. I strongly object to this project and the entire WestConnex of which this is a part. In particular, I strongly object to:

- The NSW Government's failure to publish a full and transparent business case for the \$15.4 billion WestConnex tollway even though taxpayers carry all the financial risk for the project.
- Construction contracts being let before this EIS was even lodged.
- The enormous amounts of extra traffic that will be induced and dumped by WestConnex into suburbs across inner, western and south-west Sydney.
- The failure of this EIS to consider how the last part of WestConnex (Stage 3) would negatively impact suburbs such as Glebe, Camperdown and Annandale, even though it cites positive impacts of the entire project as justification for building the New M5.
- The impact this extra traffic will have on the thriving retail precinct of Newtown, including King St. This traffic, along with any clearways that would inevitably result, will kill off this unique area, just as it has on Parramatta Rd and Oxford St.
- Work to remove asbestos and other toxic materials from the Alexandria Landfill site in St Peters before this EIS was lodged. This work should not have begun until after any planning approval was granted. I call on the government to halt this work now.
- AECOM being paid to do this EIS when it has a poor history of traffic modelling and a strong conflict of interest due to its commercial interests in the project.
- The appalling standard of community consultation for this project, including the failure to consult with businesses along the planned route.
- The superficial analysis of alternatives to WestConnex in this EIS, which fails to properly consider how other options could be a better use of its projected \$15.4 billion cost.
- The destruction of parks, trees and green spaces along the route, including a critically endangered fragments of remnant bush and parts of Sydney Park.
- The threat the New M5 poses to the endangered Green and Golden Bell Frogs at Kogarah Golf Club, which are unlikely to survive the tollway's construction and operation.
- Hundreds of people losing being forced from their homes and businesses before any business case is released or planning approval granted.
- People affected by compulsory acquisitions being offered below-market prices for their homes and businesses, and the distress and trauma this has already caused to many people.
- The huge increase in toxic pollution WestConnex will cause, which is known to cause cancers, respiratory and heart diseases, and impaired lung development in children.
- This EIS using the positive impact of the entire WestConnex to justify the New M5 at the same time as it fails to properly consider the negative impacts of the whole project.
- The monstrous St Peters Interchange, which would destroy the character of the local area just as planned expressways would have destroyed much of Glebe, Camperdown, Annandale and Ultimo in the 1970s if they had been built.

I ask you to acknowledge my submission and respond to each of the concerns I have raised.
