I object to the WestConnex M4-M5 Link proposals for the following reasons:

- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
- Darley Road is confirmed as a 'civil and tunnel site (drive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- I do not accept that King Street traffic congestion will be improved by this project. There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.
- Other comments:

Please include / delete (cross out or circle) my personal information when publishing this submission to your website.

Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

I am registering my strong objections to Stage 3 of Westconnex, the M4-M5 link for the following reasons:

1. SMC have made it extremely difficult for the community to access hard copies of the EIS. The local Glebe library only has one copy and this is the situation at other local libraries. There are very limited hours of access to these locations outside normal working hours. Access to the EIS is very difficult without access to a personal computer. This totally restricts open community engagement.

2. The EIS gives no information about changes to traffic increases entering the Sydney CBD caused by the Westconnex. Duncan Gay when asked about this, in connection to huge increases of traffic predicted to enter the city from Westconnex at St Peters, would only say that traffic would disperse! So thousands of extra vehicles would magically disperse – where? There is no plan for this. RMS has only just started work to identify which roads will need to be upgraded to deal with these vast numbers of extra vehicles entering the city. So it is impossible to form an understanding of the true Environmental impacts of this project – which is the very purpose of an EIS.

3. The Westconnex has been described as an integrated transport network solution. This is totally untrue as the role and integration with public transport and freight rail has not been assessed. The Government recently committed to a Metro West so this throws into question the need for Westconnex. This is especially so as the Westconnex business case outlines a shift from public transport to toll roads as a benefit. This needs to be justified economically. The EIS does not do this.

4. At the Rozelle Rail Yards site there will be 2 entry/exits for Heavy vehicles off the City West Link. Extra traffic controls are to be set up with extra sequences of traffic light controls to enable spoil trucks to access and exit this site. It is stated there will be 517 Heavy Truck movements as day of which 46 will be in Peak hours, plus 10 truck movements from the Crescent site. Maps showing the truck movements show that all these trucks will use the City West link. Similar maps for Darley Rd dive site also show trucks from there using the City West Link. At a consultation with a Westconnex staff member it was stated that trucks removing spoil from Camperdown dive site would be stationed and called up from James Craig Rd, so there will also be a constant movement of trucks from this location onto the City West Link. The EIS states the cumulative effect of truck movements from all sites onto the City West Link will be 700 one way Heavy truck movements a day and of that 208 will be in Peak hours. This will cause total gridlock. The EIS says other routes maybe considered; there are no details of these. This is unacceptable as it would allow a privately owned SMC to make whatever decisions they saw fit when and if the EIS is approved with no input from the community allowed.

5. The removal of Buruwan Park for road widening and the realignment of the Crescent is a particular loss of badly needed parkland. This park was established as a nature corridor and a buffer to shield the local residents from City West Link, there are mature trees on this site, it was not intended as a children’s recreational area with play equipment, the description in the EIS is inaccurate. Buruwan Park also has a main cycle route running through it. The alternative route being suggested is poor and takes no account of encouraging cycling as a mode of transport. The alternative routes are based on distance only and take no account of time taken or topography. Had this been done then this would have changed the assessment for the removal of the existing cycle/walkway bridge over the City West link. There is also no mention of this bridge being replaced after construction of the Westconnex. This is not acceptable.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Postcode: [2040]

We object to the location of a permanent substation and water treatment plant following the completion of the project on the Darley Road site. This will limit the future uses of the land and the community has been continually assured that the land, which is Government-owned, would be available for community purposes. The presence of this facility will forever prevent the ability for safe and direct pedestrian access to the light rail stop, with users required to walk down a dark and winding path. It will also limit the future use of the site. If a permanent facility is to be located then it should be moved to the north of the site so that it is out of sight of homes and has less visual impact on residents.

- Tunnel depths the tunnel depths for the Leichhardt area as low as 35 metres. This creates and unacceptable risk of damage to homes due to settlement (ground movement). The EIS acknowledges that at tunnelling at 35 metres and less this is a real risk. There is no mitigation provided for this risk. Instead, it states that properties will be repaired at the Government’s expense. However no details or assurance as to how this will occur are provided. The project should not be approved with such tunnelling depths permitted and with no detail as to the extent of damage and how and when it will be repaired. It will lead to the situation where residents and businesses are forced to engage structural engineers and lawyers to prove that the damage was linked to Westconnex works, with no assurance that this property damage will be promptly and satisfactorily fixed.

- The EIS states that, if the current proposal for ventilation facilities do not manage to achieve satisfactory environmental and health impacts, that further ventilation facilities may be proposed. This is unacceptable and the EIS does not provide the alternative locations for any such facilities and therefore the community is deprived of any opportunity to comment on their impacts. The EIS should not be approved on the basis that there may be additional ventilation facilities that are not disclosed in the EIS.

- Many students walk or ride to Orange Grove and Leichhardt Secondary College schools via Darley Road. There are also a number of childcare centres very close to the Darley Road site.

- The presence of 170 heavy and light vehicle movements a day at this site will create an unacceptable risk to students. The EIS should not permit any truck movements near the Darley Road site. The alternative proposal which provides that all spoil trucks enter and leave from the City West link is the only proposal that should be considered.

- All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a strict prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. The EIS needs to prohibit outright truck movements (including parking) and worker parking on all of these streets.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns. My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

I wish to register my strong objections to Stage 3 (M4-M5 Link) for the following reasons -

WESTCONNEX OBJECTIVES
The main reason given for the construction of the WestConnex motorway is to connect to Sydney Airport and Port Botany. The project has failed to meet both of these objectives.

TRAVEL TIME SAVED?
If stage 3 of the Westconnex project is completed, it is predicted that by 2033, reductions in peak travel times from Western Sydney to the airport and to the Botany Port area will be miniscule. Parramatta to Sydney airport will save 10 minutes, between Burwood and Sydney Airport the time saved will be 5 minutes and between Silverwater and Port Botany the time saved will be 10 minutes. These are only the best predictions put forward and time savings may in fact be much less. The whole rationale for building this wasteful 18 billion dollar polluting project was precisely for that reason... to reduce travel times and to connect with Port Botany and the Airport.

SUBSIDENCE AND HOUSE DAMAGE
The EIS states that property damage due to ground movement "may occur", further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of ground movement and subsidence is lessened where tunnelling is more than 35 metres underground. (Vol 2B Appendix E p 1) The planned Inner West Interchange at Leichhardt, Lilyfield and Annandale proposes tunnels which are astonishingly shallow eg John St at 22m, Hill St at 28m, Moore St 27m (Vol 2B Appendix E Part 2), Catherine St at 28m (Vol 2B Appendix E Part 1). At these shallow depths, the homes above would indisputably sustain serious structural damage and cracking. Without provision for full compensation for damage there would be no incentive for contractors or Roads and Maritime Services to minimise this damage.

DEPTHS OF TUNNELS AND INCOMPLETE EIS DIAGRAMS
In response to enquiries made to the Westconnex Info line it was confirmed that the depths are measured from the excavation to the surface. Diagrams of the tunnel dimensions in the EIS only give 5.3m as a minimum height. When further clarification was sought of the total height ie from the tunnel floor to the crown (top of the tunnel), Westconnex Infoline confirmed that 5.3m is the 'minimum height', and when pressed further that there is an extra 2.2m above this to allow for signage and jet fans, giving a total height of 7.5m. This is in contrast to information from staff at the Westconnex Information Balmain session who claimed the extra section above the minimum height of 5.3m would be between 1 to 1.5m. It throws into confusion what the total height of the tunnels are and therefore the depths of tunnels below homes, which again the Information Session staff stated could be changed by the contractors. What are residents expected to believe? Yet Westconnex is asking residents to provide feedback on inadequate, conflicting information. Significantly, there is nothing in the EIS to ensure that tunnelling would be at a sufficient depth so as not to endanger the integrity of homes, including vibration, and noise impacts.

Recent experience tells us that residents in the ongoing construction of Stages 1 and 2 have suffered extensive damage to their homes caused by vibration, tunnelling activities, and changed soil moisture content costing thousands of dollars to rectify, with their claims still not settled. Insurance policies will not cover this type of damage. The onus has been on residents to prove that damage to their homes was caused by Westconnex. Furthermore, the EIS actually concedes there will be moisture drawdown caused by tunnelling. There is nothing addressing these major concerns in the EIS. This is what residents living in the path of WestConnex are facing and it is totally unacceptable.

In view of the above no tunnelling less than 35m in depth from the surface to the crown of a tunnel (ie the top) under residences should be undertaken. And of course no tunnelling should be undertaken under sensitive
UNFILTERED STACKS
It is clear that Annandale, Glebe, Rozelle, Leichhardt and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck **four unfiltered emissions stacks** in the area plus **a large number of exit portals**, the residents of this area will suffer greatly from **poisonous diesel particulates**. This is negligent when you consider that, the World Health Organisation in 2012 declared **diesel particulates carcinogenic**. "As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, "No ventilation shafts will be built near any school."

AIR AND NOISE POLLUTION
Rozelle Interchange and surrounds will experience **increased traffic with associated noise and air pollution**— most particularly at The Crescent, Johnson St Annandale and Catherine St Leichhardt and Ross Street Glebe. These streets are already highly congested at peak times and with **a massive number of extra truck movements** and traffic associated with construction, these streets will become gridlocked during peak times. Also, the widening of The Crescent between the city West Link and Johnston Street with **an extra lane being constructed** will lead to heavy traffic congestion on a road that has **3 Primary/Infants schools**. Furthermore, the EIS states that the current Rozelle Interchange and surrounds of Anzac Bridge are presently close to full capacity. In fact, Anzac Bridge is **currently at maximum** capacity during peak hours. With the proposed construction, the area is going to be subjected to a huge increase in vehicle movements throughout the 5 year construction period.

TRUCK MOVEMENTS
The removal of spoil from the Rozelle Rail Yards will lead to **the largest number of spoil truck movements** on the entire Stage 3 project: **517 Heavy truck movements a day**, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area. The **unacceptable noise levels** which will accompany the construction of this massive interchange will further add to the discomfort of the residents. No analysis has been provided of the magnitude of increased noise pollution which will adversely affect residents. The EIS actually states that local residents may have to keep their windows and doors closed to keep out the noise and dust. The proposed work hours for construction in the Goods Yard for the tunneling and spoil removal are 24 hours a day, seven days a week. This could lead to loss of sleep for local residents as well as loss of lifestyle. There will also be disturbance of soil in the old Rozelle Goods Yard which may be thick with toxic contaminants such as **lead and asbestos** (as was the case in St Peters.) You made no provision for the safe removal of these toxic substances in St Peters and I do not see any provision in the EIS for their safe removal in this area.

PROPOSED 'PARK'
The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and **poisonous smoke stacks** borders on being criminally negligent. This new **'recreational area'** will be subject to the dangerous invisible particulates of 2.5 microns and smaller so many residents and children will be unaware that they are being poisoned. **All evidence shows that these particulates are linked with increased cases of asthma, lung disease, cancer and stroke** placing further pressure on our already overloaded health system.

RESIDENT CONSULTATION
Although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major **changes to the project design and construction methodologies**. The community would have no say in this process!

Further, in the introduction of the EIS it clearly states that the information in the EIS is 'indicative of the final design' only. The reality of this statement means that the project may be completely different to stated plans in the EIS and shows the process is a sham.
I wish to register my strong objections to Stage 3 (M4-M5 Link). My reasons are set out below:

1. REASONS FOR WESTCONNEX
The main reason given for the construction of the WestConnex motorway is to connect to Sydney Airport and Port Botany. The project has failed to meet both of these objectives.

2. TRAVEL TIME SAVED?
If stage 3 of the Westconnex project is completed, it is predicted that by 2033, reductions in peak travel times from Western Sydney to the airport and to the Botany Port area will be miniscule. Parramatta to Sydney airport will save 10 minutes, between Burwood and Sydney Airport the time saved will be 5 minutes and between Silverwater and Port Botany the time saved will be 10 minutes. These are only the best predictions put forward and time savings may in fact be much less. The whole rationale for building this wasteful 18 billion dollar polluting project was precisely for that reason... to reduce travel times and to connect with Port Botany and the Airport.

3. SUBSIDENCE AND HOUSE DAMAGE
The EIS states that property damage due to ground movement "may occur", further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of ground movement and subsidence is lessened where tunnelling is more than 35 metres underground. (Vol 2B Appendix E p 1) The planned Inner West Interchange at Leichhardt, Lilyfield and Annandale proposes tunnels which are astonishingly shallow eg John St at 22m, Hill St at 28m, Moore St 27m (Vol 2B Appendix E Part 2), Catherine St at 28m (Vol 2B Appendix E Part 1). At these shallow depths, the homes above would indisputably sustain serious structural damage and cracking. Without provision for full compensation for damage there would be no incentive for contractors or Roads and Maritime Services to minimise this damage.

4. DEPTHS OF TUNNELS AND INCOMPLETE EIS DIAGRAMS
In response to enquiries made to the Westconnex Info line it was confirmed that the depths are measured from the excavation to the surface. Diagrams of the tunnel dimensions in the EIS only give 5.3m as a minimum height. When further clarification was sought of the total height ie from the tunnel floor to the crown (top of the tunnel), Westconnex Infoline confirmed that 5.3m is the 'minimum height', and when pressed further that there is an extra 2.2m above this to allow for signage and jet fans, giving a total height of 7.5m. This is in contrast to information from staff at the Westconnex Information Balmain session who claimed the extra section above the minimum height of 5.3m would be between 1 to 1.5m.

It throws into confusion what the total height of the tunnels are and therefore the depths of tunnels below homes, which again the Information Session staff stated could be changed by the contractors. What are residents expected to believe? Yet Westconnex is asking residents to provide feedback on inadequate, conflicting information.

Significantly, there is nothing in the EIS to ensure that tunnelling would be at a sufficient depth so as not to endanger the integrity of homes, including vibration, and noise impacts.

Recent experience tells us that residents in the ongoing construction of Stages 1 and 2 have suffered extensive damage to their homes caused by vibration, tunnelling activities, and changed soil moisture content costing thousands of dollars to rectify, with their claims still not settled. Insurance policies will not cover this type of damage. The onus has been on residents to prove that damage to their homes was caused by Westconnex. Furthermore, the EIS actually concedes there will be moisture drawdown caused by tunnelling. There is nothing addressing these major concerns in the EIS. This is what residents living in the path of WestConnex are facing and it is totally unacceptable.

In view of the above no tunnelling less than 35m in depth from the surface to the crown of a tunnel (ie the top) under residences should be undertaken. And of course no tunnelling should be undertaken under sensitive sites.
5. HEALTH DANGERS
It is clear that Annandale, Glebe, Rozelle, Leichhardt and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck four unfiltered emissions stacks in the area plus a large number of exit portals, the residents of this area will suffer greatly from poisonous diesel particulates. This is negligent when you consider that, the World Health Organisation in 2012 declared diesel particulates carcinogenic. " As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, "No ventilation shafts will be built near any school."

6. AIR AND NOISE POLLUTION
Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution—most particularly at The Crescent, Johnson St Annandale and Catherine St Leichhardt and Ross Street Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times. Also, the widening of The Crescent between the city West Link and Johnston Street with an extra lane being constructed will lead to heavy traffic congestion on a road that has 3 Primary/Infants schools.
Furthermore, the EIS states that the current Rozelle Interchange and surrounds of Anzac Bridge are presently close to full capacity. In fact, Anzac Bridge is currently at maximum capacity during peak hours. With the proposed construction, the area is going to be subjected to a huge increase in vehicle movements throughout the 5 year construction period.

7. TRUCK MOVEMENTS
The removal of spoil from the Rozelle Rail Yards will lead to the largest number of spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area.
The unacceptable noise levels which will accompany the construction of this massive interchange will further add to the discomfort of the residents. No analysis has been provided of the magnitude of increased noise pollution which will adversely affect residents. The EIS actually states that local residents may have to keep their windows and doors closed to keep out the noise and dust. The proposed work hours for construction in the Goods Yard for the tunneling and spoil removal are 24 hours a day, seven days a week. This could lead to loss of sleep for local residents as well as loss of lifestyle.
There will also be disturbance of soil in the old Rozelle Goods Yard which may be thick with toxic contaminants such as lead and asbestos (as was the case in St Peters.) You made no provision for the safe removal of these toxic substances in St Peters and I do not see any provision in the EIS for their safe removal in this area.

8. LOSS OF PARKS AND OPEN SPACE
The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this Inner City area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, IJTS and the CBD.

9. PROPOSED PARK
The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and poisonous smoke stacks borders on being criminally negligent. This new ‘recreational area’ will be subject to the dangerous invisible particulates of 2.5 microns and smaller so many residents and children will be unaware that they are being poisoned. All evidence shows that these particulates are linked with increased cases of asthma, lung disease, cancer and stroke placing further pressure on our already overloaded health system.

10. RESIDENT CONSULTATION
Although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major changes to the project design and construction methodologies. The community would have no say in this process!
Further, in the introduction of the EIS it clearly states that the information in the EIS is ‘indicative of the final design’ only. The reality of this statement means that the project may be completely different to stated plans in the EIS and shows the process is a sham.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485 for the reasons set out below.

1. The TfNSW website says "The Sydney Metro West project is Sydney's next big railway infrastructure investment" but the Cumulative Impact assessment by AECOM (App C) does not include West Metro. A business case for West Metro should be completed before determination of the Project.

2. The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.

3. Emissions were not modelled beyond 2033. This is an omission, as the contractual life of the project is significantly longer, until 2060. The EIS states, on page 22-15 that 'it is expected that savings in emissions from improved road performance would reduce over time as traffic volumes increase'. Therefore, the longer-term outcome of the project is likely to be an increase in GHG emissions.

4. Bridge Road School - Pyrmont Bridge Road site - The EIS states that 'construction activities are predicted to impact' this School. However, the only mitigation proposed is to consult with the School 'to identify sensitive receivers of the school along with periods of examination'. (Table 5-120) The EIS should not be approved on the basis that it does not propose any measures to reduce the impacts to this School. The EIS simply states that 'where practicable' work should be scheduled to avoid major student examination period when students are studying for examinations such as the Higher School Certificate. This is inadequate and students will be studying every day in preparation for examinations and this proposal will impact on their ability to be provided with an education. Consultation is not considered an adequate response and detailed mitigation should be provided which will reduce the impacts to students to an acceptable level.

5. Improving connectivity with public transport, including trains, light rail and bus services in the inner west would make the Parramatta Road corridor a more attractive place to live, work and socialise.

6. Increased traffic on local roads will decrease residential amenity and decrease the potential for new higher density housing. This will affect numerous streets, with particularly major impacts on The Crescent, Minogue Crescent, Ross, Mount Vernon, Catherine, Ross and Arundel streets in Glebe; and Euston Road, McEvoy, Botany, Wyndham, Bourke and Lachlan Streets in the Green Square area. In the redevelopment areas, land adjoining these streets may suffer a loss of development potential, a loss of value and will bear the additional costs of designing for noisy environments.

Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- The EIS at 7-21 states that Community update Newsletters were distributed to residents ‘near the project footprint’ in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses ‘letterboxed’. This statement of community engagement should be rejected by the Department.
- Darley Road is confirmed as a ‘civil and tunnel site (dive site) with a ‘Motorway Operations’ site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- I do not accept that King Street traffic congestion will be improved by this project. There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- Why is there no detailed information about the so called ‘King Street Gateway’ included in the EIS?
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow ‘swoosh’ that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be ‘encouraged’ to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that ‘definitive’ rather than ‘indicative’ alignments could be published. The EIS should be withdrawn till such time that it is a true and fair ‘definitive’ document open for genuine public comment.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name __________________________ Email __________________________ Mobile __________________________
Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney’s congestion problem. The negative impacts on the health and well-being of local community’s both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. I understand this includes full publication on the Department's website of my submission, any attachments, and any of my personal information in those documents, and possible supply to third parties such as state agencies, local government and the proponent.

I have not made a reportable donation to a political party.

Yours sincerely,

Polly Kornie
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

- The EIS states that the risk of ground settlement is lessened where tunnelling is more than 35m (EIS Vol 2B App E p1). Yet the depths of tunnelling in streets leading to and around the Inner West Interchange are astonishingly low, e.g., John St at 22m, Emma St at 24m, Hill St at 28m, Moore St 27m, Piper St 37m, (Vol 2B Appendix E Part 2), Catherine St at 28m (Vol 2B Appendix E Part 1) - homes would indisputably sustain damage or cracking at these depths.

- Given that the modelling for air quality is based on the traffic modelling, which, as shown above, is fundamentally flawed, and given poor air quality has a significant health impact the EIS should not be approved until an independent scientifically qualified reviewer has analysed the stated air quality outcomes and identified any deficits.

- Concentrations of some pollutants PM$_{2.5}$ and PM$_{10}$ are already near the current standard and in excess of proposed standards (p9-81, p9-93). It is critical to note that these particulates are a classified carcinogen and are known to have critical, and at times fatal, consequences if elevated. People living within 500 metres of heavily affected areas have demonstrably shorter lives, much higher incidences of chronic lung conditions and higher levels of cardiovascular diseases.

- I object to the whole WestConnex project and Stage 3, the M4-M5 Link in particular, because I object to paying high tolls to fund a road project that does not benefit Western Sydney.

- The EIS notes that an ‘Operational Traffic Performance Review’ will be undertaken at 12 months and five years after the M4-M5 Link is open to consider the need for “post-opening mitigation measures” (Page 223, Chapter 9.8, Appendix H). I object to this approach as it is contrary to the requirements of the EIS process and reflects a clear admission on the part of the NSW Government that:
  - It has no confidence in the traffic modelling process to predict to any reliable extent the likely impacts of the Project;
  - It is unable or unprepared to describe the true impacts of the Project on the people of NSW;
  - It has not considered or budgeted for the potentially significant additional roadworks required to address the impacts of the Project (or the need for road upgrades to feed toll-paying drivers to WestConnex).

- The modelling conclusions are internally inconsistent. There is an assumption that traffic would dissipate at the edge of the motorway with no negative impacts on the CBD, Mascot and Alexandria. However there is also an assumption that additional roads would be needed to cope with said traffic.
This document is vague, lacking in detail confusing and confused. Here are my objections:
1. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck four unfiltered emissions stacks in the area plus a large number of exit portals, the residents of this area will suffer greatly from poisonous diesel particulates. This is negligent when you consider that, the World Health Organisation in 2012 declared diesel particulates carcinogenic.
As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments and surrounds will experience increased traffic with associated noise and air pollution—most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe.
2. Also, the widening of the Crescent between the city West Link and Johnston street with an extra lane being constructed will lead to heavy traffic congestion on a road that has 3 Primary/Infants schools.
3. The EIS states that property damage due to ground movement "may occur, further stating that settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of ground movement and subsidence is lessened where tunnelling is more than 35 metres underground. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are astonishingly shallow eg John St at 22metres Hill St at 28metres Moore St 27 metres. (Vol 2B Appendix E Part 2) Catherine St at 28metres (Vol 2B Appendix E Part 1). At these shallow depths, the homes above would sustain serious structural damage and cracking.
5. Rozelle Rail Yards will have 400 car parking spaces provided for workers (EIS). The daily workforce for these sites is stated to be approximately 550. This means that 150 vehicles will need to park in nearby local streets which are already over-subscribed during weekdays by commuters taking the light rail.
6. The removal of spoil from the Rozelle Rail Yards will lead to the largest number of spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours.
7. The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area.
8. The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and poisonous smoke stacks borders on being criminally negligent. This new "recreational area" children will be unaware that they are being poisoned.
9. The introduction of the EIS clearly states that the information in the EIS is "indicative of the final design only. The reality of this statement means that the project may be completely different to stated plans in the EIS. Furthermore although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major changes to the project design and construction methodologies. The community would have no say in this process.
I am strongly opposed to Stage 3 (M4-M5 Link) for the following reasons -

WESTCONNEX PURPOSE
1. The main reason given for the construction of the WestConnex motorway is to connect to Sydney Airport and Port Botany. The project has failed to meet both of these objectives.

QUESTIONABLE TRAVEL
2. If stage 3 of the Westconnex project is completed, it is predicted that by 2033, reductions in peak travel times from Western Sydney to the airport and to the Botany Port area will be miniscule. Parramatta to Sydney airport will save 10 minutes, between Burwood and Sydney Airport the time saved will be 5 minutes and between Silverwater and Port Botany the time saved will be 10 minutes. These are only the best predictions put forward and time savings may in fact be much less. The whole rationale for building this wasteful 18 billion dollar polluting project was precisely for that reason... to reduce travel times and to connect with Port Botany and the Airport.

SUBSIDENCE AND HOUSE DAMAGE
3. The EIS states that property damage due to ground movement "may occur", further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of ground movement and subsidence is lessened where tunnelling is more than 35m underground. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are extremely shallow eg John St at 22m, Hill St at 28m, Moore St 27m (Vol 2B Appendix E Part 2) Catherine St at 28m (Vol 2B Appendix E Part 1). At these shallow depths, the homes above would indisputably sustain serious structural damage and cracking. Without provision for full compensation for damage there would be no incentive for contractors or Roads and Maritime Services to minimise this damage.

UNFILTERED STACKS - HEALTH DANGERS
4. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck four unfiltered emissions stacks in the area plus a large number of exit portals, the residents of this area will suffer greatly from poisonous diesel particulates. This is negligent when you consider that, the World Health Organisation in 2012 declared diesel particulates carcinogenic. " As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, "No ventilation shafts will be built near any school."

PARKING CONGESTION
5. Rozelle Rail Yards will have 400 car parking spaces provided for workers(EIS). The daily workforce for these sites is stated to be approximately 550. This means that 150 vehicles will need to park in nearby local streets which are already over-subscribed during weekdays by commuters taking the light rail.

AIR AND NOISE POLLUTION
6. Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution—most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe.
These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times. Also, the widening of the Crescent between the city West Link and Johnston street with an extra lane being constructed will lead to heavy traffic congestion on a road that has 3 Primary/Infants schools.

Furthermore, the EIS states that the current Rozelle Interchange and surrounds of Anzac Bridge are presently close to full capacity. In fact, Anzac Bridge is currently at maximum capacity during peak hours. With the proposed construction, the area is going to be subjected to a huge increase in vehicle movements throughout the 5 year construction period.

REMOVAL OF SPOIL - TRUCK MOVEMENTS

7. The removal of spoil from the Rozelle Rail Yards will lead to the largest number of spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area.

The unacceptable noise levels which will accompany the construction of this massive interchange will further add to the discomfort of the residents. No analysis has been provided of the magnitude of increased noise pollution which will adversely affect residents. The EIS actually states that local residents may have to keep their windows and doors closed to keep out the noise and dust. The proposed work hours for construction in the Goods Yard for the tunneling and spoil removal are 24 hours a day, seven days a week. This could lead to loss of sleep for local residents as well as loss of lifestyle.

There will also be disturbance of soil in the old Rozelle Goods Yard which may be thick with toxic contaminants such as lead and asbestos (as was the case in St Peters.) You made no provision for the safe removal of these toxic substances in St Peters and I do not see any provision in the EIS for their safe removal in this area.

LOSS OF PARKS AND RECREATIONAL SPACE

8. The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this innercity area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, IJTS and the CBD.

PROPOSED PARK

9. The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and poisonous smoke stacks borders on being criminally negligent. This new "recreational area" will be subject to the dangerous invisible particulates of 2.5 microns and smaller so many residents and children will be unaware that they are being poisoned. All evidence shows that these particulates are linked with increased cases of asthma, lung disease, cancer and stroke placing further pressure on our already overloaded health system.

CONSULTATION

10. Although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major changes to the project design and construction methodologies. The community would have no say in this process!

SUBJECT TO CHANGE

11. In the introduction of the EIS it clearly states that the information in the EIS is “indicative of the final design” only. The reality of this statement means that the project may be completely different to stated plans in the EIS with residents given no say in the final outcome.

For the reasons listed above the project should not go ahead and alternatives looked into that seriously takes into consideration all of the issues raised above such as has been proposed by the City of Sydney Council.
I object to the Westconnex M4-M5 link proposals as contained in the EIS for the following reasons:

1. The EIS is a strategy document only. It does not commit to any design, and therefore it doesn’t address any local issues which are created by the construction of the M4-M5 link. Its whole purpose is to prepare a legal and bureaucratic pathway for the sale of Sydney Motor Corporation to the private sector thereby removing the Government from the oversight and responsibility for the design and construction. It also endeavours to lock out the public from being able to have any say in what is built, how it is built and where it is built.

2. The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street will greatly increase during the construction period and also be greatly increased by the time Stage 3 is completed. It states that Stage 3 will do nothing to improve traffic congestion in the area in fact it will add to the problem. Many of these areas are already congested at Peak times. This will be highly negative for the local area as more and more people try to avoid the congestion by using rat runs through the local areas on local streets.

3. The proposed work hours for the Rozelle Rail Yards Site are tunnelling and spoil handling 24 hours a day seven days a week. On ground construction Mon-Fri 7.00am - 6.00pm, Sat 8.00am-1.00pm. However as has been experienced by those at Haberfield and St Peters these hours and especially late and night work have been extended and implemented when the schedules have fallen behind and this has lead to great physical and mental stress for many residents through interrupted sleep and loss of sleep especially for those with children. The roads and sites at night in the area will see a marked increase in noise from truck movements, truck reversing alarms and running machinery. It will also see a marked increase in light during the night hours with site illumination and vehicle head lights as has been experienced in other areas. These problems have not been addressed in the EIS.

4. The Rozelle Rail Yards site is the location of 3 Unfiltered Pollution Stacks. There is a fourth stack on Victoria Rd close to Darling St almost opposite Rozelle Primary School. If the Western Harbour Tunnel is built there will also be a total of 7 Tunnel Portals. Tunnel Portals are also areas of high levels of pollution. It is totally unacceptable that the Pollution Stacks are unfiltered. Recently built tunnels in Tokyo successfully filter 98% of all pollutants. There are at least 5 schools and childcare centres in close proximity to these pollution stacks.

5. Heart disease will skyrocket due to air pollution caused by Westconnex bringing more cars into the Inner West says Paul Torzillo, Head of Respiratory medicine at Royal Prince Albert Hospital. Inner West Courier 23rd May 2017

6. Motor vehicles account for 14% of Particulate Pollution of 2.5 microns and less in Australia. There is no safe level to exposure to particulate matter of 2.5 microns and less. Fine particulate matter is linked with Asthma, Lung Disease, Cancer, Stroke and poor lung development in children. Those most at risk are the old, the young and the unborn of pregnant women.

7. The Rozelle Rail Yard stacks are stated to be 38m high and are situated in a valley area. The majority of Balmain Road is 39m above sea level and Annandale St is at 29m above sea level. Both are considerably less than 1 kilometre from the Rail Yard stacks so pollution will be blown directly into many homes in these areas. This will expose the residents of Annandale, Lilyfield, Rozelle and Balmain to highly increased health risks.

8. There will be major impacts on the Anzac Bridge with a projected increase of 60% in daily traffic. There will also be major impacts to the Sydney City Centre. The EIS states that this will lead to major impacts on bus travel time and reliability. The EIS’s suggests that people will have to adjust their travel times to starting for work earlier and finishing later. This is unacceptable and underlines Westconnex’s waste and total failure.
This document is vague, lacking in detail confusing and confused. Here are my objections:

1. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck **four unfiltered emissions stacks** in the area plus a **large number of exit portals**, the residents of this area will suffer greatly from **poisonous diesel particulates**. This is negligent when you consider that, the World Health Organisation in 2012 declared **diesel particulates carcinogenic**.

As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments and surrounds will experience **increased traffic with associated noise and air pollution** — most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe.

2. Also, the widening of the Crescent between the city West Link and Johnston street with **an extra lane being constructed** will lead to heavy traffic congestion on a road that has **3 Primary/Infants schools**.

3. The EIS states that property damage due to ground movement "may occur, further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of **ground movement and subsidence** is lessened where tunnelling is more than **35 metres underground**. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are astonishingly shallow eg **John St at 22metres Hill St at 28metres Moore St 27 metres**.(Vol 2B Appendix E Part 2) **Catherine St at 28metres**.(Vol 2B Appendix E Part 1). At these shallow depths, the homes above would sustain serious structural damage and cracking.

5. Rozelle Rail Yards will have **400 car** parking spaces provided for workers(EIS). The daily workforce for these sites is stated to be approximately **550**. This means **150 vehicles** will need to park in nearby local streets which are already over-subscribed during weekdays by commuters taking the light rail.

6. The removal of spoil from the Rozelle Rail Yards will lead to the **largest number of spoil truck movements** on the entire Stage 3 project: **517 Heavy truck movements a day**, of which 46 are stated to take place during peak hours.

7. **The removal of Buruwan Park** between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area.

8. The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and **poisonous smoke stacks** borders on being criminally negligent. This new "recreational area" children will be unaware that they are being poisoned.

9. The introduction of the EIS clearly states that the information in the EIS is "indicative of the final design only. The reality of this statement means that the project may be completely different to stated plans in the EIS. Furthermore although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major changes to the project design and construction methodologies. The community would have no say in this process."
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

**Noise and disruption from construction**

I object to the proposal for the Darley Road Civil and Tunnel Construction site at Leichhardt because of the noise and disruption impact it will have on residents during periods of extended construction. The proponent has a very poor track record of managing the impacts of Stages 1 and 2 of this project. In addition, the conditions of approval are so broad as to make enforcing compliance with Council or EPA regulations impossible. The protections for residents are ineffectual and the abuse of the Critical State Significant Infrastructure powers is continuous.

The reality for residents living with the Stages 1 and 2 of WestConnex is night after night of disruption and disturbance with no respite and no way of enforcing compliance. In addition, the policy for mitigation entitlements such as noise protection or respite accommodation is not transparent and is discretionary. Many residents especially the most vulnerable such as those in rental properties or in public housing are unwilling to complain about their situation.

In St Peters in mid-September 2017 the Stage 2 Joint venture’s contractors were digging up pipes all one weekend, resulting in two burst water mains. They worked through Saturday night until after 1am on Sunday morning when they should have finished at 6pm on Saturday. Many of the residents were without water for much of the weekend. On Monday night at 8.30pm RMS turned up unannounced with concrete saws and jackhammers. On Tuesday night, RMS were supposed to stop at 6pm but again the work until after midnight. A resident whose bedroom was right next door to the work, posted a video of the deafening concrete saws in use after midnight with the caption “It’s impossible to live here at the moment”. Many local residents are unaware of the construction impacts and that there will be months of construction work which will have to take place out of hours. The EIS does not specify which works to establish the site will take place during standard construction hours.
The Department of Planning and Environment should oppose the approval of the Darley Road Civil and Tunnel Construction site at Leichhardt because alternatives are available which will have less impact on residents or which will impact fewer residents during the construction phase. These alternatives should be assessed. If not suitable then the proponent must do without a dive site. It is not acceptable to treat communities like this. The mistakes of Stages 1 and 2 should not be repeated.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Suburb: Camperdown

Postcode: 2050

a. No road junction as large and complex as the extraordinary spaghetti junction proposed to go underground has been built anywhere in the world. The feasibility is not tested. There are no international or national standards for such a construction.

b. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

c. The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.

d. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).

e. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.

f. I strongly object to the privatisation of the WestConnex project that turns public monies into private profit.

g. Are there other potentially serious problems with Sydney Water utility services (described at EIS 12-57) or with other utilities in other suburbs or along the proposed M4-M5 tunnel alignment? If so, the EIS proposals and application should not be approved till these are all disclosed, researched, surveyed and the resolution publicly published.

h. It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033. The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.

i. The mechanical ventilation proposed depends on single direction tunnel construction, so how it can possibly work for large curved tunnels on multiple levels is unknown.

Name ___________________________ Email ___________________________ Mobile: ___________________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- Stage 3 is the most complex and expensive stage of WestConnex and the government is seeking approval, yet there are no detailed construction plans so we are not speaking to a real situation.
- The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors.
- The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people’s transport needs but instead enrich private corporations.
- This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.
- The EIS at 7-41 acknowledges that there is great concern in the community that King Street, Newtown, will be made a 24 hour clearway, stating “Roads and Maritime has no plan to change the existing clearways on King Street”. This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has NEVER stated publicly that King Street will not be subject to extended clearways.
- The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating "Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets". Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future?
- There are estimated 100 heavy and 70 light vehicle movements a day and the plan is to allow a right-hand turn into Darley Road from the CW Link. The trucks will drive onto Darley Road, turn right into the site and then left back out onto the CW Link, which is unrealistic given the amount of traffic on these roads now.
- I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.
- The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling).

I submit my strongest objections to the M4-M5 Link proposals as contained in the EIS application # SSI 7485, and request the Minister to reject the application and require SMC / RMS to issue a true, not an ‘indicative’ and fundamentally flawed EIS.

<< Please include my personal Information when publishing this submission to your website

Suburb: Annandale

The City West Link Eastbound AM and PM peak hour and other locations. “Table 7-19 shows that several locations are forecast to exceed theoretical roadway capacity with the increased background traffic and the construction traffic in the 2021 AM and PM peak hours. However, traffic on the majority of these roads would exceed their theoretical capacity even without the construction traffic, simply due to the growth in background traffic”. So in the full knowledge that this area will be at capacity in 2021, massive amounts of construction traffic are going to be added for the whole construction period of 5 years. Even on completion it is stated in the EIS that traffic will be worse in this area than ‘without the project’. This categorically shows that the planning of Westconnex is totally inadequate and needs major changes. It also shows that when completed Westconnex will not work. It is abundantly obvious that Rail/Metro is the only option to radically overhaul Sydney’s failed transport systems.

I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.

2 G Appendix P Table 5-27 of the EIS states that 43% of the Leichhardt- Glebe Precinct travel to work by Car, 21% by Bus and 5% by Rail. These are figures for 2011. These figures are being used to promote the project and suggest they are accurate today. In the case of Rail these figures are extremely questionable. The Light Rail is now hugely popular, it’s use having grown enormously. It is travelling at full capacity at Peak hours. More services are being put in place. Apartment blocks are being built as close to the Light Rail corridor as possible. Residents see the Light Rail as an efficient, reliable and timely method of commuting to work. It is blatantly obvious that the Govt should be investing heavily in building and extending Light Rail, Metro and Rail. If this were pursued in a professional manner the necessity for trying to hoodwink the community into believing that Westconnex were needed would be totally unnecessary.

The EIS was prepared by global engineering firm AECOM, which also prepared the EIS for Stages 1 and 2. When he approved these earlier stages, the then Minister for Planning Rob Stokes pointed to conditions of approval that would minimise impacts on communities. But the impacts have turned out to worse than expected.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significance would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)

The EIS states that ‘Impacts associated with property acquisition would be managed through a property acquisition support service.’ There is no reference as to how this support service will be more effective than that currently offered. There were many upset residents and businesses who did not believe they were treated in a respectful and fair manner in earlier stages. The EIS needs to include details as to lessons learned from earlier projects and how this will be improved for the M4-M5 impacted residents and businesses. (Executive Summary xviii)

The EIS states that investigation would be undertaken to confirm whether the Victoria Road bridge is a potential roost site for microbats. There will be attempts to ‘manage potential impacts’ if confirmed. This is inadequate. The project should not be permitted to impact on vulnerable species.

The EIS acknowledges that visual impacts will occur during construction. However it does not propose to address these negative impacts in the design of the project. This is unacceptable and the EIS needs to propose walls, plant and perimeter treatments and other measures at appropriate locations to lessen the impact on visual amenity. (Executive Summary xviii)

The EIS does not provide any opportunity to comment on the urban design and landscape component of the project. It states that ‘a detailed review and finalisation of the architectural treatment of the project operational infrastructure would be undertaken during detailed design’. The Community should be given an opportunity to comment upon and influence the design and we object to the approval of the EIS on the basis that this detail is not provided, nor is the community (or other stakeholders) given an opportunity to comment or influence the final design.

The construction and operation of the project will result in 51 property acquisitions. We object to the project in its entirety because of this impact. We note that a number of long-standing businesses have been acquired and that many families and businesses in earlier stages have been forced to go to court to seek fair compensation. We object to the acquisition in particular of the Dan Murphys site. The business was substantially renovated and a new business opened with full knowledge of the likely acquisition. We object to it being acquired and compensated in this circumstances and call on the Government to investigate the circumstances which led to this occurring (Executive Summary xvii)

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

The EIS states that construction noise levels would exceed the relevant goals without additional mitigation. The additional mitigation is mentioned but not proposed. All possible mitigation should be included as a condition of approval. The EIS acknowledges that substantial above ground invasive works will be required to demolish the Dan Murphys building and establish the road. The EIS noise projections indicate that for 10 weeks residents will suffer unacceptable noise impacts. The EIS does not contain a plan to manage or mitigate this terrible impact. There is no detail as to which homes will be offered (if at all) temporary relocation; there are no details of any noise walls or what treatments will be provided to individual homes that are badly affected. The approval needs to contain detail as to how this unacceptable impact will be managed and minimised during the construction period and, in particular, during site establishment. I object to the selection of the Darley Road site on the basis that the works required (demolition and surface works) will create unacceptable and unbearable noise and vibration impacts for extended periods. The EIS indicates that at least 36 homes will basically be unliveable during this period. In addition, the planned 170 heavy and light vehicles will considerably worsen the impact of construction noise.

I object to the proposal to the Darley Road civil and tunnel site because of the unacceptable risk it will create to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW’s own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.

The EIS permits trucks to access local roads in exceptional circumstances which includes queuing at the site. Given the constraints of the Darley Road site queuing will be the usual situation. The EIS needs to be amended to remove queuing as an exceptional circumstance. The truck movements should properly managed by the contractor so that there is no queuing. This exception will make it easier for contractors to neglect their obligation to monitor and manage truck movements in and out of the site and needs to be removed. The EIS needs to specifically mention all local streets abutting Darley Road and expressly prohibited truck movements (including parking) on these streets. This should include all streets from the north (James St) to the south (Falls Road), which are near the project footprint.

Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.

The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link
From: Tegan Waldren <campaigns@good.do>
Sent: Sunday, 15 October 2017 3:49 PM
To: DPE CSE Information Planning Mailbox
Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

I agree with all of the points below, but my three main objections are:

1. Unfiltered ventilation stacks near our home and schools. This is absolutely disgusting, and has us thinking of leaving the inner west due to the increased health risks.
2. The increased traffic and detrimental effect it will have on King street.
3. The loss of public space, trees and amenity at Sydney Park, for a spaghetti junction.

Why are we building more roads with most world class cities are trying to reduce them??

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS. NSW Planning must reject this EIS and instead recommend to the NSW government that there should be an independent review of WestConnex before more billions are spent and more residents' lives are damaged.

The EIS states ‘the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.’ The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. This means the community will have limited say in the management of the impacts identified in the EIS. The EIS needs to provide an opportunity for the community to meaningfully input into this report and approval conditions.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that “No ventilation shafts will be built near any school.” in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states
that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that “No ventilation shafts will be built near any school.” in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges and anyone who have driven there knows, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. An EIS based on inaccurate traffic analysis cannot be approved.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

We are also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated.(SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model’s margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some
community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

The Environmental Impact Statement for Stage 3 admits that the traffic around St Peters will be worse when both stages are completed. So the community would have to put up with the exhaust from tunnels and additional car emissions from the traffic. Car emissions are known to shorten the lives of those who live within half a kilometre of a busy roadway. Diesel exhaust from trucks is classed as a carcinogen.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

During the Stage one consultation phase, residents were repeatedly told that after construction of the M4 East, there would be no more above ground construction in Haberfield. It now appears that they were misled. SMC is already preparing its Preferred Infrastructure Report which will include its final choice of option. I demand that this report be made public as soon as it is filed with NSW Planning and that residents be given a right to consultation on the actual plan before a determination on this EIS application is made by NSW Planning.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney’s waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, publish, my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Tegan Waldren

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 Application, for the following reasons:

1. Deciding to build a tollway of the scale and complexity proposed and that has never been built before is placing the community at great risk. No project of this kind should be approved on the basis of an ‘indicative design’. This risks billions of public monies and resources.

2. The planning process that involves such risks has not been subject to any democratic consideration. The huge majority of community, stakeholder and Council submissions objected to the Environmental Impact Statements for the first two stages. WestConnex is now attempting to rush through approval on an even less complete EIS.

3. The business case for the project across the 3 stages failed to measure or account for the cost of any external impacts of this massive toll road project. The social costs of dislocation, stress, health impacts, sleep deprivation and damaged quality of life in communities have been ignored. This proposal will further extend these impacts in Haberfield and St Peters for years. Fresh unacceptable impacts will be imposed on the suburbs of Leichhardt, Lilyfield and Rozelle, parts of which will be decimated. The impact of air pollution on human and environmental health; adding fossil fuel emissions contributing to global warming effects; and the displacement of people and businesses and the destruction of community cohesion and amenity have never been seriously considered. These external costs outweigh any benefits from building roads that poorly serve people’s transport needs, induce traffic and displace congestions spots.

4. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 nor 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1000s more per day onto the roads to Sydney Airport which are already at capacity.

5. This EIS has been released only 14 days after submission of comments on the concept design closed and a report released after the EIS. It seems impossible that the community comments could have been reviewed, assessed and responses to be incorporated into the EIS in this time. This raises serious questions about the integrity of the entire EIS process.

6. I strongly object to proceeding in the face of unknown hazards associated with two different tunnelling operations taking place in close time and location - the tunnelling for the M4-M5 link and the proposed Sydney Metro tunnelling in the same area - Tempe, Sydenham, St Peters and Newtown. The impact of this combined tunnelling is an unknown hazard to the soundness of the residences and buildings above, many of them very old and heritage listed. This is a serious community safety issue and residents who do experience damage will be caught between 2 separate contractors for repairs and compensation. No approval should be given until a construction plan is produced. It is not sufficient to list heritage buildings. Risks should be evaluated not simply described.

7. Given the high cost of the tolls and their annual increases, it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware Rd and Enmore Rd and though the streets of Erskineville and Alexandria. The increasing numbers of vehicles will mean more roadside pollution in the area (known to have adverse effects on breathing and also to be carcinogenic).

8. I strongly object to unfiltered stacks. I believe that scientific reports that are being used be the government to justify these is based on out of date evidence. I am appalled that the government would consider building these so close to schools including St Peters and Rozelle Public Schools.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Name: ........................................

Signature: ......................................

Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

Address: ........................................

Postcode 2010

Suburb: ........................................

A. Permanent substation and water treatment plant - Residents on Darley Rd opposite the site and residents in Hubert St will have a direct line of site to the Motorway operation infrastructure. The resultant impact is a permanent degradation of the visual environment, is a loss of amenity and is detrimental to the community. This facility should not be permitted in this location and the EIS needs to demonstrate why it is required at this site. If approved, the facility should be moved to the north of the site out of line of site of residents. The residual land should be returned for community purposes, such as green space, with future commercial uses ruled out. If the community is forced to endure 5 years of severe disruptions due to this toll road, the compensation should, at the very least, result in the land being returned to the community as green space.

B. It is clear from the EIS that spoil truck movements will not be confined to the City West link. At a community consultation it was revealed that trucks removing spoil at Camperdown would very likely be travelling from the James Craig Rd area and in that case would be using the additional lane on the Crescent and then turning right up Johnston St. This is totally CONTRARY to what concerned residents had been promised would not happen. It is clear that any assurances given to the community in past consultations are totally disregarded without consultation later. This is unacceptable.

C. Heart disease will skyrocket due to air pollution caused by Westconnex bringing more cars into the Inner West says Paul Torzillo, Head of Respiratory medicine at Royal Prince Albert Hospital. Inner West Courier 23rd May 2017

D. The removal of spoil at the Rozelle Rail Yards will lead to the largest amount of Spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place at Peak hours. There will also be 10 Heavy truck movements a day from the Crescent Civil Site. The sheer number of trucks on the road will lead to massive increases in congestion. Maps in the EIS have the spoil trucks going to and from these sites from the Haberfield direction on the City West Link. This is also the direction that is being proposed for spoil truck movements from Darley Rd which is said to have 100 Heavy truck movements a day. It is stated that the cumulative effect of truck movements from all sites on the City West Link will be 700 (one way) Heavy truck movements a day and of that 208 will be in Peak hours. This plan totally lacks credibility.

E. The Concept Design was a woefully inadequate document totally devoid of any real depth of detail in terms of maps, scales, distances with only vague suggestions and glamorized Artist’s Impressions of an idealized view of what Stage 3 would be like. It was another example of current city planning documents that consistently accentuate huge areas of tranquil green spaces with families and children out walking and riding bicycles in idealized parks and suburbs. All this is total PR spin and bears no reality about the real outcome of the build. It bears no reality as to what Stage 3 of Westconnex will be like.

F. I am concerned that while the EIS finds that tolls do weigh more heavily on lower income motorists, there is no serious analysis of the blatant unfairness of letting of private consortium toll people for decades in order to pay for less profitable tollways for wealthier communities.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 application, for the following reasons:

1. There is great concern in the community that King Street, Newtown, will become a 24-hour clearway. The EIS at 7-41 acknowledges that, and states “Roads and Maritime has no plan to change the existing clearways on King Street”. This statement is deliberately misleading as it infers that SMC has the authority to establish Clearways on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has NEVER stated publicly that King Street will not be subject to extended clearways.

2. The EIS uses maps indicating alignment of the mainline tunnels. It is only when you get to EIS 12-57 (Sydney Water Tunnels) that it becomes clear that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are only 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

3. The EIS refers to concerns that were raised by the community that the route of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech testing (see at 7-51) SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. The details in the just released EIS indicate both sides of King St but as it is only indicative how is it possible to comment on the likely impacts. This seriously casts doubt over the integrity of the entire EIS process.

4. I strongly object to the way the EIS treats "uncertainties". EIS 6.1 (Synthesis, Page 45) describes the process re project uncertainties. "The EIS is based on the concept design developed for the project. ... it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors ... would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". Given this I strongly object to the approval of this EIS until critical 'uncertainties' have been fully researched and the results (and any changes) published for public comment.

5. At 7-25 the EIS does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.

6. It all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does NOT constitute open and fair community engagement.

7. This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area taking into account long term sustainability over short-term private profit.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 application, for the following reasons:

1. There is great concern in the community that King Street, Newtown, will become a 24-hour clearway. The EIS at 7-41 acknowledges that, and states "Roads and Maritime has no plan to change the existing clearways on King Street". This statement is deliberately misleading as it infers that SMC has the authority to establish Clearways on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has NEVER stated publicly that King Street will not be subject to extended clearways.

2. The EIS uses maps indicating alignment of the mainline tunnels. It is only when you get to EIS 12-57 (Sydney Water Tunnels) that is becomes clear that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are only 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

3. The EIS refers to concerns that were raised by the community that the route of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech testing (see at 7-51) SMC staff indicated at community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. The details in the just released EIS indicate both sides of King St but as it is only indicative how is it possible to comment on the likely impacts. This seriously casts doubt over the integrity of the entire EIS process.

4. I strongly object to the way the EIS treats "uncertainties". EIS 6.1 (Synthesis, Page 45) describes the process re project uncertainties. "The EIS is based on the concept design developed for the project. ... it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors ... would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". Given this I strongly object to the approval of this EIS until critical 'uncertainties' have been fully researched and the results (and any changes) published for public comment.

5. At 7-25 the EIS does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.

6. It all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does NOT constitute open and fair community engagement.

7. This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area taking into account long term sustainability over short-term private profit.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the Environmental Impact Statement M4/M5 application, for the following reasons:

1. SMC has made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.

2. EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved until critical 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.

3. At 7-25 the EIS refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.

4. The EIS acknowledges at 7-41 that there is great concern in the community that King Street, Newtown, will be made a 24-hour clearway, stating "Roads and Maritime has no plan to change the existing clearways on King Street". This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has NEVER stated publicly that King Street will not be subject to extended clearways.

5. The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. There are no further details provided. Again, this casts doubt over the integrity of the entire EIS process.

6. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 application, for the following reasons:

1. There is great concern in the community that King Street, Newtown, will become a 24-hour clearway. The EIS at 7-41 acknowledges that, and states "Roads and Maritime has no plan to change the existing clearways on King Street". This statement is deliberately misleading as it infers that SMC has the authority to establish Clearways on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has NEVER stated publicly that King Street will not be subject to extended clearways.

2. The EIS uses maps indicating alignment of the mainline tunnels. It is only when you get to EIS 12-57 (Sydney Water Tunnels) that it becomes clear that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are only indicative and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

3. The EIS refers to concerns that were raised by the community that the route of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech testing (see at 7-51) SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. The details in the just released EIS indicate both sides of King St but as it is only indicative how is it possible to comment on the likely impacts. This seriously casts doubt over the integrity of the entire EIS process.

4. I strongly object to the way the EIS treats "uncertainties". EIS 6.1 (Synthesis, Page 45) describes the process re project uncertainties. "The EIS is based on the concept design developed for the project. ... it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors ... would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". Given this I strongly object to the approval of this EIS until critical 'uncertainties' have been fully researched and the results (and any changes) published for public comment.

5. At 7-25 the EIS does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.

6. It all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does NOT constitute open and fair community engagement.

7. This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area taking into account long term sustainability over short-term private profit.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

1) Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.

2) I am concerned that while hundreds of impacts on resident, including noise, loss of business, dust, and lost time through more traffic congestion, are identified in the EIS, the approach is always to recommend approval and promise vague 'mitigation' in the future. This is not good enough.

3) The EIS indicates that 36 homes will have unacceptable noise impacts for extended periods at the Darley road construction site. The EIS does not mention the cumulative impact of aircraft noise in the Leichhardt or St Peters area, and therefore does not reflect the true impact of construction noise on the amenity of nearby residents and businesses. The noise impacts of construction are not able to be mitigated to an acceptable level and the EIS should not be approved on this basis.

4) The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

5) The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.

6) I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

7) It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle.

8) The EIS states that after the M4-m5 opens, that traffic on Darley Road will increase by 4%. There is no benefit in the overall project for residents. During construction westbound traffic will increase on Darley Road by 37%. This increase in traffic for a period of up to five years will make it hazardous to cross the road and access the light rail and travel to Blackmore oval, the bat run, the dog park and the Leichhardt pool. In addition, it will drastically increase both local traffic and outer area traffic at peak commute times. We therefore object to the location of this site based on the unacceptable traffic impacts it will have on road users and on residents.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

◊ The heritage impacts of WestCONnex Stage 3 need to be seen in the light of the appalling wholesale destruction that has already taken place in St Peters and Haberfield. Scores of houses and industrial buildings were torn down for tollways that will not solve traffic congestions. Always the cost of destruction is undervalued and the benefits of WestCONnex promoted. Whenever WestCONnex wants to tear down buildings or put them at risk it is backed by the EIS evaluation. This is not objective and it is not in the public interest.

◊ I object strongly to AECOM's approach to heritage. The methodology used is simply to describe heritage. If it interrupts the project plans, it simply must be destroyed. This is not an assessment at all. Plans to salvage items do have value but this value should not be used as a carrot to justify the removal of buildings.

◊ The EIS claims to have saved Blackmore Park and Easton Park, Rozelle, due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community if false or not.

◊ There has never been any proper assessment of the cumulative impacts on heritage of the WestCONnex project. The loss of heritage in Concord, Haberfield and St Peters has been on a large scale and now the Stage 3 EIS shows that the M$/M5 tunnel would further add to this loss.

◊ Heritage items - Camperdown. The EIS also acknowledges that the use of a rock-breaker at the outer extents of the project footprint will affect 73 residences, with five heritage items identified as having the potential to be within the 'minimum safe working distance'. While some mitigation 'considered', it is not mandated and the requirement to mitigate is limited to 'where feasible and reasonable'. The mitigation proposed seems in any event to comprise letter-boxing residents about the likely impacts! The protection of heritage items should be mandated, not just considered and there should be a strict requirement to protect such heritage items.

◊ I object to the assessment of the removal of buildings, other rail infrastructure and vegetation on the Rozelle Railway Yards being done in advance of this EIS. The RMS environmental assessment process is not publicly accountable. These works were part of the WestConnex project and should have been assessed as part of Stage 3.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

a) The management of water in the Rozelle Yards is of great concern as the site is highly contaminated and the construction work that will be carried out will cause a great deal of disturbance especially once vegetation has been removed. There will be potential impacts from contaminated soils, leakage/spills of hydrocarbons and other chemicals from machinery, vehicles transporting spoil adjacent to roads and stormwaters, rinse water from plant washing and concrete slurries. Water from tunnelling activity and other works will also introduce contaminants. The EIS says that much of this water will be treated in temporary treatment facilities and sediment tanks before being released to Whites Creek and Rozelle Bay. The EIS does not disclose what levels of pollution controls will be implemented to make sure that contaminated water is not released into White's Creek or Rozelle Bay. This is not acceptable.

d) EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these "uncertainties" have been fully researched and surveyed and the results (and any changes) published for public comment.

c) I object to the proposal to the Darley Road civil and tunnel site because of the unacceptable risk it will create to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW's own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.

b) In 2033 with the M4 - M5 link the WRTM is forecasting reductions in peak travel times between the M4 corridor and the Sydney Airport/Port Botany area. The time savings that are quoted miniscule! Between Parramatta and Sydney Airport the time saving is 10 minutes. Between Burwood and Sydney Airport the time saving is 5 minutes. Between Silverwater and Port Botany the time saving is 10 minutes. So for well over $20Billion all that can be saved is just a handful of minutes! This total waste of public money is completely unacceptable.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the Environmental Impact Statement M4/M5 application, for the following reasons:

1. I am deeply disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.

2. This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.

3. Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.

4. The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.

5. It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.

6. I completely reject the idea that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.

7. I have read the warm and caring words contained in the EIS, ref Sustainability Management Strategy. What purpose do these serve if they are not reflected in actual plans. They simply highlight the wanton destruction of homes, trees and habitat already.

8. There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.

9. I am concerned that SMC has selected one of Sydney's most dangerous traffic spots, Darley Rd in Leichhardt for a construction site that will bring hundreds of extra trucks and cars into the area on a daily basis for years.

For these and many other reasons, I urge the Secretary of Planning to advise the Minister to reject this EIS.

Name: __________________________ Email: ___________________________ Mobile: __________________
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- The decision to build this project has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
- Darley Road is confirmed as a 'civil and tunnel site (dive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.

Please include / delete (cross out or circle) my personal information when publishing this submission to your website I HAVE NOT made reportable political donations in the last 2 years.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

1. Stage 3 is the most complex and expensive stage of WestConnex and the government is seeking approval, yet there are no detailed construction plans so we are not speaking to a real situation.

2. The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors.

3. The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people’s transport needs but instead enrich private corporations.

4. This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.

5. The EIS at 7-41 acknowledges that there is great concern in the community that King Street, Newtown, will be made a 24 hour clearway, stating “Roads and Maritime has no plan to change the existing clearways on King Street”. This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has NEVER stated publicly that King Street will not be subject to extended clearways.

6. The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating “Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets”. Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future?

7. There are estimated 100 heavy and 70 light vehicle movements a day and the plan is to allow a right-hand turn into Darley Road from the CW Link. The trucks will drive onto Darley Road, turn right into the site and then left back out onto the CW Link, which is unrealistic given the amount of traffic on these roads now.

8. I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.

9. The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?

10. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling)

Your view on the application: I object to it

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney’s congestion problem. The negative impacts on the health and well-being of local community’s both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
more pollution for our kids and their future, no thanks. Invest in green energy efficient public transport thank you.

I have read the Department’s Privacy Statement and agree to the Department using my submission in the ways it describes. I understand this includes full publication on the Department’s website of my submission, any attachments, and any of my personal information in those documents, and possible supply to third parties such as state agencies, local government and the proponent.

I have not made a reportable donation to a political party.

Marcus Liang
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1000s more per day onto the roads to the Airport which are already at capacity.

- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow ‘swoosh’ that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be ‘encouraged’ to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that ‘definitive’ rather than ‘indicative’ alignments could be published. The EIS should be withdrawn till such time that it is a true and fair ‘definitive’ document open for genuine public comment.

- The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.

- The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people’s transport needs but instead enrich private corporations.

- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling).

- Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.

- The increasing numbers of vehicles will also increase the vehicle pollution (known to have adverse effects on breathing and also to be carcinogenic) in this area. The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages. EIS 6.1 (Synthesis, Page 45) states “…… this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. It is unstated just who would have responsibility for such a “review(ed) for consistency”, and how these changes would be communicated to the community. The EIS should not

Your view on the application: I object to it

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney’s congestion problem. The negative impacts on the health and well-being of local community’s both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
Extra comments

For a project with such a significant impact, impact that contradicts expert advice indicative design is not acceptable. Ventilation facilities in close proximity to schools and public open space is not acceptable. Selling the road to a private entity is not acceptable.

More transparency / future thinking is required. Why are we not learning from examples from experts and other cities who prove public transport is the way to move forward.

Extra comments

I’m opposed to this project for so many reasons, one being the totally unacceptable notion of installing un-ventilated smoke stacks.

Another is - why did the tunnel plan change from going under RPA and the University due to fears of disturbing their infrastructure and change to going under hundred year old houses.

Is it OK to disturb the foundations of the voters homes, but not government owned buildings?

Extra comments

Not only will we end up with a hideous spaghetti junction of roads, there's likely to be thousands of road users trying to avoid the tollways via local streets. It's a nightmare.

I also fear that access to Sydney Park will be difficult and probably not as pleasant, being surrounded by constant traffic fumes and noise.

I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. Extra comments

in addition to the reasons above I am also concerned about:

* Traffic ratrunning through Haberfield and other suburbs to avoid tolls and congestion
* Increased noise level from trucks which is already apparent in Haberfield
* The heat effect of removing large trees from suburbs
* Destruction of habitat for local wildlife through removal of trees and wildlife corridors

Lynne Blundell
Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states ‘the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.’ The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. As I live in Haberfield these stacks impact directly on me and all those who live in my community.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that “No ventilation shafts will be built near any school.” in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The research evidence shows it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained...
were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I am very concerned about motorists exiting the road due to tolls and rat running through local streets. This is already happening in Haberfield. Add to that the constant noise from trucks coming and going from construction sites, plus dust and noise from the construction and the impact is massive.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kills a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH ‘Pressure builds on government to sweeten WestConnex sale’ 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model’s margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.
When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project ‘surplus lands and property’ delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now being ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney’s waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for “meaningful” consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that every impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle, which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Lynne Blundell 112 Dalhousie St, Haberfield NSW 2045, Australia

Your view on the application: I object to it

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney's congestion problem. The negative impacts on the health and well-being of local community's both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
Invest in public transport such as trains, cycle lanes. Don’t increase Sydneys pollution levels with more roads.

I have read the Department’s Privacy Statement and agree to the Department using my submission in the ways it describes. I understand this includes full publication on the Department’s website of my submission, any attachments, and any of my personal information in those documents, and possible supply to third parties such as state agencies, local government and the proponent.

I have not made a reportable donation to a political party.

Yours sincerely,

Carol Wallace-Teunissen

Extra comments

WestConnex is Australia’s most expensive road project ever and costs will cost $50 billion. Residents, community groups, local councils and industry are up in arms over this network of private toll roads that will only support 2% of daily trips in Sydney. This seems like a waste of money, that could be put to good use on public transport, which supports larger numbers of commuters.

I am deeply concerned about the Environmental Impacts. The concept designs on the plans don’t seem to capture this issue.

I’m concerned about the volume of traffic and the noise and emissions that will pollute my area.

Please pause the WestConnex project and fix the many problems that will destroy community life, the environment and cause traffic chaos on local roads connecting to WestConnex.

I think this is not a big ask when such a large amount of public money is being used for this project.

Yours sincerely,

Phoebe Repeti
Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. I am disgusted by the ignorance and blind commitment to an unsustainable and city changing road.

NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addresssed in the EIS. NSW Planning must reject this EIS and instead recommend to the NSW government that there should be an independent review of WestConnex before more billions are spent and more residents' lives are damaged.

The EIS is based on an indicative design and has insufficient detail for the impacts to be properly assessed and addressed, and the public consultation has been woefully inadequate.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. This means the community will have limited say in the management of the impacts identified in the EIS. The EIS needs to provide an opportunity for the community to meaningfully input into this report and approval conditions.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS states that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that “No ventilation shafts will be built near any school.” in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges and anyone who have driven there knows, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks
and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. An EIS based on inaccurate traffic analysis cannot be approved.

The economic basis for this project is the approval of further toll roads. Throughout the EIS there are references to the f6 and Northern beaches Link; it is assumed that these toll roads will, in fact, be built. The issue with this is that the impacts set out in the EIS rely upon them being built — that is, traffic will lessen once they are built. However, there is no certainty this will occur. Any references to these toll roads, in the context of impacts from this project, need therefore to be disregarded.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

We are also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH ‘Pressure builds on government to sweeten WestConnex sale’ 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model’s margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of much more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. I am appalled that these odours are predicted to possibly continue if Stage 3 is approved. No community should be treated in this manner.

The Environmental Impact Statement for Stage 3 admits that the traffic around St Peters will be worse when both stages are completed. So we will have to put up with the exhaust from the tunnels and the additional car emissions from the traffic. Car emissions are known to shorten the lives of those who live within half a kilometre of a busy roadway. Diesel exhaust from trucks is classed as a carcinogen.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. During the Stage one consultation phase, residents were repeatedly told that after construction of the M4 East, there would be no more
above ground construction in Haberfield. It now appears that they were misled. SMC is already preparing its Preferred Infrastructure Report which will include its final choice of option. I demand that this report be made public as soon as it is filed with NSW Planning and that residents be given a right to consultation on the actual plan before a determination on this EIS application is made by NSW Planning.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

I object to the EIS on the grounds that it fails the Secretary's requirement for “meaningful” consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a ‘plan’.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, publish, my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, phoebe repeti 6/67 garfield st five dock

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney's congestion problem. The negative impacts on the health and well-being of local community's both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. Your view on the application: I object to it

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney's congestion problem. The negative impacts on the health and well-being of local community's both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
Extra comments

I have been appalled by every step of this project especially the lack of transparency. It is a terrible option for all Sydneysiders and should be scrapped.

I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. Extra comments

Dear Sir Madam and everyone else. Please don't make more roads. We are sick of them. The carbon dioxide is a pollution, however the cars themselves are a pollution, taking up space on our streets, where children can longer play, and the import bill of crude oil is crippling to the Australian economy.

Living areas, schools etc around major intersections will be exposed to increased fumes...and the public is still waiting to hear where the outlets are planned to be!

This monstrosity will encourage greater use of suburban roads - to (understandably) avoid the high tolls - and we still need more efficient and environmentally friendly public transport...

Research the solutions being undertaken by more enlightened overseas planners..

This whole project, all of it, is a disgrace. It is a disgrace for two key reasons.

Firstly, it is delivering the wrong result, it will not solve Sydney's traffic issues. Secondly it has not been conducted in an open and transparent manner. If it had been, then we would not have to deal with the first issue, no solution.

Forcing this project through without any recognition of the communities affected and their views, coupled with no transparency in the process suggests the government is, for reasons only known to itself, hiding a great deal of its decision making from public scrutiny. Is this truly the case? We, the public, have no evidence to suggest otherwise.

Indeed their is a great deal of anecdotal evidence to suggest that from O'Farrell through Baird to Berejiklian there is much that has been and continues to be covered up. To whom have our NSW government politicians become beholden? Is there corruption within our government? When will a politician stand up and ask the questions?

Extra comments

Sydney has been sacrificed to the car at the expense of public transport, health, communal human habitation and the social cohesion it brings.

Projects like WestConnex are short-sighted, ineffective and mired in pork barrelling and NSW has had enough.

Stop this project now and others like it that seek to increase the number of cars already threatening our struggling environment and reorient NSW back to public transport and space we can all live and thrive in.

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney’s congestion problem. The negative impacts on the health and well-being of local community’s both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. I understand this includes full publication on the Department's website of my submission, any attachments, and any of my personal information in those documents, and possible supply to third parties such as state agencies, local government and the proponent.

I have not made a reportable donation to a political party.

Yours sincerely,

Sue Krajnik
Your view on the application: I object to it

Extra comments

Sydney used to be swinging, now its suffocating. More roads and freeways is not a solution to rising population numbers. Clever public transport systems are the best long term solution. Preservation of our heritage areas is what we need, no more destruction. STOP NOW.

Nelly Pedavoli
Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS. NSW Planning must reject this EIS and instead recommend to the NSW government that there should be an independent review of WestConnex before more billions are spent and more residents’ lives are damaged.

The EIS states ‘the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.’ The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. This means the community will have limited say in the management of the impacts identified in the EIS. The EIS needs to provide an opportunity for the community to meaningfully input into this report and approval conditions.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The air quality will be detrimental to the health of all residents in the inner west area.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that “No ventilation shafts will be built near any school.” in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges and anyone who have driven there knows, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the
compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. An EIS based on inaccurate traffic analysis cannot be approved.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

We are also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH ‘Pressure builds on government to sweeten WestConnex sale’ 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model’s margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

The Environmental Impact Statement for Stage 3 admits that the traffic around St Peters will be worse when both stages are completed. So the community would have to put up with the exhaust from tunnels and additional car emissions from the traffic. Car emissions are known to shorten the lives of those who live within half a kilometre of a busy roadway. Diesel exhaust from trucks is classed as a carcinogen.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

During the Stage one consultation phase, residents were repeatedly told that after construction of the M4 East, there would be no more above ground construction in Haberfield. It now appears that they were misled. SMC is already preparing its Preferred Infrastructure Report which will include its final choice of option. I demand that this report be made public as soon as it is filed with NSW Planning and that residents be given a right to consultation on the actual plan before a determination on this EIS application is made by NSW Planning.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for
residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney’s waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks.

I object to the EIS on the grounds that it fails the Secretary’s requirement for “meaningful” consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a ‘plan’.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, publish, my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Extra comments

Thanks for your ongoing work for the people of NSW. I am writing to ask that you reconsider the WestConnect project altogether.

I have no doubt you are aware of how unpopular this project is with many people who will be impacted. Even for those who will not be immediately impacted, the additional pollution will reduce health outcomes for years to come.

We really need our Ministers to take a more progressive approach to moving people around the city (and other issues). Investing in public transport is good first (no brainer) option. The money that is being spent on a project that will only benefit a few and dis advantage many could be better spent on any number of other projects.

From a personal point of view, I would like this project halted now and the money re-allocated to public transport.

I would also like a full disclosure of all the research related to this project and see some initiatives that take the data into account.

Thanks for any action to take in responding in the affirmative to my request.

I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. Extra comments

No public consultation. Pollution. Peoples lives shattered and will continue in future.

No support for public transport, which is what is needed. There will be a huge bottle neck on many roads, how do you get eight lanes diverging into two?

Increased traffic jams and delays for travel. The answer is more public transport and not westconnex.

Sydney road planning has been and is atrocious, there is no future vision for sustainability with very poor environmental impact.

What will happen in 20 years time as population increases with no increase in public transport.

I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. i'M SURE YOU'VE TRAVELLED WIDELY ON OUR MONEY FOLKS, and seen much.

But the WestConnex VANDALISM is not at all related to the FAVELAS youse might've spotted around the world, which WOULD need replacing with something more decent, BUT THERE IS NO MONEY for that.

These premises are HISTORY and semi decent HABITAT. Therefore you cannot be viewed as visionaries--don't even contemplate it.

You are CONCRETE LAYERS and habitat destroyers, with possibly sinister dispositions, not happy until EVERYTHING is covered by what CAN BE considered YOUR LEGACY. I FOR ONE DON'T SALUTE YOU.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
Extra comments

Our model of transport is ludicrously outdated and not geared to the upcoming massive disruption that will be created by the bridging of private and public transport afforded by autonomous vehicles and our increasing digital connection.

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney’s congestion problem. The negative impacts on the health and well-being of local community’s both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.

I have been a passionate and conscientious objector to the West connex project having attended the first meetings and forwarding my submission of opposition and concerns regarding their complete disregard for proper community consultation, their lack of transparency their arrogance and destruction of our communities and environment.

To date they have not been held to account in spite of mounting evidence from experts in all aspects of impacts and Councils and other governance. While we as a community continue to stand firm I wonder if ABC 4 Corners were contacted and WestConnex were investigated by them as this is such a social community and environmental emergency that there would be a completely different response.

NSW Government is also answerable. It defies belief that today there is no democratic process open to publicly oppose Westconnex other then courageously standing on grounds of civil disobedience.

All doors are closed and the regressive construction and destruction moves at an alarming and covert pace like an insatiable worst kind of disease. However we all need to keep the faith and join hands and stand firm. We can make a difference.

West Connex is an insane idea for a city already overwhelmed by traffic and pollution. We can all get around with well designed public transport and use more land for parks, open spaces and places for people...for children to play not for fossil fuel guzzling dinosaurs mostly driven by one person to get somewhere they can get to by bus or train.

I really resent paying taxes when my hard earned money goes to destroying our planet and the future for my children and grandchildren and when the cuts to what matters just keep coming. It's a stupid country and I feel ashamed to be Australian at the moment.

I thought we lived in a democracy. That means listening to the people.
Yet the NSW government continues to be deaf to the protests of so many. If only we had politicians with a vision beyond the next election.
I should not have to explain the mess of Westconnex to my children, or their children.
Look beyond your own political careers and consider the long term consequences of this diabolical plan. More roads is NEVER the solution. EVER

I have read the Department’s Privacy Statement and agree to the Department using my submission in the ways it describes. Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and the application must be refused as the Proponent has not properly and adequately addressed the impacts set out below in the EIS.

NSW Planning must therefore reject this EIS and demand a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged.

The EIS states ‘the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.’ The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and respond to it.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The Education Minister Rob Stokes declared in 2017, that “No ventilation shafts will be built near any school.” in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on residents and workers living near portals and on local roads which become even more congested as a result of WestConnex, polluting the air these residents breathe. It is unacceptable for a government authority to approve a project knowing that it will place some residents at risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts were of the view that the traffic predictions are unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.
The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross Street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic.

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model’s margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project ‘surplus lands and property’ delivered back to the community. These promises were
still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored.

The heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Alexa Wyatt 35 Great Buckingham St, Redfern NSW 2016, Australia

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney's congestion problem. The negative impacts on the health and well-being of local community's both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. I understand this includes full publication on the Department's website of my submission, any attachments, and any of my personal information in those documents, and possible supply to third parties such as state agencies, local government and the proponent.

I have not made a reportable donation to a political party.

Your view on the application: I object to it

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney's congestion problem. The negative impacts on the health and well-being of local community's both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
Extra comments

More roads = more care = more congestion. Bad decisions will ruin our quality of life both in our community but also contribute to more environmental damage. Put more money into effective public transport, more bike paths and make car travel less attractive.

I have read the Department’s Privacy Statement and agree to the Department using my submission in the ways it describes. I object to the shortsightedness of the whole project. Improved public transport is where this money should be spent. Who is the city for? The citizens or the developers? We need proper planning not roads.

Extra comments

NSW Government activity indicates total dependence on highly lucrative (for some) profit motivated corporations. This is not democratic representation. You, the NSW Government, are destroying the fabric and scale of communities in which we choose to live because of these very attributes. Shame.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.
Extra comments

Please read the submission and not just put it to the side. The planet is at a very fragile time and we need better public transport solutions not more cars on the road

I have read the Department’s Privacy Statement and agree to the Department using my submission in the ways it describes. I understand this includes full publication on the Department’s website of my submission, any attachments, and any of my personal information in those documents, and possible supply to third parties such as state agencies, local government and the proponent.

I have not made a reportable donation to a political party.

Yours sincerely,

Rachel Morley
Your view on the application: I object to it

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link EIS tollroad proposal.

Global experience of major toll roads demonstrates that these projects are enormously expensive and counter-productive. WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity. It is not a sustainable solution to Sydney's congestion problem. The negative impacts on the health and well-being of local community's both in the construction and operation phases are unacceptable.

The fact that the State Government released this EIS just 2 weeks after submissions closed for comment on the M4-M5 Link Concept Design, undermines community confidence that this is a genuine consultation process.

The impending sale of over 51% of WestConnex means that the government will transfer the whole of WestConnex and the construction of M4-M5 Link project completely into the hands of a private company which will not give adequate protections to the community.

In particular I object to the M4-M5 Link because:

1) it will induce more traffic into the Inner West with increases in congestion on already highly congested major roads and increased congestion on local roads as commuters avoid the expensive tolls.

2) it will increase the negative health impacts by increasing toxic fine particle pollution especially in the vicinity of the unfiltered ventilation stacks which are located near schools and homes.

3) it will destroy the Rozelle to Balmain rail corridor thus removing the option for a rail link to the Balmain peninsula and the White Bay precinct.

4) it will impose significant and unsustainable tolls on western Sydney communities who will not have adequate public transport alternatives.

5) it will lead to the imposition of more clearways on high streets in the inner west which will destroy businesses and community amenity.

6) it will potentially damage significant aboriginal and non aboriginal heritage in the inner west.

Go back to project management school. This is not leading to a mutually beneficial outcome for your stakeholders, many of whom are residents of the Inner West community.

Build smart transport infrastructure that reduces emissions, creates more open space, and increases access to public transport! A happier healthier future proofed city it would make.
