Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Tim Edmeades 16 Rowley St, Camperdown NSW 2050, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal and have been so depressed about this proposed action and the devastation in my suburb that I have not even been able to engage with the materials. I cannot believe what is being proposed, not only do we have an entry/ exit tunnel 1 block from our home but the new proposal has using the Holden site at Haberfield for spoil, only 100-200m from my kids school. I am devastated. I also find those television ads depicting us as riding on grassy hills while traffic is below is insulting and trivialises what destruction has occurred. I fully expect us to be totally shortchanged in any rehabilitation action as well. Shame on the decision makers who have proposed this.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the

analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Bryony Mika 70

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below.

I am particularly concerned about a project which will add to pollution and congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas.

The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be a huge increase in traffic in our area. This will not only mean noise and pollution but make it so much harder for me to get around on foot and bicycle.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

Even if a lot of people take up electric cars, we will still suffer greatly from exposure to poisonous diesel and petrol fumes from cars coming off the roads and from the stacks.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained

were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and our local roads will be much more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. As a local resident, I do not feel I have been properly informed of the project or given a chance to have input.

Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored.

Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

We were given brochures in the mail extolling the virtues of "easing congestion" but the congestion is just going to be moved onto our local streets! Surely, it would be better to reduce the cause of the congestion in the first place, by providing better work and study options closer to home for those who now want to drive into the city.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

NSW Planning must require the Proponent to properly and adequately address the impacts above which are not adequately addressed in the EIS.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Katriona Richards 33 MacDonald St, Erskineville NSW 2043, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I object to most of this proposal and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I reject the notion that any more unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The smoke stacks should at least have basic filtering.

I object to the indicative design for the Rozelle Interchange.

The link from the Rozelle interchange to the Iron Cove Bridge appears to be an expensive and destructive minor addition to the plan. A better interchange at White Bay would solve a lot of the congestion problems without the destruction of dozens of houses and the enormous cost of the tunnel.

I object to the use of Darley Rd, Leichhardt as a dive site.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the

traffic for all stages of WestConnex has been overestimated and construction costs underestimated.(SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. The public displays I attended were perfunctory. It was "here is a taste of what you are getting". The plans of the Rozelle interchange plans showing some of the possible variations were so complex and large that they were unbelievable.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Wayne Carveth 141 Wigram Rd, Forest Lodge NSW 2037, Australia

Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were

still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets. I live in this area. We don't need more roads. We need public transport. How can SYDNEY pretend to be a first class city if we have third rate public transport. Major cities in the developed world are not building roads – they are improving public transport that uses clean energy and putting in more bike lanes! Why does SYDNEY want to be a third rate city?

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS. The whole project is yet another example of simply 'kicking the can up the road' : I'm old enough to be able to remember back to the '60's when Governments of both persuasions would state that 'When we build this new freeway.highway, Sydney's traffic problems will be solved'; claims proven patently false. Neither 'Bulldozer Baird' nor successor 'Bulldozer Berejiklian' had/have prioritized public transport – where are shelters and seats at ALL Bus-stops – remember the phenomenon of the AGEING Population? – and where are the solar panels lighting up Timetables at those bus-stops @ night. We DON'T all have/want smart phones!It's OBVIOUS that the more people in Sydney = more c

ars and Governments need to GENUINELY improve public transport to lure the masses of lazy and stupid people who drive when they don't have to out of their cars (B-Line and the Light Rail will alienate those who have to CHANGE to get into the city instead of getting on the bus and staying on - wet weather makes changing FOR NO REASON an incentive to get into the car!

I and many many other taxpayers ask NSW Planning to face facts and to reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives AND HOUSES are damaged. Does not this corrupt government realise that the vast majority of Inner West houses are built on a thin layer of soil and perhaps rocks but then clay – long periods of dry weather followed by heavy rains will often cause minor cracks in houses, even double-brick.and guess what, stiff clay (it's like iron if you attempt to dig down in my backyard) is the worst for transmitting vibrations – our very dwellings are at risk of BOTH construction and – heaven forbid –

operation of this criminally- conceived WestConnex. I quote from a report commissioned by the American Federal Transport Administration - see FTA Guidance Manual for Transit Noise and Vibration Impact Assessment, 2006 (carried out by Harris Miller Miller & Hanson Inc. (HMMH) founded 1981). This document is on the internet :I quote below from Section 7.4 FACTORS THAT INFLUENCE GROUND-BORNE VIBRATION AND NOISE
 Geology: Soil and subsurface conditions are known to have a strong influence on the levels of

ground-borne vibration. Among the most important factors are the stiffness and internal damping of the soil and the depth to bedrock. Experience with ground-borne vibration is that vibration propagation is more efficient in stiff clay soils, and shallow rock seems to concentrate the vibration energy close to the surface and can result in ground-borne vibration problems at large distances from the track. Factors such as layering of the soil and depth to water table can have significant effects on the propagation of ground-borne vibration.

The Victorian LABOR Government had the guts to throw out the previous Government's misconceived roadworks – I do wonder if, given that Nick Greiner is apparently one of the big shareholders in Tollways, whether some of the present functionaries are also planning to become shareholders if the WesConnex atrocity were ever to be foisted upon a public which DOES NOT WANT IT!!! Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states ‘the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.’ The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that “No ventilation shafts will be built near any school.” in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely

commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead. Not only that, I am old enough to

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on

residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, WENDY DYSON 2 Baltic St, Newtown NSW 2042, Australia

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

Can we please learn from the best, most liveable, cities around the world and invest more in bike lanes and public transport – not roads? It helps the environment, physical and mental health outcomes of the residents, and makes for a more enjoyable and liveable city. Please begin planning not just for our children, but our grandchildren and the many generations to come. Cars are not a sustainable mode of transport.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

The NSW government should significantly improve public transport to help Sydney's growing population get to our jobs, shops, family, friends & leisure destinations.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Susan Goodman 164 Union St, Erskineville NSW 2043, Australia

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area.

As residents of Annandale we already suffer greatly from the additional congestion resulting from the Harold Park residential project where additional 2500 households were introduced with little care about the impact to residents around the project.

WestConnect is expected to bring even more congestion to Annandale and this is simply not acceptable.

Yours sincerely, Ehud Tamir 4/143 Trafalgar St, Annandale NSW 2038, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The research evidence confirms that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below.

This is a very brief submission against the most abhorrent road-project of all times as it's so blatantly obvious it goes against anything humane, sensible and moral!!

Currently around the world, highways are being REMOVED from city centres and there's a greater world-wide push to altogether try and do away with private cars in these dense centres.

Perhaps the most ridiculous aspect of it is the fact that the project will be funded by taxpayer money and that there has been NO meaningful consultation with effected residents!! Elected officials have an obligation to act with accordance of the community.

If this were to take place, our lives would be devastated. We have three children who suffer from anxiety, asthma, and various environmental allergies--all of which are bound to be effected and drive-up our medical bills, not to mention tax medical and mental-health services, already inundated in these areas.

This plan pays no heed to the Paris agreement as cars directly effect global warming. The Australian government is part of an international community and has a responsibility to this community, not to mention to its own constituents, to do EVERYTHING in its power to halt the process of global warming, NOT AID AND ACCELERATE IT!!

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS and provide a written response to each of the objections I have raised.

Yours sincerely, leili (leah) gressel Union Square, 2 Cardigan Ln, Camperdown NSW 2050, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

As a resident bordering this a proposal who has witnessed and me too many people moved on a from their homes, I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained

were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some

community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Nicholas McCallum 39 Darley St

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Simone Bye 47 Sutherland St, St Peters NSW 2044, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection

licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Anthony Ierardo 251 Ramsay St, Haberfield NSW 2045, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I think we can all agree that this whole project has been thoroughly ballsed up.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

To quote Helen Lovejoy, 'Won't somebody please think of the children?!'

I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

As a resident of Balmain who has a vested interest in ensuring the the best possible outcome is created I would like to draw your attention to a number of points made by a independent study of the West Connex Project Proposal

1 Material published on-line was so badly designed that it could not be printed out except as unreadable 7 or 8 point print and had little or no detailed information. The concept design document is a massive 160+MB PDF that was almost impossible to download using normal computer and tablet systems.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

To: DPE CSE Information Planning Mailbox
Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. The Proponent should be required to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

There is zero evidence that building more roads will result in better outcomes for motorists or residents.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

I believe SMC has ignored any investigation into proper alternatives such as the City of Sydney alternative plan. It is irresponsible governance not to consider alternatives.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools and childcare centres would be near such unfiltered stacks. There is plenty of evidence that exposure to poisonous diesel particulates is detrimental to human health and well-being.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

I object proposal which is unable to demonstrate any real advantages. I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead. This will make living in the area unbearable.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

I am a 24 year old university student and the thought of more cars, traffic and pollution does not sound like a city of the future. We need to be investing in quality renewables and alternative public transport like other major cities.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools, play grounds and sports fields would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates. My house is in the direct path of the prevailing winds which would pass over some of these stacks and I am concerned for the health of my family.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

The estimated tunnel depths for the Leichhardt area as low as 35 metres. This creates an unacceptable risk of damage to homes due to settlement (ground movement). The EIS acknowledges that tunnelling at 35 metres and less presents a real risk. There is no mitigation provided for this risk. Instead, it states that properties will be repaired at the Government's expense. However no details or assurance as to how this will occur are provided. The project should not be approved with such tunnelling depths permitted with no detail provided about potential risk of damage and how and when it will be repaired. If damage were to occur, residents and businesses would be forced to engage structural engineers and lawyers to prove that the damage was linked to Westconnex works, with no assurance that this property damage will be promptly and satisfactorily fixed. There is an added legal risk to residents should the project be privatised.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, John Souliotis 173 Balmain Rd, Leichhardt NSW 2040, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that. There has been no consideration of improved public transportation in this plan which would ameliorate any concerns with an outdated concept.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last

week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with.

During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

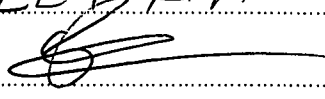

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Robert Downton Clubb St, Rozelle NSW 2039, Australia

--	---

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
- Darley Road is confirmed as a 'civil and tunnel site (dive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS ?
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.
- Other comments :

I wish to submit my objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485. The reasons for objecting are set out below.

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

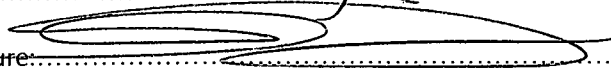

- ❖ I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.
- ❖ The EIS was released just 12 days after the closing date for submissions to the Concept Design. This categorically proves that all the Community Consultations and Submissions to the Concept Design were a total sham. There were at least 800 posts on the interactive map. These were limited as the community only had 140 characters available to make their point which was woefully inadequate. But there were at least 1500 written submissions, some of which were highly detailed and of considerable length. There is no way that all these submissions could have been read, considered, their arguments integrated into the EIS and then for the EIS of 7200 pages to be put together, printed and released 12 days after the the closing date for submissions to the Concept Design. There needs to be a major investigation into this flagrant abuse of the way NSW planning laws have been flouted for the whole of Westconnex and particularly Stage 3.
- ❖ All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a strict prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. The EIS needs to prohibit outright truck movements (including parking) and worker parking on all of these streets.
- ❖ Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.
- ❖ Targets for renewable energy and carbon offsets are not aligned with NSW government policy. (Table 22-8)
- ❖ The EIS indicates that 36 homes will have unacceptable noise impacts for extended periods at the Darley road construction site. The EIS does not mention the cumulative impact of aircraft noise in the Leichhardt or St Peters area, and therefore does not reflect the true impact of construction noise on the amenity of nearby residents and businesses. The noise impacts of construction are not able to be mitigated to an acceptable level and the EIS should not be approved on this basis.

Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. Stage 3 is the most complex and expensive stage of WestConnex and the government is seeking approval, yet there are no detailed construction plans so we are not speaking to a real situation.
2. The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors.
3. The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.
4. This EIS contains **no meaningful** design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.
5. The EIS at 7-41 acknowledges that there is great concern in the community that King Street, Newtown, will be made a 24 hour clearway, stating "Roads and Maritime has no plan to change the existing clearways on King Street". This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has **NEVER** stated publicly that King Street will not be subject to extended clearways.
6. The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating "*Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets*". Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future ?
7. There are estimated 100 heavy and 70 light vehicle movements a day and the plan is to allow a right-hand turn into Darley Road from the CW Link. The trucks will drive onto Darley Road, turn right into the site and then left back out onto the CW Link, which is unrealistic given the amount of traffic on these roads now.
8. I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.
9. The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
10. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling).

--	--

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.
- II. The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.
- III. The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.
- IV. The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.
- V. It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?
- A. THE LATEST EIS WAS RELEASED JUST TEN BUSINESS DAYS AFTER FEEDBACK PERIOD ENDED

Declaration: I have not made any reportable political donations in the last 2 years.			

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Hours of operation

- I object to the EIS because it is effectively a 24 hour operation despite the fact that the proponent represents that spoil removal from this site would only occur within standard construction hours.

The EIS states in 6.5.8 Darley Road civil and tunnel site (C4):

'Spoil handling associated with tunnelling supported by the Darley Road civil and tunnel site would occur 24 hours a day, seven days a week. Spoil would be handled below ground wherever practicable to reduce the potential for amenity impacts in adjacent areas. Spoil handling at the surface outside standard day time construction hours would occur within an acoustic shed to manage potential amenity impacts. Spoil removal from this site would only occur within standard construction hours, between 7.00 am and 6.00 pm Monday to Friday, and between 8.00 am and 1.00 pm on Saturdays.'

The EIS allows for the possibility of spoil handling above ground 24 hours 7 days a week. The EIS fails to assess or explain the impacts of this on the residents in nearby streets. These impacts could include construction noise, light and heavy vehicles (other than spoil trucks), workers arriving for shifts and leaving after shifts. It is not clear to what extent the acoustic shed will contain noise. The Jim Holt report stated that the acoustic shed would not operate effectively due to its location on the site. It is not clear whether the proponent will mandate the contractor to employ the highest level of acoustic protection rather than what is feasible.

I object to the EIS and the Darley Rd construction site. The proponent should be directed to abandon its plan for a dive site as it is clear impacts are too great for the community. At the very least the site should be restricted to standard construction hours for all operations above ground and there should be no shifts commencing or ending outside of standard construction hours. The proponent should be directed to find a site where its operations will not impact on residents outside of standard construction hours.

- I object to the EIS because it is effectively a 24 hour operation despite the fact that the proponent represents that spoil removal from this site would only occur within standard construction hours. The EIS states in 6.5.8 Darley Road civil and tunnel site (C4):

'Reasonable and feasible work practices and mitigation measures would be implemented to minimise potential noise impacts due to activities occurring at the Darley Road civil and tunnel site. Local residents, businesses and the NSW EPA would be kept informed about works outside standard day time construction hours at the site.'

The EIS allows for the possibility of spoil handling above ground 24 hours 7 days a week. The EIS fails to assess or explain the impacts of this on the residents in nearby streets. These impacts could include construction noise, light and heavy vehicles (other than spoil trucks), workers arriving for shifts and leaving after shifts. It is not clear to what extent the acoustic shed will contain noise. The Jim Holt report stated that the acoustic shed would not operate effectively due to its location on the site. It is not clear whether the proponent will mandate the contractor to employ the highest level of acoustic protection rather than what is feasible.

I object to the EIS because the proponent/contractor would only have to keep local residents, businesses and the NSW EPA informed about works outside standard day time construction hours at the site. Local residents, businesses and the NSW EPA would have no right to limit works outside standard day time construction hours at the site. As we have seen with other stages of WestConnex this leads to devastating impacts for residents who must endure significant periods of exposure to out of hours works which involve noise, lights and disturbance.

I object to the EIS and the Darley Rd construction site. The proponent should be directed to abandon its plan for a dive site as it is clear impacts are too great for the community. At the very least the site should be restricted to standard construction hours for all operations above ground and there should be no shifts commencing or ending outside of standard construction hours. The proponent should be directed to find a site where its operations will not impact on residents outside of standard construction hours.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

- Air quality – exhaust emissions**

I object to the Darley Road Civil and Tunnel Construction site at Leichhardt because the proponent has failed to comply with the SEARS requirement in relation to Air quality, that the project is designed, constructed and operated in a manner that minimises air quality impacts (including nuisance dust and odour) to minimise risks to human health and the environment to the greatest extent practicable.

In particular I object to the Darley Road Civil and Tunnel Construction site because of the impact it will have on health.

In 9.3 'Construction assessment methodology' of the EIS the proponent states that one of the main air pollution and amenity considerations at demolition/construction sites is increased concentrations of airborne particles and NO₂ due to exhaust emissions from on-site diesel-powered vehicles and construction equipment.

In 9.3 the proponent also states that **'Exhaust emissions from on-site plant and site traffic are unlikely to have a significant impact on local air quality, and in the majority of cases they would not need to be quantitatively assessed.'**

This assessment is incorrect in the case of the Darley Road Civil and Tunnel Construction site in Leichhardt and the Department of Planning must require the proponent to submit an assessment.

The proponent sets out elsewhere in the EIS its plan to run spoil trucks in and out of the site via Darley Rd/James St.

A full laden truck and dog driving up the steep blind section of Darley Rd/James St will have to use high gears and high revs to get up the hill. This will take longer than for other vehicles because of the size of a truck and dog and the extensive traffic queuing that takes place at the intersection. The proponent anticipates there being a truck every 4 minutes in peak hour which coincides with the peak of foot traffic near the intersection. This means a truck every traffic light cycle. This will create unacceptable concentrations of diesel exhaust in an area used by a lot of pedestrians to get to and from the North Leichhardt light rail stop.

The Darley Road Civil and Tunnel Construction site in Leichhardt should not be allowed to proceed because of the health impacts from diesel exhaust.

..... Please
include my personal information when publishing this submission to your website. I HAVE NOT
made reportable political donations in the last 2 years.

I submit my objection to the WestConnex M4-M5 Link proposals for the reasons stated below, and request the Minister reject the application entirely, and cause the proponents to reissue an EIS that is based on a fully researched, developed, and budgeted concept design, and require the proponents to prepare a new business case against that design.

- ◇ Other planning issues are excluded from cost-benefit analysis, which is a key component of developing a business case:
 - No analysis of equity impacts of the infrastructure investment and the tolling regime, given the lower socio-economic status of many areas of Western Sydney, and the requirement for potential users of WestConnex to own or pay for access to a private vehicle to be able to use it
 - The localised impact of air quality around the ventilation outlets should have been accounted for.
 - Impacts associated with loss of amenity from reduced access to open space should have been accounted for.
- ◇ There will be major impacts on the Anzac Bridge with a projected increase of 60% in daily traffic. There will also be major impacts to the Sydney City Centre. The EIS states that this will lead to major impacts on bus travel time and reliability. The EIS's suggests that people will have to adjust their travel times to starting for work earlier and finishing later. This is unacceptable and underlines Westconnex's waste and total failure.
- ◇ Lack of ability to comment on the urban design as part of the approval process - The EIS does not provide any opportunity to comment on the urban design and landscape component of the project. It states that 'a detailed review and finalisation of the architectural treatment of the project operational infrastructure would be undertaken ;during detailed design'. The

Community should be given an opportunity to comment upon and influence the design and we object to the approval of the EIS on the basis that this detail is not provided, nor is the community (or other stakeholders) given an opportunity to comment or influence the final design.

- ◇ The Westconnex has been described as an integrated transport network solution. This is totally untrue as the role and integration with public transport and freight rail has not been assessed. The Government recently committed to a Metro West so this throws into question the need for Westconnex. This is especially so as the Westconnex business case outlines a shift from public transport to toll roads as a benefit. This needs to be justified economically. The EIS does not do this.
- ◇ The EIS is a strategy only document, it does not commit to any design and it therefore does not address any local impacts created by the proposed M4-M5 Link. Rather it prepares the pathway for sale of the Sydney Motorways Corporation to the private sector, removing from the responsibility, oversight and control of the Government the final design, cost and implementation of the M4-M5 Link.

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Name: DAVID MACQUARIE

Signature: D. Macquarie

Please include my personal information when publishing this submission to your website
Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

Address: 37 BUCKLAND ST

Suburb: Alexandria Postcode: 2015

Submission to:

Planning Services,
 Department of Planning and Environment
 GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.

One toll road leads to another 3 being proposed. The EIS's for the M4 East and the New M5 argued the case that serious congestion created near interchanges would be solved once the M4/M5 was built. Now it seems this is not the case and more roads will be needed to relieve the congestion – WHERE DOES THIS END? According to the M4/M5 EIS the real benefits will depend on building the Western Harbour Tunnel, the Airport Link and a tollway heading South. None of these projects have been planned, let alone approved but yet are part of addressing the congestion impacts acknowledged for the M4/M5 link project. Given this how is it possible to know or address the impacts of the M4/M5 Link, unless this is just yet more justification for yet more roads?

The EIS states that by 2033 Ross St will see an increase of 80 heavy vehicles a day at Peak periods. The greatest increase of Heavy vehicles at the PM peak will be in Johnston Street, which will see an increase of about 30-50 vehicles when compared to the

'without project' scenario. At Catherine St there will be an increase of 30 heavy vehicles a day at Peak periods. These streets will see a huge increase in Heavy vehicle movements if Stage 3 is built. The increase would be roughly half this amount if the project did not go ahead. Annexure Fig 26 B2 Section H

Research about roads clearly demonstrates that roads create congestion. The WestConnex project is no different and the EIS clearly indicates that this is an impact of the M4/M5 and the consequent roads that will follow. WHERE WILL THIS END AS THE m4/m5 Link EIS itself indicates the RMS is already hard at work considering how to solve these problems – of congestion caused by roads.

The Air quality data provided in the EIS is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.

Vegetation: Leichhardt. The mature trees on the Darley Road site should be preserved. If any trees are removed during construction it should be a condition of approval that they are replaced with mature trees.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

This document is vague, lacking in detail confusing and confused. Here are my objections:

1. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck **four unfiltered emissions stacks** in the area plus a **large number of exit portals**, the residents of this area will suffer greatly from **poisonous diesel particulates**. This is negligent when you consider that, the World Health Organisation in 2012 declared **diesel particulates carcinogenic**. As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments and surrounds will experience **increased traffic with associated noise and air pollution** – most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe.
2. Also, the widening of the Crescent between the city West Link and Johnston street with an **extra lane being constructed** will lead to heavy traffic congestion on a road that has **3 Primary/Infants schools**.
3. The EIS states that property damage due to ground movement "may occur, further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of **ground movement and subsidence is lessened** where tunnelling is more than **35 metres underground**. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are astonishingly shallow eg **John St at 22metres Hill St at 28metres Moore St 27 metres**.(Vol 2B Appendix E Part 2) **Catherine St at 28metres**(Vol 2B Appendix E Part 1). At these shallow depths, the homes above would sustain serious structural damage and cracking.
5. Rozelle Rail Yards will have **400 car parking spaces** provided for workers(EIS). The daily workforce for these sites is stated to be approximately **550**. This means **that 150 vehicles will need to park in nearby local streets** which are already over-subscribed during weekdays by commuters taking the light rail.
6. The removal of spoil from the Rozelle Rail Yards will lead to **the largest number of spoil truck movements** on the entire Stage 3 project: **517 Heavy truck movements a day**, of which 46 are stated to take place during peak hours.
7. **The removal of Buruwan Park** between The Crescent and Bayview Crescent/ Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area.
8. The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and **poisonous smoke stacks** borders on being criminally negligent. This new "recreational area" children will be unaware that they are being poisoned.
9. The introduction of the EIS clearly states that the information in the EIS is "indicative of the final design" only. The reality of this statement means that the project may be completely different to stated plans in the EIS. Furthermore although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in **major changes to the project design and construction methodologies**. The community would have no say in this process.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- Traffic diversions – Leichhardt.** The EIS states that 'temporary diversions along Darley Road may be required during construction' (8-65). No detail is provided as to when these diversions would occur; there is no provision for consultation with the community; no detail as to how long the diversions will be in place and no comment on the impact of diversions on local roads or the amenity of residents. Will diversions occur at night? If so, down what streets? Diverting the arterial traffic from Darley Road down local streets (which are not designed for heavy vehicle volumes) will result in damage to streets, sleep disturbances for residents and create safety issues. There is also childcare centre and a school near the William Street/Elswick Street intersection which will be impacted by diverting vehicles onto local roads. It is unacceptable for proposed road diversions not to be detailed whatsoever in the EIS. The EIS should not be approved without setting out the impacts of road diversions on residents and businesses.
- Permanent water treatment plant and substation – Leichhardt** The proposal to locate this permanent structure in a residential setting is opposed. The site will have a negative visual impact on the area and is in direct line of sight of a number of homes. If approved, the facility should be moved to the north of the site further from homes.
- Discharge of water into storm water at Blackmore Oval – Leichhardt** The permanent substation and water treatment plant proposed for the Darley Road site facility should not be approved as part of the EIS. It proposes discharging water from the tunnels into the storm water canal near Blackmore Oval. This will devastate our waterways and impact negatively on the amenity of the bay which has four rowing clubs in close proximity. In addition, the environmental impacts of this discharge are not properly set out in the EIS.
- Impacts not provided – Permanent water treatment plant and substation –** The EIS states that there will be an office, worker parking and buildings to accommodate this facility on a permanent basis. It does not provide any detail as to – noise impacts, numbers of workers on site, any health risks associated with the facility. This is simply inadequate and the decision to locate this facility should be subject to a thorough assessment and approval process. It should not be approved as part of this EIS as there is simply no detail provided about the impact of this facility on the amenity of the area.
- Removal of vegetation – Leichhardt.** The EIS states that all vegetation will be removed on the Darley Road site. There are several mature trees located on the north of the site. None of these trees should be removed as they provide precious greenery. They also act as a visual and noise screen for residents from the City West Link traffic. All efforts should be taken to retain the trees and the EIS should not simply permit these trees to be removed without proper investigations being undertaken as to how they can be retained. If they are removed (following a proper investigation and consideration of all options) then the approval needs to specify that all streets are replaced with mature, native trees at the conclusion of the construction at the site.

Attn: Director - Transport Assessments

Application Number: SSI 7485

Application Name:
 WestConnex M4-M5 Link

- ◇ It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With four unfiltered emissions stacks in the area plus a large number of exit portals, the residents of this area will suffer greatly from poisonous diesel particulates. This is negligent when you consider that, the World Health Organisation in 2012 declared diesel particulates carcinogenic. "As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, "No ventilation shafts will be built near any school."
- ◇ Where is the commitment to community consultation and to long term planning when the EIS for the M4/M5 Link is released before any response to the extensive community feedback on the M4-M5 Link concept design could possibly have been seriously considered. This demonstrates deep government contempt for the people of NSW and the communities of the Inner West of Sydney in particular.
- ◇ No workers associated with the WestConnex project should be permitted to park on local streets. Parking is at a premium in this area and many residents do not have off-street parking. The removal of 20 car spaces for five years as is proposed on Darley Road will worsen this situation as will the removal of 'kiss and ride facilities' at the light rail. There is also a pre-DA application for 120 units on William Street which is not taken into account in the EIS. This will place further stress on parking. The EIS needs to outright prohibit any worker parking on local streets.
- ◇ The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- ◇ In the EIS there are indications of what is to be expected in the Rozelle Rail Yards construction site and the Crescent Civil site. But the EIS states that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed. This may result in major changes to the project design and construction methodologies. The community will have no input into this process, so the community is totally powerless to be able to comment on what will actually be proposed, how it will be carried out and what will finally be built. This is not acceptable.

I submit my strongest objections to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Attn: Director – Transport
Assessments

Application Number: SSI 7485

Application Name:
WestConnex M4-M5 Link

- The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.
- The EIS states that Darley Road is a contaminated site, and likely has asbestos. The proposal is that 'treated' water will be directly discharged into the stormwater drain at Blackmore oval. There are four long-standing rowing clubs in the vicinity of this location. This plan will jeopardise the integrity of our waterway and compromise the use of the bay for recreational activities for boat and other users. We object in the strongest terms to this proposal on environmental and health reasons. There is no detail of the ongoing Motorway maintenance activities during operation provided in the EIS. The community therefore cannot comment on the impact that this ongoing facility will have on the locality. This component of the EIS should not be approved as this information is not provided and therefore impacts (on parking, safety, noise, amenity of the area) are not known.
- The removal of spoil at the Rozelle Rail Yards will lead to the largest amount of Spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place at Peak hours. There will also be 10 Heavy truck movements a day from the Crescent Civil Site. The sheer number of trucks on the road will lead to massive increases in congestion. Maps in the EIS have the spoil trucks going to and from these sites from the Haberfield direction on the City West Link. This is also the direction that is being proposed for spoil truck movements from Darley Rd which is said to have 100 Heavy truck movements a day. It is stated that the cumulative effect of truck movements from all sites on the City West Link will be 700 (one way) Heavy truck movements a day and of that 208 will be in Peak hours. This plan totally lacks credibility
- Rozelle is an old and historic suburb of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- Permanent water treatment plant and substation – Leichhardt The proposal to locate this permanent structure in a residential setting is opposed. The site will have a negative visual impact on the area and is in direct line of sight of a number of homes. If approved, the facility should be moved to the north of the site further from homes.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ◆ The EIS states that darley Road is a contaminated site, and likely has asbestos. The proposal is that 'treated' water will be directly discharged into the stormwater drain at Blackmore oval. There are four long-standing rowing clubs in the vicinity of this location. This plan will jeopardise the integrity of our waterway and compromise the use of the bay for recreational activities for boat and other users. We object in the strongest terms to this proposal on environmental and health reasons. There is no detail of the ongoing Motorway maintenance activities during operation provided in the EIS. The community therefore cannot comment on the impact that this ongoing facility will have on the locality. This component of the EIS should not be approved as this information is not provided and therefore impacts (on parking, safety, noise, amenity of the area) are not known.
 - ◆ It is outrageous to suggest that four unfiltered stacks would be built in one area in Rozelle
 - ◆ The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.
 - ◆ Traffic diversions – Leichhardt. The EIS states that 'temporary diversions along Darley Road may be required during construction' (8-65). No detail is provided as to when these diversions would occur; there is no provision for consultation with the community; no detail as to how long the diversions will be in place and no comment on the impact of diversions on local roads or the amenity of residents.
- Will diversions occur at night? If so, down what streets? Diverting the arterial traffic from Darley Road down local streets (which are not designed for heavy vehicle volumes) will result in damage to streets, sleep disturbances for residents and create safety issues. There is also childcare centre and a school near the William Street/Elswick Street intersection which will be impacted by diverting vehicles onto local roads. It is unacceptable for proposed road diversions not to be detailed whatsoever in the EIS. The EIS should not be approved without setting out the impacts of road diversions on residents and businesses.
- ◆ The removal of Buruwan Park between the Crescent and Bayview Crescent/Railway Pde Annandale to accommodate the widening realignment of the Crescent would be a particular loss of badly needed parkland in this Inner City area. Currently we have fewer parks than almost any suburb in Sydney so this would have a direct impact on local people. Buruwan Park also lies on a major cycle route from Railway Pde through to Anzac Bridge, UTS and the CBD. The alternative route being suggested is poor and takes no real account of trying to encourage cycling as a mode of transport. Cycling should be made as easy as possible to get more ordinary commuters to bicycle and the alternative to the current level route directs cyclists to Johnston St and then up Bayview Crescent arguably the steepest road in Annandale.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ◇ The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
- ◇ I am concerned that while the EIS finds that tolls do weigh more heavily on lower income motorists, there is no serious analysis of the blatant unfairness of letting of private consortium toll people for decades in order to pay for less profitable tollways for wealthier communities.
- ◇ The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- ◇ We object to the selection of the Darley Road site on the basis that it provides for daily movements of 170 heavy and light vehicles accessing Darley Road. This creates an unacceptable risk to the safety of pedestrians accessing the North Leichhardt light rail stop as well as bicycle users accessing the bicycle route on Darley Road and entering Canal road to join the dedicated bike paths on the bay run. Many school children cross at this point to walk to Orange Grove and Leichhardt Secondary College. The EIS states that an alternative truck movement is proposed which involves use of the City West Link with no trucks to access Darley Road. The selection of Darley Road should not be approved if it involves any truck movements on Darley Road, which is what it currently provides.
- ◇ I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.
- ◇ The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).
- ◇ It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- A. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city
- B. No noise barriers have been proposed. This is unacceptable and appropriate noise barriers should be included in the EIS for consideration. (Executive Summary xvii)
- C. The EIS should not be approved as it does not contain any certainty for residents as to what is proposed and does not provide a basis on which the project can be approved. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' Therefore this entire process is a sham as the extent to which concerns are taken into account is not known as the contractor can simply make further changes. As the contractor is not bound to take into account community impacts outside of the strict requirements and as the contractor will be trying to deliver the project as quickly and cheaply as possible, it is likely that the additional measure proposed with respect to construction noise mitigation for (example) will not be adopted. The EIS should not be approved on the basis that it does not provide a reliable basis on which to base the approval documents. It does not provide the community with a genuine opportunity to provide meaningful feedback in accordance with the legislative obligation of the Government to provide a consultation process because the designs are 'indicative' only and subject to change. Because of this the EIS is riddled with caveats and lacks clear obligations and requirements for project delivery. The additional effect of this is that the community and other stakeholders such as the Council will be unable to undertake compliance activities as the conditions are simply too broad and lack any substantial detail.
- D. There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
- E. The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

I wish to submit my objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485. The reasons for objecting are set out below.

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

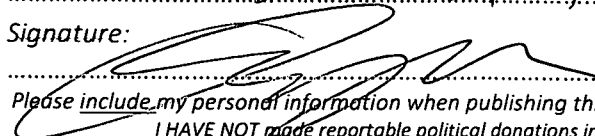

- ◆ EIS is Indicative only – Pyrmont bridge Road site – The EIS should not be approved as it does not contain any certainty for residents as to what is proposed and does not provide a basis on which the project can be approved. This is because the EIS states ‘the detail of the design and construction approach is indicative only’ and is subject to ‘detailed design and construction planning to be undertaken by the successful contractors.’
- ◆ The EIS gives no information about changes to traffic increases entering the Sydney CBD caused by the Westconnex. Duncan Gay when asked about this, in connection to huge increases of traffic predicted to enter the city from Westconnex at St Peters, would only say that traffic would disperse! So thousands of extra vehicles would magically disperse – where? There is no plan for this. RMS has only just started work to identify which roads will need to be upgraded to deal with these vast numbers of extra vehicles entering the city. So it is impossible to form an understanding of the true Environmental impacts of this project – which is the very purpose of an EIS.
- ◆ The removal of Buruwan Park for road widening and the realignment of the Crescent is a particular loss of badly needed parkland. This park was established as a nature corridor and a buffer to shield the local residents from City West Link, there are mature trees on this site, it was not intended as a children’s recreational area with play equipment, the description in the EIS is inaccurate. Buruwan Park also has a main cycle route running through it. The alternative route being suggested is poor and takes no account of encouraging cycling as a mode of transport. The alternative routes are based on distance only and take no account of time taken or topography. Had this been done then this would have changed the assessment for the removal of the existing cycle/walkway bridge over the City West link. There is also no mention of this bridge being replaced after construction of the Westconnex. This is not acceptable.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- i. The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatigue'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- ii. In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- iii. The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and Environment Court found that the location of the site couldn't safely deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.
- iv. It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- v. The EIS identifies hundreds of risks at different construction sites. In relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the "detailed design" phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.
- vi. EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" - this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS ?
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- A. Experience has shown that construction and other plans by WestCONnex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONnex.
- B. Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.
- C. I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.
- D. The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- E. Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- F. It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle
- G. Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.
- H. A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a 'temporary' imposition.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- 1) *I note that in the area of Lilyfield Rd and Gordon Street, the work proposed which would include deep excavation that would result in major adverse impacts on archaeological remains, while other surface works would have localised impacts on archaeological remains that may be present. It is suggested that what are called 'management measures' would be carried out including the development of a Historical Archaeological Research Design which would include an "assessment of any detailed design plans to develop a methodology and scope for a program of test excavation to determine the nature, condition and extent of potential archaeological remains." This is completely unacceptable to me. The community will have no right to any input into this plan or access to independent expert advice. This is all part of an 'approve now', 'research later' approach that will lead to poorly planned unnecessary destruction, a loss of potential community history and understanding.*
- 2) *It is quite clear to me that insufficient research has been done on the archeology of the Rozelle Railway yards. This could be a valuable archeology site. Why has an EIS been put forward without the necessary research being done to further identify potential remains? No project should be approved on the basis of such an inadequate level of research.*
- 3) *The EIS admits that it is not even known what excavation would be undertaken at the White Bay Power station. I am particularly concerned about the old water channels and the southern penstock which are part of Sydney's industrial heritage. How could an EIS for such a major project be put forward on this basis? It is fatuous to state that "physical and indirect impacts on this heritage element should be avoided" and suggest that a future plan should be done. Why isn't the need for excavation known? This raises great concerns about the 'indicative only' nature of the work that has been done before this EIS. Why is there such a rush? This EIS is not complete and should be rejected for that reason.*
- 4) *The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)*

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ❖ I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.
- ❖ I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.
- ❖ Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choices extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)
- ❖ Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. There is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.
- ❖ I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd. St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.
- ❖ I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- A. The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statement
- B. The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.
- C. The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable.
- D. The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.
- E. It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.
- F. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5
- G. The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- a) It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.
- b) Crash statistics – City West Link and James St intersection. The EIS only analyses crash statistics near the interchanges. It does not provide any detail as to the number of crashes at the James St/City West Link intersection which, on Transport for NSW's own figures, is the third most dangerous intersection in the inner west. Nor does it comment on the two fatalities that occurred on Darley Road near the proposed construction site. The EIS needs to detail the increased risk in crashes that will be caused by the additional 170 vehicles a day that are proposed to enter and leave Darley Road during the construction period.
- c) The EIS states that by 2033 Ross St will see an increase of 60 heavy vehicles a day at Peak periods. The greatest increase of Heavy vehicles at the PM peak will be in Johnston Street, which will see an increase of about 30-50 vehicles when compared to the 'without project' scenario. At Catherine St there will be an increase of 30 heavy vehicles a day at Peak periods. These streets will see a huge increase in Heavy vehicle movements if Stage 3 is built. The increase would be roughly half this amount if the project did not go ahead. Annexure Fig 26 B2 Section H
- d) The EIS shows a diagrammatic explanation of the way the polluted air will be expelled from the Westconnex tunnels. This method will work on straight tunnels of short distance providing there is no traffic congestion. There are already signs in tunnel locations in Sydney advising motorists to roll up their windows and put on their 'in vehicle circulating' air conditioning. This type of straight line pollution expulsion doesn't work if the tunnels go around corners, which is the case with the tunnels from the Rozelle Rail Yards site.
- e) The removal of Buruwan Park between the Crescent and Bayview Crescent/Railway Pde Annandale to accommodate the widening realignment of the Crescent would be a particular loss of badly needed parkland in this Inner City area. Currently we have fewer parks than almost any suburb in Sydney so this would have a direct impact on local people. Buruwan Park also lies on a major cycle route from Railway Pde through to Anzac Bridge, UTS and the CBD. The alternative route being suggested is poor and takes no real account of trying to encourage cycling as a mode of transport. Cycling should be made as easy as possible to get more ordinary commuters to bicycle and the alternative to the current level route directs cyclists to Johnston St and then up Bayview Crescent arguably the steepest road in Annandale.
- f) I am concerned that the EIS provides no reasons why the City of Sydney's alternative plan might not be preferable to the proposed WestCONnex.

Address: 9 Trafalgar St

Suburb: Enmore Postcode: 2042

Submission to:

Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director - Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

- ❖ The operational Green House Gas (GHG) assessment is based on the WestConnex Road Traffic Model version 2.3 (WRTM v2.3). This model has major flaws and the unreliable outputs of the model put into question the GHG assessment.
- ❖ The proposed Inner West Subsurface Interchange, planned as part of Stage 1 (Vol 2B Appendix E p 1), linking the 2 mainline tunnels with the Rozelle Interchange and the Iron Cove link is of serious concern, there has been little information about the Inner West Interchange, its construction or exactly which streets it would affect. At Westconnex Information sessions held in the inner west in Sept 2017 staff state the path of the tunnels and the Interchange are 'indicative only'. How are residents expected to submit submissions without knowing if their street is affected?
- ❖ Both the St Peters Active Recreation Area and the Rozelle Interchange Open Space are a false promise. Unless there is an agreement for construction and management these will be grassed wastelands with compromised amenity, adjoined by ventilation facilities in Rozelle, divided by above ground portals and difficult to access across busy roads
- ❖ The project would take land intended for housing and employment specified in The Bays Precinct Transformation Plan.
- ❖ Significantly, there is nothing in the EIS to ensure that tunnelling would be at a sufficient depth so as not to endanger the integrity of homes, including vibration, and noise impacts. Further, without provision for full compensation for damage sustained there would be no incentive for contractors, or Roads and Maritime Services, to minimise damage to homes or indeed to have any concern for damage sustained.
- ❖ Scientists have found that there is no safe level of air pollution. As pollution levels rise deaths and hospitalisations rise too. A thorough cost-benefit analysis that takes into account the health effects due to increased exposure is required.
- ❖ Given that these works could be undertaken to deliver toll paying drivers to the privately owned WestConnex, there is strong potential for a conflict between private profit and community impacts. The cost of any such integration works should very clearly be attributed to the Project cost, and should not impact on the available RMS budget for the State road network normal maintenance and improvement budget.

I submit my strongest objections to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

- ◇ Recently Andrew Constance has been quoted numerous times promoting his vision of the transport future and some of these views are aired in the EIS but the vision put forward is highly visionary with no practical detail addressing how these changes are going to be brought about and so they are totally unrealistic. For example it is starting to be commonly accepted that car manufacturers will be reducing production of petrol/diesel cars before 2040 probably starting in 2030. It is proposed that electric cars will then take over. It is suggested that cars will be charged over night at people's homes. Virtually no one in the Inner City Suburbs has a garage. Are all the streets throughout all the suburbs going to be fitted out with charging points outside all the houses, similar to parking meters? We have all watched the shambles of the rolling out of the NBN it would be mind blowing to watch what would happen with the rolling out of charging points to each household without a garage and it would take years to achieve. There are virtually no recharging points at any Fuel Stations anywhere as yet and to set these up will take years. A large part of the population run older cars, because that is all they are able to afford. It will take many years for these petrol/diesel cars to disappear. Andrew Constance has also said that when everyone is driving an autonomous car average speeds will be reduced but as they are not being controlled by individual drivers this will mean they will be able to travel much closer together and so there will not be so much delay caused by spread out congestion. If this is to be so perhaps the suggestion could be made that some mechanism could be employed which would enable these cars to link together; if that could be done then they could form -a TRAIN - and then really travel at speed!
- ◇ The removal of spoil from the Rozelle Rail Yards will lead to the largest number of spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area.
- ◇ Volumes on the main links (the trunks) cannot be as high as what is claimed in the EIS. It is physically untenable.
- ◇ The money spent on this stage could have been spent on modernizing the railway signal system so the train service could be improved which would benefit the communities west of Parramatta. What commuters out west really need is an extension of the heavy rail train system. I object that we were never given a choice about it.
- ◇ I object to this stage of WestConnex which doesn't benefit western Sydney in any way because it doesn't even include the links to Port Botany or Sydney Airport which were the main justification for the whole project

I wish to register my strong objections to Stage 3 (M4-M5 Link). My reasons are set out below:

1. The EIS states that property damage due to ground movement "may occur (Ch X, p y), further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of **ground movement is lessened** where tunnelling is more than **35 metres underground**. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are astonishingly shallow eg **John St at 22metres Hill St at 28metres Moore St 27metres. Piper St 37metres(Vol 2B Appendix E Part 2) Catherine St at 28metres(Vol 2B Appendix E Part 1)**. At these shallow depths, the homes above would indisputably sustain serious structural damage and cracking. Without provision for full compensation for damage there would be no incentive for contractors or Roads and Maritime Services to minimise this damage.
 2. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With **four unfiltered emissions stacks** in the area plus a **large number of exit portals**, the residents of this area will suffer greatly from **poisonous diesel particulates**. As you are no doubt aware, the World Health Organisation in 2012 declared diesel particulates carcinogenic. "As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. As Education Minister Rob Stokes declared in 2017, "No ventilation shafts will be built near any school"
 3. Rozelle Rail Yards will have 400 car parking spaces provided for workers(EIS). The daily workforce for these sites is stated to be approximately 550. This means that there will be **150 vehicles** will need to park in **nearby local streets** which are already over-subscribed during weekdays by commuters taking the light rail.
 4. Rozelle Interchange and surrounds will experience **increased traffic with associated noise and air pollution**– most particularly at the Crescent, Johnson St and Catherine St, Annandale and Ross Street Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction will become gridlocked during peak times.
 5. The removal of spoil from the Rozelle Rail Yards will lead to **the largest number** of Spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place during Peak hours. This leads to extra noise and air pollution in this area.
 6. The **removal of Buruwan Park** between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, UTS and the CBD.
 7. Unacceptable noise levels will accompany the construction of this massive interchange. No analysis has been provided of the magnitude of increased noise pollution in this area.
- There will also be disturbance of soil which may be thick with contaminants such as lead and asbestos(as was the case in St Peters.) You made no provision for the safe removal of these toxic substances in St Peters and I do not see any provision in the EIS for their safe removal in this area.

Please include my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- a. The latest EIS was released just ten business days after feedback period ended for the Concept Design for the M4/M5 and before preliminary drilling to establish a route through the Inner West is completed. WHAT IS THE RUSH? This EIS is little more than a concept design and is far less developed than earlier ones. It is composed of many indicate only plans such that it is impossible to know what the impacts will be and yet approval is being sought in a rush. The EIS ignores more than 1500 submissions, including one of 142 pages from the Inner West Council.
- b. One toll road leads to another 3 being proposed. The EIS's for the M4 East and the New M5 argued the case that serious congestion created near interchanges would be solved once the M4/M5 was built. Now it seems this is not the case and more roads will be needed to relieve the congestion – WHERE DOES THIS END? According to the M4/M5 EIS the real benefits will depend on building the Western Harbour Tunnel, the Airport Link and a tollway heading South. None of these projects have been planned, let alone approved but yet are part of addressing the congestion impacts acknowledged for the M4/M5link project. Given this how is it possible to know or address the impacts of the M4/M5 Link, unless this is just yet more justification for yet more roads?
- c. Research about roads clearly demonstrates that roads create congestion. The WestConnex project is no different and the EIS clearly indicates that this is an impact of the M4/M5 and the consequent roads that will follow. WHERE WILL THIS END AS THE m4/m5 Link EIS itself indicates the RMS is already hard at work considering how to solve these problems – of congestion caused by roads.
- d. Where is the commitment to community consultation and to long term planning when the EIS for the M4/M5 Link is released before any response to the extensive community feedback on the M4-M5 Link concept design could possibly have been seriously considered. This demonstrates deep government contempt for the people of NSW and the communities of the Inner West of Sydney in particular.
- e. The EIS was prepared by global engineering firm AECOM, which also prepared the EIS for Stages 1 and 2. When he approved these earlier stages, the then Minister for Planning Rob Stokes pointed to conditions of approval that would minimise impacts on communities. But the impacts have turned out to worse than expected.
- f. For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- | | |
|---|--|
| <p>a) Because this is still based on a “concept design” it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation’s ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is NO information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.</p> <p>b) The Rozelle Rail Yards are a totally inappropriate area to create a new recreational area because the area will be highly polluted by unfiltered Pollution Stacks and Tunnel Portals. In the EIS it is referred to as an idealized area. “It is envisaged that the quantum of active recreation within the Rozelle Rail Yards would be further developed by others as projects such as The Bays Precinct are developed. The concept plan provides spaces that could include an array of active recreation opportunities and even community facilities such as gardens or a school.” The suggestion that this would be</p> | <p>a suitable location for a School is just beyond belief and demonstrates that those who have put these plans together are either staggeringly ignorant or totally delusional! At a time when major World cities are doing all they can to address the dire problems of pollution this is an appalling suggestion that is totally out of touch.</p> <p>c) There are two areas in the Rozelle Rail Yards site where construction will be by cut and cover. These are the Portals for the Western Harbour Tunnel and the Portals for the M4/M5 link. This is of particular concern in the light of residents experiences in areas of Haberfield and St Peters where highly contaminated land areas were being disturbed. There was totally inadequate control of dust in these areas, where the dust would have been loaded with toxic chemical particulates. The old Rail Yards are highly contaminated land from their past use. The EIS gives no specific details of how this highly toxic threat is going to be securely managed. It is not acceptable for this to be decided only when the Construction Contracts have been issued, when the community will have no say or control over the methodology to be employed for removing vast amounts of contaminated spoil.</p> <p>d) I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences ‘out of hours’ in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.</p> |

Submission from: Name: <u>Kyle Boersma</u> Signature: <u>[Signature]</u> Please include / exclude (circle) my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years. Address: <u>11 Hubert St</u> Suburb: <u>Leichhardt</u> Postcode: <u>2060</u>	Submission to: Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001 Attn: Director – Transport Assessments Application Number: SSI 7485 Application Application Name: WestConnex M4-M5 Link
---	--

I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, **and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS**

Existing vegetation – Leichhardt:

- a) The EIS proposes removal of all vegetation on the Darley Road site. There is a mature tree located on the site which serves as a visual and noise barrier to the heavy City West Link traffic. Removal of this tree and other vegetation will increase noise impacts to nearby residents and affect the visual amenity, with homes having a direct line of sight to the City West Link. The existing mature tree needs to be retained on this and environmental grounds.

Current noise measures – Leichhardt:

- b) The EIS states that 'reasonable and feasible work practices and mitigation measures would be implemented to minimise potential noise impacts due to activities occurring at the Darley Road civil and tunnel site.' (96-52) This is not good enough. The EIS does not contain any detail whatsoever of these proposal on which they can comment. In addition, there is no requirement that measures will in fact be introduced to address noise impacts. The approval conditions need to contain detail of specific noise mitigation measures that are mandated and can be enforced.

Acoustic shed – Leichhardt:

- c) The EIS does not require an acoustic shed and states that 'Acoustic barriers and devices at the access tunnel entrances would be considered and implemented where reasonable and feasible to minimise potential noise impacts associated with out-of-hours works within the tunnels.' (6-51) The EIS needs to mandate that these measures are in place. Where mentioned, the acoustic shed that is considered offers the lower grade noise protection. This is despite the fact that 36 'sensitive receivers' are identified in the EIS, who will have extreme noise disturbance through much of the 5-year construction period. In addition, the acoustic shed covers only the spoil and spoil handling area and not the tunnel entrances and exits. The highest level of noise protection, which is only suggested in the EIS, needs to be mandated in the EIS. In addition, the shed needs to cover both the entrance and exit to the site and not simply the spoil handling areas. The independent engineer's report (commissioned by the Inner West council) states that it is likely, because of the elevated position of the site, that it is likely an acoustic shed will not contain the noise to an acceptable level. In addition, a temporary access tunnel will be built from the top of the site and run directly under homes in James Street. These homes will be unacceptably impacted by the construction noise and truck movements without these additional measures.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- Traffic operational modelling – Leichhardt.** The EIS does not provide any operational modelling for the Darley Road area (8-11), despite the fact 170 vehicles a day are proposed to enter this highly congested (during peak hours) area. Darley Road is a critical arterial road for commuters accessing the City West Link and this analysis should be provided so that impacts can be properly assessed.
- Crash statistics – City West Link and James St intersection.** The EIS only analyses crash statistics near the interchanges. It does not provide any detail as to the number of crashes at the James St/City West Link intersection which, on Transport for NSW's own figures, is the third most dangerous intersection in the inner west. Nor does it comment on the two fatalities that occurred on Darley Road near the proposed construction site. The EIS needs to detail the increased risk in crashes that will be caused by the additional 170 vehicles a day that are proposed to enter and leave Darley Road during the construction period. The EIS needs to detail how this risk of crashes will be managed to an acceptable level, which it does not.
- Worker parking – Leichhardt.** There is provision in the EIS for only a dozen worker car parks and no provision for the 100 or so workers who will be permanently based at the Darley Road site for up to five years. A major construction site project should not be permitted in a neighbourhood area without allocated parking for all workers. No other business would be permitted to be established without this requirement being satisfied – why is it acceptable for this project? In addition, the EIS proposes the removal of 20 car spaces used by residents on Darley Road and will remove the 'kiss and ride' facility at the light rail stop. This will result in residents being unable to park in their own street and will increase noise impacts from workers doing shift changeovers 24 hours a day. The EIS needs to mandate the use of public transport or provide for workers to be bussed in if adequate allocated parking is not provided.
- Number of vehicle movements – Leichhardt.** The EIS states that there will be 170 heavy and light vehicle movements a day during construction (5 years). There is no guarantee that these figures are accurate as they are indicative only. The effect of these movements will be drastically increased commuter times for anyone accessing the City West Link during peak periods. The Darley Road site is equally busy on Saturday and this is not accounted for or acknowledged in the EIS. The EIS should not permit this number of vehicle movements and should be rejected on this basis as there is no plan as to how this will be managed. Referring to a future traffic management plan is inadequate – there is no guarantee that any such plan will be able to manage this traffic impact to an acceptable level.
- Access routes – Leichhardt.** The EIS states that all construction vehicles will enter and leave via Darley Road. Although near the City West Link, Darley Rd abuts a large number of small, local streets and homes and streets near Darley Road will be impacted by a heavy vehicle movement every 3-4 minutes. This is an unacceptable impact. No heavy or light vehicle movements should be permitted on Darley Road whatsoever and an alternative route which does not involve Darley Road is the only route that should be approved.

Submission to: Planning Services Department of Planning and Environment GPO Box 39, Sydney, NSW 2001	Name: KYRBY MACDONALD Signature: <i>Kyrby Macdonald</i>
Attention: Director – Transport Assessments	Please include / delete (cross out or circle) my personal information when publishing this submission to your website. Declaration: I HAVE NOT made any reportable political donations in the late 2 years.
Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: 21 Avon St Suburb: Hesse Postcode: 2037

After studying the massive EIS document I wish to register my strong objections to this entire project for numerous reasons.

1. The EIS was released just 12 days after the closing date for submissions to the Concept Design. This proves the Concept Design and the submissions were a sham. There were hundreds of posts on the interactive map and there were over thousand written submissions. There is no way these submissions could have been read, evaluated, their points integrated, and the 7500 page EIS edited, printed, checked and distributed in 12 days. The EIS was obviously prepared prior to the closing of submission to the Concept Design. This is a total abuse of the NSW Planning Laws.
2. The original stated objective of Westconnex had as its fundamental objective the connecting to Port Botany. The original objective was the improvement of freight access to the Airport and Port Botany. Stage 1, 2 and 3 do not achieve this goal and this is not addressed in the EIS.
3. It is stated that the hugely expensive Stage 3 M4/M5 link is required as a link between the two motorways. This is totally untrue. The A3 is the primary eastern link between the two motorways and it is described in the State Road network system as the M4- M5 Connector.
4. The introduction of the EIS clearly states that the information in the EIS is "indicative" of the final design only. The reality of this statement means that the project may be completely different to stated plans in the EIS. Furthermore although the EIS indicates what is to be expected when construction begins, it also states that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major changes to the project design and construction methodologies. The community would have no say in this process.
5. The most highly effected area of Stage 3 will be Rozelle with the massive and complex interchange. Nothing like this has been built anywhere else in the World and it is highly questionable as to whether it can be built at all in the form outlined in the EIS. The EIS does not show any detailed plans as to how this will be achieved. There are no constructional details at all, what is shown is a concept only, this is totally unacceptable.
6. Rozelle Rail Yards will have 400 car parking spaces provided for site workers(EIS). The daily workforce for these sites is shown to be approximately 550. This means that 150 vehicles will need to park in nearby local streets which are already at full capacity during weekdays from commuters parking and taking the light rail.
7. There will be 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours from the Rozelle Rail Yard the largest amount of spoil truck movement on the whole of Stage 3. This will lead to a vast amount of extra noise and air pollution in this area. There will also be disturbance of soil in the old Rozelle Goods Yard which will be heavily contaminated with toxic substances. It is highly probable that there will be lead and asbestos. (as was the case in St Peters) You made no provision for the safe removal of these toxic substances in St Peters and the EIS makes no provision for their safe removal in this area.
8. The EIS states that property damage due to ground movement "may occur. It states that subsidence may occur along tunnel paths due to tunnel excavation and water drawdown. The risk of ground movement and subsidence is greater where tunnels are less than 35 metres underground. The planned Inner West Interchange proposes tunnels in that area which are a great deal less than 35metres. The same is true for areas of Rozelle where layers of tunnels are proposed. This will definitely lead to structural damage and cracking to homes above. Without provision for full compensation for damage there would be no incentive for contractors or Roads and Maritime Services to minimise this damage. This is not acceptable

Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 application, for the following reasons:

1. There is great concern in the community that King Street, Newtown, will become a 24-hour clearway. The EIS at 7-41 acknowledges that, and states "Roads and Maritime has no plan to change the existing clearways on King Street". This statement is **deliberately misleading** as it infers that SMC has the authority to establish Clearways on regional roads. *Roads and Maritime* have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has **NEVER** stated publicly that King Street will not be subject to extended clearways.
2. The EIS uses maps indicating alignment of the mainline tunnels. It is only when you get to EIS 12-57 (Sydney Water Tunnels) that it becomes clear that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are only 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.
3. The EIS refers to concerns that were raised by the community that the route of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech testing (see at 7-51) SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. The details in the just released EIS indicate both sides of King St but as it is only indicative how is it possible to comment on the likely impacts. This seriously casts doubt over the integrity of the entire EIS process.
4. I strongly object to the way the EIS treats "uncertainties". EIS 6.1 (Synthesis, Page 45) describes the process re project uncertainties. *"The EIS is based on the concept design developed for the project. ... it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors ... would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval"*. Given this I strongly object to the approval of this EIS until critical 'uncertainties' have been fully researched and the results (and any changes) published for public comment.
5. At 7-25 the EIS does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
6. It is all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does NOT constitute open and fair community engagement.
7. This EIS contains **no meaningful** design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area taking into account long term sustainability over short-term private profit.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

⇒ The business case is fatally flawed in a number of ways :

- It does not factor in the impact of longer total journey lengths on urban sprawl, which will have a flow-cost for infrastructure and servicing.
- It includes benefits from WestConnex supporting more compact commercial land use when this is generally not the result of motorway investment, and is unlikely to be in the area served by Stage 3.
- It does not attempt to cost the reductions in public transport, especially the loss of fare revenue.
- Ancillary road projects necessitated by WestConnex, such as the potentially \$1BN Alexandria-Moore Park Connectivity Upgrade, should have been included in the Business Case.
- Impact on property values, costs of noise during construction, and loss of business should all have been costed and included in the Business Case
- Loss of heritage to the whole community (not just property owners) should have been included in the Business Case.

⇒ The Business Case for the WestConnex project (made up of the New M4, Iron Cove Link and Rozelle Interchange, M4-M5 Link, New M5, King Georges Road Interchange upgrade and Sydney

Gateway was not adequate to justify moving to environmental impact assessment.

- ⇒ The Government is spending many billions of taxpayer dollars via Metro Rail to try and free itself of the restrictions of the City Circle that imposes a choke on the whole rail network, but is now replicating a the city circle with a 60km road network. It does makes sense to focus a rail network on the centre of the densest employment and residential area of Australia, with the greatest economic output per square kilometre. However, it is the antithesis of common sense, practicality, economic productivity, property value creation, environmental planning, social planning and basic transport planning to replicate it with more motorways.
- ⇒ The M4-M5 Link enables the expansion of the WestConnex network to include the Western Harbour Tunnel, Beaches Link and M6. These motorway projects, were not part of the WestConnex business case and are not priority projects in any State or Federal roads plan.

Please include my personal information when publishing this submission to your website. Declaration: I HAVE NOT made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

1. The key intersection performance tables in App H (p.258 St Peters and 248 Rozelle) demonstrate that many intersections will either worsen (at the worst case scenario of LOS F) or remain unchanged particularly in 2033, including the following intersections:
 - Princes Highway/Canal Road
 - Princes Highway/Railway Road
 - Unwins Bridge Road/Campbell Street
 - Campbell Road/Bourke Road
 - Princes Highway/Campbell Street
 - Ricketty Street/Kent Road
 - Gardeners Road/Kent Road
 - Gardeners Road/Bourke Road
 - Gardeners Rd/O'Riordan Street
 - Victoria Road/Lyons Road
 - Victoria Road/Darling Street
 - Victoria Road/Robert Street
2. I object to this new tollway because in the past tolls have been justified as needed to pay for the new road. This is not the case of this tollway that will charge tolls for 40 years. This is only to guarantee revenue to the new private owner.
3. The proponent excludes the impact of the Western Sydney Airport from analysis of the project. This could have a significant impact on traffic volumes.
4. The modelling shows significant increases in traffic on Victoria Rd (+20% ADT) which is already at capacity.
5. Most people in Emu Plains, Penrith, Mt Druitt, or Blacktown who work in Sydney CBD use the trains. What workers travelling to Sydney city really need are better and more frequent trains. This is just dismissed by the EIS.
6. Most people in Emu Plains, Penrith, Mt Druitt, or Blacktown who work in Sydney CBD use the trains. What workers travelling to Sydney city really need are better and more frequent trains. This is just dismissed by the EIS.
7. The modelling shows the motorway exceeds reasonable operating limits in the peak in less than ten years.
8. The underlying traffic modelling and outputs was insufficient to:
 - Demonstrate the need for the project.
 - Understand impacts of dispersed traffic on connecting roads, such as the Anzac Bridge, and whether they have available capacity to meet the predicted traffic discharge. Any congestion on exits has the capacity to negate all travel time savings to the exit point, given the small predicted benefits.
9. Public transport is rejected by the EIS so the state government is forcing us to use cars more when most major cities in the world are trying to reduce the number of cars on the roads. We know this is to promote private road operators' profits. I object to putting so much public funding to the cause of private profit. I urge the Secretary of Planning to reject this project.

I object to the WestConnex M4-M5 Link proposals for the following reasons, and request the Minister reject the application, and require SMC and RMC to prepare a new EIS that is based on genuine, not indicative, design parameters, costings, and business case.

- ❖ The Rozelle Rail Yards are a totally inappropriate area to create a new recreational area because the area will be highly polluted by unfiltered Pollution Stacks and Tunnel Portals. In the EIS it is referred to as an idealized area. "It is envisaged that the quantum of active recreation within the Rozelle Rail Yards would be further developed by others as projects such as The Bays Precinct are developed. The concept plan provides spaces that could include an array of active recreation opportunities and even community facilities such as gardens or a school." The suggestion that this would be a suitable location for a School is just beyond belief and demonstrates that those who have put these plans together are either staggeringly ignorant or totally delusional! At a time when major World cities are doing all they can to address the dire problems of pollution this is an appalling suggestion that is totally out of touch.
- ❖ The EIS states that spoil handling at the Pyrmont Bridge Road Tunnel Site (C9) will "occur 24 hours a day, seven days a week" for about four years. Given the land use surrounding the site is dense residential, what mitigation measures will be used to control noise, light spill, etc. outside normal business hours? Have alternative living arrangements and/or compensation been considered? (P 8-55)
- ❖ The assessment of Strategic Alternative 3 (Travel Demand Management) should:
 - a) Identify key network capacity issues
 - b) Consider the opportunity for travel demand management measures to address the road network capacity constraints.
The measure should aim to retime; re-mode or reduce trips that make less productive use of congested road space.
 - c) Draw on a process of multi-modal transport modelling and economic assessment to inform the analysis and assessment
- ❖ The EIS does not provide appropriate parking for the estimated 100 or so workers that the EIS states will work every day at the site, while other equivalent sites have allocated parking for such workers (Northcote Civil site (150)) and Parramatta Road East Civil site (140). It is also noted that the EIS provides for loss of 20 residential parks on Darley Road. Local streets are at capacity already because of the lack of off-street parking for many residents and the Light Rail stop which means that commuters use local streets. The EIS states that workers 'will be encouraged to use public transport.' the EIS needs to mandate that no trucks or construction vehicles are to park in local streets. There needs to be a requirement that is enforceable that workers use the Light Rail stop which is adjacent to the site or a plan to bus in workers

I submit my objection to the WestConnex M4-M5 Link proposals for the reasons stated below, and request the Minister reject the application entirely, and cause the proponents to reissue an EIS that is based on a fully researched, developed, and budgeted concept design, and require the proponents to prepare a new business case against that design.

- ❖ The EIS (including Appendix H) fails to provide traffic modelling outputs to assess impacts of the Project on CBD streets and intersections. Given the highly constrained and congested nature of the CBD, NSW Government policy focusses on reducing the number of cars in the CBD in favour of public transport, walking and cycling. The proponent should provide intersection performance results for the following intersections:
 - a) The ANZAC Bridge off-ramp to Allen Street/Botany Road
 - b) The Western Distributor off-ramp to Druiitt Street (buses)
 - c) The Western Distributor off-ramp to Bathurst Street
 - d) The Western Distributor off-ramp to King Street/Sussex Street
 - e) Gardeners Road and Botany Road
 - f) All intersections within the modelled area in the Sydney CBD
- ❖ The traffic model used is an 'unconstrained' model. It assumes that all vehicles will travel on the route with the lowest "generalised cost" (i.e. combination of time and money). But it does not consider whether those routes have the capacity to handle all those vehicles. In the real world people change their time of travel, mode of travel and consider whether to make a trip at all to avoid congested routes. As a result travel patterns in the real world are very different to the patterns identified in models.
- ❖ Better use of existing road infrastructure has not been analysed as a feasible alternative. The EIS only refers to existing RMS programs. An analysis of urban road projects recommended in the State Infrastructure Strategy Update 2014 should be conducted as strategic alternatives including:
 - a) Smart Motorways investments on the M4, the Warringah Freeway and Southern Cross Drive-General Holmes Drive
 - b) Upgrading the Sydney Coordinated Adaptive Traffic System (SCATS)
- ❖ The EIS refers to benefits from road projects that are not part of the project's scope. The full costs, benefits and impacts of these projects need to be considered in a transparent process.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Link

- A. Rozelle Rail Yards will have 400 car parking spaces provided for workers(EiS). The daily workforce for these sites is stated to be approximately 550. This means that 150 vehicles will need to park in nearby local streets which are already over-subscribed during weekdays by commuters taking the light rail.
- B. There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- C. There is no evidence provided in the EIS that the ventilation outlets will be date. The EIS simply states that 'the ventilation outlets would be designed to effectively disperse the emissions from the tunnel and are predicted to have negligible effect on local air quality (xiv, Executive Summary). This is inadequate and details of the impacts on air quality need to be provided so that the residents and experts can meaningfully comment on the impact.
- D. EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" - this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.
- E. SMC have made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.
- F. I am deeply disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.
- G. I strongly object to the proposed location of this permanent operational facility on Darley Road. The presence of this site contradicts repeated assurances to the community that the site would be returned after construction was completed. The ongoing presence of this site will limit future uses of the darley Road site which could serve community purposes, particularly given its location directly next to public transport. Its presence removes the ability to provide more accessible, safer and direct pedestrian access to the North Leichhardt Light Rail Station. The plant location, in a neighbourhood setting is not appropriate. It will reduce property values and have an unacceptable impacts on the visual amenity of the area. The streets adjacent to Darley Road are comprised of low-rise residential homes and small businesses and infrastructure such as this should not be permitted in such a location.

Attn: Director – Transport Assessments

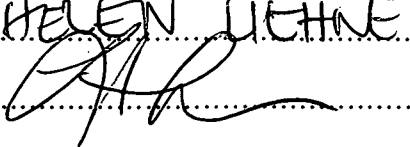

Application Number: SSI 7485

Application Name:
WestConnex M4-M5 Link

- ◇ The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- ◇ I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.
- ◇ No noise barriers have been proposed. This is unacceptable and appropriate noise barriers should be included in the EIS for consideration. (Executive Summary xvii)
- ◇ Alternative access route for trucks – Leichhardt: The EIS states that there are 'investigations' occurring into alternative access to the Darley Road site. The EIS does not provide any detail on which residents can comment about alternative access which would keep trucks off Darley Road. The plans for alternative access should be expedited. It should be a condition of approval that the alternative access is confirmed and that no spoil trucks are permitted to access Darley Road due to the unacceptable noise, safety and traffic issues that the current proposal creates
- ◇ We object to the selection of the Darley Road site on the basis that it provides for daily movements of 170 heavy and light vehicles accessing Darley Road. This creates an unacceptable risk to the safety of pedestrians accessing the North Leichhardt light rail stop as well as bicycle users accessing the bicycle route on Darley Road and entering Canal road to join the dedicated bike paths on the bay run. Many school children cross at this point to walk to Orange Grove and Leichhardt Secondary College. The EIS states that an alternative truck movement is proposed which involves use of the City West Link with no trucks to access Darley Road. The selection of Darley Road should not be approved if it involves any truck movements on Darley Road, which is what it currently provides.
- ◇ The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1,000s more per day onto the roads to the Airport which are already at capacity.

Suburb: <u>NEWTOWN</u> Postcode: <u>2042</u>	

I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, **and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS**

- ◇ The EIS states that Darley Road is a contaminated site, likely including asbestos. There is a risk to the community associated with spoil removal, transfer and handling. We object to the selection of the site based on the environmental risks that this creates, along with risks to health of residents.
- ◇ Motor vehicles account for 14% of Particulate Pollution of 2.5 microns and less in Australia. There is no safe level to exposure to particulate matter of 2.5 microns and less. Particulate matter is linked with Asthma, Lung Disease, Cancer and Stroke.
- ◇ The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
- ◇ The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project' and 'damage' would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.
- ◇ Noise mitigation – Leichhardt. The noise mitigation proposed in the EIS is unacceptable. No detail of noise walls is provided, giving residents no opportunity to comment on whether final impacts are acceptable. This is despite the fact 36 homes are identified in the EIS as severely affected by construction noise. The acoustic shed proposed is of the lowest grade and does not cover the entire site, resulting in noise impacts from the movement of trucks in and out of the tunnel access point. The highest grade acoustic shed should be provided, with the shed covering the entire site. The additional noise mitigation such as noise walls, need to be det out in detail so that residents can properly comment on the impacts.
- ◇ The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONNex.

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485 Application

Application Name: WestConnex M4-M5 Link

- ◇ No need for 'dive' site – Leichhardt. There is no need for the Darley Road site, other than a time saving (tunneling) of several months. It is unacceptable that the community should be forced to endure 5 years of severe disruption to accommodate the timetable of the private contractors. The EIS should not be approved on the basis that it contains provision for the Darley Road site without any proper justification as for its need.
- ◇ Rozelle Interchange and surrounds will experience **increased traffic with associated noise and air pollution**– most particularly at the **Crescent, Johnson St and Catherine St**, Annandale/Lilyfield/Leichhardt and **Ross Street**, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.
- ◇ The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.
- ◇ 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.
- ◇ The EIS is misleading because it discusses the creation of 14,350 direct jobs during construction. It omits the fact that jobs have also been lost because of acquisition of businesses, many of which were long-standing and employed hundreds of workers. (Executive Summary xviii)
- ◇ The EIS states that 'a preferred noise mitigation option' would be determined during 'detailed design'. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi)
- ◇ For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.

Application Name: WestConnex M4-M5
Link

- ◇ (6-51) The EIS needs to mandate that these measures are in place. Where mentioned, the acoustic shed that is considered offers the lower grade noise protection. This is despite the fact that 36 'sensitive receivers' are identified in the EIS, who will have extreme noise disturbance through much of the 5-year construction period. In addition, the acoustic shed covers only the spoil and spoil handling area and not the tunnel entrances and exits. The highest level of noise protection, which is only suggested in the EIS, needs to be mandated in the EIS. In addition, the shed needs to cover both the entrance and exit to the site and not simply the spoil handling areas. The independent engineer's report (commissioned by the Inner West council) states that it is likely, because of the elevated position of the site, that it is likely an acoustic shed will not contain the noise to an acceptable level. In addition, a temporary access tunnel will be built from the top of the site and run directly under homes in James Street. These homes will be unacceptably impacted by the construction noise and truck movements without these additional measures

- ◇ The EIS states that these will occur near the Darley Road site. There is no detail provided, nor is there a process by which residents can influence such decisions. The Inner West Council's documents state that Darley Road is not built to normal road requirements and safety standards, as it was

established as an access road for the former goods line. Two fatalities have occurred near the site location, with many accidents. The Council has been trying to make Darley Road a safer route for many years. Elwick Street North for example was partially closed as a result of a fatality. The approval conditions need to make it clear that all road closures need to be made in consultation with residents affected and that the safety issues are adequately addressed. No arterial traffic from Darley Road should be allowed to be diverted onto narrow local roads

- ◇ EIS is Indicative only - The EIS should not be approved as it does not contain any certainty for residents as to what is proposed and does not provide a basis on which the project can be approved. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. This means the community will have limited say in the management of the impacts identified in the EIS. The EIS needs to provide an opportunity for the community to meaningfully input into this report and approval conditions.

- I am concerned that while the EIS finds that tolls do weigh more heavily on lower income motorists, there is no serious analysis of the blatant unfairness of letting of private consortium toll people for decades in order to pay for less profitable tollways for wealthier communities.
- I am concerned that SMC has selected one of Sydney's most dangerous traffic spots, Darley Rd in Leichhardt for a construction site that will bring hundreds of extra trucks and cars into the area on a daily basis for years.
- Permanent substation and water treatment plant - Residents on Darley Rd opposite the site and residents in Hubert St will have a direct line of site to the Motorway operation infrastructure. The resultant impact is a permanent degradation of the visual environment, is a loss of amenity and is detrimental to the community. This facility should not be permitted in this location and the EIS needs to demonstrate why it is required at this site. If approved, the facility should be moved to the north of the site out of line of site of residents. The residual land should be returned for community purposes, such as green space, with future commercial uses ruled out. If the community is forced to endure 5 years of severe disruptions due to this toll road, the compensation should, at the very least, result in the land being returned to the community as green space.
- Darley Road is confirmed as a 'civil and tunnel site (dive site)' with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.
- The EIS does not provide any opportunity to comment on the urban design and landscape component of the project. It states that 'a detailed review and finalisation of the architectural treatment of the project operational infrastructure would be undertaken 'during detailed design'. The Community should be given an opportunity to comment upon and influence the design and we object to the approval of the EIS on the basis that this detail is not provided, nor is the community (or other stakeholders) given an opportunity to comment or influence the final design.
- The latest EIS was released just ten business days after feedback period ended for the Concept Design for the M4/M5 and before preliminary drilling to establish a route through the Inner West is completed. WHAT IS THE RUSH? This EIS is little more than a concept design and is far less developed than earlier ones. It is composed of many indicate only plans such that it is impossible to know what the impacts will be and yet approval is being sought in a rush. The EIS ignores more than 1500 submissions, including one of 142 pages from the Inner West Council.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <u>Bernie Flygten</u>

Please include my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- The latest EIS was released just ten business days after feedback period ended for the Concept Design for the M4/M5 and before preliminary drilling to establish a route through the Inner West is completed. **WHAT IS THE RUSH?** This EIS is little more than a concept design and is far less developed than earlier ones. It is composed of many indicate only plans such that it is impossible to know what the impacts will be and yet approval is being sought in a rush. The EIS ignores more than 1500 submissions, including one of 142 pages from the Inner West Council.
- One toll road leads to another 3 being proposed. The EIS's for the M4 East and the New M5 argued the case that serious congestion created near interchanges would be solved once the M4/M5 was built. Now it seems this is not the case and more roads will be needed to relieve the congestion – **WHERE DOES THIS END?** According to the M4/M5 EIS the real benefits will depend on building the Western Harbour Tunnel, the Airport Link and a tollway heading South. None of these projects have been planned, let alone approved but yet are part of addressing the congestion impacts acknowledged for the M4/M5link project. Given this how is it possible to know or address the impacts of the M4/M5 Link, unless this is just yet more justification for yet more roads?
- Research about roads clearly demonstrates that roads create congestion. The WestConnex project is no different and the EIS clearly indicates that this is an impact of the M4/M5 and the consequent roads that will follow. **WHERE WILL THIS END AS THE m4/m5 Link EIS itself indicates the RMS is already hard at work considering how to solve these problems – of congestion caused by roads.**
- Where is the commitment to community consultation and to long term planning when the EIS for the M4/M5 Link is released before any response to the extensive community feedback on the M4-M5 Link concept design could possibly have been seriously considered. This demonstrates deep government contempt for the people of NSW and the communities of the Inner West of Sydney in particular.
- The EIS was prepared by global engineering firm AECOM, which also prepared the EIS for Stages 1 and 2. When he approved these earlier stages, the then Minister for Planning Rob Stokes pointed to conditions of approval that would minimise impacts on communities. But the impacts have turned out to worse than expected.
- For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.

I HAVE NOT made reportable political donations in the last 2 years.

Address: 51/17 Newington Rd.Suburb: Murrumbidgee Postcode 2204**I object to the WestConnex M4-M5 Link proposals for the following reasons:**

- o The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatigue'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- o The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating "Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets". Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future?
- o The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.
- o The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is "based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required." The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- o It all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does NOT constitute open and fair community engagement.

<p align="center">Please <u>include</u> my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.</p>	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- Experience has shown that construction and other plans by WestCONNex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONNex.
- Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.
- I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.
- The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle
- Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.
- A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a 'temporary' imposition.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <u>Sam Miller</u>	
Application Number: SSI 7485	Address: <u>76 DICKSON ST</u>	
Application Name: WestConnex M4-M5 Link	Suburb: <u>NEWTON</u>	Postcode <u>2042</u>
Signature: 	Declaration: I HAVE NOT made any reportable political donations in the last 2 years	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- ◇ The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street will greatly increase during the construction period and also be greatly increased by the time Stage 3 is completed. It states that Stage 3 will do nothing to improve traffic congestion in the area in fact it will add to the problem. Many of these areas are already congested at Peak times. This will be highly negative for the local area as more and more people try to avoid the congestion by using rat runs through the local areas on local streets.
- ◇ The mainline tunnel alignment was influenced by a number of factors between Haberfield and St Peters. It is very concerning that one of these factors, states that this route was decided on for: "Future connections to the motorway network". This is of particular concern in the light of the Camperdown interchange removal. Westconnex was forced to remove this interchange due to pressure from the RPA Hospital, Sydney University and The Chinese Embassy. Knowing that the Camperdown Interchange was wanted it is highly concerning to see this reference to future motorway connections but no disclosures outlining where these connections maybe. The EIS also states that in 2016 extending a tunnel link to the South side of the Gladesville Bridge was seriously considered rather than to the Iron Cove Bridge but this was shelved due to costs. In light of the way residents and home owners have been dealt with by Westconnex the fact that other areas are being considered for add on sectors to this project is of great concern.
- ◇ The management of water in the Rozelle Yards is of great concern as the site is highly contaminated and the construction work that will be carried out will cause a great deal of disturbance especially once vegetation has been removed. There will be potential impacts from contaminated soils, leakage/spills of hydrocarbons and other chemicals from machinery, vehicles transporting spoil adjacent to roads and stormwaters, rinse water from plant washing and concrete slurries. Water from tunnelling activity and other works will also introduce contaminants. The EIS says that much of this water will be treated in temporary treatment facilities and sediment tanks before being released to Whites Creek and Rozelle Bay. The EIS does not disclose what levels of pollution controls will be implemented to make sure that contaminated water is not released into White's Creek or Rozelle Bay. This is not acceptable.
- ◇ In 2033 with the M4 - M5 link the WRTM is forecasting reductions in peak travel times between the M4 corridor and the Sydney Airport/Port Botany area. The times savings that are quoted miniscule! Between Parramatta and Sydney Airport the time saving is 10 minutes. Between Burwood and Sydney Airport the time saving is 5 minutes. Between Silverwater and Port Botany the time saving is 10 minutes. So for well over \$20Billion all that can be saved is just a handful of minutes! This total waste of public money is completely unacceptable.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- 1.1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.
- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.
- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls

are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.

- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

- | | |
|--|--|
| <ul style="list-style-type: none"> ◇ Public transport is rejected by the EIS so the state government is forcing us to use cars more when most major cities in the world are trying to reduce the number of cars on the roads. We know this is to promote private road operators' profits. I object to putting so much public funding to the cause of private profit. I urge the Secretary of Planning to reject this project. ◇ The traffic modelling process is not fit for purpose and places significant risks on the people of NSW in terms of: <ul style="list-style-type: none"> ▪ Traffic impacts that are significantly different to those presented in the EIS. ▪ Toll earnings that are significantly lower than projections – resulting in government subsidising the owner for lost earnings. ◇ There is no statement on the level of accuracy ◇ and reliability of the traffic modelling process. This is a major shortcoming and is contrary to the Secretary's Environmental Assessments Requirements. Westconnex traffic modelling relies on implausible traffic volumes that exceed the capacity of the road links and intersections at several key locations. ◇ The great number of heritage houses in the Rozelle interchange construction zone has not been specifically addressed. Noise and vibration impacts can have far more significant impacts on these types of properties. There is no functional management plan for these risks, no articulated complaints investigation process nor any articulated compensation and remediation strategy. | <ul style="list-style-type: none"> ◇ This is despite the RMS being the client for the Sydney Motorways Corporation. It would appear this is a deliberate strategy of the NSW Government to ensure local communities affected by construction traffic have no reasonable means of managing any complaint. It is undemocratic, against the principles of open government espoused in the election platform of the current government and ultimately escalates community unrest. (P 8-44) ◇ The EIS states that 'a preferred noise mitigation option' would be determined during 'detailed design'. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi) ◇ I object strongly to AECOM's approach to heritage. The methodology used is simply to describe heritage. If it interrupts the project plans, it simply must be destroyed. This is not an assessment at all. Plans to salvage items do have value but this value should not be used as a carrot to justify the removal of buildings. ◇ The project objectives (Part 3.3 of EIS) include enabling the construction of motorways over the harbour and to the northern beaches. However, the traffic impacts of these motorways in Rozelle have not been assessed. These projects were not part of the business case that justified the WestConnex in the first place. This constant shifting of reasoning as to why the project is justified points to a desperation to find a reason to build it, rather than there being a clear need to be serviced. |

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- A. The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.
- B. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.
- C. The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
- D. Are there other potentially serious problems with Sydney Water utility services (described at EIS 12-57) or with other utilities in other suburbs or along the proposed M4-M5 tunnel alignment? If so, the EIS proposals and application should not be approved till these are all disclosed, researched, surveyed and the resolution publicly published.
- E. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).
- F. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.
- G. I strongly object to the privatisation of the WestConnex project that turns public monies into private profit.
- H. It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.
- I. No road junction as large and complex as the extraordinary spaghetti junction proposed to go underground has been built anywhere in the world. The feasibility is not tested. There are no international or national standards for such a construction.

I submit my strongest objections to the M4-M5 Link proposals as contained in the EIS application # SSI 7485, and request the Minister to reject the application and require SMC / RMS to issue a true, not an 'indicative' and fundamentally flawed EIS

Attn: Director – Transport
Assessments

Application Number: SSI 7485

Application Name:
WestConnex M4-M5 Link

- a) I am concerned that while hundreds of impacts on resident, including noise, loss of business, dust, and lost time through more traffic congestion, are identified in the EIS, the approach is always to recommend approval and promise vague 'mitigation' in the future. This is not good enough.
- b) The removal of Buruwan Park between the Crescent and Bayview Crescent/Railway Pde Annandale to accommodate the widening realignment of the Crescent would be a particular loss of badly needed parkland in this Inner City area. Currently we have fewer parks than almost any suburb in Sydney so this would have a direct impact on local people. Buruwan Park also lies on a major cycle route from Railway Pde through to Anzac Bridge, UTS and the CBD. The alternative route being suggested is poor and takes no real account of trying to encourage cycling as a mode of transport. Cycling should be made as easy as possible to get more ordinary commuters to bicycle and the alternative to the current level route directs cyclists to Johnston St and then up Bayview Crescent arguably the steepest road in Annandale.
- c) Impacts not provided – Permanent water treatment plant and substation – The EIS states that there will be an office, worker parking and buildings to accommodate this facility on a permanent basis. It does not provide any detail as to – noise impacts, numbers of workers on site, any health risks associated with the facility. This is simply inadequate and the decision to locate this facility should be subject to a thorough assessment and approval process. It should not be approved as part of this EIS as there is simply no detail provided about the impact of this facility on the amenity of the area.
- d) The site should be returned to the community as compensation for the imposition of this construction site in our neighbourhood for a 5 year period. If the substation and water treatment plant is moved to the north of the site, then the lower half of the site (which is the most accessible end) could be converted into open space with mature trees planted. As this site is immediately adjacent to the bay run, bicycle parking and other facilities that support active transport could be included. This would result increase the green space for residents and result in a pleasant green environment for pedestrians, rather than a fenced facility.
- e) The City West Link Eastbound AM and PM peak hour and other locations. "Table 7-19 shows that several locations are forecast to exceed theoretical roadway capacity with the increased background traffic and the construction traffic in the 2021 AM and PM peak hours. However, traffic on the majority of these roads would exceed their theoretical capacity even without the construction traffic, simply due to the growth in background traffic". So in the full knowledge that this area will be at capacity in 2021, massive amounts of construction traffic are going to be added for the whole construction period of 5 years. Even on completion it is stated in the EIS that traffic will be worse in this area than 'without the project'. This categorically shows that the planning of Westconnex is totally inadequate and needs major changes. It also shows that when completed Westconnex will not work. It is abundantly obvious that Rail/Metro is the only option to radically overhaul Sydney's failed transport systems

---	---

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- i. The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatigue'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- ii. In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- iii. The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and Environment Court found that the location of the site couldn't safely deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.
- iv. It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- v. The EIS identifies hundreds of risks at different construction sites. In relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the "detailed design" phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.
- vi. EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" - this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

- I. The proposal to run trucks so close to homes is dangerous. There have been two fatalities on Darley Road at the proposed site location. The EIS does not propose any noise or safety barriers to address this. Despite the unacceptable impact to nearby homes, there is no proposal for noise walls, nor any mitigation to individual homes.
- II. Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.
- III. Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- IV. The EIS states that Darley Road is a contaminated site, likely including asbestos. There is a risk to the community associated with spoil removal, transfer and handling. We object to the selection of the site based on the environmental risks that this creates, along with risks to health of residents.
- V. The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less

than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project' and 'damage' would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.

- VI. There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- VII. Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution- most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

✚ Acoustic shed - Pyrmont Bridge Road site - Despite setting out the noise impacts of construction at this site, the lowest grade acoustic shed is proposed as mitigation. The EIS states that the Acoustic shed performance should be 'upgraded' and the site hoarding increased to 4 metres 'in select areas.' (EIS, 10-119). No detail is provided as to how effectively these enhancements will manage the noise and vibration impacts of construction.

✚ The Inner City Regional Bike Network has not been included among projects assessed under Cumulative Impacts. It is identified by Infrastructure Australia as a Priority Initiative and should be included.

✚ The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city

✚ Visual amenity - Pyrmont Bridge Road site - The EIS acknowledges that visual impacts will occur during construction. However it does not propose to address these negative impacts in the design of the project. This is

unacceptable and the EIS needs to propose walls, plant and perimeter treatments and other measures at appropriate locations to lessen the impact on visual amenity. (Executive Summary xviii)

✚ Of the six areas of disturbance and 11 Historical Archaeological Management Units (HAMUs) identified in Chapter 20 of the EIS, none are within the Sydney LGA.

✚ Increased traffic cannot be accommodated in Central Sydney. It will further impede pedestrian movement and comfort and undermine easy access to public transport and reduce access to jobs over large areas of the city. It will undermine the attractiveness of Central Sydney to internationally competitive high productivity firms and their potential employees. Overall productivity is adversely affected.

✚ Map 2 in Vol 1A Chap 5 Pt 1 shows four intersecting tunnels, each 3 lanes wide, with four toll locations, apparently converging under Mayes, Young, Ferris, Moore, Catherine, Hill, John, Emma, Styles, Ilka, Paling, and the many other surrounding streets. The construction of four intersecting tunnels at varying depths in a spaghetti junction network would exacerbate ground settlement and vibrations, and cause homes most of which are Federation or earlier above the Interchange to be seriously impacted.

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- ❖ This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.
- ❖ Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.
- ❖ The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
- ❖ Increased traffic congestion in areas around portals will increase pollution along roadsides, with predicted adverse impacts on breathing and through long-term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that enables them to be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
- ❖ This EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain – and is certainly not included here.
- ❖ EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
- ❖ The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1,000s more per day onto the roads to the Airport which are already at capacity.
- ❖ There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
- ❖ Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.
- ❖ The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech drilling or testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. No further details have been provided. This casts doubt over the integrity of the entire EIS process.
- ❖ Other Comments I would like to make :

I wish to submit my objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485. The reasons for objecting are set out below.

Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

- ❖ Heritage items - Camperdown. The EIS also acknowledges that the use of a rock-breaker at the outer extents of the project footprint will affect 73 residences, with five heritage items identified as having the potential to be within the 'minimum safe working distance'. While some mitigation 'considered', it is not mandated and the requirement to mitigate is limited to 'where feasible and reasonable'. The mitigation proposed seems in any event to comprise letter-boxing residents about the likely impacts! The protection of heritage items should be mandated, not just considered and there should be a strict requirement to protect such heritage items.
- ❖ EIS is Indicative only - Pyrmont bridge Road site - The EIS should not be approved as it does not contain any certainty for residents as to what is proposed and does not provide a basis on which the project can be approved. This is because the EIS states 'the detail of the design and construction approach is indicative only' and is subject to 'detailed design and construction planning to be undertaken by the successful contractors.'
- ❖ The EIS gives no information about changes to traffic increases entering the Sydney CBD caused by the Westconnex. Duncan Gay when asked about this, in connection to huge increases of traffic predicted to enter the city from Westconnex at St Peters, would only say that traffic would disperse! So thousands of extra vehicles would magically disperse – where? There is no plan for this. RMS has only just started work to identify which roads will need to be upgraded to deal with these vast numbers of extra vehicles entering the city. So it is impossible to form an understanding of the true Environmental impacts of this project – which is the very purpose of an EIS.
- ❖ While the Rozelle interchange remains committed to be opened in December 2023, the design is so preliminary and so complex that it needs to be treated as another stage of the project to ensure that potential private sector funders are willing to invest, knowing they can heavily modify and/or defer the Rozelle Interchange.
- ❖ The removal of Buruwan Park for road widening and the realignment of the Crescent is a particular loss of badly needed parkland. This park was established as a nature corridor and a buffer to shield the local residents from City West Link, there are mature trees on this site, it was not intended as a children's recreational area with play equipment, the description in the EIS is inaccurate. Buruwan Park also has a main cycle route running through it. The alternative route being suggested is poor and takes no account of encouraging cycling as a mode of transport. The alternative routes are based on distance only and take no account of time taken or topography. Had this been done then this would have changed the assessment for the removal of the existing cycle/walkway bridge over the City West link. There is also no mention of this bridge being replaced after construction of the Westconnex. This is not acceptable.

<p align="center">Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.</p>	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
2. EIS 6.1 (Synthesis, Page 45) states. *"..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval"*. It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
3. I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
4. Why is there no detailed information about the so called 'King Street Gateway' included in the EIS ?
5. An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwa0rds of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

Please include my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.
- I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.
- The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project' and 'damage' would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.
- It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.
- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used.. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. The Air quality data provided in the EIS is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.
2. I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.
3. The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.
4. The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)
5. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
6. The EIS states that 'a preferred noise mitigation option' would be determined during 'detailed design'. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi)
7. A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a 'temporary' imposition.

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

- i. It is clear from the EIS that spoil truck movements will not be confined to the City West link. At a community consultation it was revealed that trucks removing spoil at Camperdown would very likely be travelling from the James Craig Rd area and in that case would be using the additional lane on the Crescent and then turning right up Johnston St. This is totally CONTRARY to what concerned residents had been promised would not happen. It is clear that any assurances given to the community in past consultations are totally disregarded without consultation later. This is unacceptable.
- ii. The latest EIS was released just ten business days after feedback period ended for the Concept Design for the M4/M5 and before preliminary drilling to establish a route through the Inner West is completed. WHAT IS THE RUSH? This EIS is little more than a concept design and is far less developed than earlier ones. It is composed of many indicate only plans such that it is impossible to know what the impacts will be and yet approval is being sought in a rush. The EIS ignores more than 1500 submissions, including one of 142 pages from the Inner West Council.
- iii. The proposal to run trucks so close to homes is dangerous. There have been two fatalities on Darley Road at the proposed site location. The EIS does not propose any noise or safety barriers to address this. Despite the unacceptable impact to nearby homes, there is no proposal for noise walls, nor any mitigation to individual homes.
- iv. Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is NO information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.
- v. I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.
- vi. The EIS states that by 2033 Ross St will see an increase of 80 heavy vehicles a day at Peak periods. The greatest increase of Heavy vehicles at the PM peak will be in Johnston Street, which will see an increase of about 30-50 vehicles when compared to the 'without project' scenario. At Catherine St there will be an increase of 30 heavy vehicles a day at Peak periods. These streets will see a huge increase in Heavy vehicle movements if Stage 3 is built. The increase would be roughly half this amount if the project did not go ahead. Annexure Fig 26 B2 Section H

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ◆ The EIS states that Darley Road is a contaminated site, and likely has asbestos. The proposal is that 'treated' water will be directly discharged into the stormwater drain at Blackmore oval. There are four long-standing rowing clubs in the vicinity of this location. This plan will jeopardise the integrity of our waterway and compromise the use of the bay for recreational activities for boat and other users. We object in the strongest terms to this proposal on environmental and health reasons. There is no detail of the ongoing Motorway maintenance activities during operation provided in the EIS. The community therefore cannot comment on the impact that this ongoing facility will have on the locality. This component of the EIS should not be approved as this information is not provided and therefore impacts (on parking, safety, noise, amenity of the area) are not known.
 - ◆ It is outrageous to suggest that four unfiltered stacks would be built in one area in Rozelle
 - ◆ The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.
 - ◆ Traffic diversions – Leichhardt. The EIS states that 'temporary diversions along Darley Road may be required during construction' (8-65). No detail is provided as to when these diversions would occur; there is no provision for consultation with the community; no detail as to how long the diversions will be in place and no comment on the impact of diversions on local roads or the amenity of residents.
- Will diversions occur at night? If so, down what streets? Diverting the arterial traffic from Darley Road down local streets (which are not designed for heavy vehicle volumes) will result in damage to streets, sleep disturbances for residents and create safety issues. There is also childcare centre and a school near the William Street/Elswick Street intersection which will be impacted by diverting vehicles onto local roads. It is unacceptable for proposed road diversions not to be detailed whatsoever in the EIS. The EIS should not be approved without setting out the impacts of road diversions on residents and businesses.
- ◆ The removal of Buruwan Park between the Crescent and Bayview Crescent/Railway Pde Annandale to accommodate the widening realignment of the Crescent would be a particular loss of badly needed parkland in this Inner City area. Currently we have fewer parks than almost any suburb in Sydney so this would have a direct impact on local people. Buruwan Park also lies on a major cycle route from Railway Pde through to Anzac Bridge, UTS and the CBD. The alternative route being suggested is poor and takes no real account of trying to encourage cycling as a mode of transport. Cycling should be made as easy as possible to get more ordinary commuters to bicycle and the alternative to the current level route directs cyclists to Johnston St and then up Bayview Crescent arguably the steepest road in Annandale.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- | | |
|---|---|
| <p>I. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.</p> <p>II. The social and economic impact study fails to record the great concern for valued Newtown heritage</p> <p>III. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.</p> <p>IV. The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.</p> <p>V. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses</p> | <p>in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.</p> <p>VI. The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.</p> <p>VII. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.</p> <p>VIII. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.</p> |
