a. The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade,	1	et a highly unsuitable site has been stead of a proper plan to manage

- a. The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, UTS and the CBD.
- b. There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- c. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.
- d. Night works Leichhardt. The EIS states that to minimize disruptions to traffic on the existing road network (including in peak hours) there will be night works where appropriate. Given the congested nature of Darley Road, it is likely there will be frequent night work (EIS, 6.4). This will create an unnacceptable impact in residents. It is

- unacceptable that a highly unsuitable site has been selected. And, instead of a proper plan to manage traffic, the EIS contemplate work simply occurring at night. This is objected to in the strongest terms.
- e. The EIS states that investigation would be undertaken to confirm whether the Victoria Road bridge is a potential roost site for microbats. There will be attempts to 'manage potential impacts' if confirmed. This is inadequate. The project should not be permitted to impact on vulnerable species.
- f. I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- g. I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

Please <u>include</u> my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.		

- a) The management of water in the Rozelle Yards is of great concern as the site is highly contaminated and the construction work that will be carried out will cause a great deal of disturbance especially once vegetation has been removed. There will be potential impacts from contaminated soils, leakage/spills of hydrocarbons and other chemicals from machinery, vehicles transporting spoil adjacent to roads and stormwaters, rinse water from plant washing and concrete slurries. Water from tunnelling activity and other works will also introduce contaminants. The EIS says that much of this water will be treated in temporary treatment facilities and sediment tanks before being released to Whites Creek and Rozelle Bay. The EIS does not disclose what levels of pollution controls will be implemented to make sure that contaminated water is not released into White's Creek or Rozelle Bay. This is not acceptable.
- b) In 2033 with the M4 M5 link the WRTM is forecasting reductions in peak travel times between the M4 corridor and the Sydney Airport/Port Botany area. The times savings that are quoted miniscule! Between Parramatta and Sydney Airport the time saving is 10 minutes. Between Burwood and Sydney Airport the time saving is 5 minutes. Between Silverwater and Port Botany the time saving is 10 minutes. So for well over \$20Billion all that can be saved is just a handful of minutes! This total waste of public money is completely unacceptable.
- c) I object to the proposal to the Darley Road civil and tunnel site because of the unacceptable risk it will create

- to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW's own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.
- d) EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.

Submission to : Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attention: Director - Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

Name: Danselle. Morga

Please **include** my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

Address:

80 Brows Lave

Suburb: New 40 m Postcode 2042

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- I. The EIS does not provide appropriate parking for the estimated 100 or so workers that the EIS states will work every day at the site, while other equivalent sites have allocated parking for such workers (Northcote Civil site (150)) and Parramatta Road East Civil site (140). It is also noted that the EIS provides for loss of 20 residential parks on Darley Road. Local streets are at capacity already because of the lack of off-street parking for many residents and the Light Rail stop which means that commuters use local streets. The EIS states that workers 'will be encouraged to use public transport.' the EIS needs to mandate that no trucks or construction vehicles are to park in local streets. There needs to be a requirement that is enforceable that workers use the Light Rail stop which is adjacent to the site or a plan to bus in workers
- 11. The EIS does not require an acoustic shed and states that 'Acoustic barriers and devices at the access tunnel entrances would be considered and implemented where reasonable and feasible to minimise potential noise impacts associated with out-of-hours works within the tunnels.'
- III. The EIS contains no detail of the access tunnel from the Darley Road site to the mainline tunnel other than depicting the route. The approval conditions need to ensure that tunnelling is occurring at sufficient depth so as to not jeopardise the integrity of the homes and not create unacceptable vibration and noise impacts for James Street residents and those at adjacent streets. The

- approval conditions need to make clear the period of time for which the 'temporary' tunnel is to be used.
- IV. The EIS states that 'a preferred noise mitigation option' would be determined during 'detailed design'. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi)
- V. The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.
- VI. Light construction vehicle routes the EIS acknowledges that these vehicles will use 'dispersed' routes (8-62). In other words, construction vehicles will use and park on local roads. The EIS does not propose any management as to which roads they use. The addition of 70-100 light vehicle movements day in Leichhardt will result in our small, congested streets, which are already at capacity and suffering parking shortages, will have the added impact of workers travelling to and from the site and parking in local streets. There will be rat running. The EIS should provide an agreed route (using arterial roads only) that can be used by all vehicles associated with the project.

Suburb: PLEXANDRIA Postcode 30 15.

I. (6-51) The EIS needs to mandate that these measures are in place. Where mentioned, the acoustic shed that is considered offers the lower grade noise protection. This is despite the fact that 36 'sensitive receivers' are identified in the EIS, who will have extreme noise disturbance through much of the 5-year construction period. In addition, the acoustic shed covers only the spoil and spoil handling area and not the tunnel entrances and exits. The highest level of noise protection, which is only suggested in the EIS, needs to be mandated in the EIS. In addition, the shed needs to cover both the entrance and exit to the site and not simply the spoil handling areas. The independent engineer's report (commissioned by the Inner West council) states that it is likely, because of the elevated position of the site, that it is likely an acoustic shed will not contain the noise to an acceptable level. In addition, a temporary access tunnel will be built from the top of the site and run directly under homes in

II. I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

James Street. These homes will be unacceptably

impacted by the construction noise and truck

movements without these additional measures

III. The EIS states that these will occur near the Darley Road site. There is no detail provided, nor is there a process by which residents can influence such

Submission to:

Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001

Attn: Director - Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5

decisions. The Inner West Council's documents state that Darley Road is not built to normal road requirements and safety standards, as it was established as an access road for the former goods line. Two fatalities have occurred near the site location, with many accidents. The Council has been trying to make Darley Road a safer route for many years. Elwick Street North for example was partially closed as a result of a fatality. The approval conditions need to make it clear that all road closures need to be made in consultation with residents affected and that the safety issues are adequately addressed. No arterial traffic from Darley Road should be allowed to be diverted onto narrow local roads

IV. The proposed work hours for the Rozelle Rail Yards are tunnelling and spoil handling 24 hours a day seven days a week. Civil construction Mon - Fri 7.00am - 6.00pm, Sat 8.00am -1.00 pm. There will be no night work at The Crescent Civil Site and the daytime hours are stated to be the same as at the Rozelle Rail Yards. However as has been experienced by those at Haberfield and St Peters these hours and especially late and night work have been extended and implemented when the schedule has fallen behind and this has lead to physical and mental stress for many residents through interrupted sleep and loss of sleep especially with children. The roads and sites at night in the area will see a marked increase in noise from truck movements, truck reversing alarms and running machinery. It will also see a marked increase in light during the night hours with site illumination and vehicle head lights as has been experienced in other areas. These problems have not been properly addressed and are not adequately dealt with in the EIS.

l object to the WestConnex M4-M5 Link proposals as contained in the EIS application	Submission to:
# SSI 7485, for the reasons set out below.

- a. For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.
- b. Tunnel depths the tunnel depths for the Leichhardt area as low as 35 metres. This creates and unacceptable risk of damage to homes due to settlement (ground movement). The EIS acknowledges that at tunnelling at 35 metres and less this is a real risk. There is no mitigation provided for this risk. Instead, it states that properties will be repaired at the Government's expense. However no details or assurance as to how this will occur are provided. The project should not be approved with such tunnelling depths permitted and with no detail as to the extent of damage and how and when it will be repaired. It will lead to the situation where residents and businesses are forced to engage structural engineers and lawyers to prove that the damage was linked to Westconnex works, with no assurance that this property damage will be promptly and satisfactorily fixed.
- c. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- d. Worker parking Leichhardt. There is provision in the EIS for only a dozen worker car parks and no provision for the 100 or so workers who will be permanently based at the Darley Road site for up to five years. A major construction site project should not be permitted in a neighbourhood area without allocated parking for all workers. No other business would be permitted to be established without this requirement being satisfied why is it acceptable for this project? In addition, the EIS proposes the removal of 20 car spaces used by residents on Darley Road and will remove the 'kiss and ride' facility at the light rail stop. This will result in residents being unable to park in their own street and will increase noise impacts from workers doing shift changeovers 24 hours a day.
- e. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS	Submission to:
application # SSI 7485, for the reasons set out below.

HAVE NOT made any reportable political donations in the last 2 years.	•
Address: 37 Bulwell Street	Application Name: WestConnex M4-M5 Link
Suburbi New Loren NSW Borroads 2042	_

- a) The Concept Design was a woefully inadequate document totally devoid of any real depth of detail in terms of maps, scales, distances with only vague suggestions and glamorized Artist's Impressions of an idealized view of what Stage 3 would be like. It was another example of current city planning documents that consistently accentuate huge areas of tranquil green spaces with families and children out walking and riding bicycles in idealized parks and suburbs. All this is total PR spin and bears no reality about the real outcome of the build. It bears no reality as to what Stage 3 of Westconnex will be like.
- b) Along with the widening of the Crescent at Annandale the White's Creek bridge is to be rebuilt. This will mean that the road in this area will be reduced in width as first one side of the bridge is rebuilt followed by the other. Added to the additional volume of trucks from the Rozelle Rail Yards, the Crescent Civil site and the Camperdown site this is going to lead to massive congestion on Johnston St and all along the Crescent towards Ross St and make it virtually impossible for residents to exit and return to their local area. It is most likely that the commercial sectors of the Tramsheds development will be badly affected.
- c) Truck routes Leichhardt: No trucks should be permitted on Darley Road or local roads in Leichhardt or Lilyfield. The EIS proposes that all trucks will arrive at the Darley Road civil and tunnel site from Haberfield and travel along Darley Road to the site, with a right-hand turn now permitted into James Street. The proposed route will result in a truck every 3-4 minutes for 5 years running directly by the small houses on Darley Road. These homes will not be habitable during the five-year construction period due to the unacceptable noise impacts. The truck noise will be worsened by their need to travel up a steep hill to return to the City West Link, so the noise impacts will affect not just those homes on or immediately adjacent to Darley Road. The proposal to run trucks so close to homes is dangerous and there have been two fatalities on Darley Road at the proposed site location. The EIS does not propose any noise or safety barriers to address this. Despite the unacceptable impact to nearby homes, there is no proposal for noise walls, nor any mitigation to individual homes.
- d) I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- e) One toll road leads to another 3 being proposed. The EIS's for the M4 East and the New M5 argued the case that serious congestion created near interchanges would be solved once the M4/M5 was built. Now it seems this is not the case and more roads will be needed to relieve the congestion WHERE DOES THIS END? According to the M4/M5 EIS the real benefits will depend on building the Western Harbour Tunnel, the Airport Link and a tollway heading South. None of these projects have been planned, let alone approved but yet are part of addressing the congestion impacts acknowledged for the M4/M5link project. Given this how is it possible to know or address the impacts of the M4/M5 Link, unless this is just yet more justification for yet more roads?

Attention Director

Application Number: SSI 7485

Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001 Application Name: WestConnex M4-M5 Link

	sonal information when pu	iblishing this submiss tical donations in the la	sion to your website. I <u>HAVE N</u>
Address:	264 NEW	CANTERBU	IRY RD
Suburb:	LEWISMAN	NW	Postcode 2049

I submit my objection to the WestConnex M4-M5 Link proposals for the reasons stated below, and request the Minister reject the application entirely, and cause the proponents to reissue an EIS that is based on a fully researched, developed, and budgeted concept design, and require the proponents to prepare a new business case against that design.

- The nature of proposed "post-opening mitigation measures" (Page 223, Chapter 9.8, Appendix H) are unknown and their impacts could be significant including intersection and road widening (and associated property loss), banning parking in local centres, removal of trees, footpaths and cycling facilities. The people of NSW have a reasonable expectation to understand whether such impacts form part of the Project and they should be detailed in the EIS. They should not be left to a "wait and see" approach. Not only a proper analysis of demand, but also of traffic dispersion should be provided for connecting roads up to three kilometres from every exit and entry portal and the capacity of those roads analysed.
- Road congestion is reducing bus performance and reliability. The project will make it worse.
- The EIS says traffic on ANZAC Bridge will increase by 2023 (p.8-103).
- Traffic modelling shows bus times will be slower into the city in the morning (p.3-19).
- The EIS identifies capacity constraints on ANZAC Bridge (p3-19). This project will dump more traffic onto the ANZAC Bridge.
- The statements made that public transport cannot serve diverse areas are empirically

- incorrect. The area the Westconnex is being built in has higher public transport mode use than the Greater Metropolitan Area as noted in the IES.
- ◆ The EIS notes that the project design and land use forecasts have changed significantly since the Stage 2 and Stage 3 EIS. However the cumulative analysis does not quantify the expected change on those roads. The EIS only notes significant increases in traffic volumes.
- ♦ I object to the whole project but particularly the tolls which are unfair when people living west of Parramatta really need alternative to western neighborhoods north-south. If we had better public transport then many of us would not have to drive and this would reduce the traffic.
- The modelling has thousands of unreleased cars at key locations; i.e. in reality those unreleased vehicles would result in vehicle queues and or network failure.
- ◆ The strategic model (whole system) inputs traffic volumes that simply cannot be accommodated in the road interchanges and feeder routes. It is physically impossible to fit that amount of traffic on a road.

Application Name: WestConnex M4-M5

Link

- The high tolls are set to increase for decades by the CPI or by 4% a year, whichever is higher. When inflation is low and wages are not even keeping up with low inflation this is outrageous. And it is not as if the commuters or workers of western Sydney have a real alternative in public transport. This is just gouging western Sydney road users to make the road attractive to a buyer
- residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective.
- The EIS admits that drivers from lower income households are more likely to travel longer distances to avoid tolls because of the cost. So you either pay the high tolls (capped at \$7.95 in 2015 dollars) or you drive for longer to avoid the tolls. We have seen this already where commuters have chose to drive on Parramatta rd not the new M4 with the new tolls. This is unfair.
- Whilst chapters 10 and 12 of Appendix H show mid-block level of service at interfaces with interchanges and points within the tunnels, there is no information about other mid-block points such as the ANZAC Bridge. Part 8.3.3 of the EIS

refers to increases in daily traffic forecasts on the Anzac Bridge/Western Distributor, particularly in the AM peak, as traffic accesses the M4-M5 Link and future forms of traffic or network management are intended. Information about the traffic forecasts for the Anzac Bridge/Western Distributor should be provided.

- The 2023 'cumulative' modelling scenario includes the Sydney Gateway and the western harbour tunnel but neither of these projects are currently committed and it is highly unlikely they will be completed by this date. This raises the question of why did the proponent adopt such a misleading position and how does it affect the impacts stated?
- I object to the way this project is hailed by the Minister for Western Sydney Stuart Ayres for the benefit of western Sydney when hardly any parts of Sydney west of Parramatta are even mentioned in the EIS. This is deliberately misleading. All the reasons for this stage of WestConnex are about linking the new M4 and M5 to the western harbour tunnel and northern beaches tunnel. Or they talk about links to the "Sydney Gateway" to the airport and Port Botany and they are not even part of this project.
- This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- a) Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is NO information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.
- b) The Rozelle Rail Yards are a totally inappropriate area to create a new recreational area because the area will be highly polluted by unfiltered Pollution Stacks and Tunnel Portals. In the EIS it is referred to as an idealized area. "It is envisaged that the quantum of active recreation within the Rozelle Rail Yards would be further developed by others as projects such as The Bays Precinct are developed. The concept plan provides spaces that could include an array of active recreation opportunities and even community facilities such as gardens or a school." The suggestion that this would be

- a suitable location for a School is just beyond belief and demonstrates that those who have put these plans together are either staggeringly ignorant or totally delusional! At a time when major World cities are doing all they can to address the dire problems of pollution this is an appalling suggestion that is totally out of touch.
- c) There are two areas in the Rozelle Rail Yards site where construction will be by cut and cover. These are the Portals for the Western Harbour Tunnel and the Portals for the M4/M5 link. This is of particular concern in the light of residents experiences in areas of Haberfield and St Peters where highly contaminated land areas were being disturbed. There was totally inadequate control of dust in these areas, where the dust would have been loaded with toxic chemical particulates. The old Rail Yards are highly contaminated land from their past use. The EIS gives no specific details of how this highly toxic threat is going to be securely managed. It is not acceptable for this to be decided only when the Construction Contracts have been issued, when the community will have no say or control over the methodology to be employed for removing vast amounts of contaminated spoil.
- d) I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

- The EIS states that the project will improve connection to the Sydney Airport and Port Botany. It will not. The Premier herself has said that the Sydney Gateway does not form part of the WestConnex project. Without the Sydney Gateway, connections between WestConnex (St Peters Interchange) and Sydney Airport and Port Botany will be via congested surface roads in Botany and Mascot. As the connection is unresolved, it is impossible to determine the effect on demand of the unknown pricing regime that will apply to the Sydney Gateway, nor how much travel time will be incurred which might actually negate the already marginal proposed travel time savings.
- ➤ It is quite clear to me that insufficient research has been done on the archeology of the Rozelle Railway yards. This could be a valuable archeology site. Why has an EIS been put forward without the necessary research being done to further identify potential remains? No project should be approved on the basis of such an inadequate level of research.
- The WestConnex program of works has been described as an integrated transport network solution. However, the role and interdependency with public transport and freight rail is not considered. The recent Government commitment to a Metro West requires a rethink on the need for WestConnex. Particularly as the WestConnex business case outlines a mode shift

- from public transport to the toll road as a benefit required to justify it economically.
- While WestConnex might integrate with the wider motorway network, no evidence is provided demonstrating that it integrates with the wider road network let alone the broader transport and land use system. For example the EIS provides no information about changes in traffic volumes entering the Sydney CBD caused by WestConnex. RMS has only just commenced work to identify which roads fanning out from WestConnex portals will need to be upgraded to deliver large numbers of vehicles to and from the project. It is thereformpossible to form a properly informed understanding of the environmental impacts the very purpose of the EIS.
- Ambient air quality There is no evidence provided in the EIS that the ventilation outlets will be date. The EIS simply states that 'the ventilation outlets would be designed to effectively disperse the emissions from the tunnel and are predicted to have negligible effect on local air quality (xiv, Executive Summary). This is inadequate and details of the impacts on air quality need to be provided so that the residents and experts can meaningfully comment on the impact.

I	Address: 42 Falance m tol from a

I object to the WestConnex M4-M5 Link proposals for the following reasons:

Suburb: Enmote

- I. The tunnels under Rozelle/Lilyfield are going to be in three levels. The EIS does not explain what safety procedures are being built into the project to deal with situations like serious congestion, accidents or fire. With a serious hold up on the deepest of these tunnels it is clear that the air quality will very quickly become toxic unless substantial air conditioning is a major part of the design. There is no in depth detail about how these issues are going to be addressed. This is not acceptable.
- II. Additional facilities. The EIS states that the contractor may decide upon additional 'construction ancillary facilities' to the 12 identified in the EIS. The EIS should not be approved on the basis that there may be more unidentified sites taken, as residents will have no opportunity to comment on their impacts. The approval condition should limit any construction facilities to those already notified and detailed in the EIS.
- III. I am concerned that while hundreds of impacts on resident, including noise, loss of business, dust, and lost time through more traffic congestion, are identified in the EIS, the approach is always to recommend approval and promise vague 'mitigation' in the future. This is not good enough.
- IV. The EIS at 7-21 states that Community update
 Newsletters were distributed to residents 'near the
 project footprint' in many suburbs. This statement is
 simply not correct. No such newsletters were received
 by residents in central and northern Newtown. SMC
 was made aware of this fact, but has not responded to
 verbal and written requests for audited confirmation of
 the addresses 'letterboxed'. This statement of

community engagement should be rejected by the Department.

Postcode

- V. The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous. stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatique'. This is intolerable for the local community who bear the areatest cost of the construction of the M4 and M5 and the least benefit.
- VI. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.
- VII. It is outrageous to suggest that four unfiltered stacks would be built in one area in Rozelle

Suburb: Canterby Postcode 2ia3	
There has never been any proper assessment of the cumulative impacts on herita	age of the WestCONnex project. The
loss of heritage in Concord, Haberfield and St Peters has been on a large scale o	, ,

- e the M\$/M5 tunnel would further add to this loss.
- The Rozelle Rail Yards site is the location of 3 Unfiltered Pollution Stacks. There is a fourth stack on Victoria Rd close to Darling St. If the Western Harbour Tunnel is built there will also be a total of 7 Tunnel Portals. Tunnel Portals are also areas of high levels of pollution. It is totally unacceptable that the Pollution Stacks are unfiltered. In 2008 Gladys Berejiklian said of Labor "It's not too late, the Government can still ensure that filtration is a possibility. World's best practice is to filter tunnels. Why won't Labor allow people to sleep at night, knowing their children aren't inhaling toxins that could jeopardize their health now or in the future." It is totally unacceptable that the tunnels will not be filtered. Recently built tunnels in Tokyo successfully filter 98% of all pollutants.
- The basic question that the people of NSW need answered by the EIS is For the same or lower cost of the project, could we do something that is different to the project that will deliver outcomes that are as good or better? The Secretary's Environmental Assessment Requirements (SEARS) require analysis of feasible alternatives to the project. No feasible alternatives have been developed and no objective analysis of alternatives has been undertaken. While Section 4.4 of the EIS purports to cover Strategic Alternatives, it does little more than offer a discussion of why an alternative was not pursued.
- There is no reliable evidence presented (or available) that building motorways reduces traffic congestion over the long term. No major urban arterial road project, without carefully considered and implemented pricing signals, has succeeded in easing congestion for more than a few years. This is universally acknowledged in planning disciplines, and is replicated by the Future Transport website, has been stated by the current Minister for Transport and the current Premier (during her time as Shadow Minister for Transport).
- I specifically object to the removal of the lighting tower and the Port Authority Building. These items are of considerable local significance and are representative of the operation of the Rozelle Rail Yards in the first part of the 20th century. I do not agree with trashing industrial history when it could be put to good community use.

June 100 to the control of the contr	

described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57)

- The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
- The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less

than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project" and 'damage' would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.

The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and northwesterly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south—western and north-western corners of the interchange. This is utterly unacceptable.

Declaration: I HAVE NOT made any reportable political donations in the last 2 years. Address: Let Struct Court Library.	Application Number: SSI 7485
Suburb: Cantalan Postcode 2193	Application Name: WestConnex M4-M5 Link

- The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.
- > The proposed work hours for the Rozelle Rail Yards are tunnelling and spoil handling 24 hours a day seven days a week. Civil construction Mon Fri 7.00am 6.00pm, Sat 8.00am -1.00 pm. There will be no night work at The Crescent Civil Site and the daytime hours are stated to be the same as at the Rozelle Rail Yards. However as has been experienced by those at Haberfield and St Peters these hours and especially late and night work have been extended and implemented when the schedule has fallen behind and this has lead to physical and mental stress for many residents through interrupted sleep and loss of sleep especially with children. The roads and sites at night in the area will see a marked increase in noise from truck movements, truck reversing alarms and running machinery. It will also see a marked increase in light during the night hours with site illumination and vehicle head lights as has been experienced in other areas. These problems have not been properly addressed and are not adequately dealt with in the EIS.
- > The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.
- Additional facilities. The EIS states that the contractor may decide upon additional 'construction ancillary facilities' to the 12 identified in the EIS. The EIS should not be approved on the basis that there may be more unidentified sites taken, as residents will have no opportunity to comment on their impacts. The approval condition should limit any construction facilities to those already notified and detailed in the EIS.
- It is outrageous to suggest that four unfiltered stacks would be built in one area in Rozelle
- > The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- A. The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statement.
- B. The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.
- C. The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable.
- D. The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.
- E. It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.
- F. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5
- G. The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ❖ I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.
- ❖ I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.
- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four

- years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)
- ❖ Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.
- ❖ I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

disturbance. The technical paper in EIS ac	ents would have noise levels in the evening sufficient to cause sleep cknowledges that this is the case, even allowing for acoustic sheds and risks including heightened stress levels and risk of developing
	f shift workers in the Inner West. The EIS acknowledges that even acoustic sheds and noise walls, shift workers will be more vulnerable

- to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.
- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.
- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents.NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

Submission to:

Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001

Attn: Director - Transport Assessments

Application Number: SSI 7485 Application

Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I do not accept that King Street traffic congestion
 will be improved by this project, There should be a
 complete review of the traffic modelling that does
 not appear to take sufficient notice of the impact of
 pouring 51000 extra cars down Euston Rd on top
 of increases in population in the area. Given that
 there is no outlet between the St Peters and
 Haberfield or Rozelle, all traffic going to the CBD,
 East or into the Inner West will use local roads.
- EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency"; and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57)
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public

- ntresponse to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found. necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be

- A. The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statement
- B. The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.
- C. The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable.
- D. The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.
- E. It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.
- F. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5
- G. The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.

- I. The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.
- II. The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.
- III. The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.
- IV. I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.
- V. The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to \$20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.
- VI. Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at

Email

- least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy'. Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.
- VII. The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.
- VIII. I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

- I. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
- II. The social and economic impact study fails to record the great concern for valued Newtown heritage
- III. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.
- IV. The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.
- V. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses

- in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.
- VI. The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.
- VII. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- VIII. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

Enmore

l object to the WestConnex M4-M5 Link proposals for the following reasons:

- a) The EIS needs to require that all workers are bussed in or use public transport such as the light rail with no parking whatsoever permitted on local roads at the
 Darley Road site. This is justified because the site provides 11 car spacers for an estimated 100 workers a day on site. The project cannot be approved on this basis without a strict requirement on workers to use public transport or project provided transport and a prohibition needs to be in place against parking on local streets. The EIS needs to require that this restriction is included in all contracts and in the relevant approval documentation
- b) Traffic diversions Leichhardt. The EIS states that 'temporary diversions along Darley Road may be required during construction' (8-65). No detail is provided as to when these diversions would occur; there is no provision for consultation with the community; no detail as to how long the diversions will be in place and no comment on the impact of diversions on local roads or the amenity of residents. · Will diversions occur at night? If so, down what streets? Diverting the arterial traffic from Darley Road down local streets (which are not designed for heavy vehicle volumes) will result in damage to streets, sleep disturbances for residents and create safety issues. There is also childcare centre and a school near the William Street/Elswick Street intersection which will be impacted by diverting vehicles onto local roads. It is unacceptable for proposed road diversions not to be detailed whatsoever in the EIS. The EIS should not be approved without setting out the impacts of road diversions on residents and businesses.
- The removal of Buruwan Park between the Crescent and Bayview Crescent/Railway Pde Annandale to accommodate the widening realignment of the Crescent would be a particular loss of badly needed parkland in this Inner City area. Currently we have fewer parks than almost any suburb in Sydney so this would have a direct impact on local people. Buruwan Park also lies on a major cycle route from Railway Pde through to Anzac Bridge, UTS and the CBD. The alternative route being suggested is poor and takes no real account of trying to encourage cycling as a mode of transport. Cycling should be made as easy as possible to get more ordinary commuters to bicycle and the alternative to the current level route directs cyclists to Johnston St and then up Bayview Crescent arguably the steepest road in Annandale.

1.	object to the WestConnex M4-M5 Link propos	als for the following reasons:			
Α.	The original objectives of the project specifi	ied improving road and freight access to Sydney Airport and to Port			
		1,2 and 3 and none achieve this goal. The community is asked to support			
		offunded projects, which are little more than ideas on a map. This is NOT			
	the way to plan a liveable city				
B.	· ·	is unacceptable and appropriate noise barriers should be included in the			
	EIS for consideration. (Executive Summary x	(VII)			
C.	The EIS should not be approved as it does n	ot contain any certainty for residents as to what is proposed and does not			
		approved. The EIS states 'the detail of the design and construction			
		ept design and is subject to detailed design and construction planning to			
		indertaken by the successful contractors.' Therefore this entire process is a sham as the extent to which concerns			
		contractor can simply make further changes. As the contractor is not			
		bound to take into account community impacts outside of the strict requirements and as the contractor will be trying			
		as possible, it is likely that the additional measure proposed with respect			
		le) will not be adopted. The EIS should not be approved on the basis that			
		to base the approval documents. It does not provide the community with			
		Il feedback in accordance with the legislative obligation of the			
		ess because the designs are 'indicative' only and subject to change.			
		ts and lacks clear obligations and requirements fn project delivery. The			
		ty and other stakeholders such as the Council will be unable to undertake			
		imply too broad and lack any substantial detail.			
D.	There has been no 'meaningful' consultation	n with the community. Some areas affected by M3/M5 have not even			
		Peters and sections of Erskineville. The SMC received hundreds of			
	submissions on its concept design and failed	to respond to any of these before lodging this EIS.			
Ε.	The EIS at 12-57 describes potentially seriou	s problems where mainline tunnels alignment crosses key Sydney Water			
	utility services that service Sydney's eastern	and southern suburbs. Why is SMC proposing tunnelling within metres of			
these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these iss		eying has been done? And when there is only limited information			
		tunnels? The community can have no confidence in the EIS proposals			
		The EIS proposals and application should not be approved till these issues			
	are definitively resolved and publicly publish	ed.

Please <u>include</u> my personal inf Declaration : I <u>HAVE NOT</u> m	ormation when publishing this submission to your website and reportable political donations in the last 2 years

- The management of water in the Rozelle Yards is of great concern as the site is highly contaminated and the construction work that will be carried out will cause a great deal of disturbance especially once vegetation has been removed. There will be potential impacts from contaminated soils, leakage/spills of hydrocarbons and other chemicals from machinery, vehicles transporting spoil adjacent to roads and stormwaters, rinse water from plant washing and concrete slurries. Water from tunnelling activity and other works will also introduce contaminants. The EIS says that much of this water will be treated in temporary treatment facilities and sediment tanks before being released to Whites Creek and Rozelle Bay. The EIS does not disclose what levels of pollution controls will be implemented to make sure that contaminated water is not released into White's Creek or Rozelle Bay. This is not acceptable.
- b) In 2033 with the M4 M5 link the WRTM is forecasting reductions in peak travel times between the M4 corridor and the Sydney Airport/Port Botany area. The times savings that are quoted miniscule! Between Parramatta and Sydney Airport the time saving is 10 minutes. Between Burwood and Sydney Airport the time saving is 5 minutes. Between Silverwater and Port Botany the time saving is 10 minutes. So for well over \$20Billion all that can be saved is just a handful of minutes! This total waste of public money is completely unacceptable.
- I object to the proposal to the Darley Road civil and tunnel site because of the unacceptable risk it will create

- to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW's own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.
- d) EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.

1)	Given the high cost of the tolls and their anticipated annual increase it is also expected	that there will be an increase on traffic
,	generally on local roads as motorists avoid the tollways. This can already be seen on Pa	
	tolls were activated. We expect exactly the same effect in the roads around the intercha	•
	· · · · · · · · · · · · · · · · · · ·	•
	King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alex	andria.
2)	I am concerned that while hundreds of impacts on resident, including noise, loss of bu	siness, dust, and lost time through
	more traffic congestion, are identified in the EIS, the approach is always to recommend	
	'mitigation' in the future. This is not good enough.	
3)	The EIS indicates that 36 homes will have unacceptable noise impacts for extended per	riods at the Darley road construction
٠,	site. The EIS does not mention the cumulative impact of aircraft noise in the Leichhard	•
	not reflect the true impact of construction noise on the amenity of nearby residents an	
	construction are not able to be mitigated to an acceptable level and the EIS should not	
	construction are not uple to be invigated to air acceptable level and the 210 should not	be approved on this basis.
4)	The additional unfiltered exhaust stack on the north-west corner of the interchange wi	ll further increase the vehicle pollution
	in an area where the prevailing south and north-westerly winds will send that pollution	_
	fields. The St Peters Primary School in particular will be at the apex of a triangle between	-
	• • • • • • • • • • • • • • • • • • • •	en die two exhaust stacks on die soudi-
	western and north-western corners of the interchange. This is utterly unacceptable.	
5)	The impacts on The Crescent and Annandale are massive and were not sufficiently rev	ealed in the Concept Design to enable
	residents to give feedback on the negative impacts on communities and businesses in the	
6)	I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary'	impact. Four years in the life of a
	community is a long time. The EIS acknowledges that there will be more danger in the	-
	sites. It is a serious matter to deliberately take steps to reduce the safety of a community	
	shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is N	- •
	about the impacts.	of an answer to diose concerned
	about the impacts.	
7)	It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle	•
8)	The EIS states that after the M4-m5 opens, that traffic on Darley Road will increase by	
	project for residents. During construction westbound traffic will increase on Darley Ro	ad by 37%. This increase in traffic for a
	period of up to five years will make it hazardous to cross the road and access the light ra	ail and travel to Blackmore oval, the
	bat run, the dog park and the Leichhardt pool. In addition, it will drastically increase bo	th local traffic and outer area traffic at
	peak commute times. We therefore object to the location of this site based on the unacc	eptable traffic impacts it will have on
	road users and on residents.	- ·

a. The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city	selected. And, instraffic, the EIS co	at a highly unsuitable site has been stead of a proper plan to manage ntemplate work simply occurring bjected to in the strongest terms.

- area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, UTS and the CBD.
- b. There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- c. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.
- d. Night works Leichhardt. The EIS states that to minimize disruptions to traffic on the existing road network (including in peak hours) there will be night works where appropriate. Given the congested nature of Darley Road, it is likely there will be frequent night work (EIS, 6.4). This will create an unnacceptable impact in residents. It is

- e. The EIS states that investigation would be undertaken to confirm whether the Victoria Road bridge is a potential roost site for microbats. There will be attempts to 'manage potential impacts' if confirmed. This is inadequate. The project should not be permitted to impact on vulnerable species.
- f. I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

- 1. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
- · II. The social and economic impact study fails to record the great concern for valued Newtown heritage
- III. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.
- IV. The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.
- V. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.
- VI. The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.
- VII. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- VIII. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

- The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.
- The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.
- The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.
- I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.
- The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to \$20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.
- Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at

least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy'. Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

- The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.
- I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

Please <u>include</u> my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.		

- * Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.
- Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.
- Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- ❖ I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.
- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- ❖ The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statement

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.	Submission to:

a. The project directly affected five listed heritage items, including demolitic Twenty-one other statutory heritage items of State or local heritage significantly of the state of the sta	icant would be subject to indirect impact

- The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle.

 Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)
- b. 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective.
- Recently Andrew Constance has been quoted numerous times promoting his vision of the transport future and some of these views are aired in the EIS but the vision put forward is highly visionary with no practical detail addressing how these changes are going to be brought about and so they are totally unrealistic. For example it is starting to be commonly accepted that car manufacturers will be reducing production of petrol/diesel cars before 2040 probably starting in 2030. It is proposed that electric cars will then take over. It is suggested that cars will be charged over night at people's homes. Virtually no one in the Inner City Suburbs has a garage. Are all the streets throughout all the suburbs going to be fitted out with charging points outside all the houses, similar to parking meters? We have all watched the shambles of the rolling out of the NBN it would be mind blowing to watch what would happen with the rolling out of charging points to each household without a garage and it would take years to achieve. There are virtually no recharging points at any Fuel Stations anywhere as yet and to set these up will take years. A large part of the population run older cars, because that is all they are able to afford. It will take many years for these petrol/diesel cars to disappear. Andrew Constance has also said that when everyone is driving an autonomous car average speeds will be reduced but as they are not being controlled by individual drivers this will mean they will be able to travel much closer together and so there will not be so much delay caused by spread out congestion. If this is to be so perhaps the suggestion could be made that some mechanism could be employed which would enable these cars to link together; if that could be done then they could form -a TRAIN - and then really travel at speed!
- d. In the EIS the Rozelle Rail Yards will have 400 car parking spaces for workers. There will be no car parking spaces at the Crescent Civil site. The daily workforce for these sites is stated to be approximately 550. This means that there will be approximately 150 additional vehicles that will not be able to park in the Construction sites on a daily basis. The EIS suggests workers use public transport. If not, they will have to park on local streets in the area. Parking is already at a premium in the surrounding suburbs and is worsening all the time with the success of the Light Rail and out of area commuters daily leaving their cars at the light rail stops. It is totally unacceptable that the local streets accommodate constructors extra vehicles on a daily basis for the construction period of 5 years in an area where parking is already at a premium.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ➤ I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57)
- ➤ I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public

- response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents.NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.
- II. The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.
- III. The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.

- IV. The EIS lacks sufficient focus on traffic congestion in the suburbs of Alexandria and Erskineville. Are these being ignored because they will be even more congested than currently.
- V. The EIS states that, if the current proposal for ventilation facilities do not manage to achieve satisfactory environmental and health impacts, that further ventilation facilities may be proposed. This is unacceptable and the EIS does not provide the alternative locations for any such facilities and therefore the community is deprived of any opportunity to comment on their impacts. The EIS should not be approved on the basis that there may be additional ventilation facilities that are not disclosed in the EIS.
- VI. It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.
- VII. Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.
- VIII. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.

I object to the whole of the Westconnex Project, including the Westconnex M4-M5 Link proposals as contained in the EIS, for the following reasons:

- The planning for WestCONnex has been completely undemocratic. Independent evidence that tollways are not the solution to Sydney's Traffic Congestion has been ignored and instead the NSW government is wasting billions of public money.
- According to the EIS, traffic around the St Peters Interchange will be highly congested in 2033. Why would anyone approve a project costing billions of dollars to produce more traffic congestion?
- The NSW government stated that WestCONnex would NOT mean clearways for King St Newtown. Less than a week after the release of the EIS weekend clearways for King St have already been announced. I am completed opposed to Clearways as everyone knows that they would kill off Newtown that is valued by people throughout Sydney as a retail and social hub.
- The EIS includes no serious analysis of the impacts of WestConnex M4M5 on Erskineville, Mitchell or Edgeware Rds. These roads will be flooded with traffic coming out of the St Peters Interchange.
- WestCONnex has chosen Darley Road as a dive site despite the fact that it is the third most dangerous traffic spot in the Inner West. They have ignored advice from an independent engineer that it is not suitable.
- The WestConnex Traffic model should not be confidential. It should immediately be released to Councils and the public so that it can be independently reviewed and tested.
- There has been no serious assessment of the impacts on very old houses in Newtown sustaining weeks of tunneling and vibration. At some points in South Newtown and St Peters this tunneling will be only 15 metres below ground level.
- I am opposed to even more destruction of heritage buildings in the Inner West. Already scores have been demolished in St Peters and Haberfield.
- The EIS expects "construction fatigue" (its euphemism for unacceptable noise and pollution in our homes) to continue for at least another 5 years. I am opposed to five more years of noise and dust from construction in St Peters and Haberfield.
- I am angry that there was so little consultation in Newtown during the community feedback period.
 Many residents near the tunnel were not notified at all about the potential impacts of the project on them.
- Parents and Students at Newtown Public and Newtown Performing High School have not been sufficiently consulted about this project.
- The EIS states that the route is indicative only. This is completely unacceptable to me. This means that if there are changes, residents who are impacted will have no right to public feedback.
- I am very concerned that privatisation of WestConnex will mean that the contractors are even less accountable than they are currently. Who will hold the contractors accountable?
- I am opposed to the M4/M5Link project being proposed let alone approved when its "success" depends on the construction of the Western Harbour Tunnel AND the F6, neither of which even planned.
- I am opposed to construction happening so close to childcare centres anywhere, including in Lilyfield and Rozelle.
- The EIS does not sufficiently take into account the impact of decades of tolls on Western Sydney.
- The EIS ignores the horrific impacts of the New M5 and M4 East and thereby fails to take account of cumulative impacts.

Submission to : Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: NICOLE LYTOURY Signature:		
Attention: Director – Transport Assessments	Please <u>include</u> my personal information when publishing this submission to your website Declaration : I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.		
Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: 90 GUEUDELOURT AVE		
	Suburb: EARWOOD Postcode 2706		

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- ❖ Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.
- Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- ❖ I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.
- Acceptable to argue that worsening pollution is not a problem simply because it is already bad.
- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- ❖ The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- ❖ The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statement

- I. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
- II. The social and economic impact study fails to record the great concern for valued Newtown heritage
- III. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.
- IV. The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.
- V. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.
- VI. The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.
- VII. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- VIII. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.	Attn: Director – Transport Assessments
Address: 32 Segenhol 8+	Application Number: SSI 7485 Application
Suburb: Arncliffl Postcode 2205	Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57)
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ❖ I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.
- ❖ I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.
- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four

- years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)
- ❖ Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.
- ❖ I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.	Attn: Director – Transport Assessments
Address: 32 Segenhore 8+	Application Number: SSI 7485 Application
Suburb: AVACIAFI Postcode 2205	Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.
- II. The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.
- III. The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.
- IV. The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in

Email

- the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it reopens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.
- V. It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?
- A. THE LATEST EIS WAS RELEASED JUST TEN
 BUSINESS DAYS AFTER FEEDBACK PERIOD ENDED

	ormation when publishing this submission to your website ade any reportable political donations in the last 2 years.

- i. 1.1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.
- ii. There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- iii. 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.
- iv. 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used..The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.
- v. I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents.NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

- o Experience has shown that construction and other plans by WestCONnex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONnex.
- O Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.
- I do not consider so many disruptions of pedestrian and cycle ways to be a temporary impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.
- The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given

- to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle
- Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.
- A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale.
 Interference and disruption of routes for four years is not a temporary imposition.

1	ddress: 596 kmg 5+	Application Number: SSI 7485 Application				
S	uburb: New town Postcode 2042	Application Name: WestConnex M4-M5 Link				
	submit this objection to the WestConnex M4-M5 Link proposals as conference following reasons, and ask that the Minister reject the application					
i.	The site should be returned to the community as compensation for the imposition of this construction site in our neighbourhood for a 5 year period. If the substation and water treatment plant is moved to the north of the site, then the lower half of the site (which is the most accessible end) could be converted into open space with mature trees planted. As this site is immediately adjacent to the bay run, bicycle parking and other facilities that support active transport could be included. This would result increase the green space for residents and result in a pleasant green environment for pedestrians, rather than a fenced facility.					
ii.	i. Why the so called 'King Street Gateway' been excluded in the analysis of cumulative impacts of other projects?					
iii.	ii. I am concerned that the AECOM, the company responsible for the EIS, always approves knocking down heritage buildings if the project requires it. It doesn't how much value it holds for the community, it must always be destroyed.					
iv.	iv. No workers associated with the WestConnex project should be permitted to park on local streets. Parking is at a premium in this area and many residents to not have off-street parking. The removal of 20 car spaces for five years as is proposed on Darley Road will worsen this situation as will the removal of 'kiss and ride facilities' at the light rail. There is also a pre-DA application for 120 units on William Street which is not taken into account in the EIS. This will place further stress on parking. The EIS needs to outright prohibit any worker parking on local streets.					
v.	The additional unfiltered exhaust stack on the north-west corner of vehicle pollution in an area where the prevailing south and north residences, schools and sports fields. The St Peters Primary School triangle between the two exhaust stacks on the south-western and This is utterly unacceptable.	-westerly winds will send that pollution over I in particular will be at the apex of a				
vi.	i. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.					
vii.	A lot of work has gone into building cycling and pedestrian route and disruption of routes for four years is not a 'temporary' imposit

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- a) The EIS needs to require that all workers are bussed in or use public transport such as the light rail with no parking whatsoever permitted on local roads at the Darley Road site. This is justified because the site provides 11 car spacers for an estimated 100 workers a day on site. The project cannot be approved on this basis without a strict requirement on workers to use public transport or project provided transport and a prohibition needs to be in place against parking on local streets. The EIS needs to require that this restriction is included in all contracts and in the relevant approval documentation
- b) Traffic diversions Leichhardt. The EIS states that 'temporary diversions along Darley Road may be required during construction' (8-65). No detail is provided as to when these diversions would occur; there is no provision for consultation with the community; no detail as to how long the diversions will be in place and no comment on the impact of diversions on local roads or the amenity of residents. Will diversions occur at night? If so, down what streets? Diverting the arterial traffic from Darley Road down local streets (which are not designed for heavy vehicle volumes) will result in damage to streets, sleep disturbances for residents and create safety issues. There is also childcare centre and a school near the William Street/Elswick Street intersection which will be impacted by diverting vehicles onto local roads. It is unacceptable for proposed road diversions not to be detailed whatsoever in the EIS. The EIS should not be approved without setting out the impacts of road diversions on residents and businesses.
- The removal of Buruwan Park between the Crescent and Bayview Crescent/Railway Pde Annandale to accommodate the widening realignment of the Crescent would be a particular loss of badly needed parkland in this Inner City area. Currently we have fewer parks than almost any suburb in Sydney so this would have a direct impact on local people. Buruwan Park also lies on a major cycle route from Railway Pde through to Anzac Bridge, UTS and the CBD. The alternative route being suggested is poor and takes no real account of trying to encourage cycling as a mode of transport. Cycling should be made as easy as possible to get more ordinary commuters to bicycle and the alternative to the current level route directs cyclists to Johnston St and then up Bayview Crescent arguably the steepest road in Annandale.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be
removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other partie.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ➤ I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57)
- ➤ I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public

- response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

I. Permanent water treatment plant and substation - north-western c	orners of the interchange. This is

- Leichhardt The proposal to locate this permanent structure in a residential setting is opposed. The site will have a negative visual impact on the area and is in direct line of sight of a number of homes. If approved, the facility should be moved to the north of the site further from homes.
- II. The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is "based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required." The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- III. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and

- utterly unacceptable.
- IV. Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is **NO** information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.
- V. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

I submit this objection to the WestConnex M4-M5 Link proposals as o	contained in the EIS application # SSI 7485, for

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

FOR THE CONCEPT DESIGN FOR THE M4/M5 AND BEFORE PRELIMINARY DRILLING TO ESTABLISH A ROUTE THROUGH THE INNER WEST IS COMPLETED. WHAT IS THE RUSH? THIS EIS IS LITTLE MORE THAN A CONCEPT DESIGN AND IS FAR LESS DEVELOPED THAN EARLIER ONES. IT IS COMPOSED OF MANY INDICATE ONLY PLANS SUCH THAT IT IS IMPOSSIBLE TO KNOW WHAT THE IMPACTS WILL BE AND YET APPROVAL IS BEING SOUGHT IN A RUSH. THE EIS IGNORES MORE THAN 1500 SUBMISSIONS, INCLUDING ONE OF 142 PAGES FROM THE INNER WEST COUNCIL.

- B. ONE TOLL ROAD LEADS TO ANOTHER 3 BEING PROPOSED. THE EIS'S FOR THE M4 EAST AND THE NEW M5 ARGUED THE CASE THAT SERIOUS CONGESTION CREATED NEAR INTERCHANGES WOULD BE SOLVED ONCE THE M4/M5 WAS BUILT. NOW IT SEEMS THIS IS NOT THE CASE AND MORE ROADS WILL BE NEEDED TO RELIEVE THE CONGESTION - WHERE DOES THIS END? ACCORDING TO THE M4/M5 EIS THE REAL BENEFITS WILL DEPEND ON BUILDING THE WESTERN HARBOUR TUNNEL, THE AIRPORT LINK AND A TOLLWAY HEADING SOUTH. NONE OF THESE PROJECTS HAVE BEEN PLANNED, LET ALONE APPROVED BUT YET ARE PART OF ADDRESSING THE CONGESTION IMPACTS ACKNOWLEDGED FOR THE M4/M5LINK PROJECT. GIVEN THIS HOW IS IT POSSIBLE TO KNOW OR ADDRESS THE IMPACTS OF THE M4/M5 LINK. UNLESS THIS IS JUST YET MORE JUSTIFICATION FOR YET MORE ROADS?
- C. RESEARCH ABOUT ROADS CLEARLY
 DEMONSTRATES THAT ROADS CREATE
 CONGESTION. THE WESTCONNEX PROJECT IS NO
 DIFFERENT AND THE EIS CLEARLY INDICATES
 THAT THIS IS AN IMPACT OF THE M4/M5 AND THE
 CONSEQUENT ROADS THAT WILL FOLLOW.
 WHERE WILL THIS END AS THE M4/M5 LINK

- EIS ITSELF INDICATES THE RMS IS ALREADY HARD AT WORK CONSIDERING HOW TO SOLVE THESE PROBLEMS OF CONGESTION CAUSED BY ROADS.
- D. WHERE IS THE COMMITMENT TO COMMUNITY CONSULTATION AND TO LONG TERM PLANNING WHEN THE EIS FOR THE M4/M5 LINK IS RELEASED BEFORE ANY RESPONSE TO THE EXTENSIVE COMMUNITY FEEDBACK ON THE M4-M5 LINK CONCEPT DESIGN COULD POSSIBLY HAVE BEEN SERIOUSLY CONSIDERED. THIS DEMONSTRATES DEEP GOVERNMENT CONTEMPT FOR THE PEOPLE OF NSW AND THE COMMUNITIES OF THE INNER WEST OF SYDNEY IN PARTICULAR.
- E. THE EIS WAS PREPARED BY GLOBAL ENGINEERING FIRM AECOM, WHICH ALSO PREPARED THE EIS FOR STAGES 1 AND 2. WHEN HE APPROVED THESE EARLIER STAGES, THE THEN MINISTER FOR PLANNING ROB STOKES POINTED TO CONDITIONS OF APPROVAL THAT WOULD MINIMISE IMPACTS ON COMMUNITIES. BUT THE IMPACTS HAVE TURNED OUT TO WORSE THAN EXPECTED.
- F. FOR EXAMPLE, THE AECOM EIS FOR THE NEW M5 FAILED TO DEAL WITH HOW THE MASSIVELY CONTAMINATED LAND FILL AT ALEXANDRIA WOULD BE MANAGED DURING CONSTRUCTION.

 AFTER MONTHS OF SICKENING ODOURS, THE NSW EPA ADMITS THAT DESPITE FINING SMC AND REQUIRING CONTRACTORS TO TAKE MEASURES TO CONTROL ODOURS, THEY HAVE NOT STOPPED. IT ACKNOWLEDGES THAT IT DOES NOT HAVE THE POWER TO STOP WORK UNTIL WESTCONNEX CONTRACTORS COMPLY WITH ENVIRONMENTAL REGULATIONS.

the following reasons, and ask that the Minister reject the application.

- Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5
- ii. The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- iii. I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.
- iv. I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.
- v. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.

	ormation when publishing this submission to your website ade any reportable political donations in the last 2 years.

- I. The EIS should not be approved as it does not contain any certainty for residents as to what is proposed. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' Therefore this entire process is a sham as the extent to which concerns are taken into account is not known as the contractor can simply make further changes. As the contractor is not bound to take into account community impacts outside of the strict requirements and as the contractor will be trying to deliver the project as quickly and cheaply as possible, it is likely that the additional measure proposed with respect to construction noise mitigation for (example) will not be adopted. The EIS should not be approved on the basis that it does not provide a reliable basis on which to base the approval documents. It does not provide the community with a genuine opportunity to provide meaningful feedback in accordance with the legislative obligation of the Government to provide a consultation process because the designs are 'indicative' only and subject to change. Because of this the EIS is riddled with caveats and lacks clear obligations and requirements fn project delivery. The additional effect of this is that the community and other stakeholders such as the Council will be unable to undertake compliance activities as the conditions are simply too broad and lack any substantial detail.
- II. The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic

- congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to \$20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.
- III. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.
- IV. The EIS states that 'reasonable and feasible work practices and mitigation measures would be implemented to minimise potential noise impacts due to activities occurring at the Darley Road civil and tunnel site.' 96-52) This is not good enough. The EIS does not contain any detail whatsoever of these proposal on which they can comment. In addition, there is no requirement that measures will in fact be introduced to address noise impacts. The approval conditions need to contain detail of specific noise mitigation measures that are mandated and can be enforced.

Submission from:	Submission to:
Name: Signature: Signa	Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001
Please <u>include</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.	Attn: Director – Transport Assessments
Address: 23 KINGST.	Application Number: SSI 7485 Application
Suburb: 100 Nostcode	Application Name: WestConnex M4-M5 Link
<u>I submit this objection</u> to the WestConnex M4-M5 Link proposals as the following reasons, and ask that the Minister reject the application	

- 1) I note that in the area of Lilyfield Rd and Gordon Street, the work proposed which would include deep excavation that would result in major adverse impacts on archaeological remains, while other surface works would have localised impacts on archaeological remains that may be present. It is suggested that what are called 'management measures' would be carried out including the development of a Historical Archaeological Research Design which would include an "assessment of any detailed design plans to develop a methodology and scope for a program of test excavation to determine the nature, condition and extent of potential archaeological remains." This is completely unacceptable to me. The community will have no right to any input into this plan or access to independent expert advice. This is all part of an 'approve now', 'research later' approach that will lead to poorly planned unnecessary destruction, a loss of potential community history and understanding.
- 2) It is quite clear to me that insufficient research has been done on the archeology of the Rozelle Railway yards. This could be a valuable archeology site. Why has an EIS been put forward without the necessary research being done to further identify potential remains? No project should be approved on the basis of such an inadequate level of research.
- 3) The EIS admits that it is not even known what excavation would be undertaken at the White Bay Power station. I am particularly concerned about the old water channels and the southern penstock which are part of Sydney's industrial heritage. How could an EIS for such a major project be put forward on this basis? It is fatuous to state that "physical and indirect impacts on this heritage element should be avoided" and suggest that a future plan should be done. Why isn't the need for excavation known? This raises great concerns about the 'indicative only' nature of the work that has been done before this EIS. Why is there such a rush? This EIS is not complete and should be rejected for that reason.
- 4) The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction.(Executive Summary xviii)

Please <u>include</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.		

- The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.
- The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.
- The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.
- I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.
- The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to \$20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.
- Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy'. Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.
- The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.
- I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Address: 6/91-98 Samuel 91		
Application Name: WestConnex M4-M5 Link	Suburb: Postcode 2044		
I object to the WestConnex M4-M5 Link proposals for the following reasons:			
➤ I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.			
EIS 6.1 (Synthesis, Page 45) states. " this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures,			

➤ I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.

environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels

> Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?

issues at 12-57)

An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

Name: MARY PORTER Attention Director Application Number: SSI 7485 Signature: Infrastructure Projects, Planning Services, Please include my personal information when publishing this submission to your website. Department of Planning and Environment I HAVE NOT made reportable political donations in the last 2 years. GPO Box 39, Sydney, NSW, 2001 Address: -----Suburb: Postcode Application Name: WestConnex M4-M5 Link ENMORE 2042

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- 1) The EIS proposes that all trucks will arrive at the Darley Road civil and tunnel site from Haberfield and travel along Darley Road to the site, with a right-hand turn now permitted into James Street. The proposed route will result in a truck every 3-4 minutes for 5 years running directly by the small houses on Darley Road. These homes will not be habitable during the five-year construction period due to the unacceptable noise impacts. The truck noise will be worsened by their need to travel up a steep hill to return to the City West Link, so the noise impacts will affect not just those homes on or immediately adjacent to Darley Road.
- 2) Experience has shown that construction and other plans by WestCONnex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONnex.
- 3) The Darley Road site will not be returned after the project, with a substantial portion permanently housing a Motorways Operations facility which involves a substation and water treatment plant. This means that the residents will not be able to directly access the North Light rail Station from Darley Road but will have to traverse Canal Road and use the narrow path from the side. In addition the presence of this facility reduces the utility of this vital land which could be turned into a community facility. Over the past 12 months community representatives were repeatedly told that the land would be returned and this has not occurred. We also object to the location of this type of infrastructure in a neighbourhood setting.

- 4) Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.
- 5) The EIS states that darley Road is a contaminated site, and likely has asbestos. The proposal is that 'treated' water will be directly discharged into the stormwater drain at Blackmore oval. There are four long-standing rowing clubs in the vicinity of this location. This plan will jeopardise the integrity of our waterway and compromise the use of the bay for recreational activities for boat and other users. We object in the strongest terms to this proposal on environmental and health reasons. There is no detail of the ongoing Motorway maintenance activities during operation provided in the EIS. The community therefore cannot comment on the impact that this ongoing facility will have on the locality. This component of the EIS should not be approved as this information is not provided and therefore impacts (on parking, safety, noise, amenity of the area) are not
- 6) It all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does NOT constitute open and fair community engagement.

		Suburb: NEW +OWN Postcode 4047
•	tion to the WestConnex M4-M5 sons, and ask that the Minister	Link proposals as contained in the EIS application # SSI 7485, for reject the application
❖ It is outrageou	is to suggest that four unfiltere	ed stacks would be built in one area in Rozelle
The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project" and 'damage' would be rectified at no cost to the owner. would be placed (Executive Summary, xvii-iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.		
It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.		
The EIS refers period to be te		being 'temporary'. I do not consider a five year construction
	ely opposed to approving a proj ks extra stacks could be added	ect in which the Air quality experts recommend rather than later.

1	reject the application entirely, and caus	x M4-M5 Link proposals for the reasons stated below, and request the Minister e the proponents to reissue an EIS that is based on a fully researched, developed, re the proponents to prepare a new business case against that design.		
a)	health and are taking steps to tough	e more and more concerned about the bad effects of car emissions on people's er emission standards. Here the state government is promoting car use at the object to the WestConnex project because of the increased car emissions it will		
b)	The removal of spoil at the Rozelle Rail Yards will lead to the largest amount of Spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place at Peak hours. There will also be 10 Heavy truck movements a day from the Crescent Civil Site. The sheer number of trucks on the road will lead to massive increases in congestion. Maps in the EIS have the spoil trucks going to and from these sites from the Haberfield direction on the City West Link. This is also the direction that is being proposed for spoil truck movements from Darley Rd which is said to have 100 Heavy truck movements a day. It is stated that the cumulative effect of truck movements from all sites on the City West Link will be 700 (one way) Heavy truck movements a day and of that 208 will be in Peak hours. This plan totally lacks credibility.			
c)	The original stated objective of Westconnex had as its fundamental objective the connecting to Port Botany. The original objective was the improvement of freight access to the Airport and Port Botany. Stage 1, 2 and 3 do not achieve this goal and this is not addressed in the EIS.			
d)	The EIS asserts that WestConnex will be a catalyst for urban renewal along major corridors. No evidence is provided to back this assertion. The Sydney experience suggests that roads don't - this is not a likely catalyst e.g. Canterbury Road after M5 East; Cumberland Highway corridor after the M7.			
e)	The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street will greatly increase during the construction period and also be greatly increased by the time Stage 3 is completed. It states that Stage 3 will do nothing to improve traffic congestion in the area in fact it will add to the problem. Many of these areas are already congested at Peak times. This will be highly negative for the local area as more and more people to avoid the congestion by using rat runs through the local areas on local streets.			
f)		pollution caused by Westconnex bringing more cars into the Inner West says dicine at Royal Prince Albert Hospital. Inner West Courier 23 rd May 2017

Please <u>include</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.		

- The latest EIS was released just ten business days after feedback period ended for the Concept Design for the M4/M5 and before preliminary drilling to establish a route through the Inner West is completed. WHAT IS THE RUSH? This EIS is little more than a concept design and is far less developed than earlier ones. It is composed of many indicate only plans such that it is impossible to know what the impacts will be and yet approval is being sought in a rush. The EIS ignores more than 1500 submissions, including one of 142 pages from the Inner West Council.
- One toll road leads to another 3 being proposed. The EIS's for the M4 East and the New M5 argued the case that serious congestion created near interchanges would be solved once the M4/M5 was built. Now it seems this is not the case and more roads will be needed to relieve the congestion WHERE DOES THIS END? According to the M4/M5 EIS the real benefits will depend on building the Western Harbour Tunnel, the Airport Link and a tollway heading South. None of these projects have been planned, let alone approved but yet are part of addressing the congestion impacts acknowledged for the M4/M5link project. Given this how is it possible to know or address the impacts of the M4/M5 Link, unless this is just yet more justification for yet more roads?
- Research about roads clearly demonstrates that roads create congestion. The WestConnex project is no different and the EIS clearly indicates that this is an impact of the M4/M5 and the consequent roads that will follow. WHERE WILL THIS END AS THE m4/m5 Link EIS itself indicates the RMS is already hard at work considering how to solve these problems of congestion caused by roads.
- Where is the commitment to community consultation and to long term planning when the EIS for the M4/M5 Link is released before any response to the extensive community feedback on the M4-M5 Link concept design could possibly have been seriously considered. This demonstrates deep government contempt for the people of NSW and the communities of the Inner West of Sydney in particular.
- The EIS was prepared by global engineering firm AECOM, which also prepared the EIS for Stages 1 and 2. When he approved these earlier stages, the then Minister for Planning Rob Stokes pointed to conditions of approval that would minimise impacts on communities. But the impacts have turned out to worse than expected.
- For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.

	nformation when publishing this submission to your website made any reportable political donations in the last 2 years.

- The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction' fatigue'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and Environment Court found that the location of the site couldn't safely

- deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.
- It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- The EIS identifies hundreds of risks at different construction sites. It relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the "detailed design" phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.
- EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" - this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

Tobject to the WestConnex M4-M5 Link proposals for the following reasons:

- I. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
- II. The social and economic impact study fails to record the great concern for valued Newtown heritage
- III. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.
- IV. The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.
- V. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested.

- These impacts are not been taken into account of evaluating the cost of WestCONnex.
- VI. The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.
- VII. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- VIII. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

◊	I am appalled that the Sydney Motorway Corporation could seek approval to be suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a conceproposal that includes engineering plans.			
◊	Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.			
\	I am concerned that while hundreds of impacts on resident, including noise, loss of business, dust, and lost time through more traffic congestion, are identified in the EIS, the approach is always to recommend approval and promise vague 'mitigation' in the future. This is not good enough.			
◊	The EIS indicates that 36 homes will have unacceptable noise impacts for extend construction site. The EIS does not mention the cumulative impact of aircraft no area, and therefore does not reflect the true impact of construction noise on the	oise in the Leichhardt or St Peters		
	businesses. The noise impacts of construction are not able to be mitigated to an a not be approved on this basis.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment	Name: GVAN PARAGGION
GPO Box 39, Sydney, NSW, 2001	Address: 10/H SHICH 100
Application Number: SSI 7485	Suburb: HONSTONE (NAT) Postcode 20165
Application Name: WestConnex M4-M5 Link	Signature: G.
	mation when publishing this submission to your website le any reportable political donations in the last 2 years.

- The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St
 Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely
 affect vehicle users because it is known that people in their vehicles are not protected from the air
 pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is
 offered.
- 2. The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.
- 3. The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.
- 4. The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.
- 5. It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?

Rozelle Interchange and surrounds will experience increased traffic with associated not particularly at the Crescent, Johnson St and Catherine St. Annandale/Lilvfield/Leichha	-

- 1) Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution- most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.
- 2) The EIS should not be approved as it does not contain any certainty for residents as to what is proposed and does not provide a basis on which the project can be approved. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' Therefore this entire process is a sham as the extent to which concerns are taken into account is not known as the contractor can simply make further changes. As the contractor is not bound to take into account community impacts outside of the strict requirements and as the contractor will be trying to deliver the project as quickly and cheaply as possible, it is likely that the additional measure proposed with respect to construction noise mitigation for (example) will not be adopted. The EIS should not be approved on the basis that it does not provide a reliable basis on which to base the approval documents. It does not provide the community with a genuine opportunity to provide meaningful feedback in accordance with the legislative obligation of the Government to provide a consultation process because the designs are 'indicative' only and subject to change. Because of this the EIS is riddled with caveats and lacks clear obligations and requirements fn project delivery. The additional effect of this is that the community and other stakeholders such as the Council will be unable to undertake compliance activities as the conditions are simply too broad and lack any substantial detail.
- 3) All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a strict prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. The EIS needs to prohibit outright truck movements (including parking) and worker parking on all of these streets.
- 4) The EIS indicates that 36 homes will have unacceptable noise impacts for extended periods at the Darley road construction site. The EIS does not mention the cumulative impact of aircraft noise in the Leichhardt or St Peters area, and therefore does not reflect the true impact of construction noise on the amenity of nearby residents and businesses. The noise impacts of construction are not able to be mitigated to an acceptable level and the EIS should not be approved on this basis.

Suburb: Postcode	

- ♦ It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle
- ♦ The EIS states that after the M4-m5 opens, that traffic on Darley Road will increase by 4%. There is no benefit in the overall project for residents. During construction westbound traffic will increase on Darley Road by 37%. This increase in traffic for a period of up to five years will make it hazardous to cross the road and access the light rail and travel to Blackmore oval, the bat run, the dog park and the Leichhardt pool. In addition, it will drastically increase both local traffic and outer area traffic at peak commute times. We therefore object to the location of this site based on the unacceptable traffic impacts it will have on road users and on residents.
- It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.
- The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- Flooding Leichhardt. Darley Road and adjacent streets such as Hubert St are exposed to flood. The flood impact could be exacerbated by the disruption or blockage of existing drainage networks, which are risks identified in the EIS. The EIS has not assessed whether the identified risk to the existing drainage network will cause increased risk of flood damage to flood lots and it fails to take account of the Inner West Council's Leichhardt Floodplain Risk Management Plan which contains recommended flood modification options. The EIS has not assessed whether its drainage infrastructure will impede the Inner West Council's Leichhardt Floodplain Risk Management Plan option HC_FM3 to lay additional pipes/culverts from Elswick Street to Hawthorne Canal (via Regent Street and Darley Road). RMS has not assessed whether its drainage infrastructure will impede Inner West Council's Leichhardt Floodplain Risk Management Plan option HC_FM4 to lay additional pipes/ culverts from William Street to Hawthorne Canal via Hubert Street and Darley Road. The EIS should not be approved as it has not properly explained or assessed these impacts.
- Discharge of water into storm water at Blackmore Oval Leichhardt The permanent substation and water treatment plant proposed for the Darley Road site facility should not be approved as part of the EIS. It proposes discharging water from the tunnels into the storm water canal near Blackmore Oval. This will devastate our waterways and impact negatively on the amenity of the bay which has four rowing clubs in close proximity. In addition, the environmental impacts of this discharge are not properly set out in the EIS.

Attention Director Infrastructure Projects, Planning Services,	Name: JESSICA Ibarra
Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Address: 1/90 Alice st
Application Number: SSI 7485	Suburb: Newtown Postcode 2042
Application Name: WestConnex M4-M5 Link	Signature:

- ♦ Acquisition of Dan Murphys I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the tax payer should not be left to foot the compensation bill in these circumstances.
- The removal of spoil from the Rozelle Rail Yards will lead to the largest number of spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area.
- I object to the proposal to the Darley Road civil and tunnel site because of the unacceptable risk it will create to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW's own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.
- of 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In

- any case, there is no certainty that additional measures would be taken or be effective.
- The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction.(Executive Summary xviii)
- The EIS states that all vegetation will be removed on the site which includes a mature tree. I object to the removal of the tree which creates a visual and noise barrier for residents from the City West Link. If the tree is removed it must be replaced with a mature tree as soon as the remediation of the site commences.
- Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.

- 1.1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep
 disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and
 noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing
 dementia. This is simply not acceptable.
- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.
- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used..The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.
- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents.NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

Night works – Leichhardt. The EIS states that to minimize disruptions to traffic on the existing road network (including in peak hours) there will be night works where appropriate. Given the congested nature of Darley Road, it is likely there will be frequent night work (EIS, 6.4). This will create an unnacceptable impact in residents. It is unacceptable that a highly unsuitable site has been selected. And, instead of a proper plan to manage traffic, the EIS contemplate work simply occurring at night. This is objected to in the strongest terms.	that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered. The EIS states that investigation would be undertaken to confirm whether the Victoria Road bridge is a potential roost site for microbats. There will be attempts to 'manage potential impacts' if confirmed. This is inadequate. The project should not be permitted to impact on vulnerable species.
The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss	I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
of much-needed parkland in this inner city area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, UTS and the CBD.	❖ I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young

The EIS admits that air pollutants will exceed

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: MAR PORTER Address: 16 DENION		
Application Number: SSI 7485	Suburb: NEW Postcode 226		
Application Name: WestConnex M4-M5 Link	Signature:		
Please <u>include</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.			

- The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.
- The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.
- The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.
- The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken

- (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.
- ➢ It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?

Please <u>Include</u> my personal information when publishing this submission to your website **Declaration**: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.

Address: 29 Covoligon St

Suburb: Stanmare Postcode 2048

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- ⇒ I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.
- ⇒ This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.
- ⇒ The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
- ⇒ The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as

- inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable
- ⇒ Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.
- ⇒ I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.
- ⇒ Many students walk or ride to Orange Grove and Leichhardt Secondary College schools via Darley Road. There are also a number of childcare centres very close to the Darley Road site.

◊	I am appalled that the Sydney Motorway Corporation could seek approval to bus suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a conceproposal that includes engineering plans.	
◊	Given the high cost of the tolls and their anticipated annual increase it is also exponentially on local roads as motorists avoid the tollways. This can alread immediately the new M4 tolls were activated. We expect exactly the same effect including the Princes Highway, King St, Edgeware and Enmore Roads and throadlexandria.	ly be seen on Parramatta Rd in the roads around the interchange,
◊	I am concerned that while hundreds of impacts on resident, including noise, loss through more traffic congestion, are identified in the EIS, the approach is always promise vague 'mitigation' in the future. This is not good enough.	
◊	The EIS indicates that 36 homes will have unacceptable noise impacts for extend construction site. The EIS does not mention the cumulative impact of aircraft noi area, and therefore does not reflect the true impact of construction noise on the abusinesses. The noise impacts of construction are not able to be mitigated to an account of the approved on this basis.	se in the Leichhardt or St Peters menity of nearby residents and
◊	The additional unfiltered exhaust stack on the north-west corner of the interchange pollution in an area where the prevailing south and north-westerly winds will send schools and sports fields. The St Peters Primary School in particular will be at the exhaust stacks on the south-western and north-western corners of the interchange	that pollution over residences, apex of a triangle between the two
◊	Are there other potentially serious problems with Sydney Water utility services (de utilities in other suburbs or along the proposed M4-M5 tunnel alignment? If so, the should not be approved till these are all disclosed, researched, surveyed and the re-	ne EIS proposals and application
◊	The impacts on The Crescent and Annandale are massive and were not sufficiently enable residents to give feedback on the negative impacts on communities and bus	
◊	I do not consider so many disruptions of pedestrian and cycle ways to be a 'tempora a community is a long time. The EIS acknowledges that there will be more danger construction sites. It is a serious matter to deliberately take steps to reduce the safet as the traffic analysis shows there will be a legacy of traffic congestion even in 2033 answer to those concerned about the impacts.	in the environment around by of a community, especially when

- EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57)
- The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is "based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required." The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a

- triangle between the two exhaust stacks on the southwestern and north-western corners of the interchange. This is utterly unacceptable.
- Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is NO information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.
- ♦ The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- Research about roads clearly demonstrates that roads create congestion. The WestConnex project is no different and the EIS clearly indicates that this is an impact of the M4/M5 and the consequent roads that will follow. WHERE WILL THIS END AS THE m4/m5 Link EIS itself indicates the RMS is already hard at work considering how to solve these problems – of congestion caused by roads.
- The EIS should not be approved as it does not contain any certainty for residents as to what is proposed and does not provide a basis on which the project can be approved. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' Therefore this entire process is a sham as the extent to which concerns are taken into account is not known as the contractor can simply make further changes. As the contractor is not bound to take into account community impacts outside of the strict requirements and as the contractor will be trying to deliver the project as quickly and cheaply as possible, it is likely that the additional measure proposed with respect to construction noise mitigation for (example) will not be adopted. The EIS should not be approved on the basis that it does not provide a reliable basis on which to base the approval documents. It does not provide the community with a genuine opportunity to provide meaningful feedback in accordance with the legislative obligation of the Government to provide a consultation process because the designs are 'indicative' only and subject to change. Because of this the EIS is riddled with caveats and lacks clear obligations and requirements fn project delivery. The additional effect of this is that the community and other stakeholders such as the Council will be unable to undertake compliance activities as the conditions are simply too broad and lack any substantial detail.
- ♦ It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- ♦ There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
- ♦ The substation and water treatment plant should be moved to the north end of the site near the City West link. This will mean that the site is less visible to residents and most pedestrian access is at this end. There are no homes that will have direct line of site of the facility if it is moved. This will also enable direct pedestrian access to the light rail without the need to use the winding path at the rear of the site which creates safety issues and adds to the time required to access the light rail stop.

- ⇒ I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents.NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.
- ⇒ The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.
- The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.

- ⇒ Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)
- ⇒ EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.

- Night works Leichhardt. The EIS states that to minimize disruptions to traffic on the existing road network (including in peak hours) there will be night works where appropriate. Given the congested nature of Darley Road, it is likely there will be frequent night work (EIS, 6.4). This will create an unnacceptable impact in residents. It is unacceptable that a highly unsuitable site has been selected. And, instead of a proper plan to manage traffic, the EIS contemplate work simply occurring at night. This is objected to in the strongest terms.
- The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, UTS and the CBD.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- ❖ The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known

Submission to:

Link

that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.

- The EIS states that investigation would be undertaken to confirm whether the Victoria Road bridge is a potential roost site for microbats. There will be attempts to 'manage potential impacts' if confirmed. This is inadequate. The project should not be permitted to impact on vulnerable species.
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

- ❖ The EIS states that there may be a 'small increase in pollutant concentrations' near surface roads. The EIS states that potential health impacts associated with changes in air quality (specifically nitrogen dioxide and particulates) within the local community have been assessed and are considered to be 'acceptable.' We disagree that the impacts on human health are acceptable and object to the project in its entirety because of these impacts.
- ❖ I am concerned that the EIS provides no reasons why the City of Sydney's alternative plan might not be preferable to the proposed WestCONnex.
- ❖ There is no evidence provided in the EIS that the ventilation outlets will be date. The EIS simply states that 'the ventilation outlets would be designed to effectively disperse the emissions from the tunnel and are predicted to have negligible effect on local air quality (xiv, Executive Summary). This is inadequate and details of the impacts on air quality need to be provided so that the residents and experts can meaningfully comment on the impact.
- ❖ The EIS was prepared by global engineering firm AECOM, which also prepared the EIS for Stages 1 and 2. When he approved these earlier stages, the then Minister for Planning Rob Stokes pointed to conditions of approval that would minimise impacts on communities. But the impacts have turned out to worse than expected.
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.
- ❖ EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

Attention Director Infrastructure Projects, Planning Services,	Name: Alexandra Plester
Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Address: 2/49-55 Parramatta Rd

- I am appalled to learn that more than 100 homes including hundreds of residents will be affected by
 noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few
 days but could continue for years. Such impacts will severely impact on the quality of life of residents.
- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.
 - Residents of Haberfield should not be asked to choose between two construction sites. This smacks of
 manipulation and a deliberate attempt to divide a community. Both choice extend construction
 impacts for four years and severely impact the quality of life of residents. NSW Planning should reject
 the impacts on Haberfield as unacceptable. (page 106)
 - Daytime noise at 177 properties across the project is predicted to be so bad during the years of
 construction that extra noise treatments will be required. The is however a caveat the properties will
 change if the design changes. My understanding is that the design could change without the public
 being specifically notified or given the chance for feedback. This means that there is a possibility of
 hundreds of residents being severely impacted who are not even identified in this EIS. I find this
 completely unacceptable.
 - I do not accept the finding in the Appendix P that there will be no noise exceedences during
 construction at Campbell Rd St Peters. There has been terrible noise during the early construction of
 the New M5. Why would this stop, especially given the construction is just as close to houses? Is it
 because the noise is already so bad that comparatively it will not be that much worse. This casts doubt
 on the whole noise study.
 - I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Submission from:	Submission to:
Name: Alexandra Plester	Planning Services, Department of Planning and Environment
Signature:	GPO Box 39, Sydney, NSW, 2001
Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.	Attn: Director – Transport Assessments
Address: 2/49-55 Porramatta Rd	Application Number: SSI 7485 Application
Suburb: Annandale Postcode 2538.	Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatigue'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and Environment Court found that the location of the site couldn't safely deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.
- It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- The EIS identifies hundreds of risks at different construction sites. It relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the "detailed design" phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.
- EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

Address: 1/20 Gipps Street

Suburb: BardWell Valley

The presence of 170 heavy and light vehicle movements a day at this site will create an unacceptable risk to students. The EIS should not permit any truck movements near the Darley Road site. The alternative proposal which provides that all spoil trucks enter and leave from the City West link is the only proposal that should be considered.

- ♦ The impact of the deep tunnelling for the M4-M5 link in addition to the tunnelling for the new Sydney Metro in the same area in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.
- We object to the location of the Darley Road civil and construction site because the site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of leichhardt and the inner west to access and cross the City West Link. It is already congested at peak hours and the intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

Submission to:

Planning Services,
Department of Planning and
Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director - Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5

Link

- ◆ The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.
- ◆ The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.
- ♦ I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

Attention Director Infrastructure Projects, Planning Services,	Name: Ruby Twe Petil
Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Address: 1/20 Gipps Street
Application Number: SSI 7485	Suburb: Bardwell Valley Postcode 2207
Application Name: WestConnex M4-M5 Link	Signature: Posto
Please include my personal in Declaration I HAVE NOT m	formation when publishing this submission to your website hade any reportable political donations in the last 2 years

- The EIS states that 'reasonable and feasible work practices and mitigation measures would be implemented to minimise potential noise impacts due to activities occurring at the Darley Road civil and tunnel site.' 96-52) This is not good enough. The EIS does not contain any detail whatsoever of these proposal on which they can comment. In addition, there is no requirement that measures will in fact be introduced to address noise impacts. The approval conditions need to contain detail of specific noise mitigation measures that are mandated and can be enforced.
- ♦ Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.
- The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
- ↑ Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this

- is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.
- Heavy vehicle movements during peak hours -Leichhardt. The EIS states that 'reasonable and practical management strategies would be investigated to minimize the volume of heavy vehicle movements during peak hours.' (8-53). This is also not acceptable as it is not known what will actually be done to manage this impact. It is not good enough for the EIS, which forms the basis of the approval of this project, to simply mention 'investigations' and not detail a proper plan (on which residents can comment) on management of heavy vehicle movements during peak hours. In addition, Darley Road is very congested from 7am until 9.30am and then from 4pm-6.30pm, well outside the 'peak' periods identified in the EIS. And the impact on traffic will be caused by 'light' vehicles and not simply heavy vehicles. It is clear that there is no plan for managing these vehicle movements. The EIS should not be approved as drafted. It is unacceptable for this volume of vehicles to be proposed for this critical arterial road with no plan for management

Attention Director	Name: Ruby-June Pettit
Application Number: SSI 7485	Signature: Parettit
Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Please include my personal information when publishing this submission to your website. I HAVE NOT made reportable political donations in the last 2 years. Address: 1/20 6.pps Street
Application Name: WestConnex M4-M5 Link	Suburb: Bordwell Walley Postcode 2207

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ♦ The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
- I am concerned that while the EIS finds that tolls do weigh more heavily on lower income motorists, there is no serious analysis of the blatant unfairness of letting of private consortium toll people for decades in order to pay for less profitable tollways for wealthier communities.
- The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- We object to the selection of the Darley Road site on the basis that it provides for daily movements of 170 heavy and light vehicles accessing Darley Road. This creates an unacceptable risk to the safety of pedestrians accessing the North Leichhardt light rail stop as well as bicycle users accessing the bicycle route on Darley Road and entering Canal road to join the dedicated bike paths on the bay run. Many school children cross at this point to walk to Orange Grove and Leichhardt Secondary College. The EIS states that an alternative truck movement is proposed which involves use of the City West Link with no trucks to access Darley Road. The selection of Darley Road should not be approved if it involves any truck movements on Darley Road, which is what it currently provides.
- I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.
- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).
- It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.

	Suburb: Temp & Postcode 2044

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- ⇒ I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.
- ⇒ This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.
- ⇒ The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
- ⇒ The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as

- inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable
- ⇒ Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.
- ⇒ I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.
- ⇒ Many students walk or ride to Orange Grove and Leichhardt Secondary College schools via Darley Road. There are also a number of childcare centres very close to the Darley Road site.

Submission from:	Submission to:
Name GIERADINE O BRIEN Signature: GLOSSIUS ES	Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001
Please included delete (cross out or circle) my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable	Attn: Director – Transport Assessments
Address A TT STD	Application Number: SSI 7485 Application
Suburb: RtDtDU Postcode 20th	Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- 1. The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- 2. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- 3. There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- 4. The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
- 5. Darley Road is confirmed as a 'civil and tunnel site (dive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- 6. I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- 7. I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- 8. Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- 9. I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- 10. An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

Application Number: SSI 7485	Suburb: Balmain	Postcode 2041
Application Name: WestConnex M4-M5 Link	Signature:	
Please <u>include</u> my personal in Declaration : I <u>HAVE NOT</u> m	formation when publishing this submission to ade any reportable political donations in the	your website last 2 years.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

provided so that the residents and experts can meaningfully comment on the impact.

- 1. The M4-M5 Link enables the expansion of the WestConnex network to include the Western Harbour Tunnel, Beaches Link and M6. These motorway projects, were not part of the WestConnex business case and are not priority projects in any State or Federal roads plan.
- 2. The business case is fatally flawed in a number of ways:
 - It does not factor in the impact of longer total journey lengths on urban sprawl, which will have a flow-cost for infrastructure and servicing.
 - It includes benefits from WestConnex supporting more compact commercial land use when this is generally not the result of motorway investment, and is unlikely to be in the area served by Stage 3.
 - It does not attempt to cost the reductions in public transport, especially the loss of fare revenue.
 - Ancillary road projects necessitated by WestConnex, such as the potentially \$1BN Alexandria-Moore Park Connectivity Upgrade, should have been included in the Business Case.
 - Impact on property values, costs of noise during construction, and loss of business

- should all have been costed and included in the Business Case
- Loss of heritage to the whole community (not just property owners) should have been included in the Business Case.
- 3. The Government is spending many billions of taxpayer dollars via Metro Rail to try and free itself of the restrictions of the City Circle that imposes a choke on the whole rail network, but is now replicating a the city circle with a 60km road network. It does makes sense to focus a rail network on the centre of the densest employment and residential area of Australia, with the greatest economic output per square kilometre. However, it is the antithesis of common sense, practicality, economic productivity, property value creation, environmental planning, social planning and basic transport planning to replicate it with more motorways.
- 4. The Business Case for the WestConnex project (made up of the New M4, Iron Cove Link and Rozelle Interchange, M4-M5 Link, New M5, King Georges Road Interchange upgrade and Sydney Gateway was not adequate to justify moving to environmental impact assessment.

Name: J. NAUGHTON Signature: happy	Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001
Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.	Attn: Director – Transport Assessments
Address: 90 TERRY ST	Application Number: SSI 7485 Application
Suburb: TEMPE Postcode 2094	Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.
- II. The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.
- III. The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.
- IV. The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.
- V. It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?

- The EIS states that, if the current proposal for ventilation facilities do not manage to achieve satisfactory environmental and health impacts, that further ventilation facilities may be proposed. This is unacceptable and the EIS does not provide the alternative locations for any such facilities and therefore the community is deprived of any opportunity to comment on their impacts. The EIS should not be approved on the basis that there may be additional ventilation facilities that are not disclosed in the EIS.
- The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to \$20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- There are two areas in the Rozelle Rail Yards site where construction will be by cut and cover. These are the Portals for the Western Harbour Tunnel and the Portals for the M4/M5 link. This is of particular concern in the light of residents experiences in areas of Haberfield and St Peters where highly

contaminated land areas were being disturbed. There was totally inadequate control of dust in these areas, where the dust would have been loaded with toxic chemical particulates. The old Rail Yards are highly contaminated land from their past use. The EIS gives no specific details of how this highly toxic threat is going to be securely managed. It is not acceptable for this to be decided only when the Construction Contracts have been issued, when the community will have no say or control over the methodology to be employed for removing vast amounts of contaminated spoil.

- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- The Darley Road site should be rejected because it involves acquiring Dan Murphy's. This business was rem=novated and opened with full knowledge that it was to be acquired. The lessee and sub-lessees should not be permitted compensation in these circumstances. The demolition of the entire building (which the EIS confirms will occur) is wasteful and represents mismanagement of public resources.

O Tunnel depths the tunnel depths for the Leichhardt area as low as 35 damage to homes due to settlement (ground movement). The EIS acknown less this is a real risk. There is no mitigation provided for this risk. Instet the Government's expense. However no details or assurance as to how not be approved with such tunnelling depths permitted and with no downen it will be repaired. It will lead to the situation where residents are engineers and lawyers to prove that the damage was linked to Westco property damage will be promptly and satisfactorily fixed.	nowledges that at tunnelling at 35 metres and ead, it states that properties will be repaired at w this will occur are provided. The project should etail as to the extent of damage and how and and businesses are forced to engage structural
o Heavy vehicle movements during peak hours — Leichhardt. The EIS startegies would be investigated to minimize the volume of heavy vehics also not acceptable as it is not known what will actually be done to the EIS, which forms the basis of the approval of this project, to simply plan (on which residents can comment) on management of heavy vehicles Road is very congested from 7am until 9.30am and then from didentified in the EIS. And the impact on traffic will be caused by 'light' that there is no plan for managing these vehicle movements. The EIS sunacceptable for this volume of vehicles to be proposed for this critical	nicle movements during peak hours.' (8-53). This manage this impact. It is not good enough for y mention 'investigations' and not detail a proper vicle movements during peak hours. In addition, 4pm-6.30pm, well outside the 'peak' periods vehicles and not simply heavy vehicles. It is clear should not be approved as drafted. It is
EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1 , construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.	
and the results (and any changes) published for public comment.	·

Please <u>include</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.		

- I. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
- II. The social and economic impact study fails to record the great concern for valued Newtown heritage
- III. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.
- IV. The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.
- V. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.
- VI. The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.
- VII. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- VIII. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

- ♦ Acquisition of Dan Murphys I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the tax payer should not be left to foot the compensation bill in these circumstances.
- ♦ The removal of spoil from the Rozelle Rail Yards will lead to the largest number of spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area.
- I object to the proposal to the Darley Road civil and tunnel site because of the unacceptable risk it will create to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW's own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.
- ♦ 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used..The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In

- any case, there is no certainty that additional measures would be taken or be effective.
- ♦ The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)
- The EIS states that all vegetation will be removed on the site which includes a mature tree. I object to the removal of the tree which creates a visual and noise barrier for residents from the City West Link. If the tree is removed it must be replaced with a mature tree as soon as the remediation of the site commences.
- Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.

Application Name: WestConnex M4-M5 Link	Suburb: Newtown Postcode 2642
Lobject to the WestConnex M4-M5 Link propos	als for the following reasons:
⇒ The EIS was released just 12 days after the	closing date for submissions to the Concept Design. This categorically
	ns and Submissions to the Concept Design were a total sham. There were
•	These were limited as the community only had 140 characters available to
·	quate. But there were at least 1500 written submissions, some of which
·	ngth. There is no way that all these submissions could have been read,
	the EIS and then for the EIS of 7200 pages to be put together, printed
	late for submissions to the Concept Design There needs to be a major
•	· · · ·
investigation into this flagrant abuse of the	way NSW planning laws have been flouted for the whole of Westconnex

⇒ The EIS states that by 2033 Ross St will see an increase of 80 heavy vehicles a day at Peak periods. The greatest increase of Heavy vehicles at the PM peak will be in Johnston Street, which will see an increase of about 30-50 vehicles when compared to the 'without project' scenario. At Catherine St there will be an increase of 30 heavy vehicles a day at Peak periods. These streets will see a huge increase in Heavy vehicle movements if Stage 3 is built.

The increase would be roughly half this amount if the project did not go ahead. Annexure Fig 26 B2 Section H

and particularly Stage 3.

- ⇒ The EIS shows a diagrammatic explanation of the way the polluted air will be expelled from the Westconnex tunnels. This method will work on straight tunnels of short distance providing there is no traffic congestion. There are already signs in tunnel locations in Sydney advising motorists to roll up their windows and put on their 'in vehicle circulating' air conditioning. This type of straight line pollution expulsion doesn't work if the tunnels go around corners, which is the case with the tunnels from the Rozelle Rail Yards site.
- ⇒ The removal of Buruwan Park between the Crescent and Bayview Crescent/Railway Pde Annandale to accommodate the widening realignment of the Crescent would be a particular loss of badly needed parkland in this Inner City area. Currently we have fewer parks than almost any suburb in Sydney so this would have a direct impact on local people. Buruwan Park also lies on a major cycle route from Railway Pde through to Anzac Bridge, UTS and the CBD. The alternative route being suggested is poor and takes no real account of trying to encourage cycling as a mode of transport. Cycling should be made as easy as possible to get more ordinary commuters to bicycle and the alternative to the current level route directs cyclists to Johnston St and then up Bayview Crescent arguably the steepest road in Annandale.
- ⇒ I am concerned that the EIS provides no reasons why the City of Sydney's alternative plan might not be preferable to the proposed WestCONnex.

- The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statement
- The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.
- The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable.
- The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.
- It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.
- Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5
- The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatique' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatique'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- ii. In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- iii. The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and

- Environment Court found that the location of the site couldn't safely deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.
- iv. It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- v. The EIS identifies hundreds of risks at different construction sites. It relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the "detailed design" phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.
- vi. EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

Declaration | HAVE NOT made any reportable political donations in the last 2 years

- ⇒ I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents.NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.
- ⇒ The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.
- The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.

- ⇒ Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)
- ⇒ EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.

- I do not accept that King Street traffic congestion will be improved by this project, There should be
  a complete review of the traffic modelling that does not appear to take sufficient notice of the
  impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area.
  Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the
  CBD, East or into the Inner West will use local roads.
- 2. EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57)
- 3. I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- 4. Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- 5. An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwa0rds of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

Attention Director	Name: Sanuel Corcleiro	
Application Number: SSI 7485	Signature: Sannul Corcleio	
Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Please include my personal information when publishing this submission to your website.  I HAVE NOT made reportable political donations in the last 2 years.  Address:  33 Bumbera St	
Application Name: WestConnex M4-M5 Link	Subyrb: Postcode Preston> 2170	
I object to the WestConnex M4-M5 Link proposals for the following reasons:		

- The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
- I am concerned that while the EIS finds that tolls do weigh more heavily on lower income motorists, there is no serious analysis of the blatant unfairness of letting of private consortium toll people for decades in order to pay for less profitable tollways for wealthier communities.
- The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- We object to the selection of the Darley Road site on the basis that it provides for daily movements of 170 heavy and light vehicles accessing Darley Road. This creates an unacceptable risk to the safety of pedestrians accessing the North Leichhardt light rail stop as well as bicycle users accessing the bicycle route on Darley Road and entering Canal road to join the dedicated bike paths on the bay run. Many school children cross at this point to walk to Orange Grove and Leichhardt Secondary College. The EIS states that an alternative truck movement is proposed which involves use of the City West Link with no trucks to access Darley Road. The selection of Darley Road should not be approved if it involves any truck movements on Darley Road, which is what it currently provides.
- I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.
- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).
- It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.

Please <u>include</u> my personal information when publishing this submission to your website  Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.		

- The latest EIS was released just ten business days after feedback period ended for the Concept Design for the M4/M5 and before preliminary drilling to establish a route through the Inner West is completed. WHAT IS THE RUSH? This EIS is little more than a concept design and is far less developed than earlier ones. It is composed of many indicate only plans such that it is impossible to know what the impacts will be and yet approval is being sought in a rush. The EIS ignores more than 1500 submissions, including one of 142 pages from the Inner West Council.
- One toll road leads to another 3 being proposed. The EIS's for the M4 East and the New M5 argued the case that serious congestion created near interchanges would be solved once the M4/M5 was built. Now it seems this is not the case and more roads will be needed to relieve the congestion WHERE DOES THIS END? According to the M4/M5 EIS the real benefits will depend on building the Western Harbour Tunnel, the Airport Link and a tollway heading South. None of these projects have been planned, let alone approved but yet are part of addressing the congestion impacts acknowledged for the M4/M5link project. Given this how is it possible to know or address the impacts of the M4/M5 Link, unless this is just yet more justification for yet more roads?
- Research about roads clearly demonstrates that roads create congestion. The WestConnex project is no different and the
  EIS clearly indicates that this is an impact of the M4/M5 and the consequent roads that will follow. WHERE WILL THIS
  END AS THE m4/m5 Link EIS itself indicates the RMS is already hard at work considering how to solve these problems –
  of congestion caused by roads.
- Where is the commitment to community consultation and to long term planning when the EIS for the M4/M5 Link is
  released before any response to the extensive community feedback on the M4-M5 Link concept design could possibly have
  been seriously considered. This demonstrates deep government contempt for the people of NSW and the communities of
  the Inner West of Sydney in particular.
- The EIS was prepared by global engineering firm AECOM, which also prepared the EIS for Stages 1 and 2. When he
  approved these earlier stages, the then Minister for Planning Rob Stokes pointed to conditions of approval that would
  minimise impacts on communities. But the impacts have turned out to worse than expected.
- For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria
  would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC
  and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not
  have the power to stop work until WestConnex contractors comply with environmental regulations.

- The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
- The social and economic impact study fails to record the great concern for valued Newtown heritage
- The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable
  or acceptable even if negative. This shows the inherent bias in the EIS process.
- The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.
- The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.
- The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.
- The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

Suburb: DOCKOROLL Postcode Postcode	4

- 2 G Appendix P Table 5-27 of the EIS states that 43% of the Leichhardt- Glebe Precinct travel to work by Car, 21% by Bus and 5%by Rail. These are figures for 2011. These figures are being used to promote the project and suggest they are accurate today. In the case of Rail these figures are extremely questionable. The Light Rail is now hugely popular, it's use having grown enormously. It is travelling at full capacity at Peak hours. More services are being put in place. Apartment blocks are being built as close to the Light Rail corridor as possible. Residents see the Light Rail as an efficient, reliable and timely method of commuting to work. It is blatantly obvious that the Govt should be investing heavily in building and extending Light Rail, Metro and Rail. If this were pursued in a professional manner the necessity for trying to hoodwink the community into believing that Westconnex were needed would be totally unnecessary.
- Rozelle Rail Yards will have 400 car parking spaces provided for workers(EiS). The daily workforce for these sites is stated to be approximately 550. This means that 150 vehicles will need to park in nearby local streets which are already over-subscribed during weekdays by commuters taking the light rail.
- The EIS lacks sufficient focus on traffic congestion in the suburbs of Alexandria and Erskineville. Are these being ignored because they will be even more congested than currently.
- The EIS states that construction noise levels would exceed the relevant goals without additional mitigation. The additional mitigation is mentioned but not proposed. All possible mitigation should be included as a condition of approval. The EIS acknowledges that substantial above ground invasive works will be required to demolish the Dan Murphys building and establish the road. The EIS noise projections indicate that for 10 weeks residents will suffer unacceptable noise impacts. The EIS doeS not contain a plan to manage or mitigate this terrible impact. There is no detail as to which homes will be offered (if at all) temporary relocation; there are no details of any noise walls or what treatments will be provided to individual homes that are badly affected. The approval needs to contain detail as to how this unacceptable impact will be managed and minimised during the construction period and, in particular, during site establishment.
- I object to the selection of the Darley Road site on the basis that the works required (demolition and surface
  works) will create unacceptable and unbearable noise and vibration impacts for extended periods. The EIS
  indicates that at least 36 homes will basically be unliveable during this period. In addition, the planned 170
  heavy and light vehicles will considerably worsen the impact of construction noise.
- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.

Submission from:	Submission to:
Name: TROY MASEN  Signature: T	Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001
Please include my personal information when publishing this submission to your website  Declaration: I HAVE NOT made any reportable political donations in the last 2 years.	Attn: Director – Transport Assessments
Address: Marola St	Application Number: SSI 7485 Application
Suburb: Nanh- Postcode 2042	Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.
- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.
- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on

Haberfield as unacceptable. (page 106)

- Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.
- I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Application Name: WestConnex M4–M5 Link	Suburb: Postcode 2042	
1 object to the WestConnex M4-M5 Link proposals for the following reasons, and request the Minister reject the application, and require SMC and RMC to prepare a new EIS that is based on genuine, not indicative, design parameters, costings, and business case.		
states 'the detail of the design and co	does not contain any certainty for residents as to what is proposed. The EIS nstruction approach is indicative only based on a concept design and is subject to hing to be undertaken by the successful contractors.' Therefore this entire	

- states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' Therefore this entire process is a sham as the extent to which concerns are taken into account is not known as the contractor can simply make further changes. As the contractor is not bound to take into account community impacts outside of the strict requirements and as the contractor will be trying to deliver the project as quickly and cheaply as possible, it is likely that the additional measure proposed with respect to construction noise mitigation for (example) will not be adopted. The EIS should not be approved on the basis that it does not provide a reliable basis on which to base the approval documents. It does not provide the community with a genuine opportunity to provide meaningful feedback in accordance with the legislative obligation of the Government to provide a consultation process because the designs are 'indicative' only and subject to change. Because of this the EIS is riddled with caveats and lacks clear obligations and requirements fn project delivery. The additional effect of this is that the community and other stakeholders such as the Council will be unable to undertake compliance activities as the conditions are simply too broad and lack any substantial detail
- The Rozelle Rail Yards are a totally inappropriate area to create a new recreational area because the area will be highly polluted by unfiltered Pollution Stacks and Tunnel Portals. In the EIS it is referred to as an idealized area. "It is envisaged that the quantum of active recreation within the Rozelle Rail Yards would be further developed by others as projects such as The Bays Precinct are developed. The concept plan provides spaces that could include an array of active recreation opportunities and even community facilities such as gardens or a school." The suggestion that this would be a suitable location for a School is just beyond belief and demonstrates that those who have put these plans together are either staggeringly ignorant or totally delusional! At a time when major World cities are doing all they can to address the dire problems of pollution this is an appalling suggestion that is totally out of touch.
- The EIS states that spoil handling at the Pyrmont Bridge Road Tunnel Site (C9) will "occur 24 hours a day, seven days a week" for about four years. Given the land use surrounding the site is dense residential, what mitigation measures will be used to control noise, light spill, etc. outside normal business hours? Have alternative living arrangements and/or compensation been considered? (P 8-55)

Application Name: WestConnex M4-M5 Link	Suburb: Postcode 2042
lobject to the WestConnex M4-M5 Link	proposals for the following reasons, and request the Minister reject the

I object to the WestConnex M4-M5 Link proposals for the following reasons, and request the Minister reject the application, and require SMC and RMC to prepare a new EIS that is based on genuine, not indicative, design parameters, costings, and business case.

- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective.
- The mainline tunnel alignment was influenced by a number of factors between Haberfield and St Peters. It is very concerning that one of these factors, states that this route was decided on for: "Future connections to the motorway network". This is of particular concern in the light of the Camperdown interchange removal. Westconnex was forced to remove this interchange due to pressure from the RPA Hospital, Sydney University and The Chinese Embassy. Knowing that the Camperdown Interchange was wanted it is highly concerning to see this reference to future motorway connections but no disclosures outlining where these connections maybe. The EIS also states that in 2016 extending a tunnel link to the South side of the Gladesville Bridge was seriously considered rather than to the Iron Cove Bridge but this was shelved due to costs. In light of the way residents and home owners have been dealt with by Westconnex the fact that other areas are being considered for add on sectors to this project is of great concern.
- The modelling area shown in Figure 8-5 should be extended to include Johnston Street and The Crescent/Minogue Crescent/Ross Street corridor to Parramatta Road to provide clarity on how these feeder routes are envisaged to operate in 2023 and 2033. It should include the modelling assumptions applied
- Acquisition of Dan Murphys I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the tax payer should not be left to foot the compensation bill in these circumstances
- The EIS lacks sufficient focus on traffic congestion in the suburbs of Alexandria and Erskineville. Are these being
  ignored because they will be even more congested than currently.

• The Rozelle interchange has an unprecedented concentration of stacks, in a valley, adjacent to densely populated suburbs. The interchange has steep and long climbs, increasing emissions concentrations, which will then be pumped into the surrounding area. The modelling does not account for stop-start conditions. However, the EIS shows significant traffic volumes heading onto the Anzac Bridge, which already operates at the lowest Level of Service (F) in peak times. There will be significant queues heading into the tunnels, greatly increasing the level of emissions. The existing M5 in peak conditions may provide a more realistic base line.

I shired to the IA legt Conney M4_M5 I ink appared as contained in the FIS application # SSI

Suburb: DULWICH HILL postcode 203

- The analysis shows Anzac Bridge/Western Distributor is currently at or close to capacity, particularly in the AM peak where existing operational and geometric features of the road network limit the capacity. The EIS notes that under all scenarios the Project will generate significant additional traffic on these links, requiring major and costly additional motorway infrastructure to the CBD. This is despite the fact that the NSW Government recognises that there is no capacity to accommodate additional car trips to the CBD and all its policies aim to allocate more street space to public transport, walking and cycling. The EIS must assess and identify any upgrades that the Project will cause or require. (App H p. xxxiii)
- The modelling assuming journey time shifting when mode shifting is more likely.

- I object to the whole project because the people of Western Sydney were not consulted about where they wanted new roads or what transport they prefer. The WestConnex project with the tolls we will have to pay was just dumped on us, there was no consultation about our needs.
- The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)
- The EIS states that, if the current proposal for ventilation facilities do not manage to achieve satisfactory environmental and health impacts, that further ventilation facilities may be proposed. This is unacceptable and the EIS does not provide the alternative locations for any such facilities and therefore the community is deprived of any opportunity to comment on their impacts. The EIS should not be approved on the basis that there may be additional ventilation facilities that are not disclosed in the EIS.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?

Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: GRO Dalst
	Suburb: Postcode Zoog

- Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is NO information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.
- No road junction as large and complex as the extraordinary spaghetti junction proposed to go underground has been built anywhere in the world. The feasibility is not tested. There are no international or national standards for such a construction.
- * Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.

- The EIS does not provide appropriate parking for the estimated 100 or so workers that the EIS states will work every day at the site, while other equivalent sites have allocated parking for such workers (Northcote Civil site (150)) and Parramatta Road East Civil site (140). It is also noted that the EIS provides for loss of 20 residential parks on Darley Road. Local streets are at capacity already because of the lack of off-street parking for many residents and the Light Rail stop which means that commuters use local streets. The EIS states that workers 'will be encouraged to use public transport.' the EIS needs to mandate that no trucks or construction vehicles are to park in local streets. There needs to be a requirement that is enforceable that workers use the Light Rail stop which is adjacent to the site or a plan to bus in workers
- Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy'. Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.
- The EIS does not require an acoustic shed and states that 'Acoustic barriers and devices at the access tunnel entrances would be considered and implemented where reasonable and feasible to minimise potential noise impacts associated with out-of-hours works within the tunnels.'

- ♦ The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street will greatly increase during the construction period and also be greatly increased by the time Stage 3 is completed. It states that Stage 3 will do nothing to improve traffic congestion in the area in fact it will add to the problem. Many of these areas are already congested at Peak times. This will be highly negative for the local area as more and more people try to avoid the congestion by using rat runs through the local areas on local streets.
- The mainline tunnel alignment was influenced by a number of factors between Haberfield and St Peters. It is very concerning that one of these factors, states that this route was decided on for: "Future connections to the motorway network". This is of particular concern in the light of the Camperdown interchange removal. Westconnex was forced to remove this interchange due to pressure from the RPA Hospital, Sydney University and The Chinese Embassy. Knowing that the Camperdown Interchange was wanted it is highly concerning to see this reference to future motorway connections but no disclosures outlining where these connections maybe. The EIS also states that in 2016 extending a tunnel link to the South side of the Gladesville Bridge was seriously considered rather than to the Iron Cove Bridge but this was shelved due to costs. In light of the way residents and home owners have been dealt with by Westconnex the fact that other areas are being considered for add on sectors to this project is of great concern.
- The management of water in the Rozelle Yards is of great concern as the site is highly contaminated and the construction work that will be carried out will cause a great deal of disturbance especially once vegetation has been removed. There will be potential impacts from contaminated soils, leakage/spills of hydrocarbons and other chemicals from machinery, vehicles transporting spoil adjacent to roads and stormwaters, rinse water from plant washing and concrete slurries. Water from tunnelling activity and other works will also introduce contaminants. The EIS says that much of this water will be treated in temporary treatment facilities and sediment tanks before being released to Whites Creek and Rozelle Bay. The EIS does not disclose what levels of pollution controls will be implemented to make sure that contaminated water is not released into White's Creek or Rozelle Bay. This is not acceptable.
- In 2033 with the M4 M5 link the WRTM is forecasting reductions in peak travel times between the M4 corridor and the Sydney Airport/Port Botany area. The times savings that are quoted miniscule! Between Parramatta and Sydney Airport the time saving is 10 minutes. Between Burwood and Sydney Airport the time saving is 5 minutes. Between Silverwater and Port Botany the time saving is 10 minutes. So for well over \$20Billion all that can be saved is just a handful of minutes! This total waste of public money is completely unacceptable.

### I object to the WestConnex M4-M5 Link proposals for the following reasons:

- The EIS states that darley Road is a contaminated site, and likely has asbestos. The proposal is that 'treated' water will be directly discharged into the stormwater drain at Blackmore oval. There are four long-standing rowing clubs in the vicinity of this location. This plan will jeopardise the integrity of our waterway and compromise the use of the bay for recreational activities for boat and other users. We object in the strongest terms to this proposal on environmental and health reasons. There is no detail of the ongoing Motorway maintenance activities during operation provided in the EIS. The community therefore cannot comment on the impact that this ongoing facility will have on the locality. This component of the EIS should not be approved as this information is not provided and therefore impacts (on parking, safety, noise, amenity of the area) are not known.
- It is outrageous to suggest that four unfiltered stacks would be built in one area in Rozelle
- The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.
- ◆ Traffic diversions Leichhardt. The EIS states that 'temporary diversions along Darley Road may be required during construction' (8-65). No detail is provided as to when these diversions would occur; there is no provision for consultation with the community; no detail as to how long the diversions will be in place and no comment on the impact of diversions on local roads or the amenity of residents.

- Will diversions occur at night? If so, down what streets? Diverting the arterial traffic from Darley Road down local streets (which are not designed for heavy vehicle volumes) will result in damage to streets, sleep disturbances for residents and create safety issues. There is also childcare centre and a school near the William Street/Elswick Street intersection which will be impacted by diverting vehicles onto local roads. It is unacceptable for proposed road diversions not to be detailed whatsoever in the EIS. The EIS should not be approved without setting out the impacts of road diversions on residents and businesses.
- The removal of Buruwan Park between the Crescent and Bayview Crescent/Railway Pde Annandale to accommodate the widening realignment of the Crescent would be a particular loss of badly needed parkland in this Inner City area. Currently we have fewer parks than almost any suburb in Sydney so this would have a direct impact on local people. Buruwan Park also lies on a major cycle route from Railway Pde through to Anzac Bridge, UTS and the CBD. The alternative route being suggested is poor and takes no real account of trying to encourage cycling as a mode of transport. Cycling should be made as easy as possible to get more ordinary commuters to bicycle and the alternative to the current level route directs cyclists to Johnston St and then up Bayview Crescent arguably the steepest road in Annandale.

Suburb: m / VICIE Postcode 2204

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- The EIS contains no detail of the access tunnel from the Darley Road site to the mainline tunnel other than depicting the route. The approval conditions need to ensure that tunnelling is occurring at sufficient depth so as to not jeopardise the integrity of the homes and not create unacceptable vibration and noise impacts for James Street residents and those at adjacent streets. The approval conditions need to make clear the period of time for which the 'temporary' tunnel is to be used.
- The EIS states that 'a preferred noise mitigation option'
  would be determined during 'detailed design'. This is
  unacceptable and residents have no opportunity to
  comment on the detailed designs. The failure to include
  this detail means that residents have no idea as to what
  is planned and cannot comment or input into those
  plans. (Executive Summary xvi)
- The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.
- Light construction vehicle routes the EIS acknowledges that these vehicles will use 'dispersed' routes (8-62). In other words, construction vehicles will use and park on local roads. The EIS does not propose any management as to which roads they use. The addition of 70-100 light vehicle movements day in Leichhardt will result in our

- small, congested streets, which are already at capacity and suffering parking shortages, will have the added impact of workers travelling to and from the site and parking in local streets. There will be rat running. The EIS should provide an agreed route (using arterial roads only) that can be used by all vehicles associated with the project.
- The Rozelle Rail Yards are a totally inappropriate area to create a new recreational area because the area will be highly polluted by unfiltered Pollution Stacks and Tunnel Portals. In the EIS it is referred to as an idealized area."It is envisaged that the quantum of active recreation within the Rozelle Rail Yards would be further developed by others as projects such as The Bays Precinct are developed. The concept plan provides spaces that could include an array of active recreation opportunities and even community facilities such as gardens or a school." The suggestion that this would be a suitable location for a School is just beyond belief and demonstrates that those who have put these plans together are either staggeringly ignorant or totally delusional! At a time when major World cities are doing all they can to address the dire problems of pollution this is an appalling suggestion that is totally out of touch.

### I object to the WestConnex M4-M5 Link proposals for the following reasons:

- I. It is stated that if congestion proves to be a problem then other solutions will have to be found. Other routes that are being considered will be using the Western Distributor, the Crescent, Victoria Rd, Ross St, Pyrmont Bridge Rd and Johnston St. The Crescent and Johnston St are clearly going to be used. This despite the fact that in a consultation those representing Westconnex assured residents of Annandale that neither Johnston St or Booth St would be used. It is expected that these routes will also be used for night transport. It is clear that it is unlikely that transportation routes shown in the EIS will be adhered to. This is unacceptable.
- II. The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating "Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets". Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future?
- III. The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.
- IV. The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is "based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required." The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- V. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

Please include my personal information when publishing this submission to your website  Declaration: I HAVE NOT made any reportable political donations in the last 2 years.	Attn: Director – Transport Assessments
Address: 76 Non Steld Steet	Application Number: SSI 7485 Application
Suburb: Postcode 2037	Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatigue'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and Environment Court found that the location of the site couldn't safely deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.
- It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- The EIS identifies hundreds of risks at different construction sites. It relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the "detailed design" phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.
- EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

- The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.
- The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.
- The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.
- The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.
- It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.
- II. The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.
- III. The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.
- IV. The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.
- V. It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?

Suburb: Enmove Postcode 2042	•

I. The proposal to run trucks so close to homes is dangerous. There have been two fatalities on Darley Road at the proposed site location. The EIS does not propose any noise or safety barriers to address this. Despite the unacceptable impact to nearby homes, there is no proposal for noise walls, nor any mitigation to individual homes.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS

- II. Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.
- III. Rozelle is an old and historic suburbs of Sydney.

  The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- IV. The EIS states that Darley Road is a contaminated site, likely including asbestos. There is a risk to the community associated with spoil removal, transfer and handling. We object to the selection of the site based on the environmental risks that this creates, along with risks to health of residents.
- V. The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less

than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project" and 'damage' would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.

Submission to

- VI. There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- VII.Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution- most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be
removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

- ⇒ I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents.NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.
- ⇒ The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.
- The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.

- ⇒ Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)
- ⇒ EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

#### SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below.

I've lived in Newtown since 1993. The village vibrancy of King Street, especially on the weekend, is what keeps me here despite ever increasing rental costs. I fear greatly for the future of this unique part of Sydney and its culture should Westconnex turn my home into a 7 day week motorway. No parking on the weekend means no King St and Saturday/Sunday would become weekdays at peak hour traffic. This is unacceptable.

NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS. NSW Planning must reject this EIS and instead recommend to the NSW government that there should be an independent review of WestConnex before more billions are spent and more residents' lives are damaged.

The EIS is based on an indicative design and has insufficient detail for the impacts to be properly assessed and addressed, and the public consultation has been woefully inadequate.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. This means the community will have limited say in the management of the impacts identified in the EIS. The EIS needs to provide an opportunity for the community to meaningfully input into this report and approval conditions.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges and anyone who have

driven there knows, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. An EIS based on inaccurate traffic analysis cannot be approved.

The economic basis for this project is the approval of further toll roads. Throughout the EIS there are references to the f6 and Northern beaches Link; it is assumed that these toll roads will, in fact, be built. The issue with this is that the impacts set out in the EIS rely upon them being built – that is, traffic will lessen once they are built. However, there is no certainty this will occur. Any references to these toll roads, in the context of impacts from this project, need therefore to be disregarded.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

We are also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated.(SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

The Environmental Impact Statement for Stage 3 admits that the traffic around St Peters will be worse when both stages are completed. So the community would have to put up with the exhaust from tunnels and additional car

remissions from the traffic. Car emissions are known to shorten the lives of those who live within half a kilometre of a busy roadway. Diesel exhaust from trucks is classed as a carcinogen.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

During the Stage one consultation phase, residents were repeatedly told that after construction of the M4 East, there would be no more above ground construction in Haberfield. It now appears that they were misled. SMC is already preparing its Preferred Infrastructure Report which will include its final choice of option. I demand that this report be made public as soon as it is filed with NSW Planning and that residents be given a right to consultation on the actual plan before a determination on this EIS application is made by NSW Planning.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, publish, my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, John McAllister 17/3-13 Erskineville Rd Newtown

Application Name: WestConnex M4-M5 Link	Signature: X M Cally	
Please <u>include</u> my personal information when publishing this submission to your website  Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.		

- I do not accept that King Street traffic congestion will be improved by this project, There should be
  a complete review of the traffic modelling that does not appear to take sufficient notice of the
  impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area.
  Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the
  CBD, East or into the Inner West will use local roads.
- 2. EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57)
- 3. I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- 4. Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- 5. An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwa0rds of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

	object to the WestConnex M4-M5 Link proposals as contained in the EIS application \$\\$ SSI 7485, for the reasons set out below.	Submission to:

Attention Director Infrastructure Projects, Planning Services,	Name: Christine Marliou		
Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Address: 10 Sher St		
Application Number: SSI 7485	Suburb: St Peters Postcode Zouce		
Application Name: WestConnex M4-M5 Link	Signature:		
Please <u>include</u> my personal in <b>Declaration</b> : I <u>HAVE NOT</u> m	romation when publishing this submission to your website ade any reportable political donations in the last 2 years.		

## I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

- desperation to find a reason to build it, rather than there being a clear need to be serviced.
- Rather than ease congestion the project is likely to reduce the availability of funds for projects that enable that genuinely reduce congestion (road pricing), give priority for high productivity road users such as delivery and service vehicles or genuinely avoid congestion (public transport in separate corridors/lanes).
- 2) The most highly effected area of Stage 3 will be Rozelle with the massive and complex interchange. Nothing like this has been built anywhere else in the World and it is highly questionable as to whether it can be built at all in the form outlined in the EIS. The EIS does not show any detailed plans as to how this will be achieved. There are no constructional details at all, what is shown is a concept only, this is totally unacceptable.
- 3) There is relatively limited urban redevelopment potential along the small section of Victoria Road that the Project would decongest, and this section is not been classified by the NSW Government as redevelopment area. To claim this as a benefit is misleading.
- 4) Easton Park has a long history and is part of an urban environment which is unusual in Sydney. The park needs to be assessed from a visual design point of view. It will be quite a different park when its view is

- changed to one of a large ventilation stack. The suggestion that it has been 'saved' needs to be considered in the light of the severe 5 years construction impacts and the reshaped urban environment.
- 5) The EIS states that property damage due to ground movement "may occur, further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of ground movement is lessened where tunnelling is more than 35 metres underground. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are astonishingly shallow eg John St at 22metres Hill St at 28metres Moore St 27metres. Piper St 37metres(Vol 2B Appendix E Part 2) Catherine St at 28metres(Vol 2B Appendix E Part 1). At these shallow depths, the homes above would indisputably sustain serious structural damage and cracking. Without provision for full compensation for damage there would be no incentive for contractors or Roads and Maritime Services to minimise this damage.
- 6) The EIS projects increases in freight volumes without offering evidence as to how the project enables this. Assertions relating to improvements for freight services rely on the Sydney Gateway Project, which is not part of WestConnex, and which poses significant threats to the crucial freight rail connection to Port
