I object to the WestConnex M4-M5 Link proposals for the following reasons:

- Stage 3 is the most complex and expensive stage of WestConnex and the government is seeking approval, yet there are no detailed construction plans so we are not speaking to a real situation.
- The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors.
- The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people’s transport needs but instead enrich private corporations.
- This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.
- The EIS at 7-41 acknowledges that there is great concern in the community that King Street, Newtown, will be made a 24 hour clearway, stating “Roads and Maritime has no plan to change the existing clearways on King Street”. This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has NEVER stated publicly that King Street will not be subject to extended clearways.
- The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating “Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets”. Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future?
- There are estimated 100 heavy and 70 light vehicle movements a day and the plan is to allow a right-hand turn into Darley Road from the CW Link. The trucks will drive onto Darley Road, turn right into the site and then left back out onto the CW Link, which is unrealistic given the amount of traffic on these roads now.
- I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.
- The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling).
This document is vague, lacking in detail confusing and confused. Here are my objections:

1. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With a massive number of extra truck four unfiltered emissions stacks in the area plus a large number of exit portals, the residents of this area will suffer greatly from poisonous diesel particulates. This is negligent when you consider that, the World Health Organisation in 2012 declared diesel particulates carcinogenic. As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments and surrounds will experience increased traffic with associated noise and air pollution— most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe.

2. Also, the widening of the Crescent between the city West Link and Johnston street with an extra lane being constructed will lead to heavy traffic congestion on a road that has 3 Primary/Infants schools.

3. The EIS states that property damage due to ground movement "may occur, further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of ground movement and subsidence is lessened where tunnelling is more than 35 metres underground. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are astonishingly shallow eg John St at 22metres Hill St at 28metres Moore St 27 metres.(Vol 2B Appendix E Part 2) Catherine St at 28metres(Vol 2B Appendix E Part 1). At these shallow depths, the homes above would sustain serious structural damage and cracking.

4. Rozelle Rail Yards will have 400 car parking spaces provided for workers(EIS). The daily workforce for these sites is stated to be approximately 550. This means that 150 vehicles will need to park in nearby local streets which are already over-subscribed during weekdays by commuters taking the light rail.

5. The removal of spoil from the Rozelle Rail Yards will lead to the largest number of spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours.

6. The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area.

7. The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and poisonous smoke stacks borders on being criminally negligent. This new "recreational area" children will be unaware that they are being poisoned.

8. The introduction of the EIS clearly states that the information in the EIS is "indicative of the final design only. The reality of this statement means that the project may be completely different to stated plans in the EIS. Furthermore although the EIS indicates what is to be expected when construction begins, it also states that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major changes to the project design and construction methodologies. The community would have no say in this process.
I object to the WestConnex M4-M5 Link proposals for the following reasons:

I. There have been widespread reports in the media about extensive unresolved disputes regarding damages to houses in the Stage 1 M4 and Stage 2 M5 construction process. Why should the community believe that there will not be extensive damages to houses in Stage 3?

II. Because this is still based on a “concept design” it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation’s ownership before the actual designs and construction plans are determined. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.

III. It is quite clear that the escalating cost of tolls will encourage drivers to avoid tollways. This will further pollute and congest local roads. Such impact already evident on Parramatta Rd usage after the new M4 tolls were introduced. The community expects similar impacts on roads around the St Peters interchange, including the Prince Highway, St Peters, Tempe and Campsie. The EIS Traffic analysis fails to deal with this issue of traffic beyond the boundaries of the project and should be rejected.

IV. It is all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and this restricted access does NOT constitute open and fair community engagement.

V. I am concerned that SMC has selected one of Sydney’s most dangerous traffic spots, Darley Rd in Leichhardt for a construction site that will bring hundreds of extra trucks and cars into the area on a daily basis for years.

VI. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the north-western and north-western corners of the interchange. This is utterly unacceptable.

VII. I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools be built near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.

VIII. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-western winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

IX. I am deeply disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, “would” not “will”, telling me nothing is actually “known” for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.

X. The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Campsie and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other. The increasing numbers of vehicles will also increase the vehicle pollution (known to have adverse effects on breathing and also to be carcinogenic) in this area.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

The substation and water treatment plant should be moved to the north end of the site near the City West link. This will mean that the site is less visible to residents and most pedestrian access is at this end. There are no homes that will have direct line of site of the facility if it is moved. This will also enable direct pedestrian access to the light rail without the need to use the winding path at the rear of the site which creates safety issues and adds to the time required to access the light rail stop.

The site should be returned to the community as compensation for the imposition of this construction site in our neighbourhood for a 5 year period. If the substation and water treatment plant is moved to the north of the site, then the lower half of the site (which is the most accessible end) could be converted into open space with mature trees planted. As this site is immediately adjacent to the bay run, bicycle parking and other facilities that support active transport could be included. This would result in an increase in green space for residents and result in a pleasant green environment for pedestrians, rather than a fenced facility.

The EIS currently permits trucks to access local roads in 'exceptional circumstances', which includes queuing at the site. Given the constraints of the site (and based on experience with cars accessing the site for Dan Murphy's), queuing will be the norm and not the exception. The EIS needs to be amended to rule our queuing as an exceptional circumstance which allows trucks to use.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

**Noise and disruption from construction**

I object to the proposal for the Darley Road Civil and Tunnel Construction site at Leichhardt because of the noise and disruption impact it will have on residents during periods of extended construction.

The proponent has a very poor track record of managing the impacts of Stages 1 and 2 of this project. In addition, the conditions of approval are so broad as to make enforcing compliance with Council or EPA regulations impossible. The protections for residents are ineffectual and the abuse of the Critical State Significant Infrastructure powers is continuous.

The reality for residents living with the Stages 1 and 2 of WestConnex is night after night of disruption and disturbance with no respite and no way of enforcing compliance. In addition, the policy for mitigation entitlements such as noise protection or respite accommodation is not transparent and is discretionary. Many residents especially the most vulnerable such as those in rental properties or in public housing are unwilling to complain about their situation.

In St Peters in mid-September 2017 the Stage 2 Joint venture’s contractors were digging up pipes all one weekend, resulting in two burst water mains. They worked through Saturday night until after 1am on Sunday morning when they should have finished at 6pm on Saturday. Many of the residents were without water for much of the weekend. On Monday night at 8.30pm RMS turned up unannounced with concrete saws and jackhammers. On Tuesday night, RMS were supposed to stop at 6pm but again the work until after midnight. A resident whose bedroom was right next door to the work, posted a video of the deafening concrete saws in use after midnight with the caption "It's impossible to live here at the moment".

Many local residents are unaware of the construction impacts and that there will be months of construction work which will have to take place out of hours. The EIS does not specify which works to establish the site will take place during standard construction hours.
The Department of Planning and Environment should ensure that the conditions of any approval are stringent and prohibit out of hours work at the Darley Road Civil and Tunnel Construction site at Leichhardt for more than 2 nights in a row and in any two-week period.
Darley Road Civil and Tunnel Construction - Traffic

I object to the Darley Road Civil and Tunnel Construction site at Leichhardt because of the impact it will have on traffic, parking and local residences. The grounds on which I am objecting were also the grounds for rejecting a previous development on this site, which was only approved by the Land and Environment Court with strict conditions.

On 5 December 2006 the Building & Development Council of Leichhardt Council refused Development Application D/2006/311 in relation to 7 Darley Road, which was an application for alterations and additions to existing building and change of use of existing building for use as a liquor store, cafe/deli and commercial office space, new landscaping and signage. Hundreds of local residents had lodged objections to the DA. One of the grounds on which the application was refused was that the RTA did not support the access arrangements and would not allow right hand turns into the site, which is precisely what the proponent is now proposing. The following extract from the decision sets out why the RTA objected to the DA:

"The application has proposed a number of traffic management measures along Darley Road, included painted median islands.

The RTA does not support the access arrangements as proposed and has advised that it is likely to create conflicts at the shared entry/exit near Hubert Street. It has been recommended that there be separate entry and exit driveways, with the entry nearest to Charles Street, and the exit at the driveway crossing near Hubert Street.

The RTA has advised that these driveways must be physically restricted with left-in/left-out movements through the provision of 900mm wide concrete median islands, covering the width of each driveway and extend to a distance of 10 metres either side of each driveway crossing. The parking area along the eastern section of the site must also be restricted to left-in/left-out movements.

On the advice the of the RTA, no right-turn into the site is then possible, potentially encouraging west-bound traffic on Darley Road to conduct ‘U-turns’ at the Charles Street intersection to access the carpark, creating a conflict at that point.

Council’s engineers have advised that the proposed traffic management works on the Darley Street frontage have a number of deficiencies including:
• Traffic lanes on the southern side of Darley Street would be relocated onto the existing parking lane which is geometrically unsuitable and unsafe for vehicular traffic.

• The proposed kerbside traffic lane on the southern side of Darley Street would conflict with existing stormwater drainage inlet structures. Significant drainage works would be required to address this issue without exacerbating existing flooding problems in this area.

Advice from the RTA has also noted the unsuitability of the existing kerbside parking and bicycle lanes for a through lane due to its cross-fall. The RTA have further advised that the bicycle lane along Darley Road must be retained, and that no objections are raise to the proposed pedestrian refuge, subject to compliance with the relevant Australian standards. "The RTA also raised objections in relation to traffic that the bottle shop development would generate:

"It is expected that the peak traffic generation periods for the development would be Friday evenings and Saturdays, with Thursday evening also busy. Conflict with the morning peak hour is therefore expected to be limited. It is noted that the traffic surveys were conducted prior to the closure of Moore Street West, Leichhardt.

Anecdotal evidence has suggested that traffic flow has increased on east-west thoroughfares such as Darley Road and Marion Street since the closure.

Traffic generation figures supplied in the traffic report initially submitted to Council were derived strictly from the amount of carparking provided on the site.

The revised traffic generation figures provided as a result of the additional parking provided on the site. It has factored that 35% of traffic to the site are passing trips. It has not accounted for spill-over traffic that cannot be accommodated on the site.

These figures would appear to conflict with statement within the Social Impact Assessment (SIA) that was submitted to the LAB for approval. This document indicates that the 'catchment' for the proposed liquor outlet is considerably larger and it states "In contrast Dan Murphy's OLR's are larger format destination stores designed to appeal to a regional market …"

It has also been noted that the proposed liquor store alone would expect up to sixty (60) deliveries a week.

The study derives that the likely additional traffic on the local network would be:

• Thursday evening – some 150 vehicles/hour (in + out)
• Friday evening - some 156 vehicles/hour (in + out)
• midday - some 228 vehicles/hour (in + out)

Of particular concern in this regard is that the 'No stopping' restriction required by the RTA for the northern side of Darley Road during the Thursday and Friday evening peaks, which may funnel overflow parking into the surrounding residential streets. Furthermore, the substantial increase in traffic flow at the Saturday peak may result in significant queuing at the City-West intersection as all vehicles are forced to left-turn exiting the site.

On the basis of the above, the proposal is considered unsatisfactory when having regard to traffic and parking impacts."
It is clear that the same traffic impacts raised by the RTA will be a consequence of the Darley Road Civil and Tunnel Construction site at Leichhardt yet the proponent has failed to provide any detail about these impacts or how the proponent will manage these. The proponent’s plan to bring 100 trucks a day into the site will result in significant queuing at the City-West intersection yet the proponent has failed to provide any detail about these impacts or how the proponent will manage these.

The removal of 20 parking spaces Darley Rd and the absence of a worker parking plan will funnel overflow parking into the surrounding residential streets which are already at parking capacity yet the proponent has failed to provide any detail about these impacts or how the proponent will manage these.

The following points of concern were also raised in the Council's rejection of the bottle shop DA:

"Traffic and parking impact on Darley Road and the surrounding residential street network/ vehicular – pedestrian conflict, especially with school children/ increase noise from traffic movements and truck loading and unloading.

The increase in traffic movements to the site are likely to have an undue acoustic impact on the dwellings located opposite site, particularly as a result of late-night movements.

The proponent has failed to adequately address the fact that the Darley Road Civil and Tunnel Construction site at Leichhardt will have the same impacts of:

- Traffic and parking impact on Darley Road and the surrounding residential street network
- Vehicular – pedestrian conflict, especially with school children/
- Increase noise from traffic movements and truck loading and unloading.

The proponent has failed to address the fact that the increase in traffic movements to the site are likely to have an undue acoustic impact on the dwellings located opposite site, particularly as a result of late-night movements. The proponent plans to have workers on site 24/7. Late night and out of hours comings and goings by vehicle are to be expected yet the proponent has failed to address the impact of these vehicle movements on local residents.

The site should not be permitted to operate outside of standard constructions hours because of the noise impacts from construction vehicles, delivery vehicles and worker transportation vehicles. The following Traffic Management deficiencies were also raised in the Council’s rejection of the bottle shop DA:

"The proposed Traffic Management works on the Darley Road frontage have a number of deficiencies including:

(a) Traffic lanes on the southern side of Darley Road would be relocated onto the existing parking lane which is geometrically unsuitable and unsafe for vehicular traffic.

(b) The proposed kerbside traffic lane on the southern side of Darley Road would conflict with existing stormwater drainage inlet structures. Significant drainage works would be required to address this issue without exacerbating existing flooding problems in this area.
(c) The access arrangement for the parking area on the western side of the site will create traffic conflict at the shared entry/exit driveway near Hubert Street.

(d) The application would result in the loss of on-street parking spaces on the southern side of Darley Road.

(e) The applicant has not sufficiently demonstrated that the traffic management proposal complies with the RTA requirements for works on a State Road.

(f) The site plans do not adequately address internal vehicle manoeuvring for large trucks accessing the 2 loading docks.

(g) The application has failed to demonstrate how the existing bicycle lane would be maintained.

The application has failed to demonstrate that the proposal would not have an undue increase in traffic generation along Darley Road and the surrounding residential street network.

(a) The applicant has not sufficiently demonstrated assumptions made in their report regarding parking demand and traffic generation.

(b) The traffic generation assumption for passing or redistributed trips is not validated.

(c) The design does not adequately address the impacts from vehicle queuing in Darley Road.

The same deficiencies are present in the proponent’s EIS and the Darley Road Civil and Tunnel Construction site at Leichhardt should be rejected on the same grounds:

- construction trucks travelling on the southern side of Darley Road will force traffic onto the existing parking lane which is geometrically unsuitable and unsafe for vehicular traffic.

- the construction works will conflict with existing stormwater drainage inlet structures which will exacerbating existing flooding problems in this area.

- The access arrangement for the site will create traffic conflict at the shared entry/exit driveway near Hubert Street.

- The application would result in the loss of on-street parking spaces on the southern side of Darley Road.

- There is no traffic management proposal.

- The proponent has failed to demonstrate how the existing bicycle lane would be maintained.

- The proponent has failed to demonstrate that the proposal would not have an undue increase in traffic generation along Darley Road and the surrounding residential street network.

- The proponent has failed to adequately address the impacts from vehicle queuing in Darley Road.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

- **Contaminated site**

  I object to the Darley Road Civil and Tunnel Construction site at Leichhardt because the proponent has failed to comply with the SEARS requirement in relation to Air quality, that the project is designed, constructed and operated in a manner that minimises air quality impacts (including nuisance dust and odour) to minimise risks to human health and the environment to the greatest extent practicable.

  7 Darley Road is a site which has been reported to the NSW EPA under section 60 of the CLM Act. Although NSW EPA assessed the site as not requiring regulation under the CLM Act in 16.2.14 of the EIS the proponent sets out in Table 16-15 the contaminants of potential concern that are present at Darley Rd. These are metals, polycyclic aromatic hydrocarbons, total recoverable hydrocarbons, asbestos and Volatile Organic Hydrocarbons (SVOCs).

  The proponent's plan for the Darley Road Civil and Tunnel Construction site at Leichhardt involves demolition, earthworks, construction and track-out (the transport of dust and dirt from the construction/demolition site onto the public road network on construction vehicles).

  I object to the Darley Road Civil and Tunnel Construction site at Leichhardt because of the impact that disturbance of contaminants will have on health and on property. The community should not be put at risk when a dive site is not necessary.

- **Asbestos contaminated site**

  I object to the Darley Road Civil and Tunnel Construction site at Leichhardt because the proponent has failed to comply with the SEARS requirement in relation to Air quality, that the project is designed, constructed and operated in a manner that minimises air quality impacts (including nuisance dust and odour) to minimise risks to human health and the environment to the greatest extent practicable.

  Appendix R, 4.7.8 Areas and contaminants of concern the proponent states that 'There is also potential for asbestos to be present in the fill from potential uncontrolled filling and demolition of former buildings.'
The proponent’s assessment is defective as it fails to identify the risk to local residents and anyone else in the neighbourhood of excavated soil containing contaminants and asbestos being blown into nearby streets and into homes and gardens of adjoining properties. The proponent’s assessment is defective because having identified the presence of asbestos on the site it fails to specifically identify the potential for inhalation of asbestos either by workers or residents.

I object to the Darley Road Civil and Tunnel Construction site at Leichhardt because of the impact that disturbance of asbestos will have on health and on property. The community should not be put at risk when a dive site is not necessary.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

◊ The EIS states that ‘reasonable and feasible work practices and mitigation measures would be implemented to minimise potential noise impacts due to activities occurring at the Darley Road civil and tunnel site.’ (96-52) This is not good enough. The EIS does not contain any detail whatsoever of these proposal on which they can comment. In addition, there is no requirement that measures will in fact be introduced to address noise impacts. The approval conditions need to contain detail of specific noise mitigation measures that are mandated and can be enforced.

◊ Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.

◊ The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.

◊ Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

◊ Heavy vehicle movements during peak hours – Leichhardt. The EIS states that ‘reasonable and practical management strategies would be investigated to minimize the volume of heavy vehicle movements during peak hours.’ (8-53). This is also not acceptable as it is not known what will actually be done to manage this impact. It is not good enough for the EIS, which forms the basis of the approval of this project, to simply mention ‘investigations’ and not detail a proper plan (on which residents can comment) on management of heavy vehicle movements during peak hours. In addition, Darley Road is very congested from 7am until 9.30am and then from 4pm-6.30pm, well outside the ‘peak’ periods identified in the EIS. And the impact on traffic will be caused by ‘light’ vehicles and not simply heavy vehicles. It is clear that there is no plan for managing these vehicle movements. The EIS should not be approved as drafted. It is unacceptable for this volume of vehicles to be proposed for this critical arterial road with no plan for management.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- The EIS lacks sufficient focus on traffic congestion in the suburbs of Alexandria and Erskineville. Are these being ignored because they will be even more congested than currently.

- The EIS states that, if the current proposal for ventilation facilities do not manage to achieve satisfactory environmental and health impacts, that further ventilation facilities may be proposed. This is unacceptable and the EIS does not provide the alternative locations for any such facilities and therefore the community is deprived of any opportunity to comment on their impacts. The EIS should not be approved on the basis that there may be additional ventilation facilities that are not disclosed in the EIS.

- It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.

- The EIS should not be approved as it does not contain any certainty for residents as to what is proposed. The EIS states ‘the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.’ Therefore this entire process is a sham as the extent to which concerns are taken into account is not known as the contractor can simply make further changes. As the contractor is not bound to take into account community impacts outside of the strict requirements and as the contractor will be trying to deliver the project as quickly and cheaply as possible, it is likely that the additional measure proposed with respect to construction noise mitigation for (example) will not be adopted. The EIS should not be approved on the basis that it does not provide a reliable basis on which to base the approval documents. It does not provide the community with a genuine opportunity to provide meaningful feedback in accordance with the legislative obligation of the Government to provide a consultation process because the designs are 'indicative' only and subject to change. Because of this the EIS is riddled with caveats and lacks clear obligations and requirements fn project delivery. The additional effect of this is that the community and other stakeholders such as the Council will be unable to undertake compliance activities as the conditions are simply too broad and lack any substantial detail.

- The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to $20 a day in MI& I object to the fact that this is not considered or factored into the traffic analysis.

- Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

I object to the WestConnex M4-M5 Link proposals for the following reasons:

A. The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statements.

B. The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.

C. The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable.

D. The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.

E. It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.

F. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5.

G. The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.

Attn: Director – Transport Assessments  
Application Number: SSI 7485 Application  
Application Name: WestConnex M4-M5 Link

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.

- The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.

- The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.

- I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.

- The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to $20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.

- Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy". Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

- The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.

- I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name __________________________ Email __________________________ Mobile __________________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- Experience has shown that construction and other plans by WestCONnex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONnex.

- Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.

- I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

- The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.

- Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.

- It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle

- Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.

- A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a 'temporary' imposition.

**Campaign Mailing Lists:** I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name: ___________________________ Email: ___________________________ Mobile: ___________________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

A. The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statements.

B. The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.

C. The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable.

D. The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.

E. It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.

F. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5.

G. The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I do not accept that King Street traffic congestion will be improved by this project. There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.

- EIS 6.1 (Synthesis, Page 45) states, “…… this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. It is unstated just who would have responsibility for such a “review(ed) for consistency”, and how these changes would be communicated to the community. The EIS should not be approved till significant ‘uncertainties’ have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57).

- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.

- Why is there no detailed information about the so-called ‘King Street Gateway’ included in the EIS?

- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow ‘swoosh’ that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be ‘encouraged’ to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that ‘definitive’ rather than ‘indicative’ alignments could be published. The EIS should be withdrawn till such time that it is a true and fair ‘definitive’ document open for genuine public comment.

**Campaign Mailing Lists:** I would like to volunteer and/or be informed about the anti-WestConnex campaigns. My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Declaration: I HAVE NOT made any reportable political donations in the last 2 years.
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.

- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)

- Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. There is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.

- I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.

- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Application Name: WestConnex M4-M5 Link

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- 1,1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.

- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.

- 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.

- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.

- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation. M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-MS Link proposals as contained in the EIS application, for the following reasons:

i. 11599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.

ii. There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.

iii. 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.

iv. 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.

v. I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation. M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

Name ______________________ Email ______________________ Mobile ______________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

- Public transport is rejected by the EIS so the state government is forcing us to use cars more when most major cities in the world are trying to reduce the number of cars on the roads. We know this is to promote private road operators' profits. I object to putting so much public funding to the cause of private profit. I urge the Secretary of Planning to reject this project.

- The traffic modelling process is not fit for purpose and places significant risks on the people of NSW in terms of:
  - Traffic impacts that are significantly different to those presented in the EIS.
  - Toll earnings that are significantly lower than projections - resulting in government subsidising the owner for lost earnings.

- There is no statement on the level of accuracy and reliability of the traffic modelling process. This is a major shortcoming and is contrary to the Secretary's Environmental Assessments Requirements. Westconnex traffic modelling relies on implausible traffic volumes that exceed the capacity of the road links and intersections at several key locations.

- The great number of heritage houses in the Rozelle interchange construction zone has not been specifically addressed. Noise and vibration impacts can have far more significant impacts on these types of properties. There is no functional management plan for these risks, no articulated complaints investigation process nor any articulated compensation and remediation strategy.

- This is despite the RMS being the client for the Sydney Motorways Corporation. It would appear this is a deliberate strategy of the NSW Government to ensure local communities affected by construction traffic have no reasonable means of managing any complaint. It is undemocratic, against the principles of open government espoused in the election platform of the current government and ultimately escalates community unrest.(P 8-44)

- The EIS states that 'a preferred noise mitigation option' would be determined during 'detailed design'. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xi)

- I object strongly to AECOM's approach to heritage. The methodology used is simply to describe heritage. If it interrupts the project plans, it simply must be destroyed. This is not an assessment at all. Plans to salvage items do have value but this value should not be used as a carrot to justify the removal of buildings.

- The project objectives (Part 3.3 of EIS) include enabling the construction of motorways over the harbour and to the northern beaches. However, the traffic impacts of these motorways in Rozelle have not been assessed. These projects were not part of the business case that justified the WestConnex in the first place. This constant shifting of reasoning as to why the project is justified points to a desperation to find a reason to build it, rather than there being a clear need to be serviced.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-MS Link proposals as contained in the EIS application, for the following reasons:

1. I do not accept that King Street traffic congestion will be improved by this project. There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.

2. EIS 6.1 (Synthesis, Page 45) states: "... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ing) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57).

3. I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.

4. Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?

5. An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is up to a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

◊ The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?

◊ I am concerned that while the EIS finds that tolls do weigh more heavily on lower income motorists, there is no serious analysis of the blatant unfairness of letting of private consortium toll people for decades in order to pay for less profitable tollways for wealthier communities.

◊ The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

◊ We object to the selection of the Darley Road site on the basis that it provides for daily movements of 170 heavy and light vehicles accessing Darley Road. This creates an unacceptable risk to the safety of pedestrians accessing the North Leichhardt light rail stop as well as bicycle users accessing the bicycle route on Darley Road and entering Canal road to join the dedicated bike paths on the bay run. Many school children cross at this point to walk to Orange Grove and Leichhardt Secondary College. The EIS states that an alternative truck movement is proposed which involves use of the City West Link with no trucks to access Darley Road. The selection of Darley Road should not be approved if it involves any truck movements on Darley Road, which is what it currently provides.

◊ I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.

◊ The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).

◊ It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- 1,1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.

- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.

- 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.

- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation. M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name __________________________ Email __________________________ Mobile __________________________
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- 1,1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.

- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.

- 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.

- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.

- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation. M4 East and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

A. Experience has shown that construction and other plans by WestCONnex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONnex.

B. Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.

C. I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

D. The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.

E. Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.

F. It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle.

G. Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.

H. A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a 'temporary' imposition.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

I. The EIS social and economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.

II. The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct or not.

III. The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.

IV. I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.

V. The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to $20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.

VI. Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a 'community strategy'. Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

VII. The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.

VIII. I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

**Campaign Mailing Lists:** I would like to volunteer and/or be informed about the anti-WestConnex campaigns. My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name __________________________ Email __________________________ Mobile __________________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

I. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me. These impacts are not been taken into account of evaluating the cost of WestCONnex.

II. The social and economic impact study fails to record the great concern for valued Newtown heritage. No compensation is suggested.

III. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.

IV. The consultants for the Social and Economic Impact study is Hill PDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. Hill PDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.

V. The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.

VI. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.

VII. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.

V. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.

VI. The EIS acknowledges that ‘rat running’ by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.

VII. The EIS refers to be construction impacts as being ‘temporary’. I do not consider a five year construction period to be temporary.

VIII. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.

- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)

- Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.

- I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.

- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)

- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name ___________________________ Email ___________________________ Mobile ___________________________
I object to the WestConnex M4-M5 Link proposals for the following reasons:

➢ I do not accept that King Street traffic congestion will be improved by this project. There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.

➢ EIS 6.1 (Synthesis, Page 45) states. “…… this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. It is unstated just who would have responsibility for such a “review(ed) for consistency”, and how these changes would be communicated to the community. The EIS should not be approved till significant ‘uncertainties’ have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)

➢ I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.

➢ Why is there no detailed information about the so called ‘King Street Gateway’ included in the EIS?

➢ An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow ‘swoosh’ that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be ‘encouraged’ to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that ‘definitive’ rather than ‘indicative’ alignments could be published. The EIS should be withdrawn till such time that it is a true and fair ‘definitive’ document open for genuine public comment.

The presence of 170 heavy and light vehicle movements a day at this site will create an unacceptable risk to students. The EIS should not permit any truck movements near the Darley Road site. The alternative proposal which provides that all spoil trucks enter and leave from the City West link is the only proposal that should be considered.

The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.

We object to the location of the Darley Road civil and construction site because the site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of leichhardt and the inner west to access and cross the City West Link. It is already congested at peak hours and the intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.

The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.

I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

Night works – Leichhardt. The EIS states that to minimize disruptions to traffic on the existing road network (including in peak hours) there will be night works where appropriate. Given the congested nature of Darley Road, it is likely there will be frequent night work (EIS, 6.4). This will create an unacceptable impact in residents. It is unacceptable that a highly unsuitable site has been selected. And, instead of a proper plan to manage traffic, the EIS contemplate work simply occurring at night. This is objected to in the strongest terms.

The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, UTS and the CBD.

There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.

The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.

The EIS states that investigation would be undertaken to confirm whether the Victoria Road bridge is a potential roost site for microbats. There will be attempts to 'manage potential impacts' if confirmed. This is inadequate. The project should not be permitted to impact on vulnerable species.

I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.

- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)

- Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.

- I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New MS. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.

- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- Vegetation: Leichhardt. The mature trees on the Darley Road site should be preserved. If any trees are removed during construction it should be a condition of approval that they are replaced with mature trees.

- It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With four unfiltered emissions stacks in the area plus a large number of exit portals, the residents of this area will suffer greatly from poisonous diesel particulates. This is negligent when you consider that, the World Health Organisation in 2012 declared diesel particulates carcinogenic. “As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, “No ventilation shafts will be built near any school.”

- Insufficient time has been given for the community to prepare submissions to the EIS, especially when one considers that whole neighbourhoods affected by the project were not even notified during the concept design period. e.g Newtown, east of King St.

- All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a strict prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. The EIS needs to prohibit outright truck movements (including parking) and worker parking on all of these streets.

- 1,1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.

- There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to measure or mitigate the cumulative impact of these prolonged periods of construction noise exposure.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project’ and ‘damage’ would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.

- Where is the commitment to community consultation and to long term planning when the EIS for the M4/M5 Link is released before any response to the extensive community feedback on the M4-M5 Link concept design could possibly have been seriously considered. This demonstrates deep government contempt for the people of NSW and the communities of the Inner West of Sydney in particular.

- The EIS identifies hundreds of risks at different construction sites. It relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the “detailed design” phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.

- Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.

- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling).
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution—most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.

It is clear from the EIS that spoil truck movements will not be confined to the City West link. At a community consultation it was revealed that trucks removing spoil at Camperdown would very likely be travelling from the James Craig Rd area and in that case would be using the additional lane on the Crescent and then turning right up Johnston St. This is totally CONTRARY to what concerned residents had been promised would not happen. It is clear that any assurances given to the community in past consultations are totally disregarded without consultation later. This is unacceptable.

Heart disease will skyrocket due to air pollution caused by Westconnex bringing more cars into the Inner West says Paul Torzillo, Head of Respiratory medicine at Royal Prince Albert Hospital. Inner West Courier 23rd May 2017

The EIS states “that without the ‘construction scenario’ the City West Link/The Crescent and The Crescent/James Craig Road intersections are forecast to operate satisfactorily at LoS D or better in both Peak periods. With the ‘construction scenario’ the operational performance at the intersections is forecast to worsen”. And after 5 years of construction and the spending of more than $18 Billion the outcome at these locations will be worse:

The Concept Design was a woefully inadequate document totally devoid of any real depth of detail in terms of maps, scales, distances with only vague suggestions and glamorized Artist’s Impressions of an idealized view of what Stage 3 would be like. It was another example of current city planning documents that consistently accentuate huge areas of tranquil green spaces with families and children out walking and riding bicycles in idealized parks and suburbs. All this is total PR spin and bears no reality about the real outcome of the build. It bears no reality as to what Stage 3 of Westconnex will be like.

The removal of spoil at the Rozelle Rail Yards will lead to the largest amount of Spoil truck movements on the entire Stage 3 project: 517 Heavy truck movements a day, of which 46 are stated to take place at Peak hours. There will also be 10 Heavy truck movements a day from the Crescent Civil Site. The sheer number of trucks on the road will lead to massive increases in congestion. Maps in the EIS have the spoil trucks going to and from these sites from the Haberfield direction on the City West Link. This is also the direction that is being proposed for spoil truck movements from Darley Rd which is said to have 100 Heavy truck movements a day. It is stated that the cumulative effect of truck movements from all sites on the City West Link will be 700 (one way) Heavy truck movements a day and of that 208 will be in Peak hours. This plan totally lacks credibility

- The Concept Design was a woefully inadequate document totally devoid of any real depth of detail in terms of maps, scales, distances with only vague suggestions and glamorized Artist’s Impressions of an idealized view of what Stage 3 would be like. It was another example of current city planning documents that consistently accentuate huge areas of tranquil green spaces with families and children out walking and riding bicycles in idealized parks and suburbs. All this is total PR spin and bears no reality about the real outcome of the build. It bears no reality as to what Stage 3 of Westconnex will be like.

- The City West Link Eastbound AM and PM peak hour and other locations. “Table 7-19 shows that several locations are forecast to exceed theoretical roadway capacity with the increased background traffic and the construction traffic in the 2021 AM and PM peak hours. However, traffic on the majority of these roads would exceed their theoretical capacity even without the construction traffic, simply due to the growth in background traffic”. So in the full knowledge that this area will be at capacity in 2021, massive amounts of construction traffic are going to be added for the whole construction period of 5 years. Even on completion it is stated in the EIS that traffic will be worse in this area than ‘without the project’. This categorically shows that the planning of Westconnex is totally inadequate and needs major changes. It also shows that when completed Westconnex will not work. It is abundantly obvious that Rail/Metro is the only option to radically overhaul Sydney’s failed transport systems.

- The Health costs of outdoor Air Pollution in Australia are up to $8.4 Billion a year. The Health costs of Particulate Pollution in the Sydney Greater Metropolitan area is around $4.7 Billion a year. With no filtration on the Westconnex tunnels these Health costs will rise substantially.

- Along with the widening of the Crescent at Annandale the White’s Creek bridge is to be rebuilt. This will mean that the road in this area will be reduced in width as first one side of the bridge is rebuilt followed by the other. Added to the additional volume of trucks from the Rozelle Rail Yards, the Crescent Civil site and the Camperdown site this is going to lead to massive congestion on Johnston St and all along the Crescent towards Ross St and make it virtually impossible for residents to exit and return to their local area. It is most likely that the commercial sectors of the Transsheds development will be badly affected.

- Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution—most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.

- Motor vehicles account for 14% of Particulate Pollution of 2.5 microns and less in Australia. There is no safe level to exposure to particulate matter of 2.5 microns and less. Particulate matter is linked with Asthma, Lung Disease, Cancer and Stroke.

Name _____________________________ Email _____________________________ Mobile _____________________________
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- Experience has shown that construction and other plans by WestCONnex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONnex.

- Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers no solution other than to go ahead.

- I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

- The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.

- Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.

- It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle.

- Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.

- A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a 'temporary' imposition.

Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

Address: Suburb: Alexandria Postcode: 1111

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

i. The site should be returned to the community as compensation for the imposition of this construction site in our neighbourhood for a 5 year period. If the substation and water treatment plant is moved to the north of the site, then the lower half of the site (which is the most accessible end) could be converted into open space with mature trees planted. As this site is immediately adjacent to the bay run, bicycle parking and other facilities that support active transport could be included. This would result increase the green space for residents and result in a pleasant green environment for pedestrians, rather than a fenced facility.

ii. Why the so called 'King Street Gateway' been excluded in the analysis of cumulative impacts of other projects?

iii. I am concerned that the AECOM, the company responsible for the EIS, always approves knocking down heritage buildings if the project requires it. It doesn't how much value it holds for the community, it must always be destroyed.

iv. No workers associated with the WestConnex project should be permitted to park on local streets. Parking is at a premium in this area and many residents to not have off-street parking. The removal of 20 car spaces for five years as is proposed on Darley Road will worsen this situation as will the removal of 'kiss and ride facilities' at the light rail. There is also a pre-DA application for 120 units on William Street which is not taken into account in the EIS. This will place further stress on parking. The EIS needs to outright prohibit any worker parking on local streets.

v. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

vi. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.

vii. A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a 'temporary' imposition.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name __________________________ Email __________________________ Mobile __________________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.

- The social and economic impact study fails to record the great concern for valued Newtown heritage.

- The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.

- The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.

- The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.

- The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.

- The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.

- Table 6.1 in Appendix Q (Social and Economic Impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

I. The EIS social and economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.

II. The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.

III. The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.

IV. I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.

V. The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to $20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.

VI. Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy". Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

VII. The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.

VIII. I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name __________________________ Email __________________________ Mobile __________________________

Please include my personal information when publishing this submission to your website.

Declaration: I HAVE NOT made any reportable political donations in the last 2 years.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I do not accept that King Street traffic congestion will be improved by this project. There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51,000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.

- EIS 6.1 (Synthesis, Page 45) states: "...this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie: the Sydney Water Tunnels issues at 12-57).

- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.

- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?

- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- The EIS uses the term ‘construction fatigue’ to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality ‘construction fatigue’ means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of ‘construction fatigue’. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.

- In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer’s report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.

- The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and Environment Court found that the location of the site couldn’t safely deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.

- It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.

- The EIS identifies hundreds of risks at different construction sites. It relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the “detailed design” phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.

- EIS social impact study states that “the health and safety of residents should be prioritised around construction areas” - this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

1. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.

2. The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.

3. The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.

4. The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.

5. It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning complacently agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

In these circumstances it would be outrageous for motorists to be asked to pay up to up to $20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.

- Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a ‘community strategy’. Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

- The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.

- I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name __________________________ Email __________________________ Mobile __________________________
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.

- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)

- Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. There is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.

- I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.

- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

**Campaign Mailing Lists:** I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

I object to the WestConnex M4-M5 Link proposals for the following reasons:

A. THE LATEST EIS WAS RELEASED JUST TEN BUSINESS DAYS AFTER FEEDBACK PERIOD ENDED FOR THE CONCEPT DESIGN FOR THE M4/M5 AND BEFORE PRELIMINARY DRILLING TO ESTABLISH A ROUTE THROUGH THE INNER WEST IS COMPLETED. WHAT IS THE RUSH? THIS EIS IS LITTLE MORE THAN A CONCEPT DESIGN AND IS FAR LESS DEVELOPED THAN EARLIER ONES. IT IS COMPOSED OF MANY INDICATE ONLY PLANS SUCH THAT IT IS IMPOSSIBLE TO KNOW WHAT THE IMPACTS WILL BE AND YET APPROVAL IS BEING SOUGHT IN A RUSH. THE EIS IGNORES MORE THAN 1500 SUBMISSIONS, INCLUDING ONE OF 142 PAGES FROM THE INNER WEST COUNCIL.

B. ONE TOLL ROAD LEADS TO ANOTHER 3 BEING PROPOSED. THE EIS'S FOR THE M4 EAST AND THE NEW M5 ARGUED THE CASE THAT SERIOUS CONGESTION CREATED NEAR INTERCHANGES WOULD BE SOLVED ONCE THE M4/M5 WAS BUILT. NOW IT SEEMS THIS IS NOT THE CASE AND MORE ROADS WILL BE NEEDED TO RELIEVE THE CONGESTION — WHERE DOES THIS END? ACCORDING TO THE M4/M5 EIS THE REAL BENEFITS WILL DEPEND ON BUILDING THE WESTERN HARBOUR TUNNEL, THE AIRPORT LINK AND A TOLLWAY HEADING SOUTH. NONE OF THESE PROJECTS HAVE BEEN PLANNED, LET ALONE APPROVED BUT YET ARE PART OF ADDRESSING THE CONGESTION IMPACTS ACKNOWLEDGED FOR THE M4/M5 LINK PROJECT. GIVEN THIS HOW IS IT POSSIBLE TO KNOW OR ADDRESS THE IMPACTS OF THE M4/M5 LINK, UNLESS THIS IS JUST YET MORE JUSTIFICATION FOR YET MORE ROADS?

C. RESEARCH ABOUT ROADS CLEARLY DEMONSTRATES THAT ROADS CREATE CONGESTION. THE WESTCONNEX PROJECT IS NO DIFFERENT AND THE EIS CLEARLY INDICATES THAT THIS IS AN IMPACT OF THE M4/M5 AND THE CONSEQUENT ROADS THAT WILL FOLLOW. WHERE WILL THIS END AS THE M4/M5 LINK EIS ITSELF INDICATES THE RMS IS ALREADY HARD AT WORK CONSIDERING HOW TO SOLVE THESE PROBLEMS — OF CONGESTION CAUSED BY ROADS.

D. WHERE IS THE COMMITMENT TO COMMUNITY CONSULTATION AND TO LONG TERM PLANNING WHEN THE EIS FOR THE M4/M5 LINK IS RELEASED BEFORE ANY RESPONSE TO THE EXTENSIVE COMMUNITY FEEDBACK ON THE M4-M5 LINK CONCEPT DESIGN COULD POSSIBLY HAVE BEEN SERIOUSLY CONSIDERED. THIS DEMONSTRATES DEEP GOVERNMENT CONTEMPT FOR THE PEOPLE OF NSW AND THE COMMUNITIES OF THE INNER WEST OF SYDNEY IN PARTICULAR.

E. THE EIS WAS PREPARED BY GLOBAL ENGINEERING FIRM AECOM, WHICH ALSO PREPARED THE EIS FOR STAGES 1 AND 2. WHEN HE APPROVED THESE EARLIER STAGES, THE THEN MINISTER FOR PLANNING ROB STOKES POINTED TO CONDITIONS OF APPROVAL THAT WOULD MINIMISE IMPACTS ON COMMUNITIES. BUT THE IMPACTS HAVE TURNED OUT TO WORSE THAN EXPECTED.

F. FOR EXAMPLE, THE AECOM EIS FOR THE NEW M5 FAILED TO DEAL WITH HOW THE MASSIVELY CONTAMINATED LAND FILL AT ALEXANDRIA WOULD BE MANAGED DURING CONSTRUCTION. AFTER MONTHS OF SICKENING ODOURS, THE NSW EPA ADMITS THAT DESPITE FINING SMC AND REQUIRING CONTRACTORS TO TAKE MEASURES TO CONTROL ODOURS, THEY HAVE NOT STOPPED. IT ACKNOWLEDGES THAT IT DOES NOT HAVE THE POWER TO STOP WORK UNTIL WESTCONNEX CONTRACTORS COMPLY WITH ENVIRONMENTAL REGULATIONS.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

1. The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statements.

2. The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.

3. The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable.

4. The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.

5. It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.

6. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5.

7. The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- I do not accept that King Street traffic congestion will be improved by this project. There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.

- EIS 6.1 (Synthesis, Page 45) states “…… this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. It is unstated just who would have responsibility for such a “review(ed) for consistency”, and how these changes would be communicated to the community. The EIS should not be approved till significant ‘uncertainties’ have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57).

- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.

- Why is there no detailed information about the so called ‘King Street Gateway’ included in the EIS?

- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow ‘swoosh’ that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be ‘encouraged’ to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that ‘definitive’ rather than ‘indicative’ alignments could be published. The EIS should be withdrawn till such time that it is a true and fair ‘definitive’ document open for genuine public comment.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name: ___________________________ Email: ___________________________ Mobile: ___________________________
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application SSI 7485, for the reasons set out below.

Name: Michael Carlton
Signature: 

Please include my personal information when publishing this submission to your website.

Declaration: I have not made any reportable political donations in the last 2 years.

Address: 307/ 32 Alice St, Newtown, NSW 2042

Submission to: Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001

Application Number: SSI 7485 Application
Application Name: WestConnex M4-M5 Link

- The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other. The increasing numbers of vehicles will also increase the vehicle pollution (known to have adverse effects on breathing and also to be carcinogenic) in this area.

- The mechanical ventilation proposed depends on single direction tunnel construction, so how it can possibly work for large curved tunnels on multiple levels is unknown.

- The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.

- The EIS proposes removal of all vegetation on the Darley Road site. There is a mature tree located on the site which serves as a visual and noise barrier to the heavy City West Link traffic. Removal of this tree and other vegetation will increase noise impacts to nearby residents and affect the visual amenity, with homes having a direct line of sight to the City West Link. The existing mature tree needs to be retained on this and environmental grounds.

- The EIS needs to provide specific detail as to what will be provided by way of alternative accommodation to the 36 residents identified as suffering extreme noise interference. There is no plan to temporarily relocate such residents, not to offer them financial compensation to enable them to move out during the worst period. There is an estimated 10 weeks of extreme noise during demolition of the commercial building and preparatory road works. Once this work is finished the residents will also be forced to endure a truck every 304 minutes for a period of five years. It is clearly not possible for such residents to continue to live in these houses and the EIS needs to detail what will be provided in terms of alternative living arrangements for part, or all of the construction work period.

- The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

I. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.

II. The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.

III. The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.

IV. The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.

V. It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- The EIS social and economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.

- The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.

- The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.

- I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.

- The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to $20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.

- Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a 'community strategy'. Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

- The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.

- I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- 1.1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.

- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.

- 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.

- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.

- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation. M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

---

**Campaign Mailing Lists**: I would like to volunteer and/or be informed about the anti-WestConnex campaigns. My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.

- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)

- Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.

- I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.

- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns. My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name: __________________________ Email: __________________________ Mobile: __________________________
I submit my objection to the WestConnex M4-M5 Link proposals for the reasons stated below, and request the Minister reject the application entirely, and cause the proponents to reissue an EIS that is based on a fully researched, developed, and budgeted concept design, and require the proponents to prepare a new business case against that design.

- Rozelle Rail Yards and Rozelle Civil Site. It is clear that the most highly affected area of Stage 3 will be the Rozelle area and the massive and hugely complex Rozelle interchange. The suggestion that Westconnex is capable of building this is highly questionable. Nothing like this has been built anywhere else in the World. Considering the simple problems of dust management, noxious gasses and the handling of toxic materials like asbestos that have been so inappropriately dealt with on Stages 1 and 2 by Westconnex this intersection of Stage 3 is a disaster waiting to happen and should definitely not be allowed to proceed without a massive investigation. What has been shown in the EIS is totally inadequate for this project to be allowed to proceed.

- Human health risk (Executive Summary xvi). The EIS states that there may be a ‘small increase in pollutant concentrations’ near surface roads. The EIS states that potential health impacts associated with changes in air quality (specifically nitrogen dioxide and particulates) within the local community have been assessed and are considered to be ‘acceptable.’ We disagree that the impacts on human health are acceptable and object to the project in its entirety because of these impacts.

- Truck routes — Leichhardt: No trucks should be permitted on Darley Road or local roads in Leichhardt or Lilyfield. The EIS proposes that all trucks will arrive at the Darley Road civil and tunnel site from Haberfield and travel along Darley Road to the site, with a right-hand turn now permitted into James Street. The proposed route will result in a truck every 3-4 minutes for 5 years running directly by the small houses on Darley Road. These homes will not be habitable during the five-year construction period due to the unacceptable noise impacts. The truck noise will be worsened by their need to travel up a steep hill to return to the City West Link, so the noise impacts will affect not just those homes on or immediately adjacent to Darley Road. The proposal to run trucks so close to homes is dangerous and there have been two fatalities on Darley Road at the proposed site location. The EIS does not propose any noise or safety barriers to address this. Despite the unacceptable impact to nearby homes, there is no proposal for noise walls, nor any mitigation to individual homes.

- At the western end of Bignell Lane near Pyrmont Bridge Road existing flood depth was identified up to one metre in the 100 year ARI. The NSW Government Floodplain Development Manual (2005) identifies this location as a high flood hazard area.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- Experience has shown that construction and other plans by WestCONnex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONnex.

- Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.

- I do not consider so many disruptions of pedestrian and cycle ways to be a ‘temporary’ impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

- The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.

- Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.

- It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle

- Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.

- A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a ‘temporary’ imposition.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Name: LINDA RODRIGUEZ

Signature: LINDA RODRIGUEZ

Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

Address: 26/19-25 Flinders Road

1) Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.

2) I am concerned that while hundreds of impacts on resident, including noise, loss of business, dust, and lost time through more traffic congestion, are identified in the EIS, the approach is always to recommend approval and promise vague 'mitigation' in the future. This is not good enough.

3) The EIS indicates that 36 homes will have unacceptable noise impacts for extended periods at the Darley road construction site. The EIS does not mention the cumulative impact of aircraft noise in the Leichhardt or St Peters area, and therefore does not reflect the true impact of construction noise on the amenity of nearby residents and businesses. The noise impacts of construction are not able to be mitigated to an acceptable level and the EIS should not be approved on this basis.

4) The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

5) The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.

6) I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.

7) It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle.

8) The EIS states that after the M4-M5 opens, that traffic on Darley Road will increase by 4%. There is no benefit in the overall project for residents. During construction westbound traffic will increase on Darley Road by 37%. This increase in traffic for a period of up to five years will make it hazardous to cross the road and access the light rail and travel to Blackmore oval, the bat run, the dog park and the Leichhardt pool. In addition, it will drastically increase both local traffic and outer area traffic at peak commute times. We therefore object to the location of this site based on the unacceptable traffic impacts it will have on road users and on residents.

I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS:

1. The proposed work hours for the Rozelle Rail Yards are tunnelling and spoil handling 24 hours a day seven days a week. Civil construction Mon – Fri 7.00am – 6.00pm, Sat 8.00am – 1.00 pm. There will be no night work at The Crescent Civil Site and the daytime hours are stated to be the same as at the Rozelle Rail Yards. However as has been experienced by those at Haberfield and St Peters these hours and especially late and night work have been extended and implemented when the schedule has fallen behind and this has lead to physical and mental stress for many residents through interrupted sleep and loss of sleep especially with children. The roads and sites at night in the area will see a marked increase in noise from truck movements, truck reversing alarms and running machinery. It will also see a marked increase in light during the night hours with site illumination and vehicle head lights as has been experienced in other areas. These problems have not been properly addressed and are not adequately dealt with in the EIS.

2. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

3. I am concerned that the EIS provides no reasons why the City of Sydney’s alternative plan might not be preferable to the proposed WestCONnex.

4. Why the so called ‘King Street Gateway’ been excluded in the analysis of cumulative impacts of other projects?

5. A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a ‘temporary’ imposition.

6. The EIS lacks sufficient focus on traffic congestion in the suburbs of Alexandria and Erskineville. Are these being ignored because they will be even more congested than currently?

7. There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

A. The latest EIS was released just ten business days after feedback period ended for the Concept Design for the M4/M5 and before preliminary drilling to establish a route through the Inner West is completed. WHAT IS THE RUSH? This EIS is little more than a concept design and is far less developed than earlier ones. It is composed of many indicate only plans such that it is impossible to know what the impacts will be and yet approval is being sought in a rush. The EIS ignores more than 1500 submissions, including one of 142 pages from the Inner West Council.

B. One toll road leads to another 3 being proposed. The EIS’s for the M4 East and the New M5 argued the case that serious congestion created near interchanges would be solved once the M4/M5 was built. Now it seems this is not the case and more roads will be needed to relieve the congestion – WHERE DOES THIS END? According to the M4/M5 EIS the real benefits will depend on building the Western Harbour Tunnel, the Airport Link and a tollway heading South. None of these projects have been planned, let alone approved but yet are part of addressing the congestion impacts acknowledged for the M4/M5 Link project. Given this how is it possible to know or address the impacts of the M4/M5 Link, unless this is just yet more justification for yet more roads?

C. Research about roads clearly demonstrates that roads create congestion. The WestConnex project is no different and the EIS clearly indicates that this is an impact of the M4/M5 and the consequent roads that will follow. WHERE WILL THIS END AS THE M4/M5 Link EIS ITSELF INDICATES THE RMS IS ALREADY HARD AT WORK CONSIDERING HOW TO SOLVE THESE PROBLEMS – OF CONGESTION CAUSED BY ROADS.

D. Where is the commitment to community consultation and to long term planning when the EIS for the M4/M5 Link is released before any response to the extensive community feedback on the M4-M5 Link concept design could possibly have been seriously considered. This demonstrates deep government contempt for the people of NSW and the communities of the Inner West of Sydney in particular.

E. The EIS was prepared by global engineering firm AECOM, which also prepared the EIS for Stages 1 and 2. When he approved these earlier stages, the then minister for Planning Rob Stokes pointed to conditions of approval that would minimise impacts on communities. But the impacts have turned out to worse than expected.

F. For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledge that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name __________________________ Email __________________________ Mobile __________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

1. The heritage impacts of WestCONnex Stage 3 need to be seen in the light of the appalling wholesale destruction that has already taken place in St Peters and Haberfield. Scores of houses and industrial buildings were torn down for tollways that will not solve traffic congestions. Always the cost of destruction is undervalued and the benefits of WestCONnex promoted. Whenever WestCONnex wants to tear down buildings or put them at risk it is backed by the EIS evaluation. This is not objective and it is not in the public interest.

2. I object strongly to AECOM’s approach to heritage. The methodology used is simply to describe heritage. If it interrupts the project plans, it simply must be destroyed. This is not an assessment at all. Plans to salvage items do have value but this value should not be used as a carrot to justify the removal of buildings.

3. The EIS claims to have saved Blackmore Park and Easton Park, Rozelle, due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.

4. There has never been any proper assessment of the cumulative impacts on heritage of the WestCONnex project. The loss of heritage in Concord, Haberfield and St Peters has been on a large scale and now the Stage 3 EIS shows that the M$/M5 tunnel would further add to this loss.

5. Heritage items - Camperdown. The EIS also acknowledges that the use of a rock-breaker at the outer extents of the project footprint will affect 73 residences, with five heritage items identified as having the potential to be within the ‘minimum safe working distance’. While some mitigation ‘considered’, it is not mandated and the requirement to mitigate is limited to ‘where feasible and reasonable’. The mitigation proposed seems in any event to comprise letter-boxing residents about the likely impacts! The protection of heritage items should be mandated, not just considered and there should be a strict requirement to protect such heritage items.

6. I object to the assessment of the removal of buildings, other rail infrastructure and vegetation on the Rozelle Railway Yards being done in advance of this EIS. The RMS environmental assessment process is not publicly accountable. These works were part of the WestConnex project and should have been assessed as part of Stage 3.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.

- I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

- Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)

- Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. There is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.

- I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.

- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name __________________________ Email __________________________ Mobile __________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.

- The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.

- The Air quality data is confusing and is not presented in a form that the community can interpret. The lack of clarity leads to a suspicion that areas of concern are being covered up.

- I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.

- The EIS acknowledges that impacts of construction should M4M5 get approval will worsen traffic congestions on Parramatta Rd. In these circumstances it would be outrageous for motorists to be asked to pay up to up to $20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.

- Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy". Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

- The EIS acknowledges that four years of M4/M5 construction would have a negative economic and social impact across the Inner West through interrupted traffic routes, slower traffic times, disruption with public transport, interruption with businesses and loss of connections across communities. This finding highlights the need for a proper cost benefit analysis for the project. Such social costs should not simply be dismissed with the promise of a construction plan into which the community has not input or powers to enforce.

- I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

I. The EIS does not provide appropriate parking for the estimated 100 or so workers that the EIS states will work every day at the site, while other equivalent sites have allocated parking for such workers (Northcote Civil site (150)) and Parramatta Road East Civil site (140). It is also noted that the EIS provides for loss of 20 residential parks on Darley Road. Local streets are at capacity already because of the lack of off-street parking for many residents and the Light Rail stop which means that commuters use local streets. The EIS states that workers ‘will be encouraged to use public transport.’ the EIS needs to mandate that no trucks or construction vehicles are to park in local streets. There needs to be a requirement that is enforceable that workers use the Light Rail stop which is adjacent to the site or a plan to bus in workers.

II. The EIS does not require an acoustic shed and states that ‘Acoustic barriers and devices at the access tunnel entrances would be considered and implemented where reasonable and feasible to minimise potential noise impacts associated with out-of-hours works within the tunnels.’

III. The EIS contains no detail of the access tunnel from the Darley Road site to the mainline tunnel other than depicting the route. The approval conditions need to ensure that tunnelling is occurring at sufficient depth so as to not jeopardise the integrity of the homes and not create unacceptable vibration and noise impacts for James Street residents and those at adjacent streets. The approval conditions need to make clear the period of time for which the ‘temporary’ tunnel is to be used.

IV. The EIS states that ‘a preferred noise mitigation option’ would be determined during ‘detailed design’. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi)

V. The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.

VI. Light construction vehicle routes – the EIS acknowledges that these vehicles will use ‘dispersed’ routes (8-62). In other words, construction vehicles will use and park on local roads. The EIS does not propose any management as to which roads they use. The addition of 70-100 light vehicle movements day in Leichhardt will result in our small, congested streets, which are already at capacity and suffering parking shortages, will have the added impact of workers travelling to and from the site and parking in local streets. There will be rat running. The EIS should provide an agreed route (using arterial roads only) that can be used by all vehicles associated with the project.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Submission to: Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001
Attn: Director – Transport Assessments
Application Number: SSI 7485
Application Name: WestConnex M4-M5 Link

a. The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area. Further, Buruwan Park lies on a major cycle route from Railway Parade through to Anzac Bridge, UTS and the CBD.

b. There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.

c. The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.

d. Night works – Leichhardt. The EIS states that to minimize disruptions to traffic on the existing road network (including in peak hours) there will be night works where appropriate. Given the congested nature of Darley Road, it is likely there will be frequent night work (EIS, 6.4). This will create an unacceptable impact in residents. It is unacceptable that a highly unsuitable site has been selected. And, instead of a proper plan to manage traffic, the EIS contemplate work simply occurring at night. This is objected to in the strongest terms.

e. The EIS states that investigation would be undertaken to confirm whether the Victoria Road bridge is a potential roost site for microbats. There will be attempts to 'manage potential impacts' if confirmed. This is inadequate. The project should not be permitted to impact on vulnerable species.

f. I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

g. I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.

Name _______ Email _______ Mobile _______
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

1. The social and economic impact study notes the high value placed on community networks and social inclusion but does nothing to seriously evaluate the social impacts on these of WestCONnex. Any genuine assessment would draw on experience with the New M5 and M4 East rather than ignoring it. This lack of genuine engagement with social impact reduces the study to the level of a demographic description and a series of bland value statements.

2. The EIS states that spoil haulage hours will be restricted but ignores the fact that the same was promised for the M4 East but these promises have been ignored repeatedly.

3. The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable.

4. The impacts on The Crescent and Annandale are massive and were not sufficiently revealed in the Concept Design to enable residents to give feedback on the negative impacts on communities and businesses in the area.

5. It is clear from reading the EIS that the impacts of the project on traffic congestion and travel times across the region during five years of construction will be negative and substantial. Five years is a long time. At the end of the day, the result of the project will also be more traffic congestion although not necessarily in the same places as now. There needs to be a serious cost benefit analysis before the project proceeds further.

6. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downplays concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. The raises the question of whether this is a result of the failure of SMC to notify impacted residents including those on the Eastern Side of King Street and St Peters about the potential impacts of the M4 M5.

7. The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name: ____________________________  Email: ____________________________  Mobile: ____________________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. I am deeply disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.

2. This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.

3. Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.

4. The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.

5. It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.

6. I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.

7. I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.

8. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).

9. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.

10. I have read the warm and caring words contained in the EIS, ref Sustainability Management Strategy. What purpose do these serve if they are not reflected in actual plans. They simply highlight the wanton destruction of homes, trees and habitat already.

11. There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.

**Please Include / Delete (Cross Out or Circle) my personal information when publishing this submission to your website.**

**Declaration**: I HAVE NOT made any reportable political donations in the last 2 years.
I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS.

**Alternative truck movement proposal – Leichhardt:**

4. The EIS states that an alternative truck movement is proposed which involves use of the City West Link and no need for spoil trucks to access Darley Road. This proposal is supported, subject to further information about potential impacts being provided. The EIS should not be approved on its current basis which provides for 170 heavy and light vehicles accessing Darley Road on a daily basis. This will create unacceptable safety issues and noise impacts for adjacent homes while also compromising pedestrian and bicycle access to the light rail and bay run. It will also lead to truck chaos on this critical arterial road providing access to and across the City West Link. The current proposal which provides for truck movements solely on Darley Road should not be approved and approval should only be given to the alternative proposal. I repeat however my objection to the selection of this site altogether, but propose the least worst impact should be chosen if this site is to be used.

**Noise impacts – Leichhardt:**

5. The EIS indicates that 36 homes will have unacceptable noise impacts for extended periods at the Darley road construction site. The EIS does not mention the cumulative impact of aircraft noise in the Leichhardt or St Peters area, and therefore does not reflect the true impact of construction noise on the amenity of nearby residents and businesses. The noise impacts of construction are not able to be mitigated to an acceptable level and the EIS should not be approved on this basis.

**Alternative truck movement proposal – Leichhardt:**

6. We object to the selection of the Darley Road site on the basis that it provides for daily movements of 170 heavy and light vehicles accessing Darley Road. This creates an unacceptable risk to the safety of pedestrians accessing the North Leichhardt light rail stop as well as bicycle users accessing the bicycle route on Darley Road and entering Canal road to join the dedicated bike paths on the bay run. Many school children cross at this point to walk to Orange Grove and Leichhardt Secondary College. The EIS states that an alternative truck movement is proposed which involves use of the City West Link with no trucks to access Darley Road. The selection of Darley Road should not be approved if it involves any truck movements on Darley Road, which is what it currently provides.

**Parking – Leichhardt:**

7. No workers associated with the WestConnex project should be permitted to park on local streets. Parking is at a premium in this area and many residents to not have off-street parking. The removal of 20 car spaces for five years as is proposed on Darley Road will worsen this situation as will the removal of ‘kiss and ride facilities’ at the light rail. There is also a pre-DA application for 120 units on William Street which is not taken into account in the EIS. This will place further stress on parking. The EIS needs to outright prohibit any worker parking on local streets.

I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS.

Local roads - prohibited truck movements – Leichhardt:
01. All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a strict prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. The EIS needs to prohibit outright truck movements (including parking) and worker parking on all of these streets.

Unacceptable construction noise impacts – Leichhardt:
02. The EIS states that construction noise levels would exceed the relevant goals without additional mitigation. The additional mitigation is mentioned but not proposed. All possible mitigation should be included as a condition of approval. The EIS acknowledges that substantial above ground invasive works will be required to demolish the Dan Murphys building and establish the road. The EIS noise projections indicate that for 10 weeks residents will suffer unacceptable noise impacts. The EIS does not contain a plan to manage or mitigate this terrible impact. There is no detail as to which homes will be offered (if at all) temporary relocation; there are no details of any noise walls or what treatments will be provided to individual homes that are badly affected. The approval needs to contain detail as to how this unacceptable impact will be managed and minimised during the construction period and, in particular, during site establishment. I object to the selection of the Darley Road site on the basis that the works required (demolition and surface works) will create unacceptable and unbearable noise and vibration impacts for extended periods. The EIS indicates that at least 36 homes will basically be unlivable during this period. In addition, the planned 170 heavy and light vehicles will considerably worsen the impact of construction noise.

No mention of aircraft noise – Leichhardt:
03. The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.

Risk of accidents – Leichhardt:
04. I object to the proposal to the Darley Road civil and tunnel site because of the unacceptable risk it will create to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW’s own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.
I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS.

○ The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment). The risk of ground movement is lessened where tunnelling is more than 35 metres. However, it is proposed to tunnel at 29 metres under Hawthorne Parade Haberfield and only 35 metres at Elswick Street North. This proposed tunnel alignment creates an unacceptable risk of ground movement. (Executive Summary, xvii). The EIS states that damage will be rectified at no cost to residents with no detail as to how this will occur or the likely extent of property damage. The project should not be approved on the basis that it creates a risk of property damage that cannot be mitigated against so as to bring the risk to an acceptable level.

○ The Hawthorne canal, which is the closest waterway to the Darley Road site, is described in the EIS as a 'sensitive receiving environment'. (Executive Summary, xix). Darley Road is a contaminated site with asbestos and the water treatment plant to be established during construction proposes running water from the treatment plant directly into the waterways. The permanent water treatment plant will involve water from the tunnel discharged to local stormwater systems and waterways, therefore this is a permanent impact. This proposal will further compromise the quality of the waterway and impact on the four rowing clubs in close vicinity.

○ The EIS states that there may be impacts from flooding which, amongst other things, may disrupt drainage systems. There is no detail as to how the issues with flooding at Darley Road will be managed and on their potential impact on the area. (Executive Summary, xxi)

○ The EIS states that all vegetation will be removed on the site which includes a mature tree. I object to the removal of the tree which creates a visual and noise barrier for residents from the City West Link. If the tree is removed it must be replaced with a mature tree as soon as the remediation of the site commences.

○ The proposal for a permanent water treatment plant and substation to the south of the site on Darley Road will prevent direct pedestrian access to the light rail station. It will affect the future uses of the site once the project is completed. The facility is out of step with the area which is comprised of low rise homes and detracts from the visual amenity of the area. This site is a pedestrian hub and will be a visual blight for pedestrians, bike users and the homes that have direct line of sight to the facility. It should not be permitted on this site.

○ The substation and water treatment plant should be moved to the north end of the site near the City West Link. This will mean that the site is less visible to residents and most pedestrian access is at this end. There are no homes that will have direct line of site of the facility if it is moved. This will also enable direct pedestrian access to the light rail without the need to use the winding path at the rear of the site which creates safety issues and adds to the time required to access the light rail stop.
I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS.

Installation of a permanent motorway operations complex – Leichhardt:
I. I object to the location of a permanent substation and water treatment plant following the completion of the project on the Darley Road site. This will limit the future uses of the land and the community has been continually assured that the land, which is Government-owned, would be available for community purposes. The presence of this facility will forever prevent the ability for safe and direct pedestrian access to the light rail stop, with users required to walk down a dark and winding path. It will also limit the future use of the site. If a permanent facility is to be located then it should be moved to the north of the site so that it is out of sight of homes and has less visual impact on residents.

Tunnel depths – Leichhardt:
II. Tunnel depths the tunnel depths for the Leichhardt area as low as 35 metres. This creates and unacceptable risk of damage to homes due to settlement (ground movement). The EIS acknowledges that at tunnelling at 35 metres and less this is a real risk. There is no mitigation provided for this risk. Instead, it states that properties will be repaired at the Government’s expense. However no details or assurance as to how this will occur are provided. The project should not be approved with such tunnelling depths permitted and with no detail as to the extent of damage and how and when it will be repaired. It will lead to the situation where residents and businesses are forced to engage structural engineers and lawyers to prove that the damage was linked to Westconnex works, with no assurance that this property damage will be promptly and satisfactorily fixed.

Ventilation facilities:
III. The EIS states that, if the current proposal for ventilation facilities do not manage to achieve satisfactory environmental and health impacts, that further ventilation facilities may be proposed. This is unacceptable and the EIS does not provide the alternative locations for any such facilities and therefore the community is deprived of any opportunity to comment on their impacts. The EIS should not be approved on the basis that there may be additional ventilation facilities that are not disclosed in the EIS.

Impact on safe walking and riding to schools – Leichhardt:
IV. Many students walk or ride to Orange Grove and Leichhardt Secondary College schools via Darley Road. There are also a number of childcare centres very close to the Darley Road site. The presence of 170 heavy and light vehicle movements a day at this site will create an unacceptable risk to students. The EIS should not permit any truck movements near the Darley Road site. The alternative proposal which provides that all spoil trucks enter and leave from the City West link is the only proposal that should be considered.
I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS.

- The site should be returned to the community as compensation for the imposition of this construction site in our neighbourhood for a 5 year period. If the substation and water treatment plant is moved to the north of the site, then the lower half of the site (which is the most accessible end) could be converted into open space with mature trees planted. As this site is immediately adjacent to the bay run, bicycle parking and other facilities that support active transport could be included. This would result in increased green space for residents and result in a pleasant green environment for pedestrians, rather than a fenced facility.

- The EIS currently permits trucks to access local roads in 'exceptional circumstances', which includes queuing at the site. Given the constraints of the site (and based on experience with cars accessing the site for Dan Murphy's), queuing will be the norm and not the exception. The EIS needs to be amended to rule our queuing as an exceptional circumstance which allows trucks to use local roads.

- All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a blanket prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. These streets are not constructed for heavy vehicle movements and on this basis should also be ruled out. The EIS needs to prohibit outright truck movements including parking) and worker parking on all of these streets.

- The EIS needs to require that all workers are bussed in or use public transport such as the light rail with no parking whatsoever permitted on local roads at the Darley Road site. This is justified because the site provides 11 car spacers for an estimated 100 workers a day on site. The project cannot be approved on this basis without a strict requirement on workers to use public transport or project provided transport and a prohibition needs to be in place against parking on local streets. The EIS needs to require that this restriction is included in all contracts and in the relevant approval documentation.
I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS.

- The EIS states that a Construction traffic and Access Management plan (CTAMP) would be prepared to minimise delays and disruptions and identify changes to ensure road safety. The plans are not in the EIS so residents cannot comment. The EIS should be rejected on the basis that the impacts on traffic and safety are not adequately addressed. It is inadequate to simply refer to a plan, with no provision for residents and other key stakeholders to be involved in its development.

- The EIS provides that Darley Road traffic will increase by 4% following the completion of the project in 2022. There is no benefit for residents flowing from this project. It is unacceptable that Leichhardt residents, particularly those close to Darley Road, will be forced to endure years of highly intrusive construction impacts and then derive no benefit from the project. The EIS states that the road network will improve once the Western Harbour Tunnel and Beaches Link opens, which means that residents will have to endure worsened traffic conditions for up to 10 years. While the traffic on the City West Link is forecast to decrease by up to 40 per cent once the project is completed, this is based on commuters electing to use the tollways. There is limited evidence to support these statistics and it is likely that many people will choose to use local roads to avoid the toll which will result in significant rat-running. There is no plan in the EIS to manage this issue.

- The EIS states that 'some surface works' would need to be carried out out-of-hours to minimise traffic disruptions or for safety or operational reasons. Given that Darley Road is a known accident black spot and is highly congested, particularly at peak periods, it is likely that there will be frequent out-of-hours work. This will create an unacceptable impact on those living close to the site. There are an estimated 36 homes that will suffer severe noise impacts and out of hours work will adversely affect their amenity of life. In addition, it is likely to lead to additional road closures and diversions, placing pressure on the local traffic network. No out-of-hours work should be permitted except in the case of a true emergency. The EIS as drafted effectively permits out of hours to be undertaken whenever this is convenient to the contractor (Executive Summary xiv).

- The EIS states that construction noise levels would exceed the relevant goals without additional mitigation. Activities identified include earthworks, demolition of existing structures and site establishment and utility adjustments. The Darley Road site will suffer unacceptable construction impacts due to the need to demolish the large Dan Murphy's building and the EIS notes that 10 weeks of demolition and road adjustment works will be needed. There are no additional mitigation measures proposed for residents during this period such as temporary relocation, noise walls or treatments for individual homes. The approval needs to contain detail as to how this unacceptable impact will be managed and minimised during the construction period and, in particular, during site establishment. (Executive Summary, xiv) We object to the selection of this site on the basis that the works required (demolition and surface works) will create unbearable noise and vibration impacts and make over 30 homes unlivable and there are NO additional mitigation plans for these residents.
I wish to submit my objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485. The reasons for objecting are set out below.

a. The EIS contains no detail of the access tunnel from the Darley Road site to the mainline tunnel other than depicting the route. The approval conditions need to ensure that tunnelling is occurring at sufficient depth so as to not jeopardise the integrity of the homes and not create unacceptable vibration and noise impacts for James Street residents and those at adjacent streets. The approval conditions need to make clear the period of time for which the ‘temporary’ tunnel is to be used.

b. The EIS states that property damage due to ground movement "may occur. It states that subsidence may occur along tunnel paths due to tunnel excavation and water drawdown. The risk of ground movement and subsidence is greater where tunnels are less than 35 metres underground. The planned Inner West Interchange proposes tunnels in that area which are a great deal less than 35 metres. The same is true for areas of Rozelle where layers of tunnels are proposed. This will definitely lead to structural damage and cracking to homes above. Without provision for full compensation for damage there would be no incentive for contractors or Roads and Maritime Services to minimise this damage. This is not acceptable.

c. The proposed work hours for the Rozelle Rail Yards Site are tunnelling and spoil handling 24 hours a day seven days a week. On ground construction Mon-Fri 7.00am - 6.00pm, Sat 8.00am-1.00pm. However as has been experienced by those at Haberfield and St Peters these hours and especially late and night work have been extended and implemented when the schedules have fallen behind and this has lead to great physical and mental stress for many residents through interrupted sleep and loss of sleep especially for those with children. The roads and sites at night in the area will see a marked increase in noise from truck movements, truck reversing alarms and running machinery. It will also see a marked increase in light during the night hours with site illumination and vehicle head lights as has been experienced in other areas. These problems have not been addressed in the EIS.

d. Heritage items - Camperdown. The EIS also acknowledges that the use of a rock-breaker at the outer extents of the project footprint will affect 73 residences, with five heritage items identified as having the potential to be within the ‘minimum safe working distance’. While some mitigation ‘considered’, it is not mandated and the requirement to mitigate is limited to ‘where feasible and reasonable’. The mitigation proposed seems in any event to comprise letter-boxing residents about the likely impacts! The protection of heritage items should be mandated, not just considered and there should be a strict requirement to protect such heritage items.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

• Traffic and transport – new right hand turning lane on the City West Link to James St

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent is planning to create a right hand turning lane on the City West Link to allow construction vehicles to turn right into James Street.

This is a dangerous proposal given that it involves turning into a steep blind corner which carries a high degree of risk of collision with oncoming vehicles and with pedestrians including the many school children who cross James St at this point.

It is reckless beyond belief to plan for large number of truck and dogs to make a right-hand turn into James St from the City West Link. Even vehicles crossing the City West Link from the Lilyfield Rd side of the City West Link have a higher risk of collision or error due to the steep blind turn. This would be even higher when making a right hand turn into James St from the City West Link.

This intersection is reported as being the third most dangerous for accidents in the Inner West.

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because a right hand turning lane on the City West Link to allow construction vehicles to turn right into James Street creates an unacceptable risk of death and bodily injury due to collision.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Safer alternatives have been identified which will allow spoil haulage directly onto the City West Link and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.
Traffic and transport – hours of operation for spoil removal

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent has failed to comply with the SEARS which require that the Proponent must assess construction transport and traffic (vehicle, pedestrian and cyclists) impacts in relation to access constraints and impacts on public transport, pedestrians and cyclists. The proponent’s failure stems from its contradictory and inconsistent assessment of the impacts of spoil removal from the site. In 8.3.1 of the EIS the proponent states that ‘Where practical, spoil would be removed during the day, outside of peak periods.’

This is completely at odds with the proponents own figures for heavy vehicle movements in peak hour. In Table 8-42 Indicative daily and peak period construction traffic volumes it is indicated that there will be 14 heavy vehicle movements in the AM and PM peak. This is a spoil truck movement every 4 minutes. If the EIS is approved as is then the proponent’s contractor will be permitted to remove spoil during peak periods and would have no constraints on the number of truck movements per hour.

No doubt in order to complete the project on time the contractor will have the maximum number of truck movements possible regardless of the impact on residents. I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because spoil trucks on Darley Rd will create traffic congestion during peak times (which are in actual fact longer than the peak hours on which the proponent bases its analysis).

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because spoil trucks on Darley Rd will create traffic queues and will increase traffic through local streets. The proponent is the guardian of the road network and knows that this will be the result.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Alternatives have been identified which will allow spoil haulage directly onto the City West Link and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.

Declaration: I have not made any reportable political donations in the last 2 years.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Cumulative impacts of aircraft emissions and spoil truck emissions

- I object to the EIS because the proponent has failed to take account of the cumulative impact of emissions from spoil truck vehicles from its proposed Darley Road, Leichhardt civil and tunnel site operations and emissions from aircraft to which residents near the site are already exposed.

The attached extract from Webtrak shows that Darley Road, Leichhardt and adjacent streets are directly under the flight path.

Airplane exhaust, like car exhaust, contains a variety of air pollutants, including sulfur dioxide and nitrogen oxides. Many of these particles of pollution are tiny, about a hundred millionths of an inch wide, or smaller than the width of a human hair. So-called particulate matter that's especially small is the main culprit in human health effects, especially since the particulates can become wedged deep in the lung and possibly enter the bloodstream, scientists say.

Exposure to loud noise from living under a flight path over a long period of time may increase the risk of developing high blood pressure or having a stroke, a 2013 study by researchers at the University of Athens suggests.

Researchers examined data from 420 people living near busy Athens International Airport in Greece and found living with high noise levels from aircraft, especially at night, was associated with high blood pressure.

Every additional 10 decibels of night-time aircraft noise appeared to result in a 69 per cent increased risk of high blood pressure, also known as hypertension.

The researchers at the University of Athens found that around half the participants (just under 45 per cent) were exposed to more than 55 decibels of daytime aircraft noise, while around one in four (just over 27 per cent) were exposed to more than 45 decibels of night-time aircraft noise.

Only around one in 10 (11 per cent) were exposed to significant road traffic noise of more than 55 decibels.

Between 2004-6 and 2013, 71 people were newly diagnosed with high blood pressure and 44 were diagnosed with heart flutter (cardiac arrhythmia), while a further 18 had a heart attack, the researchers found.

I object to the plan for a construction site on Darley Rd because in addition to the existing aircraft emissions and noise experienced by people living near the site, this will mean an additional cumulative impact of spoil truck diesel exhaust emissions and noise every 4 minutes in peak hour based on number of truck movements per hour and in excess of every 4 minutes per hour in non peak permitted construction hours. This will give rise to increased health risks from noise and air pollution which research suggest will cause increased blood pressure and risk of stroke.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

◊ The site should be returned to the community as compensation for the imposition of this construction site in our neighbourhood for a 5 year period. If the substation and water treatment plant is moved to the north of the site, then the lower half of the site (which is the most accessible end) could be converted into open space with mature trees planted. As this site is immediately adjacent to the bay run, bicycle parking and other facilities that support active transport could be included. This would result increase the green space for residents and result in a pleasant green environment for pedestrians, rather than a fenced facility.

◊ Why the so called ‘King Street Gateway’ been excluded in the analysis of cumulative impacts of other projects?

◊ I am concerned that the AECOM, the company responsible for the EIS, always approves knocking down heritage buildings if the project requires it. It doesn't how much value it holds for the community, it must always be destroyed.

◊ No workers associated with the WestConnex project should be permitted to park on local streets. Parking is at a premium in this area and many residents to not have off-street parking. The removal of 20 car spaces for five years as is proposed on Darley Road will worsen this situation as will the removal of ‘kiss and ride facilities’ at the light rail. There is also a pre-DA application for 120 units on William Street which is not taken into account in the EIS. This will place further stress on parking. The EIS needs to outright prohibit any worker parking on local streets.

◊ The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south–western and north-western corners of the interchange. This is utterly unacceptable.

◊ I oppose the destruction of any more of Sydney’s heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling)

- There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to measure or mitigate the cumulative impact of these prolonged periods of construction noise exposure.

- Out of hours work - Pyrmont Bridge Road site - Up to 14 'receivers' at this site are predicted to have impacts from high noise impacts during out of hours work for construction and pavement works for approximately 2 weeks caused by the use of a rock-breaker. Again, no plans to relocate or compensate residents affected is provided in the EIS (EIS, XV) The only mitigation contained in the EIS is that the use of the road profiler is to be limited during out of hours works 'where feasible.' (Table 5-120) In other words, there is no mitigation whatsoever for residents affected by daytime noise and a possibility that they will be similarly affected out of hours where the contractor considers that it isn’t feasible to limit the use of the road profiler. This represents an inadequate response to managing these severe noise impacts for residents.

- Targets for renewable energy and offsets are unclear

- Noise from trucks entering and exiting the site - Pyrmont Bridge Road site - The EIS states that there will be noise 'exceedances' for trucks entering and exiting the site (Table 5-120) No detail is provided as to the level of any such 'exceedance'. Nor does it propose any mitigation other than investigations into 'locations' where hoarding above 2 metres can be utilized to control trucks in the queuing area. This does not result in any firm plans to manage the noise. Nor is enough detail provided so that those affected can comment on the effectiveness of this proposed mitigation measure

- Increased traffic on Bridge Road, Wattle Street and the Western Distributor will reduce the amenity and value of the investment in the renewal of the Fish Markets and renewal of the Bays Market District

- Despite the promise of the WestConnex business case, Parramatta Road remains a barrier to urban revitalisation. There is no discussion of this commitment in the EIS.
I submit my strongest objections to the M4-M5 Link proposals as contained in the EIS application # SSI 7485, and request the Minister to reject the application and require SMC / RMS to issue a true, not an ‘indicative’ and fundamentally flawed EIS.

Declaration : I HAVE NOT made any reportable political donations in the last 2 years.

The City West Link Eastbound AM and PM peak hour and other locations. “Table 7-19 shows that several locations are forecast to exceed theoretical roadway capacity with the increased background traffic and the construction traffic in the 2021 AM and PM peak hours. However, traffic on the majority of these roads would exceed their theoretical capacity even without the construction traffic, simply due to the growth in background traffic”. So in the full knowledge that this area will be at capacity in 2021, massive amounts of construction traffic are going to be added for the whole construction period of 5 years. Even on completion it is stated in the EIS that traffic will be worse in this area than ‘without the project’. This categorically shows that the planning of Westconnex is totally inadequate and needs major changes. It also shows that when completed Westconnex will not work. It is abundantly obvious that Rail/Metro is the only option to radically overhaul Sydney’s failed transport systems.

I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.

2 G Appendix P Table 5-27 of the EIS states that 43% of the Leichhardt- Glebe Precinct travel to work by Car, 21% by Bus and 5% by Rail. These are figures for 2011. These figures are being used to promote the project and suggest they are accurate today. In the case of Rail these figures are extremely questionable. The Light Rail is now hugely popular, it’s use having grown enormously. It is travelling at full capacity at Peak hours. More services are being put in place. Apartment blocks are being built as close to the Light Rail corridor as possible. Residents see the Light Rail as an efficient, reliable and timely method of commuting to work. It is blatantly obvious that the Govt should be investing heavily in building and extending Light Rail, Metro and Rail. If this were pursued in a professional manner the necessity for trying to hoodwink the community into believing that Westconnex were needed would be totally unnecessary.

The EIS was prepared by global engineering firm AECOM, which also prepared the EIS for Stages 1 and 2. When he approved these earlier stages, the then Minister for Planning Rob Stokes pointed to conditions of approval that would minimise impacts on communities. But the impacts have turned out to worse than expected.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

Address: 

Suburb: Postcode: 

- Given that the modelling for air quality is based on the traffic modelling, which, as shown above, is fundamentally flawed, and given poor air quality has a significant health impact the EIS should not be approved until an independent scientifically qualified reviewer has analysed the stated air quality outcomes and identified any deficits.

- Significant declines in pollutants are due to improvements to in-vehicle technology and fuel. However, plans to improve standards for heavy vehicles, which disproportionately contribute to NOx emissions and thus ozone, appear to have stalled. The proponent needs to provide a scenario that sets out impacts due to delays in adopting improved emission standards.

- Part 3 of the Secretary's Environmental Assessment Requirements requires assessment of the likely risks of the project to public safety, paying particular attention to pedestrian safety. This is not addressed in Chapter 8.

- The EIS admits that the people who live in western Sydney have lower incomes than in the inner suburbs and that the tolls will therefore be a heavier cost in Emu Plains, Penrith, Mt Druitt, Blacktown or Wetherill Park than in Strathfield or Padstow. This is unfair when the benefits of Stage 3 are all for north-south connections to the northern beaches or the proposed new harbour tunnel.

- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have the proposals for Stages 1, 2 and 3 and they don't even go to Port Botany or Sydney Airport. We are being asked to support Stage 3 of WestConnex on the basis of more major unfunded projects that are barely sketches on a map.

- The EIS provides traffic projections for the 'With Project' scenario and 'cumulative' scenario (which in addition to links in the 'With Project' scenario includes the Beaches Link and F6 motorway connections), but when referencing the traffic benefits/impacts in the early sections, the EIS appears to cite the ‘with project’ scenario rather than Cumulative Scenario. It is unclear which scenarios the Business Case best reflects.

- We know the state government intends to sell the project, both the constructing and the operation. I object to the privatization of the road system. There is no guarantee of protecting the public interest in an efficient transport system when so much of it operates to make a profit for shareholders.

- The modelling makes no mention of bus lanes on Victoria Rd. If these lanes were not modelled as car lanes the assumed capacity of the road is incorrect.

- The modelling shows severe degradation to the City West Link if the Western Harbour Tunnel is connected.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 application, for the following reasons:

1. The EIS at 7-21 states that Community Update Newsletters were distributed to residents ‘near the project footprint’ in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses ‘letterboxed’. This statement of community engagement should be rejected by the Department.

2. The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design ‘up to July’ that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical ‘community engagement’ feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.

3. The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech drilling or testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. No further details have been provided. This casts doubt over the integrity of the entire EIS process.

4. The EIS at 7-41 acknowledges that there is great concern in the community that King Street, Newtown, will be made a 24-hour clearway, stating “Roads and Maritime has no plan to change the existing clearways on King Street”. This statement is deliberately misleading, inferring SMC has authority over regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever/whenever and RMS has NEVER stated publicly that King St will not be subject to clearways.

5. SMC have made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.

6. EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. “The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. The EIS should not be approved till the bulk of these ‘uncertainties’ have been fully researched and surveyed and the results (and any changes) published for public comment.

7. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than ‘indicative’ and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on ‘definitive’ information.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area taking into account long term sustainability over short-term private profit.

1. The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.

2. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With four unfiltered emissions stacks in the area plus a large number of exit portals, the residents of this area will suffer greatly from poisonous diesel particulates. This is negligent when you consider that, the World Health Organisation in 2012 declared diesel particulates carcinogenic. “As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, “No ventilation shafts will be built near any school.”

3. No workers associated with the WestConnex project should be permitted to park on local streets. Parking is at a premium in this area and many residents to not have off-street parking. The removal of 20 car spaces for five years as is proposed on Darley Road will worsen this situation as will the removal of ‘kiss and ride facilities’ at the light rail. There is also a pre-DA application for 120 units on William Street which is not taken into account in the EIS. This will place further stress on parking. The EIS needs to outright prohibit any worker parking on local streets.

4. In the EIS there are indications of what is to be expected in the Rozelle Rail Yards construction site and the Crescent Civil site. But the EIS states that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed. This may result in major changes to the project design and construction methodologies. The community will have no input into this process, so the community is totally powerless to be able to comment on what will actually be proposed, how it will be carried out and what will finally be built. This is not acceptable.

5. I object to the selection of the Darley Road site on the basis that the works required (demolition and surface works) will create unacceptable and unbearable noise and vibration impacts for extended periods. The EIS indicates that at least 36 homes will basically be unliveable during this period. In addition, the planned 170 heavy and light vehicles will considerably worsen the impact of construction noise.

---

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- SMC have made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.

- Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.

- The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney’s eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

- There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.

- EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. The EIS should not be approved till the bulk of these ‘uncertainties’ have been fully researched and surveyed and the results (and any changes) published for public comment.

- I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community’s feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.

- Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.

- The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney’s eastern and southern suburbs) is “based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required.” The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

1. It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.

2. No road junction as large and complex as the extraordinary spaghetti junction proposed to go underground has been built anywhere in the world. The feasibility is not tested. There are no international or national standards for such a construction.

3. The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.

4. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

5. The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.

6. Are there other potentially serious problems with Sydney Water utility services (described at EIS 12-57) or with other utilities in other suburbs or along the proposed M4-M5 tunnel alignment? If so, the EIS proposals and application should not be approved till these are all disclosed, researched, surveyed and the resolution publicly published.

7. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle interchanges will disrupt local transport networks including bus and active transport (walking and cycling).

8. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.

9. I strongly object to the privatisation of the WestConnex project that turns public monies into private profit.

10. The mechanical ventilation proposed depends on single direction tunnel construction, so how it can possibly work for large curved tunnels on multiple levels is unknown.

OTHER:

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
- Darley Road is confirmed as a 'civil and tunnel site (dive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- I do not accept that King Street traffic congestion will be improved by this project. There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

i. There have been widespread reports in the media about extensive unresolved disputes regarding damages to houses in the Stage 1 M4 and Stage 2 M5 construction process. Why should the community believe that there will not be extensive damages to houses in Stage 3?

ii. Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is NO information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.

iii. It is quite clear that the escalating cost of tolls will encourage drivers to avoid tollways. This will further pollute and congest local roads. Such impact already evident on Parramatta Rd usage after the new M4 tolls were introduced. The community expects similar impacts on roads around the St Peters interchange, including the Princes Highway, King St, Enmore and Edgeware Roads and through streets of Alexandria and Erskineville. The EIS Traffic analysis fails to deal with this issue of traffic beyond the boundaries of the project and should be rejected.

iv. It all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does NOT constitute open and fair community engagement.

v. I am concerned that SMC has selected one of Sydney's most dangerous traffic spots, Darley Rd in Leichhardt for a construction site that will bring hundreds of extra trucks and cars into the area on a daily basis for years.

vi. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

vii. I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.

viii. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

ix. I am deeply disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.

x. The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other. The increasing numbers of vehicles will also increase the vehicle pollution (known to have adverse effects on breathing and also to be carcinogenic) in this area.

◊ There will be 517 Heavy truck movements a day, of which 46 are stated to take place during peak hours from the Rozelle Rail Yard the largest amount of spoil truck movement on the whole of Stage 3. This will lead to a vast amount of extra noise and air pollution in this area. There will also be disturbance of soil in the old Rozelle Goods Yard which will be heavily contaminated with toxic substances. It is highly probable that there will be lead and asbestos. (as was the case in St Peters) You made no provision for the safe removal of these toxic substances in St Peters and the EIS makes no provision for their safe removal in this area.

◊ The EIS misrepresents the structure of the Global Economic Corridor and overstates the relationship of the project to centres within it by claiming the Project serves centres in the north of the GEC that it does not.

◊ I note that in the area of Lilyfield Rd and Gordon Street, the work proposed which would include deep excavation that would result in major adverse impacts on archaeological remains, while other surface works would have localised impacts on archaeological remains that may be present. It is suggested that what are called 'management measures' would be carried out including the development of a Historical Archaeological Research Design which would include an "assessment of any detailed design plans to develop a methodology and scope for a program of test excavation to determine the nature, condition and extent of potential archaeological remains." This is completely unacceptable to me. The community will have no right to any input into this plan or access to independent expert advice. This is all part of an 'approve now, research later' approach that will lead to poorly planned unnecessary destruction, a loss of potential community history and understanding.

◊ The cited 'key customers' that would benefit from the project (long distance, freight, businesses) represent a very small minority of those who are forecast to actually use the project (single occupancy commuter vehicles). The key customers could be served by a far more modest project, given they represent an extremely small proportion of projected traffic on the Project.

◊ The EIS (Section 3.2) does not set out the specific transport needs addressed by the project but states additional road capacity is required to meet a projected increase in trips. It does not set out any trips, desire lines, demand corridors or growth that the WestConnex project is addressing. As a result it is not possible to assess the project's ability to meet those needs. Nor is it demonstrated that projections in growth in population and employment correlate to traffic demand increase along the proposed M4-M5 Link.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.

- I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.

- The EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the asset locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.

- I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.

- Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.

- The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is "based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required. The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

- SMC have made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.

- Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Prince’s Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.

- The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

- Why the so called 'King Street Gateway' been excluded in the analysis of cumulative impacts of other projects?

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties
I submit my strongest objections to the M4-M5 Link proposals as contained in the EIS application # SSI 7485. and request the Minister to reject the application and require SMC / RMS to issue a true, not an ‘indicative’ and fundamentally flawed EIS.

Submission to:
Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001
Attn: Director — Transport Assessments

Application Number: SSI 7485
Application Name: WestConnex M4-M5 Link

The EIS needs to provide specific detail as to what will be provided by way of alternative accommodation to the 36 residents identified as suffering extreme noise interference. There is no plan to temporarily relocate such residents, not to offer them financial compensation to enable them to move out during the worst period. There is an estimated 10 weeks of extreme noise during demolition of the commercial building and preparatory road works. Once this work is finished the residents will also be forced to endure a truck every 304 minutes for a period of five years. It is clearly not possible for such residents to continue to live in these houses and the EIS needs to detail what will be provided in terms of alternative living arrangements for part, or all of the construction work period.

For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated landfill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.

Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.

Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.

The Darley Road site will not be returned after the project, with a substantial portion permanently housing a Motorways Operations facility which involves a substation and water treatment plant. This means that the residents will not be able to directly access the North Light rail Station from Darley Road but will have to traverse Canal Road and use the narrow path from the side. In addition the presence of this facility reduces the utility of this vital land which could be turned into a community facility. Over the past 12 months community representatives were repeatedly told that the land would be returned and this has not occurred. We also object to the location of this type of infrastructure in a neighbourhood setting.

It is clear from the EIS that spoil truck movements will not be confined to the City West link. At a community consultation it was revealed that trucks removing spoil at Camperdown would very likely be travelling from the James Craig Rd area and in that case would be using the additional lane on the Crescent and then turning right up Johnston St. This is totally CONTRARY to what concerned residents had been promised would not happen. It is clear that any assurances given to the community in past consultations are totally disregarded without consultation later. This is unacceptable.

I am concerned that SMC has selected one of Sydney's most dangerous traffic spots, Darley Rd in Leichhardt for a construction site that will bring hundreds of extra trucks and cars into the area on a daily basis for years.

The latest EIS was released just ten business days after feedback period ended for the Concept Design for the M4/M5 and before preliminary drilling to establish a route through the Inner West is completed. WHAT IS THE RUSH? This EIS is little more than a concept design and is far less developed than earlier ones. It is composed of many indicate only plans such that it is impossible to know what the impacts will be and yet approval is being sought in a rush. The EIS ignores more than 1500 submissions, including one of 142 pages from the Inner West Council.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Attn: Director – Transport Assessments

Application Name: WestConnex M4-M5 Link

Application Number: SSI 7485 Application

. I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS

The EIS permits trucks to access local roads in exceptional circumstances which includes queuing at the site. Given the constraints of the Darley Road site queuing will be the usual situation. The EIS needs to be amended to remove queuing as an exceptional circumstance. The truck movements should properly managed by the contractor so that there is no queuing. This exception will make it easier for contractors to neglect their obligation to monitor and manage truck movements in and out of the site and needs to be removed. The EIS needs to specifically mention all local streets abutting Darley Road and expressly prohibited truck movements (including parking) on these streets. This should include all streets from the north (James St) to the south (Falls Road), which are near the project footprint.

Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. The is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.

Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy". Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

The assessment of Strategic Alternative 2 (Investment in "alternative transport" modes) should:
- identify key network capacity issues
- identify the shift away from private vehicles required to deliver the necessary relief on the road network to meet the future transport needs of Sydney
- identify the mix of investments in public transport, cycling and walking required to deliver these mode splits.
- use multi-modal transport modelling and economic assessment to inform the analysis and assessment of the alternative.

The EIS states that investigation would be undertaken to confirm whether the Victoria Road bridge is a potential roost site for microbats. There will be attempts to 'manage potential impacts' if confirmed. This is inadequate. The project should not be permitted to impact on vulnerable species.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

i. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.

ii. The social and economic impact study fails to record the great concern for valued Newtown heritage.

iii. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.

iv. The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.

v. The EIS acknowledges that extra construction traffic will add to travel times across the Inner West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.

vi. The EIS acknowledges that ‘rat running’ by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.

vii. The EIS refers to be construction impacts as being ‘temporary’. I do not consider a five year construction period to be temporary.

viii. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application:

- This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people’s homes on the basis of such flimsy information.
- Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.
- The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical ‘community engagement’ feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
- Increased traffic congestion in areas around portals will increase pollution along roadides, with predicted adverse impacts on breathing and through long-term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that enables them to be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
- This EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, ‘would’ not ‘will’, telling me nothing is actually ‘known’ for certain – and is certainly not included here.
- **EIS 6.1 (Synthesis, Page 45) states.** “... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. It is unstated just who would have responsibility for such a “reviewed (ed) for consistency”, and how these changes would be communicated to the community. The EIS should not be approved till significant ‘uncertainties’ have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1,000s more per day onto the roads to the Airport which are already at capacity.
- There has been no ‘meaningful’ consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
- Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government’s unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.
- The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech drilling or testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. No further details have been provided. This casts doubt over the integrity of the entire EIS process.

**Other Comments I would like to make:**
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

- The high tolls are set to increase for decades by the CPI or by 4% a year, whichever is higher. When inflation is low and wages are not even keeping up with low inflation this is outrageous. And it is not as if the commuters or workers of western Sydney have a real alternative in public transport. This is just gouging western Sydney road users to make the road attractive to a buyer

- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used... The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective.

- The EIS admits that drivers from lower income households are more likely to travel longer distances to avoid tolls because of the cost. So you either pay the high tolls (capped at $7.95 in 2015 dollars) or you drive for longer to avoid the tolls. We have seen this already where commuters have chose to drive on Parramatta rd not the new M4 with the new tolls. This is unfair.

- Whilst chapters 10 and 12 of Appendix H show mid-block level of service at interfaces with interchanges and points within the tunnels, there is no information about other mid-block points such as the ANZAC Bridge. Part 8.3.3 of the EIS refers to increases in daily traffic forecasts on the Anzac Bridge/Western Distributor, particularly in the AM peak, as traffic accesses the M4-M5 Link and future forms of traffic or network management are intended. Information about the traffic forecasts for the Anzac Bridge/Western Distributor should be provided.

- The 2023 ‘cumulative’ modelling scenario includes the Sydney Gateway and the western harbour tunnel but neither of these projects are currently committed and it is highly unlikely they will be completed by this date. This raises the question of why did the proponent adopt such a misleading position and how does it affect the impacts stated?

- I object to the way this project is hailed by the Minister for Western Sydney Stuart Ayres for the benefit of western Sydney when hardly any parts of Sydney west of Parramatta are even mentioned in the EIS. This is deliberately misleading. All the reasons for this stage of WestConnex are about linking the new M4 and M5 to the western harbour tunnel and northern beaches tunnel. Or they talk about links to the "Sydney Gateway" to the airport and Port Botany and they are not even part of this project.

- This EIS contains no meaningful design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

The Project will have significant impacts on the streets near on- and off-ramps. Modelling shows that the Anzac Bridge will have 60% more traffic in 2033 because of the Project.

The modelling assuming journey time shifting when mode shifting is more likely.

The modelling does not consider the latest plans from the NSW Government's Greater Sydney Commission despite them being released nine months ago.

I object to the whole project because the people of Western Sydney were not consulted about where they wanted new roads or what transport they prefer. The WestConnex project with the tolls we will have to pay was just dumped on us, there was no consultation about our needs.

The management of water in the Rozelle Yards is of great concern as the site is highly contaminated and the construction work that will be carried out will cause a great deal of disturbance especially once vegetation has been removed. There will be potential impacts from contaminated soils, leakage/spills of hydrocarbons and other chemicals from machinery, vehicles transporting spoil adjacent to roads and stormwaters, rinse water from plant washing and concrete slurries. Water from tunnelling activity and other works will also introduce contaminants. The EIS says that much of this water will be treated in temporary treatment facilities and sediment tanks before being released to Whites Creek and Rozelle Bay. The EIS does not disclose what levels of pollution controls will be implemented to make sure that contaminated water is not released into White's Creek or Rozelle Bay. This is not acceptable.

The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)

Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)
I wish to submit my objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485. The reasons for objecting are set out below.

Address: Neutral Bay NSW 2089

The EIS notes that the Project would cause additional traffic congestion on a number of key roads including: Gardeners Road and Bourke Road in the south, Frederick Street (Ashfield), Johnston Street (Annandale) and numerous streets in Mascot (p.8-103). The EIS must assess and identify any upgrades that the Project will require.

The EIS admits that impacts of construction of the M4-M5 Link will worsen traffic on Parramatta Rd. In these circumstances it is outrageous for motorists to be asked already to pay up to up to $20 a day in tolls. I object to the fact that this is not considered or factored into the traffic analysis.

The proponent does not consider the impact of the Sydney Metro West. This project will have a significant impact on travel behaviour (and specifically mode share).

The EIS admits that drivers from lower income households are more likely to travel longer distances to avoid tolls because of the cost. So you either pay the high tolls (capped at $7.95 in 2015 dollars) or you drive for longer to avoid the tolls. We have seen this already where commuters have chose to drive on Parramatta rd not the new M4 with the new tolls. This is unfair.

The modelling shows severe traffic levels and increased congestion on Johnston St, and The Crescent (+80% ADT).

In order to make the model work, traffic that exceeds the free flow capacity of the network was reassigned to hours outside of the peak – i.e. the model assumes people shift the time they travel. However, the potential of shifting journey times to reduce overall traffic demand is not considered.

The traffic modelling approach applied in the EIS is commonly used in NSW. This approach has proven to be flawed. Infrastructure Australia compared predicted and actual traffic levels and found that the assumed steady growth in traffic did not occur. In Sydney, urban congestion levels are growing at around one third of the forecast rate. (See Figure 1, below)

The high tolls are set to increase for decades by the CPI or by 4% a year, whichever is higher. When inflation is low and wages are not even keeping up with low inflation this is outrageous. And it is not as if the commuters or workers of western

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

1. The key intersection performance tables in App H (p.258 St Peters and 248 Rozelle) demonstrate that many intersections will either worsen (at the worst case scenario of LOS F) or remain unchanged particularly in 2033, including the following intersections:
   - Princes Highway/Canal Road
   - Princes Highway/Railway Road
   - Unwins Bridge Road/Campbell Street
   - Campbell Road/Bourke Road
   - Princes Highway/Campbell Street
   - Ricketty Street/Kent Road
   - Gardeners Road/Kent Road
   - Gardeners Road/Bourke Road
   - Gardeners Rd/O'Riordan Street
   - Victoria Road/Lyons Road
   - Victoria Road/Darling Street
   - Victoria Road/Robert Street

2. I object to this new tollway because in the past tolls have been justified as needed to pay for the new road. This is not the case of this tollway that will charge tolls for 40 years. This is only to guarantee revenue to the new private owner.

3. The proponent excludes the impact of the Western Sydney Airport from analysis of the project. This could have a significant impact on traffic volumes.

4. The modelling shows significant increases in traffic on Victoria Rd (+20% ADT) which is already at capacity.

5. Most people in Emu Plains, Penrith, Mt Druitt, or Blacktown who work in Sydney CBD use the trains. What workers travelling to Sydney city really need are better and more frequent trains. This is just dismissed by the EIS.

6. Most people in Emu Plains, Penrith, Mt Druitt, or Blacktown who work in Sydney CBD use the trains. What workers travelling to Sydney city really need are better and more frequent trains. This is just dismissed by the EIS.

7. The modelling shows the motorway exceeds reasonable operating limits in the peak in less than ten years.

8. The underlying traffic modelling and outputs was insufficient to:
   - Demonstrate the need for the project.
   - Understand impacts of dispersed traffic on connecting roads, such as the Anzac Bridge, and whether they have available capacity to meet the predicted traffic discharge. Any congestion on exits has the capacity to negate all travel time savings to the exit point, given the small predicted benefits.

9. Public transport is rejected by the EIS so the state government is forcing us to use cars more when most major cities in the world are trying to reduce the number of cars on the roads. We know this is to promote private road operators' profits. I object to putting so much public funding to the cause of private profit. I urge the Secretary of Planning to reject this project.

---

**Campaign Mailing Lists**: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name ___________________________ Email ___________________________ Mobile ___________________________
I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS.

- I strongly object to the proposed location of this permanent operational facility on Darley Road. The presence of this site contradicts repeated assurances to the community that the site would be returned after construction was completed. The ongoing presence of this site will limit future uses of the Darley Road site which could serve community purposes, particularly given its location directly next to public transport. Its presence removes the ability to provide more accessible, safer and direct pedestrian access to the North Leichhardt Light Rail Station. The plant location, in a residential setting is not appropriate. It will reduce property values and have an unacceptable impacts on the visual amenity of the area. The streets adjacent to Darley Road are comprised of low-rise residential homes and small businesses and infrastructure such as this should not be permitted in such a location.

- The Rozelle Rail Yards are a totally inappropriate area to create a new recreational area because the area will be highly polluted by unfiltered Pollution Stacks and Tunnel Portals. In the EIS it is referred to as an idealized area. "It is envisaged that the quantum of active recreation within the Rozelle Rail Yards would be further developed by others as projects such as The Bays Precinct are developed. The concept plan provides spaces that could include an array of active recreation opportunities and even community facilities such as gardens or a school." The suggestion that this would be a suitable location for a School is just beyond belief and demonstrates that those who have put these plans together are either staggeringly ignorant or totally delusional! At a time when major World cities are doing all they can to address the dire problems of pollution this is an appalling suggestion that is totally out of touch.

- The EIS is misleading because it discusses the creation of 14,350 direct jobs during construction. It omits the fact that jobs have also been lost because of acquisition of businesses, many of which were long-standing and employed hundreds of workers. (Executive Summary xviii)

- Insufficient time has been given for the community to prepare submissions to the EIS, especially when one considers that whole neighbourhoods affected by the project were not even notified during the concept design period. e.g. Newtown, east of King St.

- Acquisition of Dan Murphys – I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the tax payer should not be left to foot the compensation bill in these circumstances.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name ___________________________ Email ___________________________ Mobile ___________________________
I object to the whole of the Westconnex Project, including the Westconnex M4-M5 Link proposals as contained in the EIS, for the following reasons:

1. The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors. I have serious concerns that such a complex project with hundreds of risks could be treated by NSW politicians as if approval was a foregone conclusion.

2. There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.

3. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.

4. I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process.

5. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters interchange will have a disruptive impact on the local transport networks comprising vehicle, bus and active transport (walking and cycling).

6. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that WestCONnex are seeking approval to tunnel under hundreds of heritage buildings in Newtown without no serious assessment of risks at all.

7. It is quite clear that the escalating cost of tolls will encourage drivers to avoid tollways. This will further pollute and congest local roads. Such impact was evident on Parramatta Rd usage immediately the new M4 tolls were activated. The community expects similar impacts on the roads around the St Peters interchange, including the Princes Highway, King St, Enmore and Edgeware Roads and though streets of Alexandria and Erskineville. The Traffic analysis fails to deal with this issue of traffic beyond the boundaries of the project and should be rejected.

8. I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.

9. Increased traffic congestion will also increase the atmospheric pollution along roadsides in local areas, with predicted adverse impacts on breathing and through long term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that they can be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.

10. Unfiltered stacks anywhere in Sydney are not unacceptable. An extra exhaust stack on the NW corner of the St Peters interchange will increase pollution in an area where the prevailing winds will spread emissions over residences, schools and sports fields. St Peters Primary School will be at the apex of a triangle between the two exhaust stacks on the SW and NW corners of the interchange.

11. The impact of the deep tunnelling for the M4-M5 link – in addition to the tunnelling for the new Sydney Metro in the same area – in Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because contractors will blame the other project.

In this submission I have only been able to include some of my objections to this EIS. We have already witnesses the destruction of tracts of Haberfield and St Peters. Please do not allow the Sydney Motorway Corporation and its contractors to further extend this damage.

I call on the Secretary of the Planning Department to advise the Minister for Planning to reject this project and demand that the government rethink the transport planning for the whole metropolitan area with active consideration and comparison of heavy and light rail alternatives.

I would like to assist and/or keep up to date with the anti-Westconnex campaign - These details will be removed before lodging this submission, and will be used only for campaign purposes and will not be divulged to other parties

Name __________________________ Email __________________________ Mobile __________________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the Environmental Impact Statement M4/M5 application, for the following reasons:

1. SMC has made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.

2. EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. “The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. The EIS should not be approved until critical ‘uncertainties’ have been fully researched and surveyed and the results (and any changes) published for public comment.

3. At 7-25 the EIS refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design ‘up to July’ that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical ‘community engagement’ feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.

4. The EIS acknowledges at 7-41 that there is great concern in the community that King Street, Newtown, will be made a 24-hour clearway, stating “Roads and Maritime has no plan to change the existing clearways on King Street”. This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has NEVER stated publicly that King Street will not be subject to extended clearways.

5. The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. There are no further details provided. Again, this casts doubt over the integrity of the entire EIS process.

6. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than ‘indicative’ and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on ‘definitive’ information.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area.
I object to the Westconnex M4-M5 link proposals as contained in the EIS for the following reasons:

1. The EIS is a strategy document only. It does not commit to any design, and therefore it doesn't address any local issues which are created by the construction of the M4-M5 link. Its whole purpose is to prepare a legal and bureaucratic pathway for the sale of Sydney Motor Corporation to the private sector thereby removing the Government from the oversight and responsibility for the design and construction. It also endeavours to lock out the public from being able to have any say in what is built, how it is built and where it is built.

2. The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street will greatly increase during the construction period and also be greatly increased by the time Stage 3 is completed. It states that Stage 3 will do nothing to improve traffic congestion in the area in fact it will add to the problem. Many of these areas are already congested at Peak times. This will be highly negative for the local area as more and more people try to avoid the congestion by using rat runs through the local areas on local streets.

3. The proposed work hours for the Rozelle Rail Yards Site are tunnelling and spoil handling 24 hours a day seven days a week. On ground construction Mon-Fri 7.00am – 6.00pm, Sat 8.00am- 1.00pm. However as has been experienced by those at Haberfield and St Peters these hours and especially late and night work have been extended and implemented when the schedules have fallen behind and this has lead to great physical and mental stress for many residents through interrupted sleep and loss of sleep especially for those with children. The roads and sites at night in the area will see a marked increase in noise from truck movements, truck reversing alarms and running machinery. It will also see a marked increase in light during the night hours with site illumination and vehicle head lights as has been experienced in other areas. These problems have not been addressed in the EIS.

4. The Rozelle Rail Yards site is the location of 3 Unfiltered Pollution Stacks. There is a fourth stack on Victoria Rd close to Darling St almost opposite Rozelle Primary School. If the Western Harbour Tunnel is built there will also be a total of 7 Tunnel Portals. Tunnel Portals are also areas of high levels of pollution. It is totally unacceptable that the Pollution Stacks are unfiltered. Recently built tunnels in Tokyo successfully filter 98% of all pollutants. There are at least 5 schools and childcare centres in close proximity to these pollution stacks.

5. Heart disease will skyrocket due to air pollution caused by Westconnex bringing more cars into the Inner West says Paul Torzillo, Head of Respiratory medicine at Royal Prince Albert Hospital. Inner West Courier 23rd May 2017.

6. Motor vehicles account for 14% of Particulate Pollution of 2.5 microns and less in Australia. There is no safe level to exposure to particulate matter of 2.5 microns and less. Fine particulate matter is linked with Asthma, Lung Disease, Cancer, Stroke and poor lung development in children. Those most at risk are the old, the young and the unborn of pregnant women.

7. The Rozelle Rail Yard stacks are stated to be 38m high and are situated in a valley area. The majority of Balmain Road is 39m above sea level and Annandale St is at 29m above sea level. Both are considerably less than 1 kilometre from the Rail Yard stacks so pollution will be blown directly into many homes in these areas. This will expose the residents of Annandale, Lilyfield, Rozelle and Balmain to highly increased health risks.

8. There will be major impacts on the Anzac Bridge with a projected increase of 60% in daily traffic. There will also be major impacts to the Sydney City Centre. The EIS states that this will lead to major impacts on bus travel time and reliability. The EIS's suggests that people will have to adjust their travel times to starting for work earlier and finishing later. This is unacceptable and underlines Westconnex's waste and total failure.
I OBJECT TO THIS Environmental Impact Statement (EIS). My reasons are as follows.

There is a lack of strategic justification for the project. No feasible alternatives have been developed or assessed.

This EIS is a strategy-only document. It does not commit to any design and it therefore does not address any local impacts created by the proposed M4-M5 Link. Instead, it prepares the pathway for the sale of the Sydney Motorway Corporation (SMC) to the private sector, which would remove from the Government the responsibility, oversight and control of the final design, cost and implementation of the M4-M5 Link.

Importantly, the M4-M5 Link fails to meet the primary objectives of providing a direct motorway connection between Western Sydney and Sydney Airport and Port Botany.

While the Rozelle Interchange is supposed to be opened in December 2023, the design is so preliminary and so complex (and would be incredibly expensive if it were to proceed) that it should be treated as a separate stage of the project to ensure that potential private sector funders are willing to invest in it.

There will be major impacts on the Anzac Bridge (projected 60% increase in daily traffic) and the CBD. The EIS forecasts major impacts on bus travel times and reliability.

The EIS does not adequately account for impacts on health and air quality. Very concerning, it identifies an additional five (5) unfiltered ventilation stacks to be constructed in Rozelle/Lilyfield. Additionally, local surface roads will be widened and traffic volumes will increase – with associated increased air quality risks.

In summary, the EIS treats the public – our communities – with contempt. It offers no final design, no commitment to improved transport and only vague and unreliable traffic modelling.

If the M4-M5 Link proceeds, the people of the affected inner west suburbs – and indeed in wider Sydney - will have a highly destructive, intrusive motorway that escalating tolls will make extremely unpopular, and therefore avoided wherever possible. In turn, this will inevitably create traffic congestion in smaller, local streets.

I believe the real purpose of this EIS is to get NSW Government approval so that the opportunity to design, build, operate, maintain and put a toll on the road can be sold to private investors – a process completely outside of the scrutiny of the public (taxpayers) who will bear the ill-effects on their various communities for decades to come.

I call on the Secretary of NSW Planning to advise the Minister to reject this entire EIS and re-write it prior to any further work on the other sections of WestConnex continuing.
I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS.

- We strongly object to the proposed location of this permanent operational facility on Darley Road. The presence of this site contradicts repeated assurances to the community that the site would be returned after construction was completed. The ongoing presence of this site will limit future uses of the Darley Road site which could serve community purposes, particularly given its location directly next to public transport. Its presence removes the ability to provide more accessible, safer and direct pedestrian access to the North Leichhardt Light Rail Station. The plant location, in a neighbourhood setting is not appropriate. It will reduce property values and have an unacceptable impacts on the visual amenity of the area. The streets adjacent to Darley Road are comprised of low-rise residential homes and small businesses and infrastructure such as this should not be permitted in such a location.

- The EIS needs to provide specific detail as to what will be provided by way of alternative accommodation to the 36 residents identified as suffering extreme noise interference. There is no plan to temporarily relocate such residents, not to offer them financial compensation to enable them to move out during the worst period. There is an estimated 10 weeks of extreme noise during demolition of the commercial building and preparatory road works. Once this work is finished the residents will also be forced to endure a truck every 3-4 minutes for a period of five years. It is clearly not possible for such residents to continue to live in these houses and the EIS needs to detail what will be provided in terms of alternative living arrangements for part, or all of the construction work period.

- Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.

- The EIS contains no detail of the access tunnel from the Darley Road site to the mainline tunnel other than depicting the route. The approval conditions need to ensure that tunnelling is occurring at sufficient depth so as to not jeopardise the integrity of the homes and not create unacceptable vibration and noise impacts for James Street residents and those at adjacent streets. The approval conditions need to make clear the period of time for which the ‘temporary’ tunnel is to be used.
I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

1. The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.

2. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1, 2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.

3. There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.

4. The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.

5. Darley Road is confirmed as a 'civil and tunnel site (dive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.

6. I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 31000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.

7. I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.

8. Why is there no detailed information about the so called 'King Street Gateway' included in the EIS?

9. I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

10. An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

✓ We object to the location of a permanent substation and water treatment plant following the completion of the project on the Darley Road site. This will limit the future uses of the land and the community has been continually assured that the land, which is Government-owned, would be available for community purposes. The presence of this facility will forever prevent the ability for safe and direct pedestrian access to the light rail stop, with users required to walk down a dark and winding path. It will also limit the future use of the site. If a permanent facility is to be located then it should be moved to the north of the site so that it is out of sight of homes and has less visual impact on residents.

✓ Tunnel depths the tunnel depths for the Leichhardt area as low as 35 metres. This creates and unacceptable risk of damage to homes due to settlement (ground movement). The EIS acknowledges that at tunnelling at 35 metres and less this is a real risk. There is no mitigation provided for this risk. Instead, it states that properties will be repaired at the Government's expense. However no details or assurance as to how this will occur are provided. The project should not be approved with such tunnelling depths permitted and with no detail as to the extent of damage and how and when it will be repaired. It will lead to the situation where residents and businesses are forced to engage structural engineers and lawyers to prove that the damage was linked to Westconnex works, with no assurance that this property damage will be promptly and satisfactorily fixed.

✓ The EIS states that, if the current proposal for ventilation facilities do not manage to achieve satisfactory environmental and health impacts, that further ventilation facilities may be proposed. This is unacceptable and the EIS does not provide the alternative locations for any such facilities and therefore the community is deprived of any opportunity to comment on their impacts. The EIS should not be approved on the basis that there may be additional ventilation facilities that are not disclosed in the EIS.

✓ Many students walk or ride to Orange Grove and Leichhardt Secondary College schools via Darley Road. There are also a number of childcare centres very close to the Darley Road site.

✓ The presence of 170 heavy and light vehicle movements a day at this site will create an unacceptable risk to students. The EIS should not permit any truck movements near the Darley Road site. The alternative proposal which provides that all spoil trucks enter and leave from the City West link is the only proposal that should be considered.

✓ All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a strict prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. The EIS needs to prohibit outright truck movements (including parking) and worker parking on all of these streets.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

**Declaration:** I

The EIS states that construction noise levels would exceed the relevant goals without additional mitigation. The additional mitigation is mentioned but not proposed. All possible mitigation should be included as a condition of approval. The EIS acknowledges that substantial above ground invasive works will be required to demolish the Dan Murphys building and establish the road. The EIS noise projections indicate that for 10 weeks residents will suffer unacceptable noise impacts. The EIS does not contain a plan to manage or mitigate this terrible impact. There is no detail as to which homes will be offered (if at all) temporary relocation; there are no details of any noise walls or what treatments will be provided to individual homes that are badly affected. The approval needs to contain detail as to how this unacceptable impact will be managed and minimised during the construction period and, in particular, during site establishment. I object to the selection of the Darley Road site on the basis that the works required (demolition and surface works) will create unacceptable and unbearable noise and vibration impacts for extended periods. The EIS indicates that at least 36 homes will basically be unliveable during this period. In addition, the planned 170 heavy and light vehicles will considerably worsen the impact of construction noise.

I object to the proposal to the Darley Road civil and tunnel site because of the unacceptable risk it will create to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW's own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.

The EIS permits trucks to access local roads in exceptional circumstances which includes queuing at the site. Given the constraints of the Darley Road site queuing will be the usual situation. The EIS needs to be amended to remove queuing as an exceptional circumstance. The truck movements should properly managed by the contractor so that there is no queuing. This exception will make it easier for contractors to neglect their obligation to monitor and manage truck movements in and out of the site and needs to be removed. The EIS needs to specifically mention all local streets abutting Darley Road and expressly prohibited truck movements (including parking) on these streets. This should include all streets from the north (James St) to the south (Falls Road), which are near the project footprint.

Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.

The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.

**Campaign Mailing Lists:** I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Name: MARCO MATTARELLI  
Signature:  

Please include my personal information when publishing this submission to your website  

Address: 46 WETHERILL ST  
Suburb: LEICHHARDT  
Postcode: 2040  

The EIS states that an alternative truck movement is proposed which involves use of the City West Link and no need for spoil trucks to access Darley Road. This proposal is supported, subject to further information about potential impacts being provided. The EIS should not be approved on its current basis which provides for 170 heavy and light vehicles accessing Darley Road on a daily basis. This will create unacceptable safety issues and noise impacts for adjacent homes while also compromising pedestrian and bicycle access to the light rail and bay run. It will also lead to truck chaos on this critical arterial road providing access to and across the City west Link. The current proposal which provides for truck movements solely on Darley Road should not be approved and approval should only be given to the alternative proposal. I repeat however my objection to the selection of this site altogether, but propose the least worst impact should be chosen if this site is to be used.

The EIS indicates that 36 homes will have unacceptable noise impacts for extended periods at the Darley road construction site. The EIS does not mention the cumulative impact of aircraft noise in the Leichhardt or St Peters area, and therefore does not reflect the true impact of construction noise on the amenity of nearby residents and businesses. The noise impacts of construction are not able to be mitigated to an acceptable level and the EIS should not be approved on this basis.

We object to the selection of the Darley Road site on the basis that it provides for daily movements of 170 heavy and light vehicles accessing Darley Road. This creates an unacceptable risk to the safety of pedestrians accessing the North Leichhardt light rail stop as well as bicycle users accessing the bicycle route on Darley Road and entering Canal road to join the dedicated bike paths on the bay run. Many school children cross at this point to walk to Orange Grove and Leichhardt Secondary College. The EIS states that an alternative truck movement is proposed which involves use of the City West Link with no trucks to access Darley Road. The selection of Darley Road should not be approved if it involves any truck movements on Darley Road, which is what it currently provides.

No workers associated with the WestConnex project should be permitted to park on local streets. Parking is at a premium in this area and many residents to not have off-street parking. The removal of 20 car spaces for five years as is proposed on Darley Road will worsen this situation as will the removal of 'kiss and ride facilities' at the light rail. There is also a pre-DA application for 120 units on William Street which is not taken into account in the EIS. This will place further stress on parking. The EIS needs to outright prohibit any worker parking on local streets.

Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Suburb: LEICHWARDT Postcode: 2040

The substation and water treatment plant should be moved to the north end of the site near the City West link. This will mean that the site is less visible to residents and most pedestrian access is at this end. There are no homes that will have direct line of site of the facility if it is moved. This will also enable direct pedestrian access to the light rail without the need to use the winding path at the rear of the site which creates safety issues and adds to the time required to access the light rail stop.

The site should be returned to the community as compensation for the imposition of this construction site in our neighbourhood for a 5 year period. If the substation and water treatment plant is moved to the north of the site, then the lower half of the site (which is the most accessible end) could be converted into open space with mature trees planted. As this is immediately adjacent to the bay run, bicycle parking and other facilities that support active transport could be included. This would result increase the green space for residents and result in a pleasant green environment for pedestrians, rather than a fenced facility.

The EIS currently permits trucks to access local roads in ‘exceptional circumstances’, which includes queuing at the site. Given the constraints of the site (and based on experience with cars accessing the site for Dan Murphy’s), queuing will be the norm and not the exception. The EIS needs to be amended to rule our queuing as an exceptional circumstance which allows trucks to use local roads.

All of the streets abutting Darley Road identified as NCA 13 (James Street to falls Street) should have a blanket prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. These streets are not constructed for heavy vehicle movements and on this basis should also be ruled out. The EIS needs to prohibit outright truck movements including parking) and worker parking on all of these streets.

The EIS needs to require that all workers are bussed in or use public transport such as the light rail with no parking whatsoever permitted on local roads at the Darley Road site. This is justified because the site provides 11 car spacers for an estimated 100 workers a day on site. The project cannot be approved on this basis without a strict requirement on workers to use public transport or project provided transport and a prohibition needs to be in place against parking on local streets. The EIS needs to require that this restriction is included in all contracts and in the relevant approval documentation.

The Darley Road site should be rejected because it involves acquiring Dan Murphy’s. This business was renovated and opened with full knowledge that it was to be acquired. The lessee and sub-lessees should not be permitted

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Name Email Mobile
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 Application, for the following reasons:

1. The business case for the project across the 3 stages failed to measure or account for the cost of any external impacts of this massive toll road project. This includes the impact of air pollution on human and environmental health; adding fossil fuel emissions thus contributing to global warming effects; and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people’s transport needs but instead enrich private corporations.

2. Deciding to build a three-stage tollway of the scale and complexity proposed and that has never been built before is placing the community at great risk and at the same time risking billions of public monies and resources. I strongly object to that fact that this risk has never been subjected to democratic decision-making despite being opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.

3. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1000s more per day onto the roads to the Airport which are already at capacity.

4. This EIS has been released only 14 days after submission of comments on the concept design closed and a report released after the EIS. It seems impossible that the community comments could have been reviewed, assessed and responses to be incorporated into the EIS in this time. This raises serious questions about the integrity of the entire EIS process.

5. I have strong objections to proceeding in the face of the unknown hazard associated with two different tunnelling operations taking place in close time and location - the tunnelling for the M4-M5 link and the proposed Sydney Metro tunnelling in the same area - Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond. The impact of this combined tunnelling is an unknown hazard to the soundness of the residences and buildings above, many of them very old and heritage listed. This is a serious community safety issue and residents who do experience damage will be caught between 2 separate contractors for repairs and compensation. No approval should be given

6. Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware Rd and Enmore Rd and though the streets of Erskineville and Alexandria. The increasing numbers of vehicles will mean more vehicle pollution in the area (known to have adverse effects on breathing and also to be carcinogenic).

7. The additional unfiltered exhaust stack on the north-west corner of the St Peters Interchange will increase the vehicle pollution in an area where the prevailing south and north-westerly winds sends that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This impact is both dangerous and unacceptable.

The people living near St Peters Interchange neither asked for nor want the whole WestConnex project which will not contribute to the provision of long-term sustainable transport to meet the community needs. At the same time, we will have to live and work with the impact of multiple years of construction, heavy vehicle traffic, noise and pollution, and local disruption possible damage to homes and business premises. I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area.

I object to the WestConnex M4-M5 Link proposals for the following reasons:  

1. The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted ‘strict limits on the degree of settlement permitted would be imposed on the project’ and ‘damage’ would be rectified at no cost to the owner. would be placed (Executive Summary, xvii–iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.  

2. There is no evidence provided in the EIS that the ventilation outlets will be date. The EIS simply states that ‘the ventilation outlets would be designed to effectively disperse the emissions from the tunnel and are predicted to have negligible effect on local air quality (xiv, Executive Summary). This is inadequate and details of the impacts on air quality need to be provided so that the residents and experts can meaningfully comment on the impact.  

3. The EIS states that ‘a preferred noise mitigation option’ would be determined during ‘detailed design’. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi)  

4. The EIS states that all vegetation will be removed on the site which includes a mature tree. I object to the removal of the tree which creates a visual and noise barrier for residents from the City West Link. If the tree is removed it must be replaced with a mature tree as soon as the remediation of the site commences.  

5. The proposal for a permanent water treatment plant and substation to the south of the site on Darley Road will prevent direct pedestrian access to the light rail station. It will affect the future uses of the site once the project is completed. The facility is out of step with the area which is comprised of low rise homes and detracts from the visual amenity of the area. This site is a pedestrian hub and will be a visual blight for pedestrians, bike users and the homes that have direct line of sight to the facility. It should not be permitted on this site.  

6. The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.  

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties
I submit my objection to the WestConnex M4-M5 Link proposals for the reasons stated below, and request the Minister reject the application entirely, and cause the proponents to reissue an EIS that is based on a fully researched, developed, and budgeted concept design, and require the proponents to prepare a new business case against that design.

- The nature of proposed “post-opening mitigation measures” (Page 223, Chapter 9.8, Appendix H) are unknown and their impacts could be significant including intersection and road widening (and associated property loss), banning parking in local centres, removal of trees, footpaths and cycling facilities. The people of NSW have a reasonable expectation to understand whether such impacts form part of the Project and they should be detailed in the EIS. They should not be left to a “wait and see” approach. Not only a proper analysis of demand, but also of traffic dispersion should be provided for connecting roads up to three kilometres from every exit and entry portal and the capacity of those roads analysed.

- Road congestion is reducing bus performance and reliability. The project will make it worse.

- The EIS says traffic on ANZAC Bridge will increase by 2023 (p.8-103).

- Traffic modelling shows bus times will be slower into the city in the morning (p.3-19).

- The EIS identifies capacity constraints on ANZAC Bridge (p3-19). This project will dump more traffic onto the ANZAC Bridge.

- The statements made that public transport cannot serve diverse areas are empirically incorrect. The area the Westconnex is being built in has higher public transport mode use than the Greater Metropolitan Area as noted in the IES.

- The EIS notes that the project design and land use forecasts have changed significantly since the Stage 2 and Stage 3 EIS. However the cumulative analysis does not quantify the expected change on those roads. The EIS only notes significant increases in traffic volumes.

- I object to the whole project but particularly the tolls which are unfair when people living west of Parramatta really need alternative to western neighborhoods north-south. If we had better public transport then many of us would not have to drive and this would reduce the traffic.

- The modelling has thousands of unreleased cars at key locations; i.e. in reality those unreleased vehicles would result in vehicle queues and or network failure.

- The strategic model (whole system) inputs traffic volumes that simply cannot be accommodated in the road interchanges and feeder routes. It is physically impossible to fit that amount of traffic on a road.
I submit my strongest objections to the M4-M5 Link proposals as contained in the EIS application # SSI 7485, and request the Minister to reject the application and require SMC / RMS to issue a true, not an 'indicative' and fundamentally flawed EIS.

The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.

I do not consider it acceptable that cycling/pedestrian routes should be changed for four years in Annandale and Rozelle in ways that will make cycling more difficult and walking less possible for residents with reduced mobility. These are vital community transport routes.

Rozelle Rail Yards will have 400 car parking spaces provided for workers(EiS). The daily workforce for these sites is stated to be approximately 550. This means that 150 vehicles will need to park in nearby local streets which are already over-subscribed during weekdays by commuters taking the light rail.

I am deeply disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.

There will be increases of noise in the area of Johnston St where traffic volumes will increase. Residents will be more susceptible to health impacts associated with increased noise. In the EIS it is stated that residents may have to keep their windows closed. They may well experience sleep disturbance and interference of living activities like eating outdoors. However the EIS considers this to be only moderately negative. This is not acceptable.

371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.

I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Tunnel vertical alignments:

In 5.3.6 of Chapter 5 the EIS states that 'the tunnels would generally have grades of less than four per cent. However, isolated locations connecting to the surface road network may require short lengths of steeper grades of up to eight per cent. These grades would generally match with existing conditions on local surface roads or are required to ensure appropriate ground conditions with no direct property impacts.'

In 2014 the RMS Advisory Committee on Tunnel Air Quality published a technical paper (TP09) 'Evolution of road tunnels in Sydney'. The paper highlights the key lessons learnt from over 20 years of experience in assessing and operating long road tunnels as it relates to the assessment, design and operation of ventilation systems to manage air quality in and around tunnels.

A key lesson learnt identified in the paper is the need to minimise the gradient of the tunnel.

'The M5 East has a gradient of eight per cent at the exit of the westbound tunnel. The increase in gradient resulted from a late design change to facilitate the placement of tunnel spoil between Bexley Road and King Georges Road. This was to substantially reduce the number of truck movements on local roads during construction.

The unintended consequence of this change was that vehicles exiting the west bound tunnel are under significant load with multiple consequences for air emissions. Firstly vehicle emissions per distance travelled significantly increase with increase in grade. This is especially the case for ladened heavy vehicles (eg trucks returning from the port). Secondly the steep grade slows down heavy vehicles which contribute to congestion throughout the west bound tunnel further adding to vehicle emissions as compared to free flowing traffic. Consequently the Cross City and Lane Cove tunnels were designed to
As a result of this analysis the RMS concludes that a key design requirement for new road tunnel projects is to minimise grades.

It is therefore astonishing that the proponent is now planning to ignore this advice and repeat the mistakes of the M5 and incorporate tunnels with inclines of up to eight per cent. These steep tunnels will have multiple direct impacts on air emissions.

- Vehicle emissions per distance travelled significantly increase with increase in grade. This is especially the case for laden heavy vehicles which the tunnel is intended to take off local roads and which are intended to be users of the tunnel
- The steep grade slows down heavy vehicles which will contribute to congestion further adding to vehicle emissions as compared to free flowing traffic.

In conclusion the proponent should be required to redesign the tunnels so that no gradient exceeds 4%. 
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

**Noise and disruption from construction:**

I object to the proposal for the Darley Road Civil and Tunnel Construction site at Leichhardt because of the noise and disruption impact it will have on residents during periods of extended construction.

The proponent has a very poor track record of managing the impacts of Stages 1 and 2 of this project. In addition the conditions of approval are so broad as to make enforcing compliance with Council or EPA regulations impossible. The protections for residents are ineffectual and the abuse of the Critical State Significant Infrastructure powers is continuous.

The reality for residents living with the Stages 1 and 2 of WestConnex is night after night of disruption and disturbance with no respite and no way of enforcing compliance. In addition, the policy for mitigation entitlements such as noise protection or respite accommodation is not transparent and is discretionary. Many residents especially the most vulnerable such as those in rental properties or in public housing are unwilling to complain about their situation.

In St Peters in mid-September 2017 the Stage 2 Joint venture’s contractors were digging up pipes all one weekend, resulting in two burst water mains. They worked through Saturday night until after 1am on Sunday morning when they should have finished at 6pm on Saturday. Many of the residents were without water for much of the weekend. On Monday night at 8.30pm RMS turned up unannounced with concrete saws and jackhammers. On Tuesday night, RMS were supposed to stop at 6pm but again the work until after midnight. A resident whose bedroom was right next door to the work, posted a video of the deafening concrete saws in use after midnight with the caption "It's impossible to live here at the moment". Many local residents are unaware of the construction impacts and that there will be months of construction work which will have to take place out of hours. The EIS does not specify which works to
The Department of Planning and Environment should oppose the approval of the Darley Road Civil and Tunnel Construction site at Leichhardt because alternatives are available which will have less impact on residents or which will impact fewer residents during the construction phase. These alternatives should be assessed. If not suitable then the proponent must do without a dive site. It is not acceptable to treat communities like this. The mistakes of Stages 1 and 2 should not be repeated.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Impact of MOC1 on local area:

I oppose the plan for a water treatment plant and an electrical substation to remain on the site of 7 Darley Rd Leichhardt after tunnel construction is complete.
This Motorway Operations Centre 1 (MOC1) is a completely inappropriate use of a site in a residential area with particular characteristics.

The character of Leichhardt is heavily influenced by the street pattern (predominantly north/south extending from Parramatta Road) and built form. The wide carriageways and regular street pattern combined with the topography and a predominance of single storey detached housing gives Leichhardt a more open character than that of Glebe or Annandale.

The suburb is made up of several distinctive residential neighbourhoods including Excelsior Estate, Helsarmel, Piperston and West Leichhardt.

The subject site is within the Helsarmel Distinctive Neighbourhood that is located on the northwest slope of the Leichhardt/Balmain ridge. The Helsarmel Distinctive Neighbourhood is predominated by low scale detached and semi-detached cottages that demonstrated a variety of architectural styles and building materials. Many of these dwellings are Federation or post-war styles, with scattered examples of Californian bungalows and workers cottages.

The desired future character as set out by Council is to maintain the character of the neighbourhood by keeping development complementary in architectural style, form and materials and preserve the low scale cottage character. The suburb profile allows for contemporary development that is complementary to the streetscape.
The MOC1 proposal for a tunnel water treatment plant and an electrical substation is inconsistent with the character of the neighbourhood. This is a residential neighbourhood and what is proposed will permanently degrade our neighbourhood. MOC1 will be a prominent and unwelcome eyesore.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt and the proposed Motorway Operations Centre 1.

The proponent should identify alternatives locations for water treatment and a substation including at the alternative dive site locations.

The proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Noise and disruption from construction:

I object to the proposal for the Darley Road Civil and Tunnel Construction site at Leichhardt because of the noise and disruption impact it will have on residents during periods of extended construction.

The proponent has a very poor track record of managing the impacts of Stages 1 and 2 of this project. In addition the conditions of approval are so broad as to make enforcing compliance with Council or EPA regulations impossible. The protections for residents are ineffectual and the abuse of the Critical State Significant Infrastructure powers is continuous.

The reality for residents living with the Stages 1 and 2 of WestConnex is night after night of disruption and disturbance with no respite and no way of enforcing compliance. In addition, the policy for mitigation entitlements such as noise protection or respite accommodation is not transparent and is discretionary. Many residents especially the most vulnerable such as those in rental properties or in public housing are unwilling to complain about their situation.

In St Peters in mid-September 2017 the Stage 2 Joint venture’s contractors were digging up pipes all one weekend, resulting in two burst water mains. They worked through Saturday night until after 1am on Sunday morning when they should have finished at 6pm on Saturday. Many of the residents were without water for much of the weekend. On Monday night at 8.30pm RMS turned up unannounced with concrete saws and jackhammers. On Tuesday night, RMS were supposed to stop at 6pm but again the work until after midnight. A resident whose bedroom was right next door to the work, posted a video of the deafening concrete saws in use after midnight with the caption "It's impossible to live here at the moment".

Many local residents are unaware of the construction impacts and that there will be months of construction work which will have to take place out of hours. The EIS does not specify which works to establish the site will take place during standard construction hours.
The Department of Planning and Environment should ensure that the conditions of any approval are stringent and should require the proponent to pay a predetermined amount of ex gratia payment to residents for each night of disturbance.

This should be sufficiently high to deter extended periods of out of hours work at the Darley Road Civil and Tunnel Construction site at Leichhardt.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Noise and disruption from construction:

I object to the proposal for the Darley Road Civil and Tunnel Construction site at Leichhardt because of the noise and disruption impact it will have on residents during periods of extended construction.

The proponent has a very poor track record of managing the impacts of Stages 1 and 2 of this project. In addition the conditions of approval are so broad as to make enforcing compliance with Council or EPA regulations impossible. The protections for residents are ineffectual and the abuse of the Critical State Significant Infrastructure powers is continuous.

The reality for residents living with the Stages 1 and 2 of WestConnex is night after night of disruption and disturbance with no respite and no way of enforcing compliance. In addition, the policy for mitigation entitlements such as noise protection or respite accommodation is not transparent and is discretionary. Many residents especially the most vulnerable such as those in rental properties or in public housing are unwilling to complain about their situation.

In St Peters in mid-September 2017 the Stage 2 Joint venture’s contractors were digging up pipes all one weekend, resulting in two burst water mains. They worked through Saturday night until after 1am on Sunday morning when they should have finished at 6pm on Saturday. Many of the residents were without water for much of the weekend. On Monday night at 8.30pm RMS turned up unannounced with concrete saws and jackhammers. On Tuesday night, RMS were supposed to stop at 6pm but again the work until after midnight. A resident whose bedroom was right next door to the work, posted a video of the deafening concrete saws in use after midnight with the caption "It's impossible to live here at the moment". Many local residents are unaware of the construction impacts and that there will be months of construction work which will have to take place out of hours. The EIS does not specify which works to
establish the site will take place during standard construction hours. The Department of Planning and Environment should ensure that the conditions of any approval are stringent and prohibit out of hours work at the Darley Road Civil and Tunnel Construction site at Leichhardt for more than 2 nights in a row and in any two week period.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reasons set out below.

Darley Road Civil and Tunnel Construction – Traffic:

I object to the Darley Road Civil and Tunnel Construction site at Leichhardt because of the impact it will have on traffic, parking and local residences.

The grounds on which I am objecting were also the grounds for rejecting a previous development on this site, which was only approved by the Land and Environment Court with strict conditions.

On 5 December 2006 the Building & Development Council of Leichhardt Council refused Development Application D/2006/311 in relation to 7 Darley Road, which was an application for alterations and additions to existing building and change of use of existing building for use as a liquor store, cafe/deli and commercial office space, new landscaping and signage. Hundreds of local residents had lodged objections to the DA. One of the grounds on which the application was refused was that the RTA did not support the access arrangements and would not allow right hand turns into the site, which is precisely what the proponent is now proposing.

The following extract from the decision sets out why the RTA objected to the DA:

“The application has proposed a number of traffic management measures along Darley Road, included painted median islands.

The RTA does not support the access arrangements as proposed and has advised that it is likely to create conflicts at the shared entry/exit near Hubert Street. It has been recommended that there be separate entry and exit driveways, with the entry nearest to Charles Street, and the exit at the driveway crossing near Hubert Street.”
The RTA has advised that these driveways must be physically restricted with left-in/left-out movements through the provision of 900mm wide concrete median islands, covering the width of each driveway and extend to a distance of 10 metres either side of each driveway crossing. The parking area along the eastern section of the site must also be restricted to left-in/left-out movements.

On the advice of the RTA, no right-turn into the site is then possible, potentially encouraging west-bound traffic on Darley Road to conduct ‘U-turns’ at the Charles Street intersection to access the carpark, creating a conflict at that point.

Council’s engineers have advised that the proposed traffic management works on the Darley Street frontage have a number of deficiencies including:

- Traffic lanes on the southern side of Darley Street would be relocated onto the existing parking lane which is geometrically unsuitable and unsafe for vehicular traffic.
- The proposed kerbside traffic lane on the southern side of Darley Street would conflict with existing stormwater drainage inlet structures. Significant drainage works would be required to address this issue without exacerbating existing flooding problems in this area.

Advice from the RTA has also noted the unsuitability of the existing kerbside parking and bicycle lanes for a through lane due to its cross-fall.

The RTA have further advised that the bicycle lane along Darley Road must be retained, and that no objections are raised to the proposed pedestrian refuge, subject to compliance with the relevant Australian standards.

The RTA also raised objections in relation to traffic that the bottleshop development would generate:

“It is expected that the peak traffic generation periods for the development would be Friday evenings and Saturdays, with Thursday evening also busy. Conflict with the morning peak hour is therefore expected to be limited. It is noted that the traffic surveys were conducted prior to the closure of Moore Street West, Leichhardt.

Anecdotal evidence has suggested that traffic flow has increased on east-west thoroughfares such as Darley Road and Marion Street since the closure.

Traffic generation figures supplied in the traffic report initially submitted to Council were derived strictly from the amount of car parking provided on the site.

The revised traffic generation figures provided as a result of the additional parking provided on
the site. It has factored that 35% of traffic to the site are passing trips. It has not accounted for spill-over traffic that cannot be accommodated on the site.

These figures would appear to conflict with statement within the Social Impact Assessment (SIA) that was submitted to the LAB for approval. This document indicates that the ‘catchment’ for the proposed liquor outlet is considerably larger and it states “In contrast Dan Murphy’s OLR’s are larger format destination stores designed to appeal to a regional market ...”

It has also been noted that the proposed liquor store alone would expect up to sixty (60) deliveries a week.

The study derives that the likely additional traffic on the local network would be:

- Thursday evening – some 150 vehicles/hour (in + out)
- Friday evening - some 156 vehicles/hour (in + out)
- midday - some 228 vehicles/hour (in + out)

Of particular concern in this regard is that the ‘No stopping’ restriction required by the RTA for the northern side of Darley Road during the Thursday and Friday evening peaks, which may funnel overflow parking into the surrounding residential streets. Furthermore, the substantial increase in traffic flow at the Saturday peak may result in significant queuing at the City-West intersection as all vehicles are forced to left-turn exiting the site.

On the basis of the above, the proposal is considered unsatisfactory when having regard to traffic and parking impacts.”

It is clear that the same traffic impacts raised by the RTA will be a consequence of the Darley Road Civil and Tunnel Construction site at Leichhardt yet the proponent has failed to provide any detail about these impacts or how the proponent will manage these.

The proponent’s plan to bring 100 trucks a day into the site will result in significant queuing at the City-West intersection yet the proponent has failed to provide any detail about these impacts or how the proponent will manage these.

The removal of 20 parking spaces Darley Rd and the absence of a worker parking plan will funnel overflow parking into the surrounding residential streets which are already at parking capacity yet the proponent has failed to provide any detail about these impacts or how the proponent will manage these.

The following points of concern were also raised in the Council’s rejection of the bottleshop DA:
“Traffic and parking impact on Darley Road and the surrounding residential street network/vehicular – pedestrian conflict, especially with school children/ increase noise from traffic movements and truck loading and unloading.

The increase in traffic movements to the site are likely to have an undue acoustic impacts on the dwellings located opposite site, particularly as a result of late-night movements.

The proponent has failed to adequately address the fact that the Darley Road Civil and Tunnel Construction site at Leichhardt will have the same impacts of

- Traffic and parking impact on Darley Road and the surrounding residential street network
- vehicular – pedestrian conflict, especially with school children/
- increase noise from traffic movements and truck loading and unloading.

The proponent has failed to address the fact that the increase in traffic movements to the site are likely to have an undue acoustic impacts on the dwellings located opposite site, particularly as a result of late-night movements. The proponent plans to have workers on site 24/7. Late night and out of hours comings and goings by vehicle are to be expected yet the proponent has failed to address the impact of these vehicle movements on local residents.

The site should not be permitted to operate outside of standard constructions hours because of the noise impacts from construction vehicles, delivery vehicles and worker transportation vehicles.

The following Traffic Management deficiencies were also raised in the Council’s rejection of the bottleshop DA:

“The proposed Traffic Management works on the Darley Road frontage have a number of deficiencies including:

(a) Traffic lanes on the southern side of Darley Road would be relocated onto the existing parking lane which is geometrically unsuitable and unsafe for vehicular traffic.

(b) The proposed kerbside traffic lane on the southern side of Darley Road would conflict with existing stormwater drainage inlet structures. Significant drainage works would be required to address this issue without exacerbating existing flooding problems in this area.

(c) The access arrangement for the parking area on the western side of the site will create traffic conflict at the shared entry/exit driveway near Hubert Street.

(d) The application would result in the loss of on-street parking spaces on the southern side of Darley Road.

(e) The applicant has not sufficiently demonstrated that the traffic management proposal complies with the RTA requirements for works on a State Road.

(f) The site plans do not adequately address internal vehicle manoeuvring for large trucks accessing the 2 loading docks.
The application has failed to demonstrate how the existing bicycle lane would be maintained.

The application has failed to demonstrate that the proposal would not have an undue increase in traffic generation along Darley Road and the surrounding residential street network.

(a) The applicant has not sufficiently demonstrated assumptions made in their report regarding parking demand and traffic generation.
(b) The traffic generation assumption for passing or redistributed trips is not validated.
(c) The design does not adequately address the impacts from vehicle queuing in Darley Road.”

The same deficiencies are present in the proponent’s EIS and the Darley Road Civil and Tunnel Construction site at Leichhardt should be rejected on the same grounds:

- the construction works will conflict with existing stormwater drainage inlet structures which will exacerbating existing flooding problems in this area.
- The access arrangement for the site will create traffic conflict at the shared entry/exit driveway near Hubert Street.
- The application would result in the loss of on-street parking spaces on the southern side of Darley Road.
- There is no traffic management proposal.
- The proponent has failed to demonstrate how the existing bicycle lane would be maintained.
- The proponent has failed to demonstrate that the proposal would not have an undue increase in traffic generation along Darley Road and the surrounding residential street network.
- The proponent has failed to adequately address the impacts from vehicle queuing in Darley Road.”
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Traffic and transport – hours of operation for spoil removal:
I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent has failed to comply with the SEARS which require that the Proponent must assess construction transport and traffic (vehicle, pedestrian and cyclists) impacts in relation to access constraints and impacts on public transport, pedestrians and cyclists.

The proponent’s failure stems from its contradictory and inconsistent assessment of the impacts of spoil removal from the site. In 8.3.1 of the EIS the proponent states that ‘Where practical, spoil would be removed during the day, outside of peak periods.’

This is completely at odds with the proponents own figures for heavy vehicle movements in peak hour. In Table 8.42 Indicative daily and peak period construction traffic volumes it is indicated that there will be 14 heavy vehicle movements in the AM and PM peak. This is a spoil truck movement every 4 minutes. If the EIS is approved as is then the proponent’s contractor will be permitted to remove spoil during peak periods and would have no constraints on the number of truck movements per hour.

No doubt in order to complete the project on time the contractor will have the maximum number of truck movements possible regardless of the impact on residents.

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because spoil trucks on Darley Rd will create traffic congestion during peak times (which are in actual fact longer than the peak hours on which the proponent bases its analysis).

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because spoil trucks on Darley Rd will create traffic queues and will increase traffic through local streets. The proponent is the guardian of the road network and knows that this will be the result.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Alternatives have been identified which will allow spoil haulage directly onto the City West Link and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Traffic and transport - use of local roads by heavy vehicles:

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent has failed to comply with the SEARS which require that the Proponent must assess construction transport and traffic (vehicle, pedestrian and cyclists) impacts in relation to access constraints and impacts on public transport, pedestrians and cyclists.

In Note 1 to Table 8-43 ‘Indicative access routes to and from construction ancillary facilities’ the proponent states that ‘Some use of local roads by heavy vehicles delivering materials and/or equipment may also be required, however this would be minimised as far as practicable.’

The experience of residents in local streets near other tunnel construction sites such as the streets near the M4 East site at Northcote St Haberfield is that heavy and light vehicles use these local streets and cause a high level of adverse impact. The complaints relate to construction vehicles parking out local residents, idling engines, using local roads after hours and carrying rattling loads that increase the noise impact to residents.

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because if it is allowed to proceed then it is inevitable that residents of Charles St, Hubert St and Francis St, which are quiet residential streets, will experience these same very adverse impacts. Once approval is given residents will not be able to enforce a minimal level of use of local roads by light or heavy vehicles associated with the Civil and Tunnel Construction site at Darley Road. It is inevitable that minimal use will become standard use. The contractor who is appointed to the project will be allowed to use local roads and will not be able to stop sub-contractors using local roads.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Alternatives have been identified which would avoid or minimise the use of local streets and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

**Traffic and transport - construction worker parking:**

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent has failed to comply with the SEARS which require that the Proponent must assess construction transport and traffic (vehicle, pedestrian and cyclists) impacts in relation to the nature of existing traffic (types and number of movements) on construction access routes (including consideration of peak traffic times and sensitive road users and parking arrangements).

In 8.3.1 of the EIS the proponent states that a car parking strategy would be developed as part of the Construction Traffic and Access Management Plan (CTAMP) to limit impacts on parking for the surrounding communities.

‘The car parking strategy would include items such as forecasting of construction parking demand, review of existing parking supply and use on local streets in the area, impact on existing parking, consultation activities and proposed mitigation measures, such as management of workforce parking and transport, alternative parking arrangements and communication and engagement. This would include the identification of areas where there are high levels of existing parking demand around the construction ancillary facilities and works sites and identifying alternative car parking sites for use by the construction workforce. Processes for monitoring, reporting and corrective actions would also be part of the strategy.’

The proponent has failed to comply with the SEARS because it simply has not bothered to come up with a plan for worker parking. It is not good enough or acceptable to leave residents in the dark about such a significant impact of the proposal for a Civil and Tunnel Construction site at Darley Road Leichhardt. With its existing and current experience of operating similar sites for Stages 1 and 2 of the project the proponent should present its proposed Construction Traffic and Access Management Plan (CTAMP) as part of the EIS.
I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because there is no plan for worker parking and as a result the residents of Charles St, Hubert St, Darley Rd and Francis St will not be able to park on their streets and will be adversely impacted by worker parking.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Alternatives have been identified which provide adequate worker parking and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.

Signed: ___________________________ Date 13 October 2017

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reasons set out below.

Traffic and transport – new right hand turning lane on the City West Link to James St:

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent is planning to create a right hand turning lane on the City West Link to allow construction vehicles to turn right into James Street.

This is a dangerous proposal given that it involves turning into a steep blind corner which carries a high degree of risk of collision with oncoming vehicles and with pedestrians including the many school children who cross James St at this point.

It is reckless beyond belief to plan for large number of truck and dogs to make a right hand turn into James St from the City West Link. Even vehicles crossing the City West Link from the Lilyfield Rd side of the City West Link have a higher risk of collision or error due to the steep blind turn. This would be even higher when making a right hand turn into James St from the City West Link. This intersection is reported as being the third most dangerous for accidents in the Inner West.

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because a right hand turning lane on the City West Link to allow construction vehicles to turn right into James Street creates an unacceptable risk of death and bodily injury due to collision. The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Safer alternatives have been identified which will allow spoil haulage directly onto the City West Link and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Non-compliance with SEARS

I object to the proposal because it does not comply with the SEARS requirements. The EIS must include, but not necessarily be limited to, a description of the project and all components and activities (including ancillary components and activities) required to construct and operate it, including the location and operational requirements of construction ancillary facilities and access.

In so far as it describes the Darley Road civil and tunnel site (C4) at Leichhardt the EIS does not meet this requirement because it does not describe the components and activities that have been described to the community either in meetings with LAW (Leichhardt Against WestConnex) or at the WestConnex Community Reference Group established by Sydney Motorway Corporation.

The EIS has been released before the proponent is able to describe how it actually plans to carry out construction activities at Darley Road, Leichhardt, in particular the plan for staging the arrival of spoil trucks.

The proponent via its agent Sydney Motorway Corporation’s employee Peter Jones has advised on several occasions that spoil haulage trucks will be staged from the Sydney Ports land on Glebe Island via James Craig Rd. This is to avoid the situation at Haberfield where trucks circle the Northcote St site as they are not able to queue to enter it creating congestion and noise impacts as they drive slowly into Wattle St and Ramsay St. before making a second run at the Northcote St site from the Parramatta Road entrance.

No details of this staged spoil haulage proposal at Darley Road, Leichhardt are provided other than that ‘construction traffic may also access the Darley Road civil and tunnel site (C4) at Leichhardt via the westbound lanes of City West Link’.

Peter Jones from Sydney Motorway Corporation has advised that he is in the process of finalising an agreement with Sydney Ports which will enable him to stage trucks from a location on Glebe Island via James Craig Rd. The EIS should not have been released before this plan was finalised. Peter Jones has advised that he is only required to describe the ‘worst case scenario’ in the EIS, which is trucks arriving ad hoc via the eastbound lanes of City West Link. The EIS should describe what the proponent actually plans to do as well as the worst case scenario so that the impacts of all options being considered can be assessed and commented on.

It is not clear from the EIS how the alternative plan for the staged arrival of spoil trucks from Sydney Ports will be documented and how stakeholders will have an opportunity to assess its impacts. The EIS does not specifically state that this staged arrival plan will be documented in the CTAMP, the Ancillary Facilities Management Plan or the Preferred Infrastructure Report.

I object to the EIS on the grounds that it does not comply with the SEARS.

Construction vehicle safety impacts

I object to the EIS because the proposal in relation to the Darley Road civil and tunnel site (C4) at Leichhardt stated therein, that “heavy vehicles associated with spoil haulage would travel eastbound on City West Link and turn right into Darley Road, Leichhardt’ presents unacceptable safety and amenity impacts.

The corner of Darley Rd (actually James St) and the City West Link is a pedestrian zone for:

- Pupils of Orange Grove Public School who live in Leichhardt
- Students of Sydney Secondary College, Leichhardt Campus who alight at Leichhardt North light rail stop
- Students of other schools along the light rail who board at Leichhardt North light rail stop
- Commuters who board at Leichhardt North light rail stop
- Residents walking to Leichhardt Park Aquatic Centre and adjacent sporting facilities
- Residents walking to the Orange Grove markets on Saturdays

The proponents plan brings pedestrians and school children in particular directly into the path of spoil haulage trucks at an intersection found to be the third most dangerous according to Transport for NSW figures.

A further impact will be to discourage people from walking in this area leading to greater car use for local trips.

I object to the Darley Road civil and tunnel site (C4) at Leichhardt on the above grounds.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Noise impacts

- I object to the EIS because the proponent has not provided details of the noise mitigation measures proposed in relation to the Darley Road civil and tunnel site (C4) at Leichhardt. As a result it is not possible to assess the noise impacts of the Darley Road civil and tunnel site (C4) at Leichhardt. It is unacceptable for the proponent to establish a major construction site in the middle of a residential area without a clear plan for mitigating noise impacts.

  The EIS states in 6.5.8 Darley Road civil and tunnel site (C4) that:

  'Acoustic barriers and devices at the access tunnel entrances would be considered and implemented where reasonable and feasible to minimise potential noise impacts associated with out-of-hours works within the tunnels. In addition, temporary noise mitigation measures may include noise barriers and other temporary structures such as site buildings, which would be provided to minimise noise impacts on surrounding properties.'

  Darley Road civil and tunnel site (C4) will create a high level of noise impact for residents yet the proponent has not given details of the plan for mitigating this impact. The measures will be implemented only if ‘reasonable and feasible’ which is a subjective assessment as it does not state whether they will be assessed as reasonable from the standpoint of the proponent or the residents. What the proponent thinks is reasonable may not meet the residents expectation as to what is reasonable. The measures appear to be optional as the proponent only states that they may include noise barriers and other temporary structures such as site buildings'.

- I object to the EIS because the proponent has failed to take account of the fact that the demolition of 7 Darley Road, Leichhardt will remove a significant noise barrier to traffic noise from the City West Link. This will mean increased traffic noise impacts to the residents of Darley Rd, Francis St, Hubert St and Charles St.

- I object to the EIS because the proponent has failed to take account of the noise impact of fully laden spoil haulage trucks exiting the Darley Road civil and tunnel site (C4) at Leichhardt driving up the very steep blind turn at the intersection with the City West Link. The RMS should install noise measuring equipment and monitoring cameras at this location to measure noise from heavy vehicles and identify vehicles whose noise that exceeds the applicable Australian standard.

- I object to the EIS because the proponent has failed to take account of the noise impact of spoil haulage trucks using air brakes on the descent down Darley Rd off the City West Link. Heavy vehicle drivers should avoid using exhaust brakes, engine compression or 'jake' brakes near residential areas and noise-sensitive areas such as hospitals and schools, unless they are necessary for safety reasons. RMS should implement noise limits from engine compression brakes and should use roadside noise 'cameras' as an aid to enforcement at every location where WestConnex vehicles emitting engine compression brake noise might affect nearby communities.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Noise impacts

I object to the Darley Road civil and tunnel site (C4) at Leichhardt because engine noise from the trucks approaching the intersection up the grade would be a constant source of annoyance to residents of Darley Road down to its intersection with Charles Street.

The independent engineer engaged by the Inner West Council Jim Holt also came to this conclusion in his report to the Council. SMC have not recognised this impact in the EIS. They sent a response to the Council as follows:

Response: Noise from construction traffic using the public road network is assessed under the Roads and Maritime Noise Criteria Guideline (NCG), which documents Roads and Maritime’s approach to implementing the Road Noise Policy (RNP). Under the NCG, an initial screening test is carried out to determine whether noise levels would increase by more than two decibels (dBA). This represents an increase in the number of vehicles of approximately 60 per cent due to construction traffic or a temporary reroute due to a road closure. Where increases are 2dBA or less, then further assessment is required as noise level changes would most likely not be perceptible to most people. Where noise levels increase by more than 2dBA (i.e. 2.1 dBA or greater) further assessment is required using criteria presented in the NCG.

Darley Road is currently being used by heavy vehicles and light commercial vehicles (construction, delivery etc) that contribute to background noises. The predicted traffic noise increase (dBA) at the Darley Road site is around 0.5dBA.

You do not need to be an acoustic engineer to know that truck and dogs are very noisy and that local residents will be impacted greatly, especially those close to where trucks will be accelerating and decelerating. Darley Road, Leichhardt is not currently experiencing 14 truck and dog movements an hour during peak time stated in the EIS and an unknown (but presumably greater) number of truck movements within off peak construction hours. This is a truck movement every 3-4 minutes during peak. Assuming that they will increase truck movements during off peak residents can expect a truck every 2-3 minutes. We do not need a screening test or assessment to tell us that residents will be subjected to extreme levels of truck noise.

SMC’s response does not acknowledge this and does not refute Jim Holt’s conclusion that residents will be impacted. SMC’s response like the proponent’s EIS fails to acknowledge the true impact of the Darley Road civil and tunnel site (C4) at Leichhardt.

The residents of Darley Rd, Francis, Hubert and Charles St have little acoustic protection against the noise of truck engines, exhaust and brakes and non is contemplated in the EIS.

I object to the Darley Road civil and tunnel site (C4) at Leichhardt because the truck noise impacts for residents will be too great for the extended period of construction involved and the Darley Road civil and tunnel site (C4) at Leichhardt should be rejected on this basis.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Cumulative impacts of aircraft emissions and spoil truck emissions

- I object to the EIS because the proponent has failed to take account of the cumulative impact of emissions from spoil truck vehicles from its proposed Darley Road, Leichhardt civil and tunnel site operations and emissions from aircraft to which residents near the site are already exposed.

The attached extract from Webtrak shows that Darley Road, Leichhardt and adjacent streets are directly under the flight path.

Airplane exhaust, like car exhaust, contains a variety of air pollutants, including sulfur dioxide and nitrogen oxides. Many of these particles of pollution are tiny, about a hundred millionths of an inch wide, or smaller than the width of a human hair. So-called particulate matter that's especially small is the main culprit in human health effects, especially since the particulates can become wedged deep in the lung and possibly enter the bloodstream, scientists say.

Exposure to loud noise from living under a flight path over a long period of time may increase the risk of developing high blood pressure or having a stroke, a 2013 study by researchers at the University of Athens suggests.

Researchers examined data from 420 people living near busy Athens International Airport in Greece and found living with high noise levels from aircraft, especially at night, was associated with high blood pressure.

Every additional 10 decibels of night-time aircraft noise appeared to result in a 69 per cent increased risk of high blood pressure, also known as hypertension.

The researchers at the University of Athens found that around half the participants (just under 45 per cent) were exposed to more than 55 decibels of daytime aircraft noise, while around one in four (just over 27 per cent) were exposed to more than 45 decibels of night-time aircraft noise.

Only around one in 10 (11 per cent) were exposed to significant road traffic noise of more than 55 decibels.

Between 2004-6 and 2013, 71 people were newly diagnosed with high blood pressure and 44 were diagnosed with heart flutter (cardiac arrhythmia), while a further 18 had a heart attack, the researchers found.

I object to the plan for a construction site on Darley Rd because in addition to the existing aircraft emissions and noise experienced by people living near the site, this will mean an additional cumulative impact of spoil truck diesel exhaust emissions and noise every 4 minutes in peak hour based on number of truck movements per hour and in excess of every 4 minutes per hour in non-peak permitted construction hours. This will give rise to increased health risks from noise and air pollution which research suggests will cause increased blood pressure and risk of stroke.
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

**Noise impacts**

- The proponent has identified that the most affected receivers are residential receivers which adjoin the Darley Road civil and tunnel site (C4) at Leichhardt on Darley Road between Norton Street and Falls Street. The most noise affected receivers are located between Charles Street and Norton Street due to their proximity to the construction site.

  The proponent has identified that the worst case construction scenario will occur during:
  - Road adjustments works
  - Spoil handling works within the acoustic shed during all works periods

  **Highest construction noise impacts:**
  - Use of a rock breaker during the daytime period as part of the demolition works
  - Use of a road profiler during the night-time period as part of the road adjustment works

  I object to the EIS because the proponent provides that spoil handling works within the acoustic shed will take place for the duration of the construction phase which could be up to two to three years' duration, yet there is no clear plan for measures that will be taken to minimise noise impacts.

- Many residents in Charles St and Hubert St were highly affected by noise from works conducted during the renovation of 7 Darley Rd in 2016. In Hubert St, residents at least as far as No 31 and No 32 Hubert St were affected. The affected properties are not correctly reflected in the EIS.

  I object to the EIS because it underestimates the number of residents that will be highly affected by noise. It does not take account of the impact of vehicle noise from fully laden spoil trucks driving up the very steep incline from Darley Rd to the City West Link. It does not take account of the noise impact of vehicles using air brakes down the same incline and braking to enter the site.

- I object to the EIS because the proponent incorrectly asserts construction traffic is unlikely to result in a noticeable increase in LAeq noise levels at receivers along the proposed construction traffic routes (Darley Road, Leichhardt and City West Link). This does not take account of the impact of vehicle noise from fully laden spoil trucks driving up the very steep incline from Darley Rd to the City West Link. It does not take account of the noise impact of vehicles using air brakes down the same incline and braking to enter the site. The impact of these will be substantial.

  Commercial trucks are very loud; a standard diesel engine produces approximately 100 decibels (dB) of noise.

  Engine braking noise can be disturbing both because it is loud and also as it has a distinctive characteristic modulation. Engine braking noise is caused by pulses of gases being emitted from the truck exhaust system, giving a 'machine gun' sound.

  I object to the Darley Rd site because of the level of noise that the trucks will cause.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Truck routes

- **I object** to the EIS because it suggests that no local roads would be used by heavy vehicles during works yet at the same time acknowledges that spoil trucks may use local roads in exceptional circumstances which include when there is queuing to get into the site. Darley Rd is highly congested with traffic queues forming during much of the day which will lead to queues to enter the site. Queuing will not therefore be an exceptional circumstance and the result will be that spoil trucks are able to use local roads without being in breach, which will be often. This is unacceptable to residents of Francis, Hubert, William and Charles St and I object to the EIS on this basis. As queuing cannot be avoided on Darley Rd this clearly shows why this location is inappropriate. The proponent should abandon a dive site completely or find a location directly on the City West Link where spoil trucks will never use local roads. Why should residents lives be put at risk because the project must be delivered as soon as possible?

- **I object** to the EIS because it fails to describe the truck route options available to the proponent in relation to the Darley Rd site, which SMC have on many occasions told the community they are contemplating as alternatives.

  The EIS states in 6.5.8 Darley Road civil and tunnel site (C4) that ‘It is anticipated that the majority of construction traffic would enter the site from the southern (westbound) carriageway of Darley Road, Leichhardt via new driveways. Heavy vehicles associated with spoil haulage would travel eastbound on City West Link and turn right into Darley Road, Leichhardt: A temporary right turning lane at the intersection of City West Link and Darley Road, Leichhardt would be provided for use by construction vehicles. Heavy vehicles would exit the site by turning left onto Darley Road, Leichhardt before turning left onto City West Link.

  ‘Construction traffic may also access the Darley Road civil and tunnel site (C4) via the westbound lanes of City West Link.’

  ‘Temporary traffic management measures would be established to enable access and egress arrangements. These would be detailed in a CTAMP, which would be prepared to manage construction traffic associated with the project.’

I object to the proposal for vehicles associated with spoil haulage to travel eastbound on City West Link and turn right into Darley Rd. This proposal is dangerous and the impacts and risks are too great. Darley Rd is acknowledged by RMS to be a sub-standard road in terms of its construction. The intersection from the city west link is a steep blind turn even for traffic coming across from James St. This is followed by immediate left hand turns into both Francis St and Hubert St. A number of properties on Darley Rd would be at risk of destruction from spoil haulage trucks in the event of a truck having to brake suddenly to avoid stationary vehicles.

The proponent should abandon a dive site completely or find a location directly on the City West Link where spoil trucks will never use local roads. Why should residents lives be put at risk because the project must be delivered as soon as possible?

- **I object** to the EIS because it fails to describe the truck route options available to the proponent in relation to the Darley Rd site and instead allows for the final plan to be detailed in the CTAMP, PIR or AFMP on matters which will have a devastating impact to me and to residents near 7 Darley Rd.

Peter Jones of SMC has on many occasions made representations to the community that his plan is to stage trucks from the port and eventually when possible to have them arrive and depart from the site underground when a tunnel is established between Leichhardt and the M4 East. He has also said that loading of spoil would take place underground at this time. He has recently told us of his plan to load trucks from a ramp off the city west link by means of a hopper conveyor which would pass over the Light rail station delivering spoil into silos below which trucks would pull up to receive their load. The laden trucks would then travel west bound along the city west link. None of this plan is detailed in the EIS.

I object to the fact that I am denied the opportunity to assess the impacts of all options. I object to the fact that I will have no right or opportunity to have input into the CTAMP, PIR or AFMP on matters which will have a devastating impact to me and to residents near 7 Darley Rd.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Hours of operation

- I object to the EIS because it is effectively a 24 hour operation despite the fact that the proponent represents that spoil removal from this site would only occur within standard construction hours.

The EIS states in 6.5.8 Darley Road civil and tunnel site (C4):

'Spoil handling associated with tunnelling supported by the Darley Road civil and tunnel site would occur 24 hours a day, seven days a week. Spoil would be handled below ground wherever practicable to reduce the potential for amenity impacts in adjacent areas. Spoil handling at the surface outside standard day time construction hours would occur within an acoustic shed to manage potential amenity impacts. Spoil removal from this site would only occur within standard construction hours, between 7.00 am and 6.00 pm Monday to Friday, and between 8.00 am and 1.00 pm on Saturdays.'

The EIS allows for the possibility of spoil handling above ground 24 hours 7 days a week. The EIS fails to assess or explain the impacts of this on the residents in nearby streets. These impacts could include construction noise, light and heavy vehicles (other than spoil trucks), workers arriving for shifts and leaving after shifts. It is not clear to what extent the acoustic shed will contain noise. The Jim Holt report stated that the acoustic shed would not operate effectively due to its location on the site. It is not clear whether the proponent will mandate the contractor to employ the highest level of acoustic protection rather than what is feasible.

I object to the EIS and the Darley Rd construction site. The proponent should be directed to abandon its plan for a dive site as it is clear impacts are too great for the community. At the very least the site should be restricted to standard construction hours for all operations above ground and there should be no shifts commencing or ending outside of standard construction hours. The proponent should be directed to find a site where its operations will not impact on residents outside of standard construction hours.

- I object to the EIS because it is effectively a 24 hour operation despite the fact that the proponent represents that spoil removal from this site would only occur within standard construction hours. The EIS states in 6.5.8 Darley Road civil and tunnel site (C4):

'Reasonable and feasible work practices and mitigation measures would be implemented to minimise potential noise impacts due to activities occurring at the Darley Road civil and tunnel site. Local residents, businesses and the NSW EPA would be kept informed about works outside standard day time construction hours at the site.

The EIS allows for the possibility of spoil handling above ground 24 hours 7 days a week. The EIS fails to assess or explain the impacts of this on the residents in nearby streets. These impacts could include construction noise, light and heavy vehicles (other than spoil trucks), workers arriving for shifts and leaving after shifts. It is not clear to what extent the acoustic shed will contain noise. The Jim Holt report stated that the acoustic shed would not operate effectively due to its location on the site. It is not clear whether the proponent will mandate the contractor to employ the highest level of acoustic protection rather than what is feasible.

I object to the EIS because the proponent/contractor would only have to keep local residents, businesses and the NSW EPA informed about works outside standard day time construction hours at the site. Local residents, businesses and the NSW EPA would have no right to limit works outside standard day time construction hours at the site. As we have seen with other stages of WestConnex this leads to devastating impacts for residents who must endure significant periods of exposure to out of hours works which involve noise, lights and disturbance.

I object to the EIS and the Darley Rd construction site. The proponent should be directed to abandon its plan for a dive site as it is clear impacts are too great for the community. At the very least the site should be restricted to standard construction hours for all operations above ground and there should be no shifts commencing or ending outside of standard construction hours. The proponent should be directed to find a site where its operations will not impact on residents outside of standard construction hours.
I object to the plan for a construction site on Darley Rd because this will mean an additional cumulative impact of spoil truck diesel engine, exhaust and potentially air brake noise every 4 minutes in peak hour based on number of truck movements per hour and in excess of every 4 minutes per hour in non peak permitted construction hours.

Cumulative impacts of aircraft noise and construction noise

- I object to the EIS because the proponent has failed to take account of the cumulative impact of its proposed Darley Road, Leichhardt civil and tunnel site operations and the aircraft noise which the residents near the site already endure.

The attached extract from Webtrak shows that Darley Road, Leichhardt and adjacent streets are directly under the flight path.

Airservices Australia reports that in April to June 2017 the number of average daily noise events over 70 dBA in Leichhardt this is an average of 16-17 per hour over the peak morning period and 16 per hour in the early evening peak period.

I object to the plan for a construction site on Darley Rd because this will mean an additional cumulative impact of spoil truck diesel engine, exhaust and potentially air brake noise every 4 minutes in peak hour based on number of truck movements per hour and in excess of every 4 minutes per hour in non peak permitted construction hours.

• Traffic and transport – hours of operation for spoil removal

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent has failed to comply with the SEARS which require that the Proponent must assess construction transport and traffic (vehicle, pedestrian and cyclists) impacts in relation to access constraints and impacts on public transport, pedestrians and cyclists.

The proponent's failure stems from its contradictory and inconsistent assessment of the impacts of spoil removal from the site. In 8.3.1 of the EIS the proponent states that 'Where practical, spoil would be removed during the day, outside of peak periods.'

This is completely at odds with the proponents own figures for heavy vehicle movements in peak hour. In Table 8-42 Indicative daily and peak period construction traffic volumes it is indicated that there will be 14 heavy vehicle movements in the AM and PM peak. This is a spoil truck movement every 4 minutes. If the EIS is approved as is then the proponent's contractor will be permitted to remove spoil during peak periods and would have no constraints on the number of truck movements per hour.

No doubt in order to complete the project on time the contractor will have the maximum number of truck movements possible regardless of the impact on residents. I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because spoil trucks on Darley Rd will create traffic congestion during peak times (which are in actual fact longer than the peak hours on which the proponent bases its analysis).

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because spoil trucks on Darley Rd will create traffic queues and will increase traffic through local streets. The proponent is the guardian of the road network and knows that this will be the result.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Alternatives have been identified which will allow spoil haulage directly onto the City West Link and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Cumulative impacts of aircraft noise and construction noise

- I object to the EIS because the proponent has failed to take account of the cumulative impact of its proposed Darley Road, Leichhardt civil and tunnel site operations and the aircraft noise which the residents near the site already endure.

The attached extract from Webrak shows that Darley Road, Leichhardt and adjacent streets are directly under the flight path.

Airservices Australia reports that in April to June 2017 the number of average daily noise events over 70 dBA. In Leichhardt this is an average of 16-17 per hour over the peak morning period and 16 per hour in the early evening peak period.

I object to the plan for a construction site on Darley Rd because this will mean an additional cumulative impact of spoil truck diesel engine, exhaust and potentially air brake noise every 4 minutes in peak hour based on number of truck movements per hour and in excess of every 4 minutes per hour in non peak permitted construction hours.
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. **Leichhardt Environmental issues - Substation and water treatment plant**
   The EIS proposes that 'treated' water from the tunnel will be directly discharged into the stormwater drain at Blackmore oval. There are four long-standing rowing clubs in the vicinity of this location. This plan will jeopardise the integrity of our waterway and compromise the use of the bay for recreational activities for boat and other users. We object in the strongest terms to this proposal on environmental and health reasons.

2. **Presence of Substation and water treatment plant - Leichhardt**
   There is no detail in the EIS about the impact of the ongoing Motorway maintenance activities during operation provided (noise, vibrations, hours of operation, workers on site etc). The community therefore cannot comment on the impact that this permanent facility will have on the amenity of the area. The erection of this facility should not be approved in the basis that no information is provided and therefore impacts (on parking, safety, noise, amenity of the area) are not known.

3. **Out-of-hours and night work - Leichhardt**
   Because Darley Rd is highly congested during day time, it is likely there will be frequent out of hours and night work. The EIS as drafted effectively permits out of hours to be undertaken whenever this is convenient to the contractor. This will create an unacceptable impact on those living close to the site. The approval conditions need to prohibit out of hours and night work except in genuine exceptional circumstances (for example, a risk to life). It is unacceptable to not provide limits and clear rules on such work.

4. **Flooding – Leichhardt**
   The EIS states that there may be impacts from flooding which, amongst other things, may disrupt drainage systems. Darley Road is in a flood zone and there have been ongoing issues with flooding requiring remedial work. This proposal creates an unacceptable risk of flooding and associated damage and a major tunnelling site should not be permitted on this site on this ground. There is no detail as to how the issues with flooding at Darley Road will be managed and on their potential impact on the area.

5. **Disruption to road network – Leichhardt**
   The EIS states that there will be 'impacts' ‘that would affect the efficiency of the road network.’ No detail is provided in the EIS as to how cars will be able to access and cross the City West Link once 170 vehicles (heavy and light) access the site on a daily basis. It belies common sense how this can even be considered, given its impact on commuter times.

---

**Campaign Mailing Lists:** I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Address: 100 Francis Street
Suburb: Leichhardt Postcode 2040

Application Number: SSI 7485
Application Name: WestConnex M4-M5 Link

Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. Acquisition and demolition of Dan Murphys — I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the tax payer should not be left to foot the compensation bill in these circumstances. It is also wasteful that several million dollars was spent on renovations, for the entire structure to be demolished less than 18 months later.

2. Night works – Leichhardt. The EIS states that to minimize disruptions to traffic on the existing road network (including in peak hours) there will be night works where appropriate. Given the congested nature of Darley Road, it is likely there will be frequent night work (EIS, 6.4). This will create an unacceptable impact in residents. It is unacceptable that a highly unsuitable site has been selected. And, instead of a proper plan to manage traffic, the EIS contemplate work simply occurring at night. This is objected to in the strongest terms.

3. Additional facilities. The EIS states that the contractor may decide upon additional ‘construction ancillary facilities’ to the 12 identified in the EIS. The EIS should not be approved on the basis that there may be more unidentified sites taken, as residents will have no opportunity to comment on their impacts. The approval condition should limit any construction facilities to those already notified and detailed in the EIS.

4. Permanent substation and water treatment plant - Residents on Darley Rd opposite the site and residents in Hubert St will have a direct line of site to the Motorway operation infrastructure. The resultant impact is a permanent degradation of the visual environment, is a loss of amenity and is detrimental to the community. This facility should not be permitted in this location and the EIS needs to demonstrate why it is required at this site. If approved, the facility should be moved to the north of the site out of line of site of residents. The residual land should be returned for community purposes, such as green space, with future commercial uses ruled out. If the community is forced to endure 5 years of severe disruptions due to this toll road, the compensation should, at the very least, result in the land being returned to the community as green space.

5. Noise mitigation – Leichhardt. The noise mitigation proposed in the EIS is unacceptable. No detail of noise walls is provided, giving residents no opportunity to comment on whether final impacts are acceptable. This is despite the fact 36 homes are identified in the EIS as severely affected by construction noise. The acoustic shed proposed is of the lowest grade and does not cover the entire site, resulting in noise impacts from the movement of trucks in and out of the tunnel access point. The highest grade acoustic shed should be provided, with the shed covering the entire site. The additional noise mitigation such as noise walls, need to be set out in detail so that residents can properly comment on the impacts.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. **Construction hours – Leichhardt.** The EIS states that works affecting parts of the surface road network ‘subject to high traffic volumes’ will occur out of hours. As Darley Road falls into this category it is likely residents will be subjected to regular out of hours works. This is an unacceptable impact given the EIS provides for 10 weeks of surface works. Any approval conditions need to place a reasonable and enforceable limit on the number of nights of out of hours work.

2. **EIS is ‘indicative only’** The EIS states that the EIS is indicative only and can be subject to change by the contractor. In addition, the community will have no opportunity to comment on the detailed designs, nor on the preferred Infrastructure Report. The EIS should not be approved as it does not give the community a meaningful opportunity to comment on the impacts to which it will be subject to as a result of this project.

3. **Lack of information** The EIS sets out the ‘consultation’ which has occurred with the community over the past 12 months. However, these consultation sessions have not provided any meaningful information. And in the EIS no detail is provided as to how impacts will be managed. For example, the traffic will be subject to a traffic management plan. What is traffic cannot be managed to an acceptable level at Darley Road? The EIS does not provide any assurance that impacts such as congestion caused by the addition of 170 vehicle movements a day at the Darley Road site, will be managed to an acceptable level.

4. **Blackmore oval.** The EIS states that Blackmore Oval was not taken for this project as a result of feedback from the community. I understand that the site was unsuitable for tunneling as it suffered from flooding and was ruled out on this basis. The EIS should not contain misrepresentations such as this.

5. **Flooding – Leichhardt.** Darley Road and adjacent streets such as Hubert St are exposed to flood. The flood impact could be exacerbated by the disruption or blockage of existing drainage networks, which are risks identified in the EIS. The EIS has not assessed whether the identified risk to the existing drainage network will cause increased risk of flood damage to flood lots and it fails to take account of the Inner West Council’s Leichhardt Floodplain Risk Management Plan which contains recommended flood modification options. The EIS has not assessed whether its drainage infrastructure will impede Inner West Council’s Leichhardt Floodplain Risk Management Plan option HC_FM3 to lay additional pipes/culverts from Elswick Street to Hawthorne Canal (via Regent Street and Darley Road). RMS has not assessed whether its drainage infrastructure will impede Inner West Council’s Leichhardt Floodplain Risk Management Plan option HC_FM4 to lay additional pipes/ culverts from William Street to Hawthorne Canal via Hubert Street and Darley Road. The EIS should not be approved as it has not properly explained or assessed these impacts.

6. **Leichhardt North Light Rail –** The presence of hundreds of trucks and heavy machinery at the Darley Road site will make it difficult and hazardous for pedestrians to access the light rail. There is no detail in the EIS as to how this impact will be managed and the EIS should not be approved without properly identifying management strategies for this risk.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

Name: ___________________________ Email: ___________________________ Mobile: ___________________________
I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. **Traffic operational modelling – Leichhardt.** The EIS does not provide any operational modelling for the Darley Road area (8-11), despite the fact 170 vehicles a day are proposed to enter this highly congested (during peak hours) area. Darley Road is a critical arterial road for commuters accessing the City West Link and this analysis should be provided so that impacts can be properly assessed.

2. **Crash statistics – City West Link and James St intersection.** The EIS only analyses crash statistics near the interchanges. It does not provide any detail as to the number of crashes at the James St/City West Link intersection which, on Transport for NSW's own figures, is the third most dangerous intersection in the inner west. Nor does it comment on the two fatalities that occurred on Darley Road near the proposed construction site. The EIS needs to detail the increased risk in crashes that will be caused by the additional 170 vehicles a day that are proposed to enter and leave Darley Road during the construction period. The EIS needs to detail how this risk of crashes will be managed to an acceptable level, which it does not.

3. **Worker parking – Leichhardt.** There is provision in the EIS for only a dozen worker car parks and no provision for the 100 or so workers who will be permanently based at the Darley Road site for up to five years. A major construction site project should not be permitted in a neighbourhood area without allocated parking for all workers. No other business would be permitted to be established without this requirement being satisfied – why is it acceptable for this project? In addition, the EIS proposes the removal of 20 car spaces used by residents on Darley Road and will remove the ‘kiss and ride’ facility at the light rail stop. This will result in residents being unable to park in their own street and will increase noise impacts from workers doing shift changeovers 24 hours a day. The EIS needs to mandate the use of public transport or provide for workers to be bussed in if adequate allocated parking is not provided.

4. **Number of vehicle movements – Leichhardt.** The EIS states that there will be 170 heavy and light vehicle movements a day during construction (5 years). There is no guarantee that these figures are accurate as they are indicative only. The effect of these movements will be drastically increased commuter times for anyone accessing the City West Link during peak periods. The Darley Road site is equally busy on Saturday and this is not accounted for or acknowledged in the EIS. The EIS should not permit this number of vehicle movements and should be rejected on this basis as there is no plan as to how this will be managed. Referring to a future traffic management plan is inadequate – there is no guarantee that any such plan will be able to manage this traffic impact to an acceptable level.

5. **Access routes – Leichhardt.** The EIS states that all construction vehicles will enter and leave via Darley Road. Although near the City West Link, Darley Rd abuts a large number of small, local streets and homes and streets near Darley Road will be impacted by a heavy vehicle movement every 3-4 minutes. This is an unacceptable impact. No heavy or light vehicle movements should be permitted on Darley Road whatsoever and an alternative route which does not involve Darley Road is the only route that should be approved.

---

Name __________________________ Email __________________________ Mobile __________________________
I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Name: Anna Vermaut

Signature: 

Please include my personal information when publishing this submission to your website.

Declaration:

Address: 100 Frances Street, Leichhardt, 2040

The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that ‘settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment’. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted ‘strict limits on the degree of settlement permitted would be imposed on the project’ and ‘damage’ would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.

There is no evidence provided in the EIS that the ventilation outlets will be date. The EIS simply states that ‘the ventilation outlets would be designed to effectively disperse the emissions from the tunnel and are predicted to have negligible effect on local air quality (xiv, Executive Summary). This is inadequate and details of the impacts on air quality need to be provided so that the residents and experts can meaningfully comment on the impact.

The EIS states that ‘a preferred noise mitigation option’ would be determined during ‘detailed design’. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi)

The EIS states that all vegetation will be removed on the site which includes a mature tree. I object to the removal of the tree which creates a visual and noise barrier for residents from the City West Link. If the tree is removed it must be replaced with a mature tree as soon as the remediation of the site commences.

The proposal for a permanent water treatment plant and substation to the south of the site on Darley Road will prevent direct pedestrian access to the light rail station. It will affect the future uses of the site once the project is completed. The facility is out of step with the area which is comprised of low rise homes and detracts from the visual amenity of the area. This site is a pedestrian hub and will be a visual blight for pedestrians, bike users and the homes that have direct line of sight to the facility. It should not be permitted on this site.

The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.
I object to the WestConnex M4-M5 Link proposals for the following reasons:

- The EIS admits that air pollutants will exceed permitted levels along the Canal Rd used to access the St Peters Interchange because the traffic will be heavier. This is an unacceptable impact which will adversely affect vehicle users because it is known that people in their vehicles are not protected from the air pollution, as well as anyone on foot or cycling in the streets around the interchange. No amelioration is offered.

- The EIS states that traffic congestion around the St Peters Interchange is expected to be worse after completion of the M5 and the M4-M5 Link particularly in the evening peak hour. The EIS admits that this will have a "moderate negative" impact on the neighbourhood in increasing pollution (also admitted separately) therefore in health impacts, on safety for foot and cycle traffic but also for vehicles and on the local amenity.

- The traffic around St Peters expected to be heavier because of the increased road access to the new Interchange will adversely affect our community because moving around to our parks and to the shops, to the buses and to the train stations, for pedestrians and cars, will be more difficult. Our community is being sacrificed for the marginal improvement in traffic movement elsewhere in Sydney. No measures to ameliorate the impact are mentioned. This is unacceptable.

- The EIS admits that the increased traffic congestion around the St Peters Interchange will impact on bus running times especially in the evening peak hour and increase the time taken (2.5 minutes, which seems optimistic). The 422 bus and associated cross city services which use the Princes Highway are notorious for irregular running times because of the congestion on the Princes highway and cross roads, so an admitted worsening of the running time will adversely impact the people who are dependent on the buses. This will be compounded by the loss of train services at St Peters station while it is closed for the Sydney Metro build and then subsequently when it re-opens. In all the impact of the new M5 and the M4-M5 link is to worsen access to public transport significantly for the residents of the St Peters neighbourhood.

- It is obvious the NSW government is in a desperate rush to get planning approval for the M4/M5. It has only allowed 60 days for comment yet the M4/M5 project is the most expensive and complicated stage of WestConnex. Critically, it involves building three layers of underground tunnels under parts of Rozelle. Such tunnelling does not exist anywhere in the world and as yet there are no engineering plans for this complex construction. Approval depends on senior staff in NSW Planning compliantly agreeing to tick off on the EIS, as was done with the New M5 and the M4. This demonstrates a wanton disregard for the safety of the residents of Rozelle and those who will be using the tunnel. WHAT IS THE RUSH?

---

Attention Director
Application Number: SSI 7485
Infrastructure Projects, Planning Services, Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001
Application Name: WestConnex M4-55 Link

I submit my objection to the WestConnex M4-MS Link proposals for the reasons stated below, and request the Minister reject the application entirely, and cause the proponents to reissue an EIS that is based on a fully researched, developed, and budgeted concept design, and require the proponents to prepare a new business case against that design.

- The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney’s eastern and southern suburbs) is “based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-55 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required.” The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

- The EIS states that Darley Road is a contaminated site, and likely has asbestos. The proposal is that ‘treated’ water will be directly discharged into the stormwater drain at Blackmore oval. There are four long-standing rowing clubs in the vicinity of this location. This plan will jeopardise the integrity of our waterway and compromise the use of the bay for recreational activities for boat and other users. We object in the strongest terms to this proposal on environmental and health reasons. There is no detail of the ongoing Motorway maintenance activities during operation provided in the EIS. The community therefore cannot comment on the impact that this ongoing facility will have on the locality. This component of the EIS should not be approved as this information is not provided and therefore impacts (on parking, safety, noise, amenity of the area) are not known.

- The EIS needs to require that all workers are bussed in or use public transport such as the light rail with no parking whatsoever permitted on local roads at the Darley Road site. This is justified because the site provides 11 car spaces for an estimated 100 workers a day on site. The project cannot be approved on this basis without a strict requirement on workers to use public transport or project provided transport and a prohibition needs to be in place against parking on local streets. The EIS needs to require that this restriction is included in all contracts and in the relevant approval documentation.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties.

The three Pollution Stacks in the Rozelle Rail yards are shown to be 38 meters high. This is a totally inappropriate location for these Pollution Stacks. The Rozelle Rail Yards are located in a valley. The Stacks will be on land that is approximately 3.5 meters above sea level. Balmain Road between Wharf Rd and Victoria Road is at an elevation of on average 37 meters. Orange Grove Primary School is at an elevation of 33.4 meters. Areas of Hornsey Rd Rozelle are at 28 meters. Around the junction of Annandale St and Weynton St in Annandale the height above sea level is 29 meters. All these areas are in close proximity to these stacks. All the pollution being exhausted from these stacks will almost be on the same level as these locations and so will be blowing almost directly into these properties, especially in summer when many windows are open. This is not acceptable. In situations of no wind the pollution will accumulate in this valley area and make the surrounding area highly polluted. This is not acceptable. There are also at least 4 schools of Primary age children well within one kilometer of these Stacks. Young children are the most vulnerable to pollution related disease.

I object to the selection of the Darley Road site on the basis that the works required (demolition and surface works) will create unacceptable and unbearable noise and vibration impacts for extended periods. The EIS indicates that at least 36 homes will basically be unliveable during this period. In addition, the planned 170 heavy and light vehicles will considerably worsen the impact of construction noise.

There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.

The EIS claims to have saved Blackmore Park and Easton Park due to negative community feedback. I am concerned that this is a false claim and that this site was never really in contention due to other physical factors. I would like NSW Planning to investigate whether this claim is correct to have heeded the community is false or not.

EIS social impact study states that “the health and safety of residents should be prioritised around construction areas” – this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.
