Attention: Director – Transport Assessments	Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.
Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: 61-65 Macarthur St ULTIMO Suburb: Postcode 2007

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- ◇ There will be 5 entrances/exits to the Rozelle Yards site off Lilyfield Road for light vehicles and 2 entrances/exits for Heavy vehicles off the City West Link. The 2 entrances on the City West Link, one opposite the exit of the Crescent and one 400 metres further West on the City West Link will have to have traffic controls set up to allow trucks to access and exit. This will lead to a big increase in congestion in this area, the main route to Anzac Bridge and Victoria Rd.
- ◇ There are two areas in the Rozelle Rail Yards site where construction will be by cut and cover. These are the Portals for the Western Harbour Tunnel and the Portals for the M4/M5 link. This is of particular concern in the light of residents experiences in areas of Haberfield and St Peters where highly contaminated land areas were being disturbed. There was totally inadequate control of dust in these areas, where the dust would have been loaded with toxic chemical particulates. The old Rail Yards are highly contaminated land from their past use. The EIS gives no specific details of how this highly toxic threat is going to be securely managed. It is not acceptable for this to be decided only when the Construction Contracts have been issued, when the community will have no say or control over the methodology to be employed for removing vast amounts of contaminated spoil.
- ◇ Land Subsidence in the areas of all tunnel routes is of great concern to all residents. This is of especial concern in the Rozelle /Lilyfield area where there are layers of tunnels. There is likely to be ongoing and considerable subsidence even when the tunnels are built due to the ongoing necessity to remove ground water from the tunnels. This will lead to a slow drying out of the sandstone and hence settlement.
- ◇ Recently Andrew Constance has been quoted numerous times promoting his vision of the transport future and some of these views are aired in the EIS but the vision put forward is highly visionary with no practical detail addressing how these changes are going to be brought about and so they are totally unrealistic. For example it is starting to be commonly accepted that car manufacturers will be reducing production of petrol/diesel cars before 2040 probably starting in 2030. It is proposed that electric cars will then take over. It is suggested that cars will be charged over night at people's homes. Virtually no one in the Inner City Suburbs has a garage. Are all the streets throughout all the suburbs going to be fitted out with charging points outside all the houses, similar to parking meters? We have all watched the shambles of the rolling out of the NBN it would be mind blowing to watch what would happen with the rolling out of charging points to each household without a garage and it would take years to achieve. There are virtually no recharging points at any Fuel Stations anywhere as yet and to set these up will take years. A large part of the population run older cars, because that is all they are able to afford. It will take many years for these petrol/diesel cars to disappear. Andrew Constance has also said that when everyone is driving an autonomous car average speeds will be reduced but as they are not being controlled by individual drivers this will mean they will be able to travel much closer together and so there will not be so much delay caused by spread out congestion. If this is to be so perhaps the suggestion could be made that some mechanism could be employed which would enable these cars to link together; if that could be done then they could form -a TRAIN - and then really travel at speed!

Submission to:

Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5
Link

- I. Permanent water treatment plant and substation –
Leichhardt The proposal to locate this permanent structure in a residential setting is opposed. The site will have a negative visual impact on the area and is in direct line of sight of a number of homes. If approved, the facility should be moved to the north of the site further from homes.
- II. The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is "based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required." The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- III. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and

north-western corners of the interchange. This is utterly unacceptable.

- IV. Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is **NO** information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.
- V. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

Submission to : Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: Tegan Palmer Signature: 
Attention: Director – Transport Assessments	Please include my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.
Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: Albermarle St. Suburb: Newtown Postcode 2042

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

1. The EIS states "Direct and indirect traffic disruptions are likely to be experienced on local and arterial roads in most suburbs that are in close proximity to construction sites. This would include the suburbs of Ashfield, Haberfield, St Peters, Camperdown, Annandale, Lilyfield, Leichhardt, and Rozelle." Despite this finding, the study then pushes these negative impacts aside as inevitable. There is never any evaluation of whether in the light of the negative impacts an alternative public infrastructure project might be preferable
2. Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. There is however a caveat - the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.
3. I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.
4. Many students walk or ride to Orange Grove and Leichhardt Secondary College schools via Darley Road. There are also a number of childcare centres very close to the Darley Road site.
5. No road junction as large and complex as the extraordinary spaghetti junction proposed to go underground has been built anywhere in the world. The feasibility is not tested. There are no international or national standards for such a construction.
6. Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
7. Streets in Haberfield would be subject to heavy vehicle traffic for a further four years, making at least 7 years of heavy impacts on a single suburb. The answer is not a "community strategy". Residents who believed that their pain would be over after the M4 east are now being asked to sustain a further four years of impacts. No compensation or serious mitigation is suggested.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <u>Melissa Merritt</u>

Application Number: SSI 7485	Suburb: <u>Newtown NSW</u> Postcode <u>2042</u>
Application Name: WestConnex M4-M5 Link	Signature: <u>[Signature]</u>
Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration : I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
2. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
3. There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
4. The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
5. Darley Road is confirmed as a 'civil and tunnel site (dive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
6. I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
7. I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
8. Why is there no detailed information about the so called 'King Street Gateway' included in the EIS ?
9. I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
10. An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.

Please include my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.		
Signature: <i>M. Bernhardt</i>		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- 1.1599 residences or thousands of residents would have noise levels in the evening sufficient to cause sleep disturbance. The technical paper in EIS acknowledges that this is the case, even allowing for acoustic sheds and noise walls. Sleep disturbance has health risks including heightened stress levels and risk of developing dementia. This is simply not acceptable.
- There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.
- 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective. Experience on the New M5 has shown that residents who are affected badly by noise are being refused assistance on the basis that an unknown consultant does not consider them to be sufficiently affected. Night time noise is therefore another unacceptable impact of this project and reason why it should be opposed.
- I am very concerned by the finding that 162 homes and hundreds of individual residents including young children, students and people at home during the day will be highly affected by construction noise. These homes are spread across all construction sites. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval for this, especially based on the difficulties residents near M4 East, M4 Widening and New M5 residents have experienced in achieving notification and mitigation M4 east and New M5. A promise of some future plan to mitigate by a construction company yet to be nominated is certainly not sufficient.

-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- i. The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatigue'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- ii. In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- iii. The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and Environment Court found that the location of the site couldn't safely deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4/M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.
- iv. It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- v. The EIS identifies hundreds of risks at different construction sites. In relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the "detailed design" phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.
- vi. EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" - this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

I object to the WestConnex M4-M5 Link proposals for the following reasons, and request the Minister reject the application, and require SMC and RMC to prepare a new EIS that is based on genuine, not indicative, design parameters, costings, and business case.

- The EIS uses criteria to assess the impact of existing walking and cycling routes that will need to be diverted as a result of the M4-M5 Link. The criteria are based on distance only and exclude the additional travel time taken to complete the diversion. This approach is flawed and should also consider travel time – if it did, this would completely change the assessment of the proposed removal of the existing pedestrian and cycle bridge over City West Link. (P 8-71, Table 8-50). Further, the EIS is silent as to whether the existing pedestrian and cycle bridge over City West Link will be replaced post-construction (P 8-73)
- The assessment of Strategic Alternative 3 (Travel Demand Management) should:
 - Identify key network capacity issues
 - Consider the opportunity for travel demand management measures to address the road network capacity constraints. The measure should aim to retime, re-mode or reduce trips that make less productive use of congested road space.
 - Draw on a process of multi-modal transport modelling and economic assessment to inform the analysis and assessment
- The EIS does not provide appropriate parking for the estimated 100 or so workers that the EIS states will work every day at the site, while other equivalent sites have allocated parking for such workers (Northcote Civil site (150)) and Parramatta Road East Civil site (140). It is also noted that the EIS provides for loss of 20 residential parks on Darley Road. Local streets are at capacity already because of the lack of off-street parking for many residents and the Light Rail stop which means that commuters use local streets. The EIS states that workers 'will be encouraged to use public transport.' the EIS needs to mandate that no trucks or construction vehicles are to park in local streets. There needs to be a requirement that is enforceable that workers use the Light Rail stop which is adjacent to the site or a plan to bus in workers
- I oppose the removal of further homes of Significance in either Haberfield or Ashfield. The level of destruction has already been appalling. Residents were led to expect that there would be no further construction impacts after the completion of the M4 East. The loss of further houses of the community will cause further distress within this community.
- The Rozelle Interchange will prevent major redevelopment in the Rozelle area. This area has been identified by the NSW Government as a major opportunity for urban renewal for over 20 years. Light construction vehicle routes – the EIS acknowledges that these vehicles will use 'dispersed' routes (8-62). In other words, construction vehicles will use and park on local roads. The EIS does not propose any management as to which roads they use.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Name: Krishna Saur

Signature: [Signature]

Please **include** my personal information when publishing this submission to your website **Declaration** : I **HAVE NOT** made any reportable political donations in the last 2 years.

Address: 27/155 Myernden Rd Newtown

Suburb: Newtown Postcode: 2042

Submission to:

Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

- ⇒ The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
- ⇒ The proposal to run trucks so close to homes is dangerous. There have been two fatalities on Darley Road at the proposed site location. The EIS does not propose any noise or safety barriers to address this. Despite the unacceptable impact to nearby homes, there is no proposal for noise walls, nor any mitigation to individual homes.
- ⇒ Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.
- ⇒ Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- ⇒ The EIS states that Darley Road is a contaminated site, likely including asbestos. There is a risk to the community associated with spoil removal, transfer and handling. We object to the selection of the site based on the environmental risks that this creates, along with risks to health of residents.
- ⇒ The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However,

some tunnelling is at less than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project' and 'damage' would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.

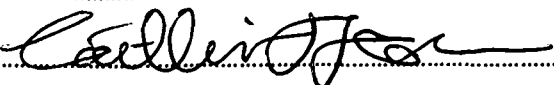

- ⇒ There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- ⇒ I am completely opposed to approving a project in which the Air quality experts recommend rather than filtrating stacks extra stacks could be added later.
- ⇒ Permanent water treatment plant and substation – Leichhardt The proposal to locate this permanent structure in a residential setting is opposed. The site will have a negative visual impact on the area and is in direct line of sight of a number of homes. If approved, the facility should be moved to the north of the site further from homes.

 GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485 Application

Application Name: WestConnex M4-M5 Link

- ◇ No need for 'dive' site – Leichhardt. There is no need for the Darley Road site, other than a time saving (tunneling) of several months. It is unacceptable that the community should be forced to endure 5 years of severe disruption to accommodate the timetable of the private contractors. The EIS should not be approved on the basis that it contains provision for the Darley Road site without any proper justification as for its need.
- ◇ Rozelle Interchange and surrounds will experience **increased traffic with associated noise and air pollution**– most particularly at the **Crescent, Johnson St and Catherine St**, Annandale/Lilyfield/Leichhardt and **Ross Street**, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.
- ◇ The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.
- ◇ 371 homes and hundreds of residences near the Darley Rd construction site will be affected by noise sufficient to cause sleep disturbance. The EIS promises negotiation over mitigation on a one by one basis. This is not acceptable to me. On other projects those with less bargaining power or social networks have been left more exposed. There is no certainty in any case that additional measures would be taken or be effective. This is another unacceptable impact of this project and reason why it should be opposed.
- ◇ The EIS is misleading because it discusses the creation of 14,350 direct jobs during construction. It omits the fact that jobs have also been lost because of acquisition of businesses, many of which were long-standing and employed hundreds of workers. (Executive Summary xviii)
- ◇ The EIS states that 'a preferred noise mitigation option' would be determined during 'detailed design'. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi)
- ◇ For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.

Application Name:
WestConnex M4-M5 Link

1. 2 G Appendix P Table 5-27 of the EIS states that 43% of the Leichhardt- Glebe Precinct travel to work by Car, 21% by Bus and 5% by Rail. These are figures for 2011. These figures are being used to promote the project and suggest they are accurate today. In the case of Rail these figures are extremely questionable. The Light Rail is now hugely popular, it's use having grown enormously. It is travelling at full capacity at Peak hours. More services are being put in place. Apartment blocks are being built as close to the Light Rail corridor as possible. Residents see the Light Rail as an efficient, reliable and timely method of commuting to work. It is blatantly obvious that the Govt should be investing heavily in building and extending Light Rail, Metro and Rail. If this were pursued in a professional manner the necessity for trying to hoodwink the community into believing that Westconnex were needed would be totally unnecessary.
2. The EIS identifies a risk to children from construction traffic at Haberfield School. I find such risks unacceptable and am not satisfied with a promise of a Plan to which the public is excluding from viewing or providing feedback until it is published.
3. Rozelle Rail Yards will have 400 car parking spaces provided for workers(EIS). The daily workforce for these sites is stated to be approximately 550. This means that 150 vehicles will need to park in nearby local streets which are already over-subscribed during weekdays by commuters taking the light rail.
4. There will be increases of noise in the area of Johnston St where traffic volumes will increase. Residents will be more susceptible to health impacts associated with increased noise. In the EIS it is stated that residents may have to keep their windows closed. They may well experience sleep disturbance and interference of living activities like eating outdoors. However the EIS considers this to be only moderately negative. This is not acceptable.
5. I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.
6. For example, the AECOM EIS for the New M5 failed to deal with how the massively contaminated land fill at Alexandria would be managed during construction. After months of sickening odours, the NSW EPA admits that despite fining SMC and requiring contractors to take measures to control odours, they have not stopped. It acknowledges that it does not have the power to stop work until WestConnex contractors comply with environmental regulations.
7. Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.

I object to the WestConnex M4-M5 Link proposals for the following reasons, and request the Minister reject the application, and require SMC and RMC to prepare a new EIS that is based on genuine, not indicative, design parameters, costings, and business case.

- a) Removal of vegetation – Leichhardt. The EIS states that all vegetation will be removed on the Darley Road site. There are several mature trees located on the north of the site. None of these trees should be removed as they provide precious greenery. They also act as a visual and noise screen for residents from the City West Link traffic. All efforts should be taken to retain the trees and the EIS should not simply permit these trees to be removed without proper investigations being undertaken as to how they can be retained. If they are removed following a proper investigation and consideration of all options, then the approval needs to specify that all streets are replaced with mature, native trees at the conclusion of the construction at the site
- b) The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.
- c) The modelling area shown in Figure 8-5 should be extended to include Johnston Street and The Crescent/Minogue Crescent/Ross Street corridor to Parramatta Road to provide clarity on how these feeder routes are envisaged to operate in 2023 and 2033. It should include the modelling assumptions applied
- d) The EIS should not be approved as it does not contain any certainty for residents as to what is proposed. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' Therefore this entire process is a sham as the extent to which concerns are taken into account is not known as the contractor can simply make further changes. As the contractor is not bound to take into account community impacts outside of the strict requirements and as the contractor will be trying to deliver the project as quickly and cheaply as possible, it is likely that the additional measure proposed with respect to construction noise mitigation for (example) will not be adopted. The EIS should not be approved on the basis that it does not provide a reliable basis on which to base the approval documents. It does not provide the community with a genuine opportunity to provide meaningful feedback in accordance with the legislative obligation of the Government to provide a consultation process because the designs are 'indicative' only and subject to change. Because of this the EIS is riddled with caveats and lacks clear obligations and requirements in project delivery. The additional effect of this is that the community and other stakeholders such as the Council will be unable to undertake compliance activities as the conditions are simply too broad and lack any substantial detail

Submission to:

Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

◇ EIS 6.1 (Synthesis, Page 45) states. “..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval”. It is unstated just who would have responsibility for such a “review(ed) for consistency”, and how these changes would be communicated to the community. The EIS should not be approved till significant ‘uncertainties’ have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)

◇ The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney’s eastern and southern suburbs) is “based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required.” The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

◇ The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a

triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

◇ Because this is still based on a “concept design” it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation’s ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is **NO** information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.

◇ The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than ‘indicative’ and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on ‘definitive’ information.

-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- i. The EIS uses the term 'construction fatigue' to refer to the continuing impacts of construction. In St Peters construction work in relation to the M4 and M5 has been going on for years. Approval of this latest EIS will mean that construction impacts of M4 and New M5 will extend for a further five years with both construction and 24/7 tunnelling sites. In reality 'construction fatigue' means residents in St Peters losing homes and neighbours and community; roadworks physically dividing communities; sickening odours over several months, incredible noise pollution 24 hours a day and dangerous work practices putting community members at risk. These conditions have already placed enormous stress on local residents, seriously impacting health and well-being. Another 5 years will be breaking point for many residents. How is this addressed in the EIS beyond the acknowledgement of 'construction fatigue'. This is intolerable for the local community who bear the greatest cost of the construction of the M4 and M5 and the least benefit.
- ii. In Leichhardt serious safety concerns about the choice of the Darley Rd site have been raised by the Inner West Council and an independent engineer's report. Despite countless meetings between local residents and SMC and RMS over 12 months, none of the serious and legitimate concerns raised by the residents have even been acknowledged. This is a massive breach of community trust and seriously questions the integrity of the EIS.
- iii. The RMS has previously identified the Darley Rd site in Leichhardt as the third most dangerous traffic hazard in the Inner West. The NSW Land and Environment Court found that the location of the site couldn't safely deal with 60 bottle truck movements a week, but the M4/M5 EIS shows that more than 800 vehicles including hundreds of heavy ones will use the site each day as part of construction of M4/M5 Link. HOW IS THIS POSSIBLE? why are the already acknowledged impacts being ignored.
- iv. It has estimated that if construction goes ahead, some homes in Darley St Leichhardt will have a truck on average every 4 minutes just metres from their bedrooms. If experience in Haberfield, Kingsgrove, St Peters and Alexandria is anything to go by, residents can again expect the actual experience to be worse than predicted by the EIS. HOW IS THIS POSSIBLE? why have the serious and legitimate concerns raised by the residents not even been acknowledged.
- v. The EIS identifies hundreds of risks at different construction sites. In relation to these risks the EIS recommends proceeding despite the risks; or seeking a way to mitigate risks during the "detailed design" phase. That phase excludes the public altogether. That is, the M4/M5 should be approved with no calculation of risks or what mitigation may mean for impacted residents.
- vi. EIS social impact study states that "the health and safety of residents should be prioritised around construction areas" - this is merely platitudinous in the light of the choice of Darley Rd the third most dangerous traffic intersection in the Inner West as a construction site.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- ❖ **I am appalled to learn that more than 100 homes including hundreds of residents will be affected by noise exceedences 'out of hours' in the vicinity of Darley Road, Leichhardt. This will not just be for a few days but could continue for years. Such impacts will severely impact on the quality of life of residents.**
- ❖ **I am appalled to read in the EIS that more than 100 homes across the Rozelle construction sites will be severely affected by construction noise for months or even years at a time. This would include hundreds of individual residents including young children, school students and people who spend time at home during the day. The predicted levels are more than 75 decibels and high enough to produce damage over an eight hour period. Such noise levels will severely impact on the health, capacity to work and quality of life of residents. NSW Planning should not give approval to a project that could cause such impacts. Promises of potential mitigation are not enough, especially when you consider the ongoing unacceptable noise in Haberfield during the M4East construction.**
- ❖ **Residents of Haberfield should not be asked to choose between two construction sites. This smacks of manipulation and a deliberate attempt to divide a community. Both choice extend construction impacts for four years and severely impact the quality of life of residents. NSW Planning should reject the impacts on Haberfield as unacceptable. (page 106)**
- ❖ **Daytime noise at 177 properties across the project is predicted to be so bad during the years of construction that extra noise treatments will be required. There is however a caveat – the properties will change if the design changes. My understanding is that the design could change without the public being specifically notified or given the chance for feedback. This means that there is a possibility of hundreds of residents being severely impacted who are not even identified in this EIS. I find this completely unacceptable.**
- ❖ **I do not accept the finding in the Appendix P that there will be no noise exceedences during construction at Campbell Rd St Peters. There has been terrible noise during the early construction of the New M5. Why would this stop, especially given the construction is just as close to houses? Is it because the noise is already so bad that comparatively it will not be that much worse. This casts doubt on the whole noise study.**
- ❖ **I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.**

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- A. THE LATEST EIS WAS RELEASED JUST TEN BUSINESS DAYS AFTER FEEDBACK PERIOD ENDED FOR THE CONCEPT DESIGN FOR THE M4/M5 AND BEFORE PRELIMINARY DRILLING TO ESTABLISH A ROUTE THROUGH THE INNER WEST IS COMPLETED. WHAT IS THE RUSH? THIS EIS IS LITTLE MORE THAN A CONCEPT DESIGN AND IS FAR LESS DEVELOPED THAN EARLIER ONES. IT IS COMPOSED OF MANY INDICATE ONLY PLANS SUCH THAT IT IS IMPOSSIBLE TO KNOW WHAT THE IMPACTS WILL BE AND YET APPROVAL IS BEING SOUGHT IN A RUSH. THE EIS IGNORES MORE THAN 1500 SUBMISSIONS, INCLUDING ONE OF 142 PAGES FROM THE INNER WEST COUNCIL.
- B. ONE TOLL ROAD LEADS TO ANOTHER 3 BEING PROPOSED. THE EIS'S FOR THE M4 EAST AND THE NEW M5 ARGUED THE CASE THAT SERIOUS CONGESTION CREATED NEAR INTERCHANGES WOULD BE SOLVED ONCE THE M4/M5 WAS BUILT. NOW IT SEEMS THIS IS NOT THE CASE AND MORE ROADS WILL BE NEEDED TO RELIEVE THE CONGESTION - WHERE DOES THIS END? ACCORDING TO THE M4/M5 EIS THE REAL BENEFITS WILL DEPEND ON BUILDING THE WESTERN HARBOUR TUNNEL, THE AIRPORT LINK AND A TOLLWAY HEADING SOUTH. NONE OF THESE PROJECTS HAVE BEEN PLANNED, LET ALONE APPROVED BUT YET ARE PART OF ADDRESSING THE CONGESTION IMPACTS ACKNOWLEDGED FOR THE M4/M5 LINK PROJECT. GIVEN THIS HOW IS IT POSSIBLE TO KNOW OR ADDRESS THE IMPACTS OF THE M4/M5 LINK, UNLESS THIS IS JUST YET MORE JUSTIFICATION FOR YET MORE ROADS?
- C. RESEARCH ABOUT ROADS CLEARLY DEMONSTRATES THAT ROADS CREATE CONGESTION. THE WESTCONNEX PROJECT IS NO DIFFERENT AND THE EIS CLEARLY INDICATES THAT THIS IS AN IMPACT OF THE

- D. M4/M5 AND THE CONSEQUENT ROADS THAT WILL FOLLOW. WHERE WILL THIS END AS THE M4/M5 LINK EIS ITSELF INDICATES THE RMS IS ALREADY HARD AT WORK CONSIDERING HOW TO SOLVE THESE PROBLEMS - OF CONGESTION CAUSED BY ROADS.
- D. WHERE IS THE COMMITMENT TO COMMUNITY CONSULTATION AND TO LONG TERM PLANNING WHEN THE EIS FOR THE M4/M5 LINK IS RELEASED BEFORE ANY RESPONSE TO THE EXTENSIVE COMMUNITY FEEDBACK ON THE M4-M5 LINK CONCEPT DESIGN COULD POSSIBLY HAVE BEEN SERIOUSLY CONSIDERED. THIS DEMONSTRATES DEEP GOVERNMENT CONTEMPT FOR THE PEOPLE OF NSW AND THE COMMUNITIES OF THE INNER WEST OF SYDNEY IN PARTICULAR.
- E. THE EIS WAS PREPARED BY GLOBAL ENGINEERING FIRM AECOM, WHICH ALSO PREPARED THE EIS FOR STAGES 1 AND 2. WHEN HE APPROVED THESE EARLIER STAGES, THE THEN MINISTER FOR PLANNING ROB STOKES POINTED TO CONDITIONS OF APPROVAL THAT WOULD MINIMISE IMPACTS ON COMMUNITIES. BUT THE IMPACTS HAVE TURNED OUT TO WORSE THAN EXPECTED.
- F. FOR EXAMPLE, THE AECOM EIS FOR THE NEW M5 FAILED TO DEAL WITH HOW THE MASSIVELY CONTAMINATED LAND FILL AT ALEXANDRIA WOULD BE MANAGED DURING CONSTRUCTION. AFTER MONTHS OF SICKENING ODOURS, THE NSW EPA ADMITS THAT DESPITE FINING SMC AND REQUIRING CONTRACTORS TO TAKE MEASURES TO CONTROL ODOURS, THEY HAVE NOT STOPPED. IT ACKNOWLEDGES THAT IT DOES NOT HAVE THE POWER TO STOP WORK UNTIL WESTCONNEX CONTRACTORS COMPLY WITH ENVIRONMENTAL REGULATIONS.

Signature: 		
Please <u>include</u> my personal information when publishing this submission to your website Declaration I HAVE NOT made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- ◇ The EIS states that 'reasonable and feasible work practices and mitigation measures would be implemented to minimise potential noise impacts due to activities occurring at the Darley Road civil and tunnel site.' 96-52) This is not good enough. The EIS does not contain any detail whatsoever of these proposal on which they can comment. In addition, there is no requirement that measures will in fact be introduced to address noise impacts. The approval conditions need to contain detail of specific noise mitigation measures that are mandated and can be enforced.
 - ◇ Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.
 - ◇ The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.
 - ◇ Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this
- is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.
- ◇ Heavy vehicle movements during peak hours – Leichhardt. The EIS states that 'reasonable and practical management strategies would be investigated to minimize the volume of heavy vehicle movements during peak hours.' (8-53). This is also not acceptable as it is not known what will actually be done to manage this impact. It is not good enough for the EIS, which forms the basis of the approval of this project, to simply mention 'investigations' and not detail a proper plan (on which residents can comment) on management of heavy vehicle movements during peak hours. In addition, Darley Road is very congested from 7am until 9.30am and then from 4pm-6.30pm, well outside the 'peak' periods identified in the EIS. And the impact on traffic will be caused by 'light' vehicles and not simply heavy vehicles. It is clear that there is no plan for managing these vehicle movements. The EIS should not be approved as drafted. It is unacceptable for this volume of vehicles to be proposed for this critical arterial road with no plan for management

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- | | |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>i. The volume of extra heavy traffic in the Rozelle area and the acknowledged impact this will have on local roads is completely unacceptable to me.</p> <p>ii. The social and economic impact study fails to record the great concern for valued Newtown heritage</p> <p>iii. The EIS identifies hundreds of negative impacts of the project but always states that they will be manageable or acceptable even if negative. This shows the inherent bias in the EIS process.</p> <p>iv. The consultants for the Social and Economic Impact study is HillPDA. This company has a conflict of interest and is not an appropriate choice to do a social impact study of WestCONnex. Amongst its services it offers property valuation services and promotes property development in what are perceived to be strategic locations. HillPDA were heavily involved in work leading to the development of Urban Growth NSW and the heavily criticised Parramatta Rd Study. It is not in the public interest to use public funds on an EIS done by a company that has such a heavy stake in property development opportunities along the Parramatta Rd corridor. One of the advantages of property development along Parramatta Rd that Hill PDA promotes on its website is the 33 kilometre WestCONnex.</p> <p>v. The EIS acknowledges that extra construction traffic will add to travel times across the Inner</p> | <p>West and have a negative impact on businesses in the area. No compensation is suggested. These impacts are not been taken into account of evaluating the cost of WestCONnex.</p> <p>vi. The EIS acknowledges that 'rat running' by cars to avoid added congestion and delays caused by construction traffic will put residents at risk. No only solution is a Management Plan, which is yet to be developed, and to which the public will have no impact. This is completely unacceptable.</p> <p>vii. The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.</p> <p>viii. Table 6.1 in Appendix Q (Social and Economic impact) is not an accurate report on the concerns of residents. It downgrades the concerns of Newtown, St Peters and Haberfield residents. It does not even mention concerns about additional years of construction in Haberfield and St Peters. It also does not mention concerns about heritage impacts in Newtown. I can only assume that this is because there was almost no consultation in Newtown and a failure to notify impacted residents including those on the Eastern Side of King Street and St Peters.</p> |

- The Concept Design was a woefully inadequate document totally devoid of any real depth of detail in terms of maps, scales, distances with only vague suggestions and glamorized Artist's Impressions of an idealized view of what Stage 3 would be like. It was another example of current city planning documents that consistently accentuate huge areas of tranquil green spaces with families and children out walking and riding bicycles in idealized parks and suburbs. All this is total PR spin and bears no reality about the real outcome of the build. It bears no reality as to what Stage 3 of Westconnex will be like.
- The City West Link Eastbound AM and PM peak hour and other locations. "Table 7-19 shows that several locations are forecast to exceed theoretical roadway capacity with the increased background traffic and the construction traffic in the 2021 AM and PM peak hours. However, traffic on the majority of these roads would exceed their theoretical capacity even without the construction traffic, simply due to the growth in background traffic". So in the full knowledge that this area will be at capacity in 2021, massive amounts of construction traffic are going to be added for the whole construction period of 5 years. Even on completion it is stated in the EIS that traffic will be worse in this area than 'without the project'. This categorically shows that the planning of Westconnex is totally inadequate and needs major changes. It also shows that when completed Westconnex will not work. It is abundantly obvious that Rail/Metro is the only option to radically overhaul Sydney's failed transport systems
- The Health costs of outdoor Air Pollution in Australia are up to \$8.4 Billion a year. The Health costs of Particulate Pollution in the Sydney Greater Metropolitan area is around \$4.7 Billion a year. With no filtration on the Westconnex tunnels these Health costs will rise substantially.
- Along with the widening of the Crescent at Annandale the White's Creek bridge is to be rebuilt. This will mean that the road in this area will be reduced in width as first one side of the bridge is rebuilt followed by the other. Added to the additional volume of trucks from the Rozelle Rail Yards, the Crescent Civil site and the Camperdown site this is going to lead to massive congestion on Johnston St and all along the Crescent towards Ross St and make it virtually impossible for residents to exit and return to their local area. It is most likely that the commercial sectors of the Tramsheds development will be badly affected.
- Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution– most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.
- Motor vehicles account for 14% of Particulate Pollution of 2.5 microns and less in Australia. There is no safe level to exposure to particulate matter of 2.5 microns and less. Particulate matter is linked with Asthma, Lung Disease, Cancer and Stroke.

 Link

- 1) The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating "Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets". Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future ?
- 2) Permanent substation and water treatment plant - Residents on Darley Rd opposite the site and residents in Hubert St will have a direct line of site to the Motorway operation infrastructure. The resultant impact is a permanent degradation of the visual environment, is a loss of amenity and is detrimental to the community. This facility should not be permitted in this location and the EIS needs to demonstrate why it is required at this site. If approved, the facility should be moved to the north of the site out of line of site of residents. The residual land should be returned for community purposes, such as green space, with future commercial uses ruled out. If the community is forced to endure 5 years of severe disruptions due to this toll road, the compensation should, at the very least, result in the land being returned to the community as green space.
- 3) The EIS does not provide any opportunity to comment on the urban design and landscape component of the project. It states that 'a detailed review and finalisation of the architectural treatment of the project operational infrastructure would be undertaken 'during detailed design'. The Community should be given an opportunity to comment upon and influence the design and we object to the approval of the EIS on the basis that this detail is not provided, nor is the community (or other stakeholders) given an opportunity to comment or influence the final design.
- 4) The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
- 5) The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- Experience has shown that construction and other plans by WestCONNex are often regarded as flexible instruments. Any action to remedy breaches depends on residents complaining and Planning staff having resources to follow up which is often not the case. I find it unacceptable that the EIS is written in a way that simply ignores problems with other stages of WestCONNex.
- Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.
- I do not consider so many disruptions of pedestrian and cycle ways to be a 'temporary' impact. Four years in the life of a community is a long time. The EIS acknowledges that there will be more danger in the environment around construction sites. It is a serious matter to deliberately take steps to reduce the safety of a community, especially when as the traffic analysis shows there will be a legacy of traffic congestion even in 2033. A promise of a plan is NOT an answer to those concerned about the impacts.
- The impact of the project on cycling and walking will be considerable around construction sites. The promise of a construction plan is not sufficient. There has not been sufficient consultation or warning given to those directly affected or interested organisations. There needs to be a longer period of consultation so that the community can be informed about the added dangers and inconvenience, especially when you consider that it is over a 4 year period.
- Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- It is outrageous to suggest that four unfiltered stacks would be built in one area, Rozelle
- Rather than adding to pollution, the NSW government should be seeking ways to reduce emissions. It is not acceptable to argue that worsening pollution is not a problem simply because it is already bad.
- A lot of work has gone into building cycling and pedestrian routes in Rozelle and Annandale. Interference and disruption of routes for four years is not a 'temporary' imposition.

• **Traffic and transport - construction worker parking**

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because it is inevitable that workers will end up parking in streets near to the site and this will impact on residents in a number of ways.

- Residents will be competing for parking with both workers and commuters who already park in the streets near the light rail. Most houses in the streets near the site do not have off-street parking so residents are already pressed for parking spaces. During the renovation of the Darley Rd site for the Dan Murphys in 2016 workers parked in local roads like Charles St, Hubert St, Darley Rd and Francis St even when there was parking on site. This was of great inconvenience to residents especially those with young children and the aged. Residents had to complain to Woolworths and to the contractor Flexem on numerous occasions.
- Residents will be disturbed by workers arriving for or leaving from shifts at anti-social hours. Residents who work shifts and need to rest during the day will be disturbed by the additional noise of vehicles coming and going. During the renovation of the Darley Rd site for the Dan Murphys in 2016 there were instances of workers parking with engines idling first thing in the morning disturbing residents.

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because there is no plan for worker parking and as a result the residents of Charles St, Hubert St, Darley Rd and Francis St will not be able to park on their streets and will be adversely impacted by worker parking.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Alternatives have been identified which provide adequate worker parking and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <u>Daniel Depre</u>
	Address: <u>18 Davies St</u>
Application Number: SSI 7485	Suburb: <u>Leichhardt</u> Postcode: <u>2040</u>
Application Name: WestConnex M4-M5 Link	Signature: 
Please <u>include</u> my personal information when publishing this submission to your website Declaration : I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. I object to the proposal to the Darley Road civil and tunnel site for the reasons set out in this submission.
2. I object because of the unacceptable risk it will create to the safety of our community. Darley Road is a known accident and traffic blackspot and the movements of hundreds of trucks a day will create an unacceptable risk of accidents. On Transport for NSW's own figures, the intersection at the City West Link and James Street is the third most dangerous in the inner west.
3. The EIS permits trucks to access local roads in exceptional circumstances which includes queuing at the site. Given the constraints of the Darley Road site queuing will be the usual situation. The EIS needs to be amended to remove queuing as an exceptional circumstance. The truck movements should properly managed by the contractor so that there is no queuing. This exception will make it easier for contractors to neglect their obligation to monitor and manage truck movements in and out of the site and needs to be removed. The EIS needs to specifically provide that all local streets abutting Darley Road and expressly prohibited truck movements (including parking) on these streets. This should include all streets from the north (James St) to the south (Falls Road), which are near the project footprint.
4. Leichhardt residents were repeatedly told by SMC that the Darley Road site would be operational for three years. The EIS states that it will be operational for 5 years. This creates an unacceptable impact for residents. The works on the site should be restricted to a three-year program as was promised.
5. The EIS states that construction noise levels would exceed the relevant goals without additional mitigation. The additional mitigation is mentioned but not proposed or any detail provided. All possible mitigation should be included as a condition of approval. The EIS acknowledges that substantial above ground invasive works will be required to demolish the Dan Murphys building and establish the road. The EIS noise projections indicate that for 10 weeks residents will suffer unacceptable noise impacts. The EIS does not contain a plan to manage or mitigate this terrible impact. There is no detail as to which homes will be offered (if at all) temporary relocation; there are no details of any noise walls or what treatments will be provided to individual homes that are badly affected. The approval needs to contain detail as to how this unacceptable impact will be managed and minimised during the construction period and, in particular, during site establishment. I object to the selection of the Darley Road site on the basis that the works required (demolition and surface works) will create unacceptable and unbearable noise and vibration impacts for extended periods. The EIS indicates that at least 36 homes will basically be unlivable during this period. In addition, the planned 170 heavy and light vehicles will considerably worsen the impact of construction noise.
6. The EIS does not even mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.

I am strongly opposed to Stage 3 (M4-M5 Link) for the following reasons -

WESTCONNEX STATED OBJECTIVES

1. The main reason given for the construction of the WestConnex motorway is to connect to Sydney Airport and Port Botany. The project has failed to meet both of these objectives.

QUESTIONABLE TRAVEL

2. If stage 3 of the Westconnex project is completed, it is predicted that by 2033, reductions in peak travel times from Western Sydney to the airport and to the Botany Port area will be **miniscule**. Parramatta to Sydney airport will save **10 minutes**, between Burwood and Sydney Airport the time saved will be **5 minutes** and between Silverwater and Port Botany the time saved will be **10 minutes**. These are only the best predictions put forward and time savings may in fact be much less. The whole rationale for building this wasteful **18 billion dollar** polluting project was precisely for that reason... to reduce travel times and to connect with Port Botany and the Airport.

SUBSIDENCE AND HOUSE DAMAGE

3. The EIS states that property damage due to ground movement "may occur", further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of **ground movement and subsidence is lessened** where tunnelling is more than **35m underground**. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are extremely shallow eg **John St at 22m, Hill St at 28m, Moore St 27m (Vol 2B Appendix E Part 2) Catherine St at 28m (Vol 2B Appendix E Part 1)**. At these shallow depths, the homes above would indisputably sustain serious structural damage and cracking. Without provision for full compensation for damage there would be **no incentive for contractors or Roads and Maritime Services to minimise this damage**.

UNFILTERED STACKS - HEALTH DANGERS

4. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck **four unfiltered emissions stacks** in the area plus a **large number of exit portals**, the residents of this area will suffer greatly from **poisonous diesel particulates**. This is negligent when you consider that, the World Health Organisation in 2012 declared **diesel particulates carcinogenic**. "As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, "No ventilation shafts will be built near any school."

PARKING CONGESTION

5. Rozelle Rail Yards will have **400 car** parking spaces provided for workers(EIS). The daily workforce for these sites is stated to be approximately **550**. This means that **150 vehicles** will need to **park in nearby local streets** which are already over-subscribed during weekdays by commuters taking the light rail.

POLLUTION - AIR/NOISE

6. The Rozelle Interchange, including the Inner West Interchange, and surrounding streets will experience **increased traffic with associated noise and air pollution** - ie at The Crescent, Johnson St and Catherine St in

Annandale/Lilyfield/Leichhardt and in Ross Street, Glebe. These streets are **already highly congested at peak times** and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times. Also, the widening of the Crescent between the city West Link and Johnston street with **an extra lane being constructed** will lead to heavy traffic congestion on a road that has **3 Primary/Infants schools**. Furthermore, the EIS states that the current Rozelle Interchange and surrounds of Anzac Bridge are presently close to full capacity. In fact, Anzac Bridge is **currently at maximum** capacity during peak hours. With the proposed construction, the area is going to be subjected to a huge increase in vehicle movements throughout the 5 year construction period.

REMOVAL OF SPOIL - TRUCK MOVEMENTS

7. The removal of spoil from the Rozelle Rail Yards will lead to **the largest number of spoil truck movements** on the entire Stage 3 project: **517 Heavy truck movements a day**, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area.

The **unacceptable noise levels** which will accompany the construction of this massive interchange will further add to the discomfort of the residents. No analysis has been provided of the magnitude of increased noise pollution which will adversely affect residents. The EIS actually states that local residents may have to keep their windows and doors closed to keep out the noise and dust. The proposed work hours for construction in the Goods Yard for the tunneling and spoil removal are 24 hours a day, seven days a week. This could lead to loss of sleep for local residents as well as loss of lifestyle.

There will also be disturbance of soil in the old Rozelle Goods Yard which may be thick with toxic contaminants such as **lead and asbestos** (as was the case in St Peters.) You made no provision for the safe removal of these toxic substances in St Peters and I do not see any provision in the EIS for their safe removal in this area.

LOSS OF PARKS AND RECREATIONAL SPACE

8. The removal of **Buruwan Park** between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this innercity area. Further, Buruwan Park lies on a **major cycle route** from Railway Parade through to Anzac Bridge, IJTS and the CBD.

PROPOSED 'PARK' in ROZELLE GOODS YARD

9. The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and **poisonous smoke stacks** borders on being criminally negligent. This new 'recreational area' will be subject to the dangerous invisible particulates of 2.5 microns and smaller so many residents and children will be unaware that they are being poisoned. **All evidence shows that these particulates are linked with increased cases of asthma, lung disease, cancer and stroke** placing further pressure on our already overloaded health system.

CONSULTATION

10. Although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major **changes to the project design and construction methodologies**. **The community would have no say in this process!**

SUBJECT TO CHANGE

11. In the introduction of the EIS it clearly states that the information in the EIS is "indicative of the final design" only. The reality of this statement means that the project may be completely different to stated plans in the EIS with residents given no say in the final outcome.

For the reasons listed above the project should not go ahead and alternatives looked into that seriously takes into consideration all of the issues raised above such as has been proposed by the City of Sydney Council.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <u>Sandi Joelson</u>
	Address: <u>52 Roberts St</u>
Application Number: SSI 7485	Suburb: <u>CAMPBELL</u> Postcode <u>2050</u>
Application Name: WestConnex M4-M5 Link	Signature: 
Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.
2. Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.
3. The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
4. Increased traffic congestion in areas around portals will increase pollution along roadsides, with predicted adverse impacts on breathing and through long-term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that enables them to be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
5. This EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain – and is certainly not included here.
6. EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
7. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1,000s more per day onto the roads to the Airport which are already at capacity.
8. There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
9. Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.
10. The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech drilling or testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. No further details have been provided. This casts doubt over the integrity of the entire EIS process.

Submission from: Name: <u>Donna Wilson</u> Signature: <u>D. Wilson</u> Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration : I <u>HAVE NOT</u> made any reportable political donations in the last 2 years. Address: <u>19 Albert Street</u> Suburb: <u>ERSKINEVILLE</u> Postcode: <u>2043</u>	Submission to: Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001 Attn: Director – Transport Assessments Application Number: SSI 7485 Application Application Name: WestConnex M4-M5 Link
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

1. There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.
2. I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.
3. EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. *"The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval"*. The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.
4. I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.
5. Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.
6. The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is *"based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required."* The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
7. SMC have made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.
8. Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.
9. The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
10. Why the so called 'King Street Gateway' been excluded in the analysis of cumulative impacts of other projects?

Application Number: SSI 7485

Application Name: WestConnex M4-M5
Link

- The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating "Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets". Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future ?
- Permanent substation and water treatment plant - Residents on Darley Rd opposite the site and residents in Hubert St will have a direct line of site to the Motorway operation infrastructure. The resultant impact is a permanent degradation of the visual environment, is a loss of amenity and is detrimental to the community. This facility should not be permitted in this location and the EIS needs to demonstrate why it is required at this site. If approved, the facility should be moved to the north of the site out of line of site of residents. The residual land should be returned for community purposes, such as green space, with future commercial uses ruled out. If the community is forced to endure 5 years of severe disruptions due to this toll road, the compensation should, at the very least, result in the land being returned to the community as green space.
- The EIS does not provide any opportunity to comment on the urban design and landscape component of the project. It states that 'a detailed review and finalisation of the architectural treatment of the project operational infrastructure would be undertaken 'during detailed design'. The Community should be given an opportunity to comment upon and influence the design and we object to the approval of the EIS on the basis that this detail is not provided, nor is the community (or other stakeholders) given an opportunity to comment or influence the final design.
- The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
- The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Submission to : Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <i>Bobbie Henning</i> Signature: <i>BH</i>
Attention: Director – Transport Assessments	Please include delete (cross out or circle) my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.
Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: <i>Orynan St</i> Suburb: <i>Summer Hill</i> Postcode <i>2130</i>

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- A. It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.
- B. No road junction as large and complex as the extraordinary spaghetti junction proposed to go underground has been built anywhere in the world. The feasibility is not tested. There are no international or national standards for such a construction.
- C. The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.
- D. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.
- E. The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
- F. Are there other potentially serious problems with Sydney Water utility services (described at EIS 12-57) or with other utilities in other suburbs or along the proposed M4-M5 tunnel alignment ? If so, the EIS proposals and application should not be approved till these are all disclosed, researched, surveyed and the resolution publicly published.
- G. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).
- H. I oppose the destruction of any more of Sydney's heritage for WestCONNex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.
- I. I strongly object to the privatisation of the WestConnex project that turns public monies into private profit.
- J. The mechanical ventilation proposed depends on single direction tunnel construction, so how it can possibly work for large curved tunnels on multiple levels is unknown.

K. Other Comments :

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

• **Asbestos contaminated site**

I object to the Darley Road Civil and Tunnel Construction site at Leichhardt because the proponent has failed to comply with the SEARS requirement in relation to Air quality, that the project is designed, constructed and operated in a manner that minimises air quality impacts (including nuisance dust and odour) to minimise risks to human health and the environment to the greatest extent practicable.

The proponent in identifying the potential contamination impacts at Darley Road states that:

'Previous soil investigations identified fill material with slightly elevated metals and PAHs, although the site is still suitable for ongoing commercial/industrial land use. A UST has also been decommissioned. If present and not appropriately controlled, there is potential for:

- Direct contact, inhalation and ingestion risk to site workers from contaminated soil or hazardous building materials via dust
- Discharge of contaminated surface water to the stormwater system and ultimately Hawthorne Canal and Iron Cove
- Incorrect handling or disposal of spoil
- Disturbance of actual or potential acid sulphate soils at the western end of the site which could impact local soil and water quality.

The proponent's assessment is defective as it fails to identify the risk to local residents and anyone else in the neighbourhood of excavated soil containing contaminants and asbestos being blown into nearby streets and into homes and gardens of adjoining properties. The proponent's assessment is defective because having identified the presence of asbestos on the site it fails to specifically identify the potential for inhalation of asbestos either by workers or residents.

I **object** to the Darley Road Civil and Tunnel Construction site at Leichhardt because of the impact that disturbance of asbestos and other contaminants will have on health and on property. The community should not be put at risk when a dive site is not necessary.

I wish to submit my objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485. The reasons for objecting are set out below.

Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director - Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

- ❖ I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.
- ❖ The EIS was released just 12 days after the closing date for submissions to the Concept Design. This categorically proves that all the Community Consultations and Submissions to the Concept Design were a total sham. There were at least 800 posts on the interactive map. These were limited as the community only had 140 characters available to make their point which was woefully inadequate. But there were at least 1500 written submissions, some of which were highly detailed and of considerable length. There is no way that all these submissions could have been read, considered, their arguments integrated into the EIS and then for the EIS of 7200 pages to be put together, printed and released 12 days after the the closing date for submissions to the Concept Design. There needs to be a major investigation into this flagrant abuse of the way NSW planning laws have been flouted for the whole of Westconnex and particularly Stage 3.
- ❖ All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a strict prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. The EIS needs to prohibit outright truck movements (including parking) and worker parking on all of these streets.
- ❖ Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.
- ❖ Targets for renewable energy and carbon offsets are not aligned with NSW government policy. (Table 22-8)
- ❖ The EIS indicates that 36 homes will have unacceptable noise impacts for extended periods at the Darley road construction site. The EIS does not mention the cumulative impact of aircraft noise in the Leichhardt or St Peters area, and therefore does not reflect the true impact of construction noise on the amenity of nearby residents and businesses. The noise impacts of construction are not able to be mitigated to an acceptable level and the EIS should not be approved on this basis.

Submission to: Planning Services Department of Planning and Environment GPO Box 39, Sydney, NSW 2001 Attention: Director – Transport Assessments Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Name: ROBIN NAGLE Address: 2 Reserve Street Annandale Signature: Robin Nagle Email: robinannagle@gmail
Date:	Please include / delete (cross out or circle) my personal information when publishing this submission to your website.
	Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.

I am registering my strong objections to the EIS of Stage 3 of the Westconnex M4-M5 link.

1. This EIS has so many uncertainties and contains so little information that it should not even be accepted as an EIS. Important issues like detailed construction designs for the Rozelle Interchange or the impacts on groundwater or risks of flooding, the EIS contains so little detail that it does not even meet the standards expected of an EIS. Details are postponed until after a construction group is chosen. Only then will risks properly be identified. At that stage, Councils and the public will have no right to consultation.

2. This EIS is 'indicative only', the whole document is based on approvals of further toll roads to justify its case. These other proposals are in draft form, are not approved and, if they proceed at all, will not be open for years.

3. It is totally unacceptable to have unfiltered stacks in Haberfield, St Peters and Rozelle, the site of an unprecedented concentration of stacks, located in a valley, adjacent to heavily populated suburbs. It is unacceptable that these stacks are to be unfiltered and it is untrue that filtration does not work. In Tokyo recently constructed tunnels filter 98% of pollution. Financial health costs will rise enormously from not filtering the stacks. The Head of RPA Respiratory medicine has publically warned that heart disease will skyrocket due to air pollution from Westconnex. Air Pollution, the No 1 World Killer and is being seriously addressed in many leading cities around the World.

4. The proposed work hours for the Rozelle Rail Yards Site are 24 hours a day seven days a week for tunnelling and spoil handling. On ground construction Mon-Fri 7.00am – 6.00pm, Sat 8.00am- 1.00pm. But as has been experienced by those at Haberfield and St Peters these hours and especially late and night work have been extended and implemented when the schedules fall behind and this has lead to great physical and mental stress for residents through interrupted sleep and loss of sleep, especially for those with children. The roads and sites at night in the area will see a big increase in noise from truck movements, truck reversing alarms and running machinery. It will also see a marked increase in light during the night hours with site illumination and vehicle head lights as has been experienced in other areas. These problems have not been addressed in the EIS.

5. There will be major impacts on the Anzac Bridge with a projected increase of 60% in daily traffic. There will also be major impacts on the Sydney City Centre. The EIS states this will lead to major impacts on bus travel time and reliability. The EIS's suggests that people will have to adjust their travel times to starting for work earlier and finishing later. This is unacceptable and underlines Westconnex's waste and total failure.

6. The EIS states that property damage due to ground movement "may occur." It states that subsidence may occur along tunnel paths due to tunnel excavation and water drawdown. The risk of ground movement and subsidence is greater where tunnels are less than 35 metres underground. The planned Inner West Interchange proposes tunnels in that area, which are a great deal less than 35metres. The same is true for areas of Rozelle where up to 3 layers of tunnels are proposed in places. This will definitely lead to structural damage and cracking to homes above. Without provision for full compensation for damage there would be no incentive for contractors of Roads and Maritime Services to minimise this damage. This is not acceptable

7. The removal of Buruwan Park for the realignment of the Crescent is a great loss of badly needed parkland. This park was established as a buffer to shield residents from City West Link, there are mature trees on this site, it was not intended as a children's playground. Buruwan Park has a main cycle route running through it. The proposed alternative route is 2nd rate. It takes no account of time or topography, it is solely distance based. Had these factors been taken into account then this would have changed the assessment for the removal of the existing cycle/walkway bridge over the City West link. There is also no mention of this bridge being replaced after construction of the Westconnex. This is not acceptable!

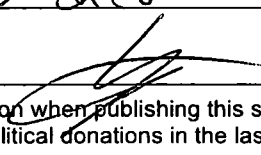

Submission from: Name: <u>Thi Van Nguyen</u> Signature: <u>Van</u> Please include / delete (cross out or circle) my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years. Address: Suburb: <u>Marrickville</u> Postcode <u>2204</u>	Submission to: Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001 Attn: Director – Transport Assessments Application Number: SSI 7485 Application Application Name: WestConnex M4-M5 Link
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- Stage 3 is the most complex and expensive stage of WestConnex and the government is seeking approval, yet there are no detailed construction plans so we are not speaking to a real situation.
- The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors.
- The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.
- This EIS contains **no meaningful** design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.
- The EIS at 7-41 acknowledges that there is great concern in the community that King Street, Newtown, will be made a 24 hour clearway, stating "Roads and Maritime has no plan to change the existing clearways on King Street". This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has **NEVER** stated publicly that King Street will not be subject to extended clearways.
- The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating "Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets". Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future ?
- There are estimated 100 heavy and 70 light vehicle movements a day and the plan is to allow a right-hand turn into Darley Road from the CW Link. The trucks will drive onto Darley Road, turn right into the site and then left back out onto the CW Link, which is unrealistic given the amount of traffic on these roads now.
- I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.
- The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling)

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- i. There have been widespread reports in the media about extensive unresolved disputes regarding damages to houses in the Stage 1 M4 and Stage 2 M5 construction process. Why should the community believe that there will not be extensive damages to houses in Stage 3 ?
- ii. Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is **NO** information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.
- iii. It is quite clear that the escalating cost of tolls will encourage drivers to avoid tollways. This will further pollute and congest local roads. Such impact already evident on Parramatta Rd usage after the new M4 tolls were introduced. The community expects similar impacts on roads around the St Peters interchange, including the Princes Highway, King St, Enmore and Edgeware Roads and though streets of Alexandria and Erskineville. The EIS Traffic analysis fails to deal with this issue of traffic beyond the boundaries of the project and should be rejected.
- iv. It all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does NOT constitute open and fair community engagement.
- v. I am concerned that SMC has selected one of Sydney's most dangerous traffic spots, Darley Rd in Leichhardt for a construction site that will bring hundreds of extra trucks and cars into the area on a daily basis for years.
- vi. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.
- vii. I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.
- viii. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.
- ix. I am very disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.
- x. The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other. The increasing numbers of vehicles will also increase the vehicle pollution (known to have adverse effects on breathing and also to be carcinogenic) in this area.

Signed: <i>Adrie Messy</i>	Date 26/9/2018

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application #SSI 7485 for the reason(s) set out below.

Noise and disruption from construction

I object to the proposal for the Darley Road Civil and Tunnel Construction site at Leichhardt because of the noise and disruption impact it will have on residents during periods of extended construction. The proponent has a very poor track record of managing the impacts of Stages 1 and 2 of this project. In addition, the conditions of approval are so broad as to make enforcing compliance with Council or EPA regulations impossible. The protections for residents are ineffectual and the abuse of the Critical State Significant Infrastructure powers is continuous.

The reality for residents living with the Stages 1 and 2 of WestConnex is night after night of disruption and disturbance with no respite and no way of enforcing compliance. In addition, the policy for mitigation entitlements such as noise protection or respite accommodation is not transparent and is discretionary. Many residents especially the most vulnerable such as those in rental properties or in public housing are unwilling to complain about their situation.

In St Peters in mid-September 2017 the Stage 2 Joint venture's contractors were digging up pipes all one weekend, resulting in two burst water mains. They worked through Saturday night until after 1am on Sunday morning when they should have finished at 6pm on Saturday. Many of the residents were without water for much of the weekend. On Monday night at 8.30pm RMS turned up unannounced with concrete saws and jackhammers. On Tuesday night, RMS were supposed to stop at 6pm but again the work until after midnight. A resident whose bedroom was right next door to the work, posted a video of the deafening concrete saws in use after midnight with the caption "It's impossible to live here at the moment". Many local residents are unaware of the construction impacts and that there will be months of construction work which will have to take place out of hours. The EIS does not specify which works to establish the site will take place during standard construction hours.

The Department of Planning and Environment should oppose the approval of the Darley Road Civil and Tunnel Construction site at Leichhardt because alternatives are available which will have less impact on residents or which will impact fewer residents during the construction phase. These alternatives should be assessed. If not suitable then the proponent must do without a dive site. It is not acceptable to treat communities like this. The mistakes of Stages 1 and 2 should not be repeated.

I wish to register my strong objections to Stage 3 (M4-M5 Link) for the following reasons -

REASONS FOR WESTCONNEX

The main reason given for the construction of the WestConnex motorway is to connect to Sydney Airport and Port Botany. The project has failed to meet both of these objectives.

TRAVEL TIME SAVED?

If stage 3 of the Westconnex project is completed, it is predicted that by 2033, reductions in peak travel times from Western Sydney to the airport and to the Botany Port area will be **miniscule**. Parramatta to Sydney airport will save **10 minutes**, between Burwood and Sydney Airport the time saved will be **5 minutes** and between Silverwater and Port Botany the time saved will be **10 minutes**. These are only the best predictions put forward and time savings may in fact be much less. The whole rationale for building this wasteful **18 billion dollar** polluting project was precisely for that reason... to reduce travel times and to connect with Port Botany and the Airport.

SUBSIDENCE AND HOUSE DAMAGE

The EIS states that property damage due to ground movement "may occur", further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of **ground movement and subsidence is lessened** where tunnelling is more than **35 metres underground**. (Vol 2B Appendix E p 1) The planned **Inner West Interchange** at Leichhardt, Lilyfield and Annandale proposes tunnels which are astonishingly shallow eg **John St at 22m, Hill St at 28m, Moore St 27m (Vol 2B Appendix E Part 2), Catherine St at 28m (Vol 2B Appendix E Part 1)**. At these shallow depths, the homes above would indisputably sustain serious structural damage and cracking. Without provision for full compensation for damage there would be **no incentive** for contractors or Roads and Maritime Services to minimise this damage.

DEPTHS OF TUNNELS AND INCOMPLETE EIS DIAGRAMS

In response to enquiries made to the Westconnex Info line it was confirmed that the depths are measured from the excavation to the surface. Diagrams of the tunnel dimensions in the EIS only give 5.3m as a minimum height. When further clarification was sought of the total height ie from the tunnel floor to the crown (top of the tunnel), Westconnex Infoline confirmed that 5.3m is the 'minimum height', and when pressed further that there is an **extra 2.2m** above this to allow for signage and jet fans, giving a total height of 7.5m.

This is in contrast to information from staff at the Westconnex Information Balmain session who claimed the extra section above the minimum height of 5.3m would be between **1 to 1.5m**.

It throws into confusion what the total height of the tunnels are and therefore the depths of tunnels below homes, which again the Information Session staff stated could be changed by the contractors. What are residents expected to believe? Yet Westconnex is asking residents to provide feedback on inadequate, conflicting information.

Significantly, there is nothing in the EIS to ensure that tunnelling would be at a sufficient depth so as not to endanger the integrity of homes, including vibration, and noise impacts.

Recent experience tells us that residents in the ongoing construction of Stages 1 and 2 have suffered extensive damage to their homes caused by vibration, tunnelling activities, and changed soil moisture content costing thousands of dollars to rectify, with their claims still not settled. Insurance policies will not cover this type of damage. The onus has been on residents to prove that damage to their homes was caused by Westconnex. Furthermore, the EIS actually concedes there will be moisture drawdown caused by tunnelling. There is nothing addressing these major concerns in the EIS. This is what residents living in the path of WestConnex are facing and it is totally unacceptable. **In view of the above no tunnelling less than 35m in depth from the surface to the crown of a tunnel (ie the top) under residences should be undertaken. And of course no tunnelling should be undertaken under sensitive sites.**

UNFILTERED STACKS

It is clear that Annandale, Glebe, Rozelle, Leichhardt and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck **four unfiltered emissions stacks** in the area plus a **large number of exit portals**, the residents of this area will suffer greatly from **poisonous diesel particulates**. This is negligent when you consider that, the World Health Organisation in 2012 declared **diesel particulates carcinogenic**. " As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, "No ventilation shafts will be built near any school."

AIR AND NOISE POLLUTION

Rozelle Interchange and surrounds will experience **increased traffic with associated noise and air pollution**— most particularly at The Crescent, Johnson St Annandale and Catherine St Leichhardt and Ross Street Glebe. These streets are already highly congested at peak times and with a **massive number of extra truck movements** and traffic associated with construction, these streets will become gridlocked during peak times. Also, the widening of The Crescent between the city West Link and Johnston Street with **an extra lane being constructed** will lead to heavy traffic congestion on a road that has **3 Primary/Infants schools**.

Furthermore, the EIS states that the current Rozelle Interchange and surrounds of Anzac Bridge are presently close to full capacity. In fact, Anzac Bridge is **currently at maximum** capacity during peak hours. With the proposed construction, the area is going to be subjected to a huge increase in vehicle movements throughout the 5 year construction period.

TRUCK MOVEMENTS

The removal of spoil from the Rozelle Rail Yards will lead to **the largest number of spoil truck movements** on the entire Stage 3 project: **517 Heavy truck movements a day**, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area.

The **unacceptable noise levels** which will accompany the construction of this massive interchange will further add to the discomfort of the residents. No analysis has been provided of the magnitude of increased noise pollution which will adversely affect residents. The EIS actually states that local residents may have to keep their windows and doors closed to keep out the noise and dust. The proposed work hours for construction in the Goods Yard for the tunneling and spoil removal are 24 hours a day, seven days a week. This could lead to loss of sleep for local residents as well as loss of lifestyle.

There will also be disturbance of soil in the old Rozelle Goods Yard which may be thick with toxic contaminants such as **lead and asbestos** (as was the case in St Peters.) You made no provision for the safe removal of these toxic substances in St Peters and I do not see any provision in the EIS for their safe removal in this area.

LOSS OF PARKS AND OPEN SPACE

The removal of Buruwan Park between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this Inner City area. Further, Buruwan Park lies on a **major cycle route** from Railway Parade through to Anzac Bridge, IJTS and the CBD.

ROPOSED 'PARK'

The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and **poisonous smoke stacks** borders on being criminally negligent. This new **'recreational area'** will be subject to the dangerous invisible particulates of 2.5 microns and smaller so many residents and children will be unaware that they are being poisoned. **All evidence shows that these particulates are linked with increased cases of asthma, lung disease, cancer and stroke** placing further pressure on our already overloaded health system.

RESIDENT CONSULTATION

Although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major **changes to the project design and construction methodologies**. The community would have **no say in this process!**

Further, in the introduction of the EIS it clearly states that the information in the EIS is ' indicative of the final design' only. The reality of this statement means that the project may be completely different to stated plans in the EIS and **shows the process is a sham.**

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <i>Amanda Sawpidis</i>	
Application Number: SSI 7485	Address: <i>16 Starkey St</i>	
Application Name: WestConnex M4-M5 Link	Suburb: <i>Hurlstone Park</i>	Postcode <i>2193</i>
Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.	Signature: <i>[Signature]</i>	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 Application, for the following reasons:

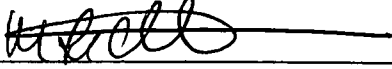

1. I object

2. I have strong objections to proceeding in the face of the unknown hazard associated with two different tunnelling operations taking place in close time and location - the tunnelling for the M4-M5 link and the proposed Sydney Metro tunnelling in the same area - Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond. The impact of this combined tunnelling is an unknown hazard to the soundness of the residences and buildings above, many of them very old and heritage listed. This is a serious community safety issue and residents who do experience damage will be caught between 2 separate contractors for repairs and compensation.
3. The high cost of the tolls has already resulted in an increase in traffic on Parramatta Rd immediately the new M4 tolls were activated. Their anticipated annual increase will likely mean that more and more commuters will seek to avoid the expensive tolls. It makes sense to expect the same effect on the roads around the St Peters Interchange, including the Princes Highway, King St, Edgeware Rd and Enmore Rd and though the streets of Erskineville and Alexandria. The increasing numbers of vehicles will mean more vehicle pollution in the area (known to have adverse effects on breathing and also to be carcinogenic). A viable public train system would easily and effectively manage commuter traffic without the requirement for expensive private tollways.
4. The business case for the project in all three stages does not take into account the costs of external impacts of air pollution for human and environmental health; increased fossil fuel emissions contributing to increase global warming; and in the economic and social costs of the disruption to human activities; of displacement of people and businesses; and of the destruction of community cohesion and amenity. These external costs far outweigh the questionable short term benefits of building roads which poorly serve people's transport needs and are not sustainable in the long term.
5. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling).
6. The increasing numbers of vehicles on the roads around the St Peters Interchange will increase the vehicle pollution (known to have adverse effects on breathing and also to be carcinogenic) in this area.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area.

Application Name: WestConnex M4-M5 Link	Signature: <u></u>
Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the Environmental Impact Statement M4/M5 application, for the following reasons:

1. I am deeply disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.
2. This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.
3. Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.
4. The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
5. It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.
6. I completely reject the idea that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.
7. I have read the warm and caring words contained in the EIS, ref Sustainability Management Strategy. What purpose do these serve if they are not reflected in actual plans. They simply highlight the wanton destruction of homes, trees and habitat already.
8. There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS>
9. I am concerned that SMC has selected one of Sydney's most dangerous traffic spots, Darley Rd in Leichhardt for a construction site that will bring hundreds of extra trucks and cars into the area on a daily basis for years.

For these and many other reasons, I urge the Secretary of Planning to advise the Minister to reject this EIS.

• **Traffic and transport - use of local roads by heavy vehicles**

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent has failed to comply with the SEARS which require that the Proponent must assess construction transport and traffic (vehicle, pedestrian and cyclists) impacts in relation to access constraints and impacts on public transport, pedestrians and cyclists.

In Note 1 to Table 8-43 'Indicative access routes to and from construction ancillary facilities' the proponent states that 'Some use of local roads by heavy vehicles delivering materials and/or equipment may also be required, however this would be minimised as far as practicable.'

The experience of residents in local streets near other tunnel construction sites such as the streets near the M4 East site at Northcote St Haberfield is that heavy and light vehicles use these local streets and cause a high level of adverse impact. The complaints relate to construction vehicles parking out local residents, idling engines, using local roads after hours and carrying rattling loads that increase the noise impact to residents.

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because if it is allowed to proceed then it is inevitable that residents of Charles St, Hubert St and Francis St, which are quiet residential streets, will experience these same very adverse impacts. Once approval is given residents will not be able to enforce a minimal level of use of local roads by light or heavy vehicles associated with the Civil and Tunnel Construction site at Darley Road. It is inevitable that minimal use will become standard use. The contractor who is appointed to the project will be allowed to use local roads and will not be able to stop sub-contractors using local roads.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Alternatives have been identified which would avoid or minimise the use of local streets and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.

This document is vague, lacking in detail confusing and confused. Here are my objections:

1. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck **four unfiltered emissions stacks** in the area plus a **large number of exit portals**, the residents of this area will suffer greatly from **poisonous diesel particulates**. This is negligent when you consider that, the World Health Organisation in 2012 declared **diesel particulates carcinogenic**. As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments and surrounds will experience **increased traffic with associated noise and air pollution** – most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe.
2. Also, the widening of the Crescent between the city West Link and Johnston street with **an extra lane being constructed** will lead to heavy traffic congestion on a road that has **3 Primary/Infants schools**.
3. The EIS states that property damage due to ground movement "may occur, further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of **ground movement and subsidence is lessened** where tunnelling is more than **35 metres underground**. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are astonishingly shallow eg **John St at 22metres Hill St at 28metres Moore St 27 metres**. (Vol 2B Appendix E Part 2) **Catherine St at 28metres** (Vol 2B Appendix E Part 1). At these shallow depths, the homes above would sustain serious structural damage and cracking.
5. Rozelle Rail Yards will have **400 car** parking spaces provided for workers (EIS). The daily workforce for these sites is stated to be approximately 550. This means **that 150 vehicles will need to park in nearby local streets** which are already over-subscribed during weekdays by commuters taking the light rail.
6. The removal of spoil from the Rozelle Rail Yards will lead to **the largest number of spoil truck movements** on the entire Stage 3 project: **517 Heavy truck movements a day**, of which 46 are stated to take place during peak hours.
7. **The removal of Buruwan Park** between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this inner city area.
8. The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and **poisonous smoke stacks** borders on being criminally negligent. This new **"recreational area"** children will be unaware that they are being poisoned.
9. The introduction of the EIS clearly states that the information in the EIS is "indicative of the final design" only. The reality of this statement means that the project may be completely different to stated plans in the EIS. Furthermore although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in **major changes to the project design and construction methodologies**. The community would have **no say in this process**.

I am strongly opposed to Stage 3 (M4-M5 Link) for the following reasons -

WESTCONNEX STATED OBJECTIVES

1. The main reason given for the construction of the WestConnex motorway is to connect to Sydney Airport and Port Botany. The project has failed to meet both of these objectives.

QUESTIONABLE TRAVEL

2. If stage 3 of the Westconnex project is completed, it is predicted that by 2033, reductions in peak travel times from Western Sydney to the airport and to the Botany Port area will be **miniscule**. Parramatta to Sydney airport will save **10 minutes**, between Burwood and Sydney Airport the time saved will be **5 minutes** and between Silverwater and Port Botany the time saved will be **10 minutes**. These are only the best predictions put forward and time savings may in fact be much less. The whole rationale for building this wasteful **18 billion dollar** polluting project was precisely for that reason... to reduce travel times and to connect with Port Botany and the Airport.

SUBSIDENCE AND HOUSE DAMAGE

3. The EIS states that property damage due to ground movement "may occur", further stating that "settlement induced by tunnel excavation and groundwater drawdown may occur in some areas along the tunnel alignment". The risk of **ground movement and subsidence is lessened** where tunnelling is more than **35m underground**. (Vol 2B Appendix E p 1) The planned Inner West Interchange proposes tunnels which are extremely shallow eg **John St at 22m, Hill St at 28m, Moore St 27m (Vol 2B Appendix E Part 2) Catherine St at 28m (Vol 2B Appendix E Part 1)**. At these shallow depths, the homes above would indisputably sustain serious structural damage and cracking. Without provision for full compensation for damage there would be **no incentive for contractors or Roads and Maritime Services to minimise this damage**.

UNFILTERED STACKS - HEALTH DANGERS

4. It is clear that Annandale, Glebe, Rozelle and Lilyfield will be exposed to unacceptable health risks. With massive number of extra truck **four unfiltered emissions stacks** in the area plus a **large number of exit portals**, the residents of this area will suffer greatly from **poisonous diesel particulates**. This is negligent when you consider that, the World Health Organisation in 2012 declared **diesel particulates carcinogenic**. "As you are no doubt aware there are at least 5 schools that will be in the orbit of these poisonous fumes and children and the elderly are most at risk to lung ailments. Your Education Minister Rob Stokes declared in 2017, "No ventilation shafts will be built near any school."

PARKING CONGESTION

5. Rozelle Rail Yards will have **400 car** parking spaces provided for workers(EIS). The daily workforce for these sites is stated to be approximately **550**. This means **that 150 vehicles** will need to **park in nearby local streets** which are already over-subscribed during weekdays by commuters taking the light rail.

POLLUTION - AIR/NOISE

6. The Rozelle Interchange, including the Inner West Interchange, and surrounding streets will experience **increased traffic with associated noise and air pollution** - ie at The Crescent, Johnson St and Catherine St in

Annandale/Lilyfield/Leichhardt and in Ross Street, Glebe. These streets are **already highly congested at peak times** and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times. Also, the widening of the Crescent between the city West Link and Johnston street with **an extra lane being constructed** will lead to heavy traffic congestion on a road that has **3 Primary/Infants schools**. Furthermore, the EIS states that the current Rozelle Interchange and surrounds of Anzac Bridge are presently close to full capacity. In fact, Anzac Bridge is **currently at maximum** capacity during peak hours. With the proposed construction, the area is going to be subjected to a huge increase in vehicle movements throughout the 5 year construction period.

REMOVAL OF SPOIL - TRUCK MOVEMENTS

7. The removal of spoil from the Rozelle Rail Yards will lead to **the largest number of spoil truck movements** on the entire Stage 3 project: **517 Heavy truck movements a day**, of which 46 are stated to take place during peak hours. This will lead to extra noise and air pollution in this area.

The **unacceptable noise levels** which will accompany the construction of this massive interchange will further add to the discomfort of the residents. No analysis has been provided of the magnitude of increased noise pollution which will adversely affect residents. The EIS actually states that local residents may have to keep their windows and doors closed to keep out the noise and dust. The proposed work hours for construction in the Goods Yard for the tunneling and spoil removal are 24 hours a day, seven days a week. This could lead to loss of sleep for local residents as well as loss of lifestyle.

There will also be disturbance of soil in the old Rozelle Goods Yard which may be thick with toxic contaminants such as **lead and asbestos** (as was the case in St Peters.) You made no provision for the safe removal of these toxic substances in St Peters and I do not see any provision in the EIS for their safe removal in this area.

LOSS OF PARKS AND RECREATIONAL SPACE

8. The removal of **Buruwan Park** between The Crescent and Bayview Crescent/Railway Parade, Annandale to accommodate the widening realignment of the Crescent would be a direct loss of much-needed parkland in this innercity area. Further, Buruwan Park lies on a **major cycle route** from Railway Parade through to Anzac Bridge, IJTS and the CBD.

PROPOSED 'PARK' in ROZELLE GOODS YARD

9. The proposed building of a park in the area of the Goods Yard right in the middle of a large number of exit portals and **poisonous smoke stacks** borders on being criminally negligent. This new 'recreational area' will be subject to the dangerous invisible particulates of 2.5 microns and smaller so many residents and children will be unaware that they are being poisoned. **All evidence shows that these particulates are linked with increased cases of asthma, lung disease, cancer and stroke** placing further pressure on our already overloaded health system.

CONSULTATION

10. Although the EIS indicates what is to be expected when construction begins, it also states that that only after Construction Contractors have been engaged would project designs and methodologies be finally worked out and agreed upon. This may result in major **changes to the project design and construction methodologies**. **The community would have no say in this process!**

SUBJECT TO CHANGE

11. In the introduction of the EIS it clearly states that the information in the EIS is "indicative of the final design" only. The reality of this statement means that the project may be completely different to stated plans in the EIS with residents given no say in the final outcome.

For the reasons listed above the project should not go ahead and alternatives looked into that seriously takes into consideration all of the issues raised above such as has been proposed by the City of Sydney Council.

• **Traffic and transport - use of local roads by heavy vehicles**

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because the proponent has failed to comply with the SEARS which require that the Proponent must assess construction transport and traffic (vehicle, pedestrian and cyclists) impacts in relation to access constraints and impacts on public transport, pedestrians and cyclists.

In Note 1 to Table 8-43 'Indicative access routes to and from construction ancillary facilities' the proponent states that 'Some use of local roads by heavy vehicles delivering materials and/or equipment may also be required, however this would be minimised as far as practicable.'

The experience of residents in local streets near other tunnel construction sites such as the streets near the M4 East site at Northcote St Haberfield is that heavy and light vehicles use these local streets and cause a high level of adverse impact. The complaints relate to construction vehicles parking out local residents, idling engines, using local roads after hours and carrying rattling loads that increase the noise impact to residents.

I object to the Civil and Tunnel Construction site at Darley Road Leichhardt because if it is allowed to proceed then it is inevitable that residents of Charles St, Hubert St and Francis St, which are quiet residential streets, will experience these same very adverse impacts. Once approval is given residents will not be able to enforce a minimal level of use of local roads by light or heavy vehicles associated with the Civil and Tunnel Construction site at Darley Road. It is inevitable that minimal use will become standard use. The contractor who is appointed to the project will be allowed to use local roads and will not be able to stop sub-contractors using local roads.

The proponent should be required to abandon the Darley Road civil and tunnel site Leichhardt. Alternatives have been identified which would avoid or minimise the use of local streets and the proponent has not given an adequate explanation as to why these alternatives have not been included in the EIS.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485 Application

Application Name: WestConnex M4-M5 Link

- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
- Darley Road is confirmed as a 'civil and tunnel site (dive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- ❖ This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.
- ❖ Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.
- ❖ The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
- ❖ Increased traffic congestion in areas around portals will increase pollution along roadsides, with predicted adverse impacts on breathing and through long-term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that enables them to be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
- ❖ This EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain – and is certainly not included here.
- ❖ EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
- ❖ The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1,000s more per day onto the roads to the Airport which are already at capacity.
- ❖ There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
- ❖ Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.
- ❖ The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech drilling or testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. No further details have been provided. This casts doubt over the integrity of the entire EIS process.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <u>Zoe Humphreys</u>
Application Number: SSI 7485	Address: <u>205 Humphreys Rd</u> Suburb: <u>Petermann</u> Postcode <u>2049</u>
Application Name: WestConnex M4-M5 Link	Signature: <u>Zoe Humphreys</u>
Please include / delete (cross out or circle) my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- SMC have made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.
- Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.
- The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.
- EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. *"The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval"*. The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.
- I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.
- Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.
- The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is *"based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required"*. The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

Unit 8 /

35 Livingstone Rd

Petersham NSW 2049 Australia

Your view on the application: I object to it

Attn: Secretary re WestConnex M4-M5 Link EIS, project number SSI 16_7485

I write to express my strong objection to the WestConnex M4-M5 Link tollroad proposal.

- Building WestConnex will increase air pollution and global warming and encourage more car use, quickly filling the increased road capacity.
- Increasing vehicle use by inducing more cars onto the road increases the risks related to climate change, including extreme rainfall and extreme heat events.
- This stage of WestConnex also facilitates the building of the Western Harbour Tunnel, which will see tunnels bored under the Balmain peninsula and generate a need for yet more exhaust stacks in and around Balmain.
- WestConnex is not a sustainable solution to Sydney's congestion problem. It will have unacceptable impacts on the health and well-being of local communities, such as increasing toxic pollution levels from unfiltered exhaust smoke stacks located near schools and parks, especially in Rozelle.
- The government has not committed to a genuine consultation process - it released this M4-M5 Link proposal just two weeks after submissions closed for comment on the concept design, and only provided an eight week consultation period. This does not allow sufficient time for submissions from the community.

Extra comments

Westconnex is both a disgrace and a shameful shambles.

I have read the Department's Privacy Statement and agree to the Department using my submission in the ways it describes. I understand this includes full publication on the Department's website of my submission, any attachments, and any of my personal information in those documents, and possible supply to third parties such as state agencies, local government and the proponent.

I have not made a reportable donation to a political party.

Yours sincerely,

Zoe Humphreys

I submit my objection to the WestConnex M4-M5 Link proposals for the reasons stated below, and request the Minister reject the application entirely, and cause the proponents to reissue an EIS that is based on a fully researched, developed, and budgeted concept design, and require the proponents to prepare a new business case against that design.

- ⇒ Along with the widening of the Crescent at Annandale the White's Creek bridge is to be rebuilt. This will mean that the road in this area will be reduced in width as first one side of the bridge is rebuilt followed by the other. Added to the additional volume of trucks from the Rozelle Rail Yards, the Crescent Civil site and the Camperdown site this is going to lead to massive congestion on Johnston St and all along the Crescent towards Ross St and make it virtually impossible for residents to exit and return to their local area. It is most likely that the commercial sectors of the Tramsheds development will be badly affected.
- ⇒ The EIS refers to be construction impacts as being 'temporary'. I do not consider a five year construction period to be temporary.
- ⇒ The Inner West Greenway was considered but not assessed as a cumulative impact. One of the claimed project benefits of the proposal is improved east/west crossings of Parramatta Rd for pedestrians/bikes and the Greenway would achieve this and should be assessed and provided as part of the project. The Greenway was part of inner west LR project before it was deferred in 2011 and Inner West Council has done extensive work on it.
- ⇒ Human health risk (Executive Summary xvii) - The EIS states that there may be a 'small increase in pollutant concentrations' near surface roads. The EIS states that potential health impacts associated with changes in air quality (specifically nitrogen dioxide and particulates) within the local community have been assessed and are considered to be 'acceptable.' We disagree that the impacts on human health are acceptable and object to the project in its entirety because of these impacts.
- ⇒ At the western end of Bignell Lane near Pyrmont Bridge Road existing flood depth was identified up to one metre in the 100 year ARI. The NSW Government Floodplain Development Manual (2005) identifies this location as a high flood hazard area.
- ⇒ The EIS states the Inner West Interchange would be under 3 suburbs - Lilyfield, Annandale and Leichhardt - so clearly it would cover a very extensive area (see map in EIS Vol 1A Chap 5 Part 1 p11) with drilling and danger of subsidence affecting hundreds of homes.
- ⇒ The modelling has thousands of unreleased cars at key locations; i.e. in reality those unreleased vehicles would result in vehicle queues and or network failure.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

As a local resident and architect I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Michael Lewarne 16 Northwood Street, West Leederville, Western Australia, Australia

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

We are also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

During the Stage one consultation phase, residents were repeatedly told that after construction of the M4 East, there would be no more above ground construction in Haberfield. It now appears that they were misled. SMC is already preparing its Preferred Infrastructure Report which will include its final choice of option. I demand that this report be made public as soon as it is filed with NSW Planning and that residents be given a right to consultation on the actual plan before a determination on this EIS application is made by NSW Planning.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of gases from exposed landfill for a further three years. The NSW EPA should not grant a continuing license that would allow this to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

This EIS relies upon presumptions in the stage 1 EIS which also excluded any investigation into public transport alternatives.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

Around the world, cities are being forced to confront air pollution as a serious public health risk. By ignoring these health and pollution warnings WestConnex is condemning Sydney to the same future.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is

dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services

who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It is unacceptable for the community to be given so little information with which to assess the project, especially as the companies and individuals theoretically charged with protecting our city and communities have financial conflicts of interest.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

I have participated in dozens of WestConnex actions and never encountered an adequately briefed staff member at a consultation or on site.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Emma Bacon 362 Wilson St, Darlington NSW 2008, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

It's critical to deal with the air-quality, otherwise whole populations will be sick. It's a matter of generations not just this governments term of office. I've just returned from four weeks in Germany. Each of the cities that have sophisticated integrated public transport systems- trams buses metros. So easy to get around quickly. You wouldn't bother with a car. It's what we need here. Currently it takes me an hour in the day time to catch a bus from Balmain to Leichardt-a 15 minute car trip.this obviously makes a car a much practical way of getting there, we need to get cars off the road. For the last six months I have been taking public transport as I have a broken hand.Mostly I avoid going to my studio as the hour there and hour back makes it hardly worth while. It's time to divert money from West Connex to public transport. Sydney's population continues to increase. We have to make public transport easy so we don't all choke to death with clouds of smoke.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Sue Callanan 9 Hampton St, Balmain NSW 2041, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. Invest our money in more environmentally and economically successful strategies, such as decentralized infrastructures. Dramatically increase the number of light industrial estates (work hubs), spread throughout the inner and outer suburbs, and link them to the growth of a clean energy public transport system. This is 2017 not 1917.

There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some

community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Robert McLaughlin 46 The Inlet Rd, Bulga NSW 2330, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

To whom it may concern,

I'm writing to express my passionate objection to the WESTCONNEX M4/M5 LINK EIS. NSW Planning has a duty of care to the citizens of NSW, and it will without question breach that duty if it approves the EIS. A raft of people have provided expert opinion that disputes the validity of this and many other aspects of the Westconnex project. Issues of major concern include:

- The health impact on residents, particularly children, of the emissions stacks. This is an issue of major concern to the community that has not been addressed!!
- Key decisions have been left open in this EIS, which means the community will not be afforded the opportunity to comment on the final choice of construction sites.
- SMC was required to consider alternatives. Despite the fact that The City of Sydney produced a well thought out alternative plan, this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.
- The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.
- The degree of congestion that will be suffered in the suburbs surrounding the Rozelle and St Peters interchanges is totally unacceptable, and the idea that King street Newtown would be a 24 hour clearway is an abomination, a way to kill the vibrancy and amenity provided by this community hub, it would be devastating in any suburb that has a 'village' street and atmosphere.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I am shocked by Dan Murphys decision to acquire and renovate a site and start a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

I am deeply disturbed by the project, and know that it will be recalled in future years as the piece of infrastructure that killed our city. I urge you to put the public interest first.

Yours sincerely, Laura Fisher 3/11A-15 Berwick St, Coogee NSW 2034, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I am writing to express my strong objection to this proposal and to urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. The is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek

airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to the extension of motorways in a time of a greenhouse emergency. The continued reliance on motor vehicles is completely crazy and irresponsible and the motorway will only encourage more vehicles.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Christopher Blair 117 Hereford St, Forest Lodge NSW 2037, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. One of such schools is Rozelle Public School as both of my children attend, with my younger son only starting this year.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. We the people of NSW deserve better!

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained

were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some

community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Jannine Graham 34/68 Princes Hwy, St Peters NSW 2044, Australia

The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Please consider further investment in public transport and freight trains rather than reliance on roads and trucks.

Yours sincerely, Geneva Richards Sydney Park Rd, Erskineville NSW 2043, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I am so angry that you are destroying our local communities one at a time.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts

and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

During the Stage one consultation phase, residents were repeatedly told that after construction of the M4 East, there would be no more above ground construction in Haberfield. It now appears that they were misled. SMC is already preparing its Preferred Infrastructure Report which will include its final choice of option. I demand that this report be made public as soon as it is filed with NSW Planning and that residents be given a right to consultation on the actual plan before a determination on this EIS application is made by NSW Planning.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Rhian Thomas 16 Commodore St, Newtown NSW 2042, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

This unit is perfect for a quiet getaway for a couple or a single traveler. Only minutes by uber to bustling Hastings St and other lovely beach villages. Castaways Beach is only six minutes walk (I timed it!). Jessica is a lovely communicative host. You'll have everything you need to enjoy a relaxing break on the Sunshine Coast. I want and need as a Sydney resident. Increased bus, tram and train services are what the government should be providing the infrastructure for. If Sydney is truly to be a modern, world class city it needs to have a mature and responsible approach in how transport is planned for our future. This means taking cars off our roads, thereby reducing pollution and congestion. Introducing a congestion charge to encourage use of public transport. It's time to stop being so pig headed and have the humility to learn from other global cities about what works namely excellent public transport NOT roads that take people directly into the city and make travel ha

rd for everyone, NOT polluting local communities and NOT destroying homes and local business. It is time for Australia to end it's love affair with the car. Sydney is no longer a small town with a small population. It is a city with growing residents and as such the transport policy needs to evolve.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS. NSW Planning must reject this EIS and instead recommend to the NSW government that there should be an independent review of WestConnex before more billions are spent and more residents' lives are damaged.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. This means the community will have limited say in the management of the impacts identified in the EIS. The EIS needs to provide an opportunity for the community to meaningfully input into this report and approval conditions .

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to

build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. An EIS based on inaccurate traffic analysis cannot be approved.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

We are also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA

granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

During the Stage one consultation phase, residents were repeatedly told that after construction of the M4 East, there would be no more above ground construction in Haberfield. It now appears that they were misled. SMC is already preparing its Preferred Infrastructure Report which will include its final choice of option. I demand that this report be made public as soon as it is filed with NSW Planning and that residents be given a right to consultation on the actual plan before a determination on this EIS application is made by NSW Planning.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that my son school in St Peters would be so close to such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on the roads between my house and St Peters Public School where we walk to school becoming even more congested as a result of WestConnex. I am concerned there is no plan to put in a 40km/hr school zone along Campbell Road/street or a pedestrian footbridge over the new Campbell road to the school.

There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the

environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

There heritage report ignores potential impacts on hundreds of homes in Newtown which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, Jenny Leahy 64 Goodsell St, St Peters NSW 2044, Australia

From: Helga Simon <campaigns@good.do>
Sent: Monday, 16 October 2017 11:14 AM
To: DPE CSE Information Planning Mailbox
Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I write to convey my strong opposition to the fast-tracked approval process of Stage 3 of the WestConnex road project (M4-M5 link). I am a Rozelle resident, a student of a Master of Environment at Macquarie University and a registered Clinical Psychologist working with children and families. I have followed the WestConnex planning and development process and have become sincerely concerned about both the scale and reach of negative effects to the environment and in particular, to air quality.

As a case in point, the Stage 3 plans for tunnel exhaust stacks (unfiltered) in the already polluted, densely populated inner city suburbs of Rozelle and St Peters have gone ahead without adequate community consultation. Subsequent to a hurried review of the location of the stacks in Rozelle and significant recent changes to the Stage 3 plans, NSW Health submitted only very minimal comments on the EIS (A People's M4East EIS, 2015). There has been a glaring deficiency of the impacts of pollution on public health and none on mental health.

Pollution & Air Quality Control

I note the private contractor for WestConnex, Sydney Motorway Corporation, is in the process of establishing an Air Quality Community Consultative Committee to provide input and advice "on the location of air quality monitoring locations and related issues" (WestConnex, 2017). This pays lip service to the concerns raised by the community, but I cannot see how this adequately addresses the main problem.

On comparable road projects the NSW Environmental Protection Authority has made submissions raising serious concerns about the data modelling used to estimate air quality both inside and outside tunnels, with high levels of nitrogen dioxide (NO₂) in the tunnel and increasing carcinogenic particulate matter along the tunnel length being described as hazardous. At a People's WestConnex Inquiry convened by Jenny Leong, MP, academics in the field reported that the same flawed assumptions used in the modelling for NorthConnex were used in the EIS for WestConnex (The Greens, 2016). Indeed, the Lane Cove Tunnel (NorthConnex) predictions were miscalculated and the project has been fraught with air quality issues since.

Given the stated aim of the project is to reduce travel times and thereby make it (temporarily) more attractive for people to drive, authentic concern for air quality must be questioned, considering the main contributing factor to a change in urban air quality is an increase in vehicles on the road. Rozelle and St Peters possess multiple high traffic roads already.

The scale of the problem is also unknown. The particulates in the air are likely to impact a far wider area than the inner city alone. With the cumulative effects of exposure to pollution, residents will experience consequences into the future. Air is a precious resource that like water, we are all dependent on and, once damaged, produces lasting and far reaching effects (Australian Institute of Health and Welfare, 2011).

Fearful of living under an increasingly polluted sky, cities around the globe have committed to reducing air pollution. Indeed Sydney has been selected to be part of The 100 Resilient Cities Project, a scheme to address a city's livability by focusing on its resilience to increasing demands (City of Sydney, 2016). This does not constitute increasing the number of roads funneling into a CBD. The project cities have outlined improvements to their public transport networks as key to improving resilience, curbing air pollution and improving livability. WestConnex fundamentally undermines these goals.

Pollution & Impacts on Mental Health

As a Clinical Psychologist who has worked in the UK and Australia, I have witnessed the impact of a number of cities' livability on mental health and wellbeing. Individuals and families generally point to psychosocial factors such as affordability, space, time and access to nature impacting their urban lives. It has been well established that mental health disorder rates are higher where there are higher psychosocial pressures.

Pertinently, attention is also being paid to the neuroscientific research which highlights the neurobiological effects of urban life. There is evidence of a link between exposure to air pollution and brain changes leading to neurocognitive deficits and higher rates of mental health disorder, with children and adolescents being especially vulnerable (Oudin et al., 2016). The EU and WHO limit for NO₂ is 40mcg/m³ (micrograms per cubic metre), but levels can reach many times that in large cities (Carrington, 2016). The researchers found that a 10mcg/m³ increase in NO₂ corresponded to a 9% increase in mental illness in the children. For the same increase in tiny particulate matter (PM_{2.5} and PM₁₀), the increase was 4%. (Oudin et al, 2016). Animal studies point to neuroinflammation as the likely causal mechanism. Neuroinflammation has also been shown to significantly accelerate Alzheimer's pathology (Calderón-Garcidueñas et al., 2014). Neurocognitive effects of air pollution are

considerable, occur across all populations, and clinically relevant as early evidence of developing neurodegenerative changes. It is unsurprising the WHO has named air pollution as one of the biggest health threats of our time (WHO, 2014).

I understand the stated aim of WestConnex is to address congestion and commuter times for those living in the Western suburbs travelling to the airport and CBD. And, arguably, congestion does contribute to psychosocial stress and judgements of livability for Sydney commuters. But this is only one lens through which to see the argument. The neurobiological consequences of long term exposure to increased air pollution is another lens through which I implore you to consider Sydney's future. What are the lasting psychosocial and fiscal costs of an increase in air pollution when higher rates of mental health problems (not to mention more general health problems) are taken into account?

Lack of Community Consultation

In response to a review of the forced property acquisitions the government has undertaken, Mike Baird admitted that the process had been unfair and opaque (Winestock, 2016). This lack of authentic community consultation has suggested a monologue, not a dialogue. In so doing, the government will continue to be accountable for the avoidable disempowerment of hundreds of Sydney residents who asked to maintain a degree of agency and control in their lives, or who simply wished to survive (psychologically and financially) in their home city.

Construction has commenced on Stages 1 & 2 with serious concerns voiced by residents, scientists, academics and councils alike (e.g., The People's WestConnex Inquiry, City of Sydney submission on WestConnex M4 East EIS, Inner West Council Minutes), that not enough rigour has gone into the planning, and that the commissioned EIAs were rushed, insufficient, inaccurate in places and in need of urgent review. The long term consequences may not play a part in the current decision making, however it's worth noting that previous governments have been judged and held accountable for lesser errors with fewer warnings.

Recommendations

I add my voice to the call for a full inquiry into the WestConnex project. I do not believe the project will serve the interests of the community, nor do I feel it is a real solution to the problem it claims to solve. The evidence points to investments in public transport infrastructure solving urban traffic problems.

At minimum, I urge you to slow down the process and review:

- (i) the current plan for exhaust stacks and air quality controls; and
- (ii) the current consultation processes so that the evidence for/against can be fairly heard with respect to Stage 3.

I ask you to consider factors such as pollution contributing to long-term mental health problems as part of comprehensive impact survey process, and to adopt a transparent, consultative and evidence-based approach to the WestConnex project going forward.

Please act now to limit damage to our most precious resource- the air we breathe.

Yours sincerely,

Helga Simon 18/1 Wulumay Close Rozelle NSW 2039

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I strongly object to the WestConnex project. My fellow residents and business owners fear the detrimental impact/effects of this proposal on both personal and business activities. We do not need to encourage any more cars in the direction of the city. making king street a clearway will destroy the ambience as well as the important income for business owners, council as well as being detrimental to the residents both in King street and surrounding areas.

If you come to King Street Newtown on the weekend it is packed with both locals and many, many visitors who visit to enjoy the unique ambience, shops, cafes and restaurants

Our concerns have not been addressed or even acknowledged.

Encouraging more vehicles to come into this area creates high density pollution and congestion. The unfiltered pollution via the stacks will be detrimental to the people as well as the environment. The visual effects of these stacks will also be detrimental.

NSW Planning must reject this EIS and instead recommend to the NSW government that there should be an immediate, independent review of WestConnex.

The EIS states 'detailed design and construction planning to be undertaken by the successful contractor' but this is not been an obvious and our concerns have not been considered. The problems accompanying the established plan will affect many schools in the vicinity and the high population of elderly will be severely affected.

The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4 East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

- the approval and subsequent acquisition of Dan Murphys reeks of collusion and poor fiscal management
- there has not been an true and accurate measure of the traffic analysis with the subsequent flawed statements on air and noise pollution prepared to deceive the public
- unreliable statistics is presented to hide future congestion in related areas as well as direct areas

- AECOM has a strong reputation of underestimating resulting traffic congestion/use
- there is no independent assessment of problems predicted
- SMH reports 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)
- the reported benefits of reduced congestion is false as reports on other roads have proven
- the push by the NSW Roads and Maritime Services for more roads and congestion rather than more accessible frequent public transport is flawed
- we strongly object to being excluded from meaningful consultation
- we urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

As a long time resident of the area for 15 years, I have grown up in St. Peter's and hope to stay here for many more. One day, I would like to start a family here and send my kids to the local schools. It pains me, then, to see that the government and the Sydney Motorways Corporation would put the health and environmental safety of not just my own hypothetical future children but real, actual, currently enrolled children at local schools throughout the communities affected by Westconnex as a lesser priority than the future profits and maintenance fees of SMC and the inevitable secondary operators of the tollway.

The cost of filtering the proposed ventilation stacks of the Westconnex project cannot and must not be prioritised over the health and safety of the citizens of the communities affected by the project. Therefore I strongly object to the proposal to omit filtration systems from the ventilation stacks.

Further, I strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services

who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I am also concerned about, and object to the proposed Camperdown construction site as it will add considerably to traffic in the surrounding streets and there are no safeguards from the noise and dust that will be caused by the construction, which is ongoing over several years.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a drive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process while there is an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process.

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that.

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that "No ventilation shafts will be built near any school." in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place some residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kill a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA

granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods.(Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Yours sincerely, James Roberts 28A Hayberry St, Crows Nest NSW 2065, Australia

Subject: Submission to WestConnex New M4/M5 EIS, project number SSI 16_7485

Attn: Secretary, re: WestConnex M4/M5 EIS, Project Number SSI 16_7485.

SUBMISSION OF OBJECTION TO WESTCONNEX M4/M5 LINK EIS.

I very strongly object to this proposal in its entirety and urge the Secretary of Planning to advise the Minister to refuse the application on the grounds below. NSW Planning must require the Proponent to properly and adequately address the impacts set out below which are not adequately addressed in the EIS.

NSW Planning must reject this EIS and recommend a halt to the planning process pending an independent review of WestConnex before more billions are spent and more residents' lives are damaged. Residents all over Sydney, experts, Councillors and even potential investors have all queried the information supplied by the Sydney Motorway Corporation and NSW Roads and Maritime Services. In this situation, it would be reckless and unprofessional of NSW Planning to rubber stamp this inadequate document. A significant challenge to the findings of the EIS needs to be addressed by an independent panel of experts. It is absolutely irresponsible to suppose that the public can comment on a complex project such as this, let alone have good arguments to put forward when there is such a poor level of documentation.

The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. Key decisions have been left open in this EIS. Not to allow consultation on the final choice of construction sites would further compromise an already inadequate consultation process. The lack of specificity makes it impossible to assess the impacts or underpin any criteria for accountability. The fact that the EIS is so vague and that all the development details are to be developed post EIS without scrutiny smacks of deliberate obfuscation bordering on corrupt process. Who will bear the blow out in costs which is likely to follow on from poor planning and clear responsibilities and scrutiny? US THE PUBLIC. No bu

siness would ever be allowed to run on such poor planning.....they would go bankrupt. Is that what you as state government want for us the constituents?

SMC was required to consider alternatives. This section in the EIS is tokenistic at best. The City of Sydney came up with a well thought out alternative plan and this has been ignored in the EIS. The SMC should be required to engage with this plan and to respond to it. Any responsible system of governance would require that. Where is the government assessment and review of the EIS? How is NSW government being accountable?

The EIS fails to put the proposed impact(s) (which would require the assessment of all alternative options) into the broader community planning context. The development of various parts of Sydney close to and related to the proposed road developments has not been considered. These developments are happening now and this unstructured and chaotic approach to urban planning is a very serious concern for the residents of Sydney. It is not clear how this proposed WXC is integrated into the bigger urban planning context and how it will be in fact relevant and the BEST solution for the longer term. Why is the public transport alternative not central to the consideration of options and the consideration of impacts and the wellbeing of the residents and also the many small businesses that will be destroyed. Public transport should be the central concern, and the alternatives fully costed to demonstrate which options are in fact of most benefit to the constituents both in the shor

t and the long term (costs, impacts and wellbeing).

I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks.

The EIS states, there are at least 5 schools that will be in the orbit of these poisonous fumes. Children and the elderly are most at risk of lung ailments. The Education Minister Rob Stokes declared in 2017, that “No ventilation shafts will be built near any school.” in his electorate. The same should be applied in all areas of Sydney and the government needs to urgently review its policy of support for unfiltered stacks.

With four unfiltered emissions stacks in Rozelle, two in Haberfield (one each for the M4East and New M5) and two in St Peters, along with a large number of exit portals, residents of these area will suffer greatly from direct exposure to poisonous diesel particulates.

This is negligent when you consider that the World Health Organisation in 2012 declared diesel particulates carcinogenic.

I am also very concerned about the impact of WestConnex on that residents and workers living near portals and on local roads which become even more congested as a result of WestConnex. There is research evidence that it is dangerous to live close to congested roads. I reject an approach to transport planning which allows a government authority to approve a project knowing that it will place many residents at more risk of life threatening impacts.

The noise and air quality studies are completely dependent on the accuracy of the traffic analysis and assumptions. If the traffic analysis is flawed, so too are the air and noise studies and local road traffic impacts. City of Sydney experts and other academic experts have already rejected the traffic analysis on which WestConnex bases its case. Only last week Citi financial analysts in a report to their large investors were of the view that the traffic predictions contained were unlikely to be achievable. They are arguing that due to toll avoidance and the opening of Badgery's Creek airport, the actual traffic figures will be lower than predicted. In this situation, it would be negligent for NSW Planning to approve this project.

I object to the indicative design for the Rozelle Interchange. Sydney Motorway Corporation has not been able to identify any other similar underground interchange project anywhere in the world or find a construction company to build it. This EIS should be rejected because it would be absurd to approve such a design concept without evidence that it could be constructed.

The EIS shows that traffic on the City West Link, Johnston St, the Crescent, Catherine St and Ross street would greatly increase during the construction period and also be greatly increased if Stage 3 were ever completed. It states that Stage 3 would do nothing to improve traffic congestion in the area, in fact it will add to the problem. Many of these areas are already congested at peak times. Even the EIS recognises that this would have a negative impact on the local area as more and more people try to avoid the congestion by using rat runs through local streets. As a resident of Annandale I am only too aware that the Crescent is already a seriously connected pinch point just from existing traffic and as there is no capacity for expansion of roads or access in this location the impacts on all Annandale residents will be massive.

I also object to a project which will add to congestion on local roads in the Alexandria, Newtown, Enmore and Erskineville areas. The EIS does not adequately model the impact on local roads of Stage 3. I am concerned that the final result will be that King Street will become a 24 hour clearway, which would kills a vibrant Sydney area.

I object to the use of Darley Rd, Leichhardt as a dive site. The site cannot accommodate the projected traffic movements without jeopardising the road network. Darley Road is a critical access road for the residents of Leichhardt and the inner west to access and cross the City West Link. As the EIS acknowledges, this route is already congested at peak hours. The intersection at James Street and the City West link already has queues at the traffic lights. The only other option for commuters to access the city West Link is to use Norton Street, a two-lane largely commercial strip which is already at capacity. The addition of hundreds of trucks and contractor vehicles will result in traffic grinding to a halt and traffic chaos at this critical juncture with commuter travel times drastically increased.

I object to the acquisition of this site on the basis that Dan Murphys renovated and started a new business in December 2016, in full knowledge that they were to be acquired, with the acquisition process commencing early November 2016. This is maladministration of public money and the taxpayer should not be left to foot the compensation bill in these circumstances. With the Premier having now been referred to ICAC over the lease extension granted over this site, it is very clear that there has been a lack of transparency in the dealings with this site.

The inadequate traffic analysis shows that even if this tollway and all other proposed tollways are completed, the St Peters Interchange and Frederick Street in Ashfield will be considerably more congested in 2033 if the project goes ahead.

I am also concerned that the traffic figures relied upon in the EIS are simply not reliable. AECOM, the company responsible for this EIS, has a well-documented record of wrongly predicting traffic. Already there are reports that the traffic for all stages of WestConnex has been overestimated and construction costs underestimated. (SMH 'Pressure builds on government to sweeten WestConnex sale' 5/10/2017)

Reductions of volumes of traffic on Parramatta Rd, King Georges Road or the existing M5 are asserted but the model which projects these effects is not provided for scrutiny or independent assessment. The model's margin for error is not stated. The rest of the benefits all depend on the asserted traffic reductions generating improved travel times and better bus services or freight movement etc. So far the experience of the growth of traffic on Parramatta Rd in response to the re-imposition of tolls on the widened section of the M4 gives us leave to doubt these touted benefits.

There is reference in the EIS to the WestConnex Road Traffic Model version 2.3 (WRTM v2.3), a strategic traffic model that has been used in the traffic analysis. This model was developed by the NSW Roads and Maritime Services who have constantly pushed a motorway agenda to the disadvantage of the development of more public transport. There is insufficient explanation of the nature of the model, where it can be accessed and what function it plays in the analysis. There is no clear explanation of how the assumptions that underpin the WRTM have changed between EIS stages. Since so much else in the EIS including noise and air quality predictions are dependent on this forecasting, the lack of transparency makes it difficult for the EIS to be subject to independent critique.

When measuring the impacts in the EIS, it is important to bear in mind the mismanagement of the project to date and residents have little confidence that any measures set out in the approval document will, in fact, be complied with. During 2017 residents in St Peters have been subject to appalling odours which have damaged the health of some community members and damaged the quality of life of many more. SMC has failed to comply with the environmental protection licence that it was granted as part of previous approvals. NSW Planning has shown that it does not have the powers to enforce compliance. In this situation conditions are meaningless. I am appalled that there is a significant risk that these odours would continue if Stage 3 is approved. I would strongly object to the NSW EPA granting a license for this project on the basis of this application and with no clear plan for how contamination would be controlled. No community should be treated in this manner.

I am also concerned that Haberfield and Ashfield residents are being given the apparent choice of two construction plans, Option A or Option B, both of which will have severe impacts on the community. In fact the EIS hints at other options that have not been fully disclosed.

It was promised, and was a condition of the M4 East approval that in 2019, all Haberfield and Ashfield above ground WestConnex construction sites were to have been dismantled, as well the Urban Design and Landscape Plan (UDLP) completed and Legacy Project 'surplus lands and property' delivered back to the community. These promises were still being reiterated in early 2017, when there was community consultation on how surplus land would be restored to the community in 2019. It is a matter of grave concern that these promises are now been ignored as if they did not happen. NSW Planning should investigate this situation.

There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to seriously research the current impacts on residents, measure what the cumulative impacts would be or make suggestions that would mitigate the cumulative impact of these prolonged periods of construction noise exposure.

The EIS identifies a significant risk of leaks of contaminated water into Rozelle Bay and Alexandria Canal. Such risks to health of Sydney's waterways is not acceptable to me. The Sydney Motorway Corporation through its conduct at St Peters has shown that it cannot be trusted to manage contamination risks. I am completely opposed to the residents of St Peters being exposed to a high risk of being impacted by gases from exposed landfill for a further three years. The NSW EPA should not grant any further licenses that would allow such events to occur.

I object to the EIS on the grounds that it fails the Secretary's requirement for "meaningful" consultation. Hundreds of residents within the proposed project zone were not even notified of feedback sessions. Hundreds of submissions on

the concept design, including a major one from the Inner West Council, were ignored. Consultation is not the provision of glossy brochures, light on detail, which minimise the negative aspects of a project and state that ever impact will be managed by a 'plan'.

There heritage report ignores potential impacts on hundreds of homes in Newtown and Rozelle which are part of Sydney's valued history. This report is incomplete and should not be accepted.

I urge the Secretary of NSW Planning to advise the Minister to reject this EIS, and publish my name and submission in accordance with the undertaking on your website, and provide a written response to each of the objections I have raised.

Submission from: Name: <u>Kevin McKenna</u> Signature: <u>[Signature]</u> Please <u>include / exclude (circle)</u> my personal information when publishing this submission to your website Declaration : I <u>HAVE NOT</u> made any reportable political donations in the last 2 years. Address: <u>33/28 Lower St</u> Suburb: <u>Summer Hill</u> Postcode: <u>2130</u>	Submission to: Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001 Attn: Director – Transport Assessments Application Number: SSI 7485 Application Application Name: WestConnex M4-M5 Link
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

I submit my objection to the WestConnex M4-M5 Link as contained in the EIS application # SSI 7485, for the following reasons, **and ask that the Minister reject the application and require preparation of a genuine, not indicative, EIS**

- All of the streets abutting Darley Road identified as NCA 13 (James Street to Falls Street) should have a strict prohibition on any truck movements and worker contractor parking. These homes are already suffering the worst construction impacts of the work on the site and should be spared the further imposition of lack of parking and additional noise impacts. The EIS needs to prohibit outright truck movements (including parking) and worker parking on all of these streets.
- The EIS states that construction noise levels would exceed the relevant goals without additional mitigation. The additional mitigation is mentioned but not proposed. All possible mitigation should be included as a condition of approval. The EIS acknowledges that substantial above ground invasive works will be required to demolish the Dan Murphys building and establish the road. The EIS noise projections indicate that for 10 weeks residents will suffer unacceptable noise impacts. The EIS does not contain a plan to manage or mitigate this terrible impact. There is no detail as to which homes will be offered (if at all) temporary relocation; there are no details of any noise walls or what treatments will be provided to individual homes that are badly affected. The approval needs to contain detail as to how this unacceptable impact will be managed and minimised during the construction period and, in particular, during site establishment. I object to the selection of the Darley Road site on the basis that the works required (demolition and surface works) will create unacceptable and unbearable noise and vibration impacts for extended periods. The EIS indicates that at least 36 homes will basically be unlivable during this period. In addition, the planned 170 heavy and light vehicles will considerably worsen the impact of construction noise.
- The EIS does not mention the impact of aircraft noise and its cumulative impact. As such, the noise levels identified are misleading. I object to the selection of the Darley Road site because of the unacceptable noise impacts it will have on surrounding homes and businesses.

Submission to: Planning Services Department of Planning and Environment GPO Box 39, Sydney, NSW 2001	Name: J. TOOTHUNTER Signature:
Attention: Director – Transport Assessments	Please include / delete (cross out or circle) my personal information when publishing this submission to your website. Declaration: I HAVE NOT made any reportable political donations in the late 2 years.
Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: 50 CALLAH ST Suburb: ROZELLE Postcode: 2039

I am registering my strong objections to Stage 3 of Westconnex, the M4-M5 link for the following reasons:

1.SMC have made it extremely difficult for the community to access hard copies of the EIS. The local Glebe library only has one copy and this is the situation at other local libraries. There are very limited hours of access to these locations outside normal working hours. Access to the EIS is very difficult without access to a personal computer. This totally restricts open community engagement.

2.The EIS gives no information about changes to traffic increases entering the Sydney CBD caused by the Westconnex. Duncan Gay when asked about this, in connection to huge increases of traffic predicted to enter the city from Westconnex at St Peters, would only say that traffic would disperse! So thousands of extra vehicles would magically disperse – where? There is no plan for this. RMS has only just started work to identify which roads will need to be upgraded to deal with these vast numbers of extra vehicles entering the city. So it is impossible to form an understanding of the true Environmental impacts of this project – which is the very purpose of an EIS.

3.The Westconnex has been described as an integrated transport network solution. This is totally untrue as the role and integration with public transport and freight rail has not been assessed. The Government recently committed to a Metro West so this throws into question the need for Westconnex. This is especially so as the Westconnex business case outlines a shift from public transport to toll roads as a benefit. This needs to be justified economically. The EIS does not do this.

4. At the Rozelle Rail Yards site there will be 2 entry/exits for Heavy vehicles off the City West Link. Extra traffic controls are to be set up with extra sequences of traffic light controls to enable spoil trucks to access and exit this site. It is stated there will be 517 Heavy Truck movements as day of which 46 will be in Peak hours, plus 10 truck movements from the Crescent site. Maps showing the truck movements show that all these trucks will use the City West link. Similar maps for Darley Rd dive site also show trucks from there using the City West Link. At a consultation with a Westconnex staff member it was stated that trucks removing spoil from Camperdown dive site would be stationed and called up from James Craig Rd, so there will also be a constant movement of trucks from this location onto the City West Link. The EIS states the cumulative effect of truck movements from all sites onto the City West Link will be 700 one way Heavy truck movements a day and of that 208 will be in Peak hours. This will cause total gridlock. The EIS says other routes maybe considered; there are no details of these. This is unacceptable as it would allow a privately owned SMC to make whatever decisions they saw fit when and if the EIS is approved with no input from the community allowed.

5.The removal of Buruwan Park for road widening and the realignment of the Crescent is a particular loss of badly needed parkland. This park was established as a nature corridor and a buffer to shield the local residents from City West Link, there are mature trees on this site, it was not intended as a children's recreational area with play equipment, the description in the EIS is inaccurate. Buruwan Park also has a main cycle route running through it. The alternative route being suggested is poor and takes no account of encouraging cycling as a mode of transport. The alternative routes are based on distance only and take no account of time taken or topography. Had this been done then this would have changed the assessment for the removal of the existing cycle/walkway bridge over the City West link. There is also no mention of this bridge being replaced after construction of the Westconnex. This is not acceptable.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Name: Sabera Phanthavong

Please include / delete (cross out or circle) my personal information when publishing this submission to your website **Declaration** : I **HAVE NOT** made any reportable political donations in the last 2 years.

Address: 12 Holborn St

Suburb: Newfern Postcode: 2042

Submission to:

Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485 Application

Application Name: WestConnex M4-M5 Link

- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.
- The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
- Darley Road is confirmed as a 'civil and tunnel site (dive site)' with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS ?
- Other Comments :

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Submission to:

Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Name: Cyril Moxon

Signature: [Signature]

Attn: Director – Transport Assessments

Please **include / delete (cross out or circle)** my personal information when publishing this submission to your website **Declaration** : I **HAVE NOT** made any reportable political donations in the last 2 years.

Application Number: SSI 7485 Application

Address: 109 Wattle Rd

Application Name: WestConnex M4-M5 Link

Suburb: Marrickville Postcode: 2204

- ✦ The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
- ✦ Why the so called 'King Street Gateway' been excluded in the analysis of cumulative impacts of other projects?
- ✦ There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.
- ✦ I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.
- ✦ SMC have made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.
- ✦ Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.
- ✦ EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. "The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.
- ✦ I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.
- ✦ Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.
- ✦ The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is "based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required." The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <u>Kumball</u>
	Address: <u>19 Michelago Cct</u>
Application Number: SSI 7485	Suburb: <u>Prestons</u> Postcode <u>2170</u>
Application Name: WestConnex M4-M5 Link	Signature: <u>[Signature]</u>
Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration : I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- ❖ This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.
- ❖ Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.
- ❖ The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
- ❖ Increased traffic congestion in areas around portals will increase pollution along roadsides, with predicted adverse impacts on breathing and through long-term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that enables them to be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
- ❖ This EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain – and is certainly not included here.
- ❖ EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
- ❖ The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1,000s more per day onto the roads to the Airport which are already at capacity.
- ❖ There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
- ❖ Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.
- ❖ The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech drilling or testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. No further details have been provided. This casts doubt over the integrity of the entire EIS process.
- ❖ Other comments

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Attention Director

Infrastructure Projects, Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001Name: *Christina K. Cooper*Address: *404/130 Carillon Ave, Newtown NSW 2042*

Application Number: SSI 7485

Suburb:

Postcode

Application Name: *WestConnex M4-M5 Link*Signature: Please include / delete (cross out or circle) my personal information when publishing this submission to your websiteDeclaration: I HAVE NOT made any reportable political donations in the last 2 years.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 Application, for the following reasons:

1. I strongly object to the **unknown hazard** associated with two different tunnelling operations taking place in close proximity in time and location - the deep tunnelling for the M4-M5 link and the tunnelling for the new Sydney Metro in the same area - Tempe, Sydenham, St Peters, Newtown and Camperdown. The impact of this combined tunnelling is an unknown hazard to the soundness of the residences and buildings above, many of them very old and heritage listed. This is a serious community safety issue and residents who experience damage will be caught between 2 separate contractors for repairs and compensation.
2. I object to the issue of this EIS only 14 days after the deadline for submission of comments on the concept design. The formal response to the 1000s of comments and submissions on the design, released only after the EIS, cannot possibly be based on a full assessment and consideration of the community responses. This is an insult to the community and questions the integrity of the entire EIS process.
3. The decision to build a three-stage tollway of the scale and complexity proposed and that has never been built before is risking community safety and state resources. I strongly object to that fact that this risk has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
4. The original objectives of WestConnex was to improve road and freight access to Sydney Airport and to Port Botany with the Interchange now being built at St Peters located much closer to the airport. This contradicts the stated purpose of the extension of the M4. Now both the new M5 and the new M4-M5 Link will dump 1000s more cars per day onto the roads to the airport which are already over-crowded and competing with freight transport. I strongly object to the impact of the M4/M5 link as it fails to meet the original purpose and provide a sustainable rail link to enable freight to be moved out of the city and commuters to travel by public transport.
5. Across all 3 stages the business case has not taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.
6. The high cost of the tolls has already resulted in an increase in traffic on Parramatta Rd immediately the new M4 tolls were activated. Their anticipated annual increase will likely mean that more and more commuters will seek to avoid the expensive tolls. It makes sense to expect the same effect on the roads around the St Peters Interchange, including the Princes Highway, King St, Edgeware Rd and Enmore Rd and through the streets of Erskineville and Alexandria. The increasing numbers of vehicles will mean more vehicle pollution in the area (known to have adverse effects on breathing and also to be carcinogenic). A viable public train system would easily and effectively manage commuter traffic without the requirement for expensive private tollways.

Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 Application, for the following reasons:

1. The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors.
2. Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM, which has multiple commercial interests in WestConnex.
3. I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.
4. There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.
5. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
6. I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.
7. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).
8. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.
9. It is quite clear that the escalating cost of tolls will encourage drivers to avoid tollways. This will further pollute and congest local roads. Such impact is already evident on Parramatta Rd usage after the new M4 tolls were introduced. The community expects similar impacts on roads around the St Peters interchange, including the Princes Highway, King St, Enmore and Edgeware Roads and though streets of Alexandria and Erskineville. The EIS Traffic analysis fails to deal with this issue of traffic beyond the boundaries of the project and should be rejected.
10. I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.
11. Increased traffic congestion in areas around portals will increase pollution along roadsides, with predicted adverse impacts on breathing and through long-term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that enables them to be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
12. Unfiltered stacks anywhere in Sydney are not unacceptable. An extra exhaust stack on the NW corner of the St Peters interchange will increase pollution in an area where the prevailing winds will spread emissions over residences, schools and sports fields. St Peters Primary School will be at the apex of a triangle between the two exhaust stacks on the SW and NW corners of the interchange.
13. The impact of the deep tunnelling for the M4-M5 link – in addition to the tunnelling for the new Sydney Metro in the same area – in Tempe, Sydenham, St Peters and Newtown -is an unknown hazard to buildings. Residents have found it hard enough to get compensation for damage done to buildings by Stage One and Two. Two different tunnelling operations taking place at such proximity will further increase difficulty because private contractors will blame the other project.

In this submission I have only been able to include some of my objections to this EIS. We have already witnessed the destruction of tracts of Haberfield and St Peters. It is time to consider this entire project before more damage is done.

Campaign Mailing Lists: I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Submission to : Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: JACQUI ADAMS Signature: 
Attention: Director – Transport Assessments	<i>Please include my personal information when publishing this submission to your website</i> Declaration : I HAVE NOT made any reportable political donations in the last 2 years.
Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: 53/4 ALEXANDRIA DR Suburb: CAMDEN Postcode 2050

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- I. The EIS does not provide appropriate parking for the estimated 100 or so workers that the EIS states will work every day at the site, while other equivalent sites have allocated parking for such workers (Northcote Civil site (150)) and Parramatta Road East Civil site (140). It is also noted that the EIS provides for loss of 20 residential parks on Darley Road. Local streets are at capacity already because of the lack of off-street parking for many residents and the Light Rail stop which means that commuters use local streets. The EIS states that workers 'will be encouraged to use public transport.' the EIS needs to mandate that no trucks or construction vehicles are to park in local streets. There needs to be a requirement that is enforceable that workers use the Light Rail stop which is adjacent to the site or a plan to bus in workers
- II. The EIS does not require an acoustic shed and states that 'Acoustic barriers and devices at the access tunnel entrances would be considered and implemented where reasonable and feasible to minimise potential noise impacts associated with out-of-hours works within the tunnels.'
- III. The EIS contains no detail of the access tunnel from the Darley Road site to the mainline tunnel other than depicting the route. The approval conditions need to ensure that tunnelling is occurring at sufficient depth so as to not jeopardise the integrity of the homes and not create unacceptable vibration and noise impacts for James Street residents and those at adjacent streets. The approval conditions need to make clear the period of time for which the 'temporary' tunnel is to be used.
- IV. The EIS states that 'a preferred noise mitigation option' would be determined during 'detailed design'. This is unacceptable and residents have no opportunity to comment on the detailed designs. The failure to include this detail means that residents have no idea as to what is planned and cannot comment or input into those plans. (Executive Summary xvi)
- V. The EIS social an economic impact study acknowledged the high value placed on retaining trees and vegetation in the affected area but does not mention that WestCONnex has already destroyed more than 1000 trees in the St Peters Alexandria area around Sydney Park alone.
- VI. Light construction vehicle routes – the EIS acknowledges that these vehicles will use 'dispersed' routes (8-62). In other words, construction vehicles will use and park on local roads. The EIS does not propose any management as to which roads they use. The addition of 70-100 light vehicle movements day in Leichhardt will result in our small, congested streets, which are already at capacity and suffering parking shortages, will have the added impact of workers travelling to and from the site and parking in local streets. There will be rat running. The EIS should provide an agreed route (using arterial roads only) that can be used by all vehicles associated with the project.

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment Application Number: SSI 7485 GPO Box 39, Sydney, NSW, 2001	From: NEWTOWN Name: SAM CHUKWOWETH Address: 5 LONGDOWN ST
Application Name: Westconnex M4-M5 Link	Suburb: NEWTOWN Postcode 2042
Declaration : I have not made any reportable political donations in the last 2 years.	Please include / delete (cross out or circle) my personal information when publishing this submission to your website

I object to the whole of the Westconnex Project, including the Westconnex M4-M5 Link proposals as contained in the EIS, for the following reasons :

Sam Chukwoveth

1. The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors. I have serious concerns that such a complex project with hundreds of risks could be treated by NSW politicians as if approval was a foregone conclusion.
2. There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.
3. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
4. I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process.
5. The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a disruptive impact on the local transport networks comprising vehicle, bus and active transport (walking and cycling).
6. I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that WestCONnex are seeking approval to tunnel under hundreds of heritage buildings in Newtown without no serious assessment of risks at all.
7. It is quite clear that the escalating cost of tolls will encourage drivers to avoid tollways. This will further pollute and congest local roads. Such impact was evident on Parramatta Rd usage immediately the new M4 tolls were activated. The community expects similar impacts on the roads around the St Peters interchange, including the Princes Highway, King St, Enmore and Edgeware Roads and though streets of Alexandria and Erskineville. The Traffic analysis fails to deal with this issue of traffic beyond the boundaries of the project and should be rejected.
8. I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.
9. Increased traffic congestion will also increase the atmospheric pollution along roadsides in local areas, with predicted adverse impacts on breathing and through long term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that they can be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
10. Unfiltered stacks anywhere in Sydney are not unacceptable. An extra exhaust stack on the NW corner of the St Peters interchange will increase pollution in an area where the prevailing winds will spread emissions over residences, schools and sports fields. St Peters Primary School will be at the apex of a triangle between the two exhaust stacks on the SW and NW corners of the interchange.
11. The impact of the deep tunnelling for the M4-M5 link – in addition to the tunnelling for the new Sydney Metro in the same area – in Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because contractors will blame the other project.

In this submission I have only been able to include some of my objections to this EIS. We have already witnesses the destruction of tracts of Haberfield and St Peters. Please do not allow the Sydney Motorway Corporation and its contractors to further extend this damage.

I call on the Secretary of the Planning Department to advise the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area with active consideration and comparison of heavy and light rail alternatives.

I would like to assist and/or keep up to date with the anti-Westconnex campaign - These details will be removed before lodging this submission, and will be used only for campaign purposes and will not be divulged to other parties

Name _____ Email _____ Mobile _____

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment PO Box 39, Sydney, NSW, 2001	Name: <u>GRAEME HARTMAN</u>	
	Address: <u>63 A BOWEN ST</u>	
Application Number: SSI 7485	Suburb: <u>LEICHHARDT</u>	Postcode <u>2040</u>
Application Name: WestConnex M4-M5 Link	Signature: <u>[Signature]</u>	
Please INCLUDE my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

1. **Heavy vehicle movements during peak hours – Leichhardt.** The EIS states that 'reasonable and practical management strategies would be investigated to minimize the volume of heavy vehicle movements during peak hours.' (8-53). This is also not acceptable as it is not known what will actually be done to manage this impact. It is not good enough for the EIS, which forms the basis of the approval of this project, to simply mention 'investigations' and not detail a proper plan (on which residents can comment) on management of heavy vehicle movements during peak hours. In addition, Darley Road is very congested from 7am until 9.30am and then from 4pm-6.30pm, well outside the 'peak' periods identified in the EIS. And the impact on traffic will be caused by 'light' vehicles and not simply heavy vehicles. It is clear that there is no plan for managing these vehicle movements. The EIS should not be approved as drafted. It is unacceptable for this volume of vehicles to be proposed for this critical arterial road with no plan for management.
2. **Light construction vehicle routes –** the EIS acknowledges that these vehicles will use 'dispersed' routes (8-62). In other words, construction vehicles will use and park on local roads. The EIS does not propose any management as to which roads they use. The addition of 70-100 light vehicle movements day in Leichhardt will result in our small, congested streets, which are already at capacity and suffering parking shortages, will have the added impact of workers travelling to and from the site and parking in local streets. There will be rat running. The EIS should provide an agreed route (using arterial roads only) that can be used by all vehicles associated with the project.
3. **EIS is Indicative only -** The EIS should not be approved as it does not contain any certainty for residents as to what is proposed and does not provide a basis on which the project can be approved. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' The community will have no opportunity to comment on the Preferred Infrastructure Report which forms the basis of the approval conditions. This means the community will have limited say in the management of the impacts identified in the EIS. The EIS needs to provide an opportunity for the community to meaningfully input into this report and approval conditions.
4. **Intersection of James St and City West Link –** The EIS (8-630) indicates that there will be an increase in traffic volume during construction of nearly 400 vehicles during peak hour. The only strategy to manage this is allowing a right-hand turn into James Street. This intersection is the third most dangerous in the inner west (based on TfNSW's own statistics). There is no analysis of crash statistics at this intersection provided in the EIS. The EIS should not be approved in its current form. It needs to provide certainty to the community that they will be able to reasonably access this part of the road network in a timely and safe manner.

Application Number: SSI 7485	Address: <i>18 Belmore</i>	
Application Name: WestConnex M4-M5 Link	Suburb: <i>Surry Hills</i>	Postcode <i>2010</i>
Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.	Signature: <i>[Signature]</i>	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 Application, for the following reasons:

1. Deciding to build a tollway of the scale and complexity proposed and that has never been built before is placing the community at great risk. No project of this kind should be approved on the basis of an 'indicative design'. This risks billions of public monies and resources.
2. The planning process that involves such risks has not been subject to any democratic consideration. The huge majority of community, stakeholder and Council submissions objected to the Environmental Impact Statements for the first two stages. WestConnex is now attempting to rush through approval on an even less complete EIS.
3. The business case for the project across the 3 stages failed to measure or account for the cost of any external impacts of this massive toll road project. The social costs of dislocation, stress, health impacts, sleep deprivation and damaged quality of life in communities have been ignored. This proposal will further extend these impacts in Haberfield and St Peters for years. Fresh unacceptable impacts will be imposed on the suburbs of Leichhardt, Lilyfield and Rozelle, parts of which will be decimated. The impact of air pollution on human and environmental health; adding fossil fuel emissions contributing to global warming effects; and the displacement of people and businesses and the destruction of community cohesion and amenity have never been seriously considered. These external costs outweigh any benefits from building roads that poorly serve people's transport needs, induce traffic and displace congestions spots.
4. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 nor 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1000s more per day onto the roads to Sydney Airport which are already at capacity.
5. This EIS has been released only 14 days after submission of comments on the concept design closed and a report released after the EIS. It seems impossible that the community comments could have been reviewed, assessed and responses to be incorporated into the EIS in this time. This raises serious questions about the integrity of the entire EIS process.
6. I strongly object to proceeding in the face of unknown hazards associated with two different tunnelling operations taking place in close time and location - the tunnelling for the M4-M5 link and the proposed Sydney Metro tunnelling in the same area - Tempe, Sydenham, St Peters and Newtown. The impact of this combined tunnelling is an unknown hazard to the soundness of the residences and buildings above, many of them very old and heritage listed. This is a serious community safety issue and residents who do experience damage will be caught between 2 separate contractors for repairs and compensation. No approval should be given until a construction plan is produced. It is not sufficient to list heritage buildings. Risks should be evaluated not simply described.
7. Given the high cost of the tolls and their annual increases, it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware Rd and Enmore Rd and though the streets of Erskineville and Alexandria. The increasing numbers of vehicles will mean more roadside pollution in the area (known to have adverse effects on breathing and also to be carcinogenic).
8. I strongly object to unfiltered stacks. I believe that scientific reports that are being used by the government to justify these is based on out of date evidence. I am appalled that the government would consider building these so close to schools including St Peters and Rozelle Public Schools.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- ✦ Stage 3 is the most complex and expensive stage of WestConnex and the government is seeking approval, yet there are no detailed construction plans so we are not speaking to a real situation.
- ✦ The process that has led to this EIS has been undemocratic and obscure, driven by decisions made behind closed doors.
- ✦ The business case for the project in all three stages has failed to taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.
- ✦ This EIS contains **no meaningful** design and construction details and no parameters as to how broad changes and therefore impacts could be. It therefore fails to allow the community to be informed about and comment on the project impacts in a meaningful way.
- ✦ The EIS at 7-41 acknowledges that there is great concern in the community that King Street, Newtown, will be made a 24 hour clearway, stating "Roads and Maritime has no plan to change the existing clearways on King Street". This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has **NEVER** stated publicly that King Street will not be subject to extended clearways.
- ✦ The EIS at 12-57 describes possible disruptions of water supply to a vast area of Sydney as a result of tunnelling in the proximity of two major Sydney Water Tunnels in the Newtown area, stating "*Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water Assets*". Why has an EIS been published that infers that the tunnel alignments have been thoroughly surveyed and researched, when further survey work could dramatically alter the alignments in the future ?
- ✦ There are estimated 100 heavy and 70 light vehicle movements a day and the plan is to allow a right-hand turn into Darley Road from the CW Link. The trucks will drive onto Darley Road, turn right into the site and then left back out onto the CW Link, which is unrealistic given the amount of traffic on these roads now.
- ✦ I am appalled that the Sydney Motorway Corporation could seek approval to build complex interchanges under the suburbs of Rozelle and Leichhardt on the basis of an EIS that is based on a concept design rather than detailed proposal that includes engineering plans.
- ✦ The warm and caring words contained in the EIS, ref Sustainability Management Strategy, have not been reflected in the wanton destruction of homes, trees and habitat already. Why should we believe them?
- ✦ The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling).
- ✦ Other Comments

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

Submission to:

Name: GISSIEA JACQUELINE SARTOSA BAN Planning Services,
Department of Planning and Environment

Please include / delete (cross out or circle) my personal information when publishing this submission to your website **Declaration** : I **HAVE NOT** made any reportable political donations in the last 2 years.

Application Number: SSI 7485 Application

Address: 9 LONGDOWN ST

Application Name: WestConnex M4-M5 Link

Suburb: NEWTOWN Postcode: 2042

1. SMC have made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.
2. Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware and Enmore Roads and through the streets of Erskineville and Alexandria.
3. The EIS at 12-57 describes potentially serious problems where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs. Why is SMC proposing tunnelling within metres of these critical services when no accurate surveying has been done? And when there is only limited information available about the strength of these water tunnels? The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.
4. Why the so called 'King Street Gateway' been excluded in the analysis of cumulative impacts of other projects?
5. There has been no independent consideration of alternatives, in particular of a major expansion of commuter rail transport. The Department should reject this inadequate EIS and have a review of the flawed processes that have already led to massive expenditure on the inadequate option of privatised toll roads. This proposal is out of step with contemporary urban planning.
6. I object to the fact that the WestConnex Traffic Model has not been released to Councils and the community.
7. EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. *"The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval"*. The EIS should not be approved till the bulk of these 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.
8. I object to the publication of this EIS only 14 days after the final date for submission of comments on the concept design. At the time this EIS was approved for publication, there had been no public response to the public submissions on the design. It was not possible that the community's feedback was considered let alone assessed before the EIS model was finalised. The rushed process exposes the fundamental lack of integrity in the feedback process and treats the community with contempt.
9. Stage 3 is the most complex and expensive stage of WestConnex, yet there are no detailed construction plans. It is not enough to say there will be mitigation if negative impacts unfold. An EIS should assess risks and be able to predict whether they are worth risking and if so, what mitigation should be necessary.
10. The assessment and solution to potentially serious problems described in the EIS at 12-57 (where mainline tunnels alignment crosses key Sydney Water utility services that service Sydney's eastern and southern suburbs) is *"based on assumptions about the strength and stiffness of the water tunnels given that limited information about the design and condition of these assets was available. Detailed surveys should be undertaken to verify the levels and condition of these Sydney Water assets. A detailed assessment would be carried out in consultation with Sydney Water to demonstrate that construction of the M4-M5 Link tunnels would have negligible adverse settlement or vibration impacts on these tunnels. A settlement monitoring program would also be implemented during construction to validate or reassess the predictions should it be required."* The community can have no confidence in the EIS proposals that are incomplete and possibly negligent. The EIS proposals and application should not be approved till these issues are definitively resolved and publicly published.

I object to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the reasons set out below.

- I. The proposal to run trucks so close to homes is dangerous. There have been two fatalities on Darley Road at the proposed site location. The EIS does not propose any noise or safety barriers to address this. Despite the unacceptable impact to nearby homes, there is no proposal for noise walls, nor any mitigation to individual homes.
- II. Why are two different options being suggested for Haberfield? It is clear that both of these are unacceptable and will expose residents to unnecessary traffic danger, congestion and disruption with capacity to enjoy their homes and environment. It is insulting that the EIS acknowledges this but offers not solution other than to go ahead.
- III. Rozelle is an old and historic suburbs of Sydney. The damage that this project would do in destruction of homes, other buildings and vegetation is unacceptable, especially when the project would leave a legacy of traffic congestion in the area.
- IV. The EIS states that Darley Road is a contaminated site, likely including asbestos. There is a risk to the community associated with spoil removal, transfer and handling. We object to the selection of the site based on the environmental risks that this creates, along with risks to health of residents.
- V. The EIS states that property damage due to ground movement may occur. We object to the project in its entirety on this basis. The EIS states that 'settlement, induced by tunnel excavation, and groundwater drawdown, may occur in some areas along the tunnel alignment'. The risk of ground movement is lessened where tunnelling is more than 35 metres. However, some tunnelling is at less than 10 metres. This proposed tunnel alignment creates an unacceptable risk of ground movement. In addition, the EIS states that there are a number of discrete areas to the north and northwest of the Rozelle Rail Yards, to the north of Campbell Road at St Peters and in the vicinity of Lord Street at Newtown where ground water movement above 20 milliliters is predicted 'strict limits on the degree of settlement permitted would be imposed on the project' and 'damage' would be rectified at no cost to the owner. would be placed (Executive Summary, xvii -iii). The project should not be permitted to be delivered in such a way that there is a known risk to property damage that cannot be mitigated to an acceptable level of risk.
- VI. There is a higher than average number of shift workers in the Inner West. The EIS acknowledges that even allowing for mitigation measures such as acoustic sheds and noise walls, shift workers will be more vulnerable to impacts of years of construction work and will consequently be at risk of a loss of quality of life, loss of productivity and chronic mental and physical illness.
- VII. Rozelle Interchange and surrounds will experience increased traffic with associated noise and air pollution- most particularly at the Crescent, Johnson St and Catherine St, Annandale/Lilyfield/Leichhardt and Ross Street, Glebe. These streets are already highly congested at peak times and with a massive number of extra truck movements and traffic associated with construction, these streets will become gridlocked during peak times.

I submit my objection to the WestConnex M4-M5 Link proposals for the reasons stated below, and request the Minister reject the application entirely, and cause the proponents to reissue an EIS that is based on a fully researched, developed, and budgeted concept design, and require the proponents to prepare a new business case against that design.

- Rozelle Rail Yards and Rozelle Civil Site. It is clear that the most highly affected area of Stage 3 will be the Rozelle area and the massive and hugely complex Rozelle interchange. The suggestion that Westconnex is capable of building this is highly questionable. Nothing like this has been built anywhere else in the World. Considering the simple problems of dust management, noxious gasses and the handling of toxic materials like asbestos that have been so inappropriately dealt with on Stages 1 and 2 by Westconnex this intersection of Stage 3 is a disaster waiting to happen and should definitely not be allowed to proceed without a massive investigation. What has been shown in the EIS is totally inadequate for this project to be allowed to proceed.

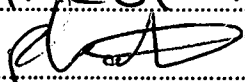

- Human health risk (Executive Summary xvi) - The EIS states that there may be a 'small increase in pollutant concentrations' near surface roads. The EIS states that potential health impacts associated with changes in air quality (specifically nitrogen dioxide and particulates) within the local community have been assessed and are considered to be 'acceptable.' We disagree that the impacts on human health are acceptable and object to the project in its entirety because of these impacts.

Leichhardt or Lilyfield. The EIS proposes that all trucks will arrive at the Darley Road civil and tunnel site from Haberfield and travel along Darley Road to the site, with a right-hand turn now permitted into James Street. The proposed route will result in a truck every 3-4 minutes for 5 years running directly by the small houses on Darley Road. These homes will not be habitable during the five-year construction period due to the unacceptable noise impacts. The truck noise will be worsened by their need to travel up a steep hill to return to the City West Link, so the noise impacts will affect not just those homes on or immediately adjacent to Darley Road. The proposal to run trucks so close to homes is dangerous and there have been two fatalities on Darley Road at the proposed site location. The EIS does not propose any noise or safety barriers to address this. Despite the unacceptable impact to nearby homes, there is no proposal for noise walls, nor any mitigation to individual homes.

- At the western end of Bignell Lane near Pyrmont Bridge Road existing flood depth was identified up to one metre in the 100 year ARI. The NSW Government Floodplain Development Manual (2005) identifies this location as a high flood hazard area.

- Truck routes – Leichhardt: No trucks should be permitted on Darley Road or local roads in

**I object to the WestConnex M4-M5 Link proposals as contained in the EIS application

Submission to:

Planning Services,
Department of Planning and Environment
GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485 Application

Application Name: WestConnex M4-M5 Link

- a. The project directly affected five listed heritage items, including demolition of the stormwater canal at Rozelle. Twenty-one other statutory heritage items of State or local heritage significant would be subject to indirect impacts through vibration, settlement and visual setting. And directly affected nine individual buildings as assessed as being potential local heritage items. It is unacceptable that heritage items are removed or potentially damaged and the approval should prohibit such destruction. (Executive Summary xviii)
- b. 602 homes and more than a thousand residents near Rozelle construction sites would be affected by noise sufficient to cause sleep disturbance even if acoustic sheds and noise walls are used. The EIS promises negotiation to provide even more mitigation on a one by one basis. This is not acceptable to me. As other projects have demonstrated, those with less bargaining power or social networks have been left more exposed. In any case, there is no certainty that additional measures would be taken or be effective.
- c. Recently Andrew Constance has been quoted numerous times promoting his vision of the transport future and some of these views are aired in the EIS but the vision put forward is highly visionary with no practical detail addressing how these changes are going to be brought about and so they are totally unrealistic. For example it is starting to be commonly accepted that car manufacturers will be reducing production of petrol/diesel cars before 2040 probably starting in 2030. It is proposed that electric cars will then take over. It is suggested that cars will be charged over night at people's homes. Virtually no one in the Inner City Suburbs has a garage. Are all the streets throughout all the suburbs going to be fitted out with charging points outside all the houses, similar to parking meters? We have all watched the shambles of the rolling out of the NBN it would be mind blowing to watch what would happen with the rolling out of charging points to each household without a garage and it would take years to achieve. There are virtually no recharging points at any Fuel Stations anywhere as yet and to set these up will take years. A large part of the population run older cars, because that is all they are able to afford. It will take many years for these petrol/diesel cars to disappear. Andrew Constance has also said that when everyone is driving an autonomous car average speeds will be reduced but as they are not being controlled by individual drivers this will mean they will be able to travel much closer together and so there will not be so much delay caused by spread out congestion. If this is to be so perhaps the suggestion could be made that some mechanism could be employed which would enable these cars to link together; if that could be done then they could form -a TRAIN - and then really travel at speed!
- d. In the EIS the Rozelle Rail Yards will have 400 car parking spaces for workers. There will be no car parking spaces at the Crescent Civil site. The daily workforce for these sites is stated to be approximately 550. This means that there will be approximately 150 additional vehicles that will not be able to park in the Construction sites on a daily basis. The EIS suggests workers use public transport. If not, they will have to park on local streets in the area. Parking is already at a premium in the surrounding suburbs and is worsening all the time with the success of the Light Rail and out of area commuters daily leaving their cars at the light rail stops. It is totally unacceptable that the local streets accommodate constructors extra vehicles on a daily basis for the construction period of 5 years in an area where parking is already at a premium.

Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: <i>60 Oxford St.</i> Suburb: <i>Newtown</i> Postcode <i>2042</i>

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- An on-line interactive map was published with the M4-M5 Concept Design that indicated a very wide yellow 'swoosh' that is upwards of a kilometre wide in some sections of the M4-M5 proposals. SMC have NEVER publicly published or acknowledged that the contractor to be appointed to build the tunnels will be 'encouraged' to do so within the yellow swoosh footprint, but may go outside the indicative swoosh area if found necessary after further geotech and survey work. The proposed Sydney Water Tunnels surveys (EIS 12-57) could potentially see a dramatic change in the tunnel alignments in the Newtown area. Why were these surveys not done during the past three years such that 'definitive' rather than 'indicative' alignments could be published. The EIS should be withdrawn till such time that it is a true and fair 'definitive' document open for genuine public comment.
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. We now have proposals for Stages 1,2 and 3 and none achieve this goal. The community is asked to support this proposal on the basis of other major unfunded projects, which are little more than ideas on a map. This is NOT the way to plan a liveable city.
- There will be 100 workers a day on the site, with provision for only 10-20 car spaces and there is a concession that local streets will be used, who will be 'encouraged' to use public transport. Our experience with the major construction sites in Haberfield, and St Peters that public transport is not used by the workers and that despite the fact they are not supposed to do so, they park in our local streets and cause strife with our residents.
- The EIS at 7-21 states that Community update Newsletters were distributed to residents 'near the project footprint' in many suburbs. This statement is simply not correct. No such newsletters were received by residents in central and northern Newtown. SMC was made aware of this fact, but has not responded to verbal and written requests for audited confirmation of the addresses 'letterboxed'. This statement of community engagement should be rejected by the Department.
- Darley Road is confirmed as a 'civil and tunnel site (dive site) with a 'Motorway Operations' site at one end for machinery during the build and will then house permanent water treatment facilities, despite evidence tendered to the Concept Design explaining that this intersection has an high accident rate and is completely unsuitable for such a purpose.
- I do not accept that King Street traffic congestion will be improved by this project, There should be a complete review of the traffic modelling that does not appear to take sufficient notice of the impact of pouring 51000 extra cars down Euston Rd on top of increases in population in the area. Given that there is no outlet between the St Peters and Haberfield or Rozelle, all traffic going to the CBD, East or into the Inner West will use local roads.
- I object to the issue of this EIS only 14 days after the period for submission of comments on the concept design closed. There is no public response to the 1,000s of comments made on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in that time. This casts doubt over the integrity of the entire EIS process.
- The decision to build a three-stage tollway instead of expanding public transport has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS ?
- I completely reject this EIS due to its failure to consider the alternative plan put forward by the City of Sydney.

Submission to : Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <u>James Moran</u> Signature: <u>[Signature]</u>

Application Number: SSI 7485 Application Name: WestConnex M4-M5 Link	Address: <u>Station St</u> Suburb: <u>Newtown</u> Postcode <u>2042</u>

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- a) It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.
- b) No road junction as large and complex as the extraordinary spaghetti junction proposed to go underground has been built anywhere in the world. The feasibility is not tested. There are no international or national standards for such a construction.
- c) The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.
- d) The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.
- e) The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
- f) Are there other potentially serious problems with Sydney Water utility services (described at EIS 12-57) or with other utilities in other suburbs or along the proposed M4-M5 tunnel alignment ? If so, the EIS proposals and application should not be approved till these are all disclosed, researched, surveyed and the resolution publicly published.
- g) The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).
- h) I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.
- i) I strongly object to the privatisation of the WestConnex project that turns public monies into private profit.
- j) The mechanical ventilation proposed depends on single direction tunnel construction, so how it can possibly work for large curved tunnels on multiple levels is unknown.
- k) Other Comments :

Attention Director Infrastructure Projects, Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001	Name: <i>Sylvia FLORIN</i>

Application Name: WestConnex M4-M5 Link <i>donot</i>	Suburb: <i>LILYFIELD</i>	Postcode <i>2040</i>
Application Name: WestConnex M4-M5 Link <i>donot</i>	Signature: 	
Please include my personal information when publishing this submission to your website Declaration: I HAVE NOT made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons, and request the Minister reject the application.

- The EIS states that the project will improve connection to the Sydney Airport and Port Botany. It will not. The Premier herself has said that the Sydney Gateway does not form part of the WestConnex project. Without the Sydney Gateway, connections between WestConnex (St Peters Interchange) and Sydney Airport and Port Botany will be via congested surface roads in Botany and Mascot. As the connection is unresolved, it is impossible to determine the effect on demand of the unknown pricing regime that will apply to the Sydney Gateway, nor how much travel time will be incurred - which might actually negate the already marginal proposed travel time savings.
- It is quite clear to me that insufficient research has been done on the archeology of the Rozelle Railway yards. This could be a valuable archeology site. Why has an EIS been put forward without the necessary research being done to further identify potential remains? No project should be approved on the basis of such an inadequate level of research.
- The WestConnex program of works has been described as an integrated transport network solution. However, the role and interdependency with public transport and freight rail is not considered. The recent Government commitment to a Metro West requires a rethink on the need for WestConnex. Particularly as the WestConnex business case outlines a mode shift from public transport to the toll road as a benefit required to justify it economically.
- While WestConnex might integrate with the wider motorway network, no evidence is provided demonstrating that it integrates with the wider road network - let alone the broader transport and land use system. For example the EIS provides no information about changes in traffic volumes entering the Sydney CBD caused by WestConnex. RMS has only just commenced work to identify which roads fanning out from WestConnex portals will need to be upgraded to deliver large numbers of vehicles to and from the project. It is therefore possible to form a properly informed understanding of the environmental impacts - the very purpose of the EIS.
- Ambient air quality - There is no evidence provided in the EIS that the ventilation outlets will be ^{adequate} ~~adequate~~. The EIS simply states that 'the ventilation outlets would be designed to effectively disperse the emissions from the tunnel and are predicted to have negligible effect on local air quality (xiv, Executive Summary). This is inadequate and details of the impacts on air quality need to be provided so that the residents and experts can meaningfully comment on the impact.

---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

I object to the WestConnex M4-M5 Link proposals for the following reasons, and request the Minister reject the application, and require SMC and RMC to prepare a new EIS that is based on genuine, not indicative, design parameters, costings, and business case.

- (1) The Hawthorne canal, which is the closest waterway to the Darley Road site, is described in the EIS as a 'sensitive receiving environment'. (Executive Summary, xix). Darley Road is a contaminated site with asbestos and the water treatment plant to be established during construction proposes running water from the treatment plant directly into the waterways. The permanent water treatment plant will involve water from the tunnel discharged to local stormwater systems and waterways, therefore this is a permanent impact. This proposal will further compromise the quality of the waterway and impact on the four rowing clubs in close vicinity.
- (2) The proposal for a permanent water treatment plant and substation to the south of the site on Darley Road will prevent direct pedestrian access to the light rail station. It will affect the future uses of the site once the project is completed. The facility is out of step with the area which is comprised of low rise homes and detracts from the visual amenity of the area. This site is a pedestrian hub and will be a visual blight for pedestrians, bike users and the homes that have direct line of sight to the facility. It should not be permitted on this site.
- (3) The EIS currently permits trucks to access local roads in 'exceptional circumstances', which includes queuing at the site. Given the constraints of the site (and based on experience with cars accessing the site for Dan Murphy's), queuing will be the norm and not the exception. The EIS needs to be amended to rule out queuing as an exceptional circumstance which allows trucks to use local roads.
- (4) The EIS states that an alternative truck movement is proposed which involves use of the City West Link and no need for spoil trucks to access Darley Road. This proposal is supported, subject to further information about potential impacts being provided. The EIS should not be approved on its current basis which provides for 170 heavy and light vehicles accessing Darley Road on a daily basis. This will create unacceptable safety issues and noise impacts for adjacent homes while also compromising pedestrian and bicycle access to the light rail and bay run. It will also lead to truck chaos on this critical arterial road providing access to and across the City West Link. The current proposal which provides for truck movements solely on Darley Road should not be approved and approval should only be given to the alternative proposal. I repeat however my objection to the selection of this site altogether, but propose the least worst impact should be chosen if this site is to be used.

I HAVE NOT made reportable political donations in the last 2 years.
Address: 101/23 Prymont Bridge Camperdown
Suburb: Camperdown Postcode 2050

I object to the WestConnex M4-M5 Link proposals for the following reasons:

1. The EIS should not be approved as it does not contain any certainty for residents as to what is proposed and does not provide a basis on which the project can be approved. The EIS states 'the detail of the design and construction approach is indicative only based on a concept design and is subject to detailed design and construction planning to be undertaken by the successful contractors.' Therefore this entire process is a sham as the extent to which concerns are taken into account is not known as the contractor can simply make further changes. As the contractor is not bound to take into account community impacts outside of the strict requirements and as the contractor will be trying to deliver the project as quickly and cheaply as possible, it is likely that the additional measure proposed with respect to construction noise mitigation for (example) will not be adopted. The EIS should not be approved on the basis that it does not provide a reliable basis on which to base the approval documents. It does not provide the community with a genuine opportunity to provide meaningful feedback in accordance with the legislative obligation of the Government to provide a consultation process because the designs are 'indicative' only and subject to change. Because of this the EIS is riddled with caveats and lacks clear obligations and requirements of project delivery. The additional effect of this is that the community and other stakeholders such as the Council will be unable to undertake compliance activities as the conditions are simply too broad and lack any substantial detail.
2. There are overlaps in the construction periods of the New M5 and M4 of up to one year. This will significantly worsen impacts for residents close to construction areas. No additional mitigation or any compensation is offered for residents for these periods. (Executive Summary xxvii). It is unacceptable that residents should have these prolonged periods of exposure to more than one project. The EIS makes no attempt to measure or mitigate the cumulative impact of these prolonged periods of construction noise exposure.
3. The EIS states that there may be a 'small increase in pollutant concentrations' near surface roads. The EIS states that potential health impacts associated with changes in air quality (specifically nitrogen dioxide and particulates) within the local community have been assessed and are considered to be 'acceptable.' We disagree that the impacts on human health are acceptable and object to the project in its entirety because of these impacts. (Executive Summary xvi)
4. The EIS is misleading because it discusses the creation of 14,350 direct jobs during construction. It omits the fact that jobs have also been lost because of acquisition of businesses, many of which were long-standing and employed hundreds of workers. (Executive Summary xviii)
5. No noise barriers have been proposed. This is unacceptable and appropriate noise barriers should be included in the EIS for consideration. (Executive Summary xvii)

I object to the WestConnex M4-M5 Link proposals for the following reasons:

- There have been widespread reports in the media about extensive unresolved disputes regarding damages to houses in the Stage 1 M4 and Stage 2 M5 construction process. Why should the community believe that there will not be extensive damages to houses in Stage 3?
- Because this is still based on a "concept design" it is unknown how the communities affected will not know what is being done below their residences, schools, business premises and public spaces, particularly if the whole project is sold into a private corporation's ownership before the actual designs and construction plans are determined. The EIS makes references to these designs and plans being reviewed but there is **NO** information as to what agency will be responsible for such reviews or whether the outcomes of such reviews will be made public. The communities below whose homes, business premises, public buildings and public spaces this massive project will be excavated and built will be completely in the dark about what is being done, what standards it is supposed to comply with, what inspection or scrutiny it will subject to, and whether the private corporations undertaking the work will be held to any liability by our government.
- It is quite clear that the escalating cost of tolls will encourage drivers to avoid tollways. This will further pollute and congest local roads. Such impact already evident on Parramatta Rd usage after the new M4 tolls were introduced. The community expects similar impacts on roads around the St Peters interchange, including the Princes Highway, King St, Enmore and Edgeware Roads and though streets of Alexandria and Crskineville. The EIS Traffic analysis fails to deal with this issue of traffic beyond the boundaries of the project and should be rejected.
- It is all very difficult for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. This restricted access does **NOT** constitute open and fair community engagement.
- I am concerned that SMC has selected one of Sydney's most dangerous traffic spots, Darley Rd in Leichhardt for a construction site that will bring hundreds of extra trucks and cars into the area on a daily basis for years.
- The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.
- I completely reject the notion that unfiltered pollution stacks should be built anywhere in Sydney, let alone three or four in a single area. I am particularly concerned that schools would be near such unfiltered stacks. The government needs to urgently review its policy of support for unfiltered stacks.
- The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.
- I am deeply disappointed that the EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain. This is a dangerous and reckless attempt to get approval for a project that is yet to be properly designed.
- The impact of the deep tunnelling for the M4-M5 link – in addition to the tunnelling for the new Sydney Metro in the same area – in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other. The increasing numbers of vehicles will also increase the vehicle pollution (known to have adverse effects on breathing and also to be carcinogenic) in this area.

Declaration: I HAVE NOT made any reportable political donations in the last 2 years.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 Application, for the following reasons:

1. The business case for the project in all three stages does not take into account the costs of external impacts of air pollution for human and environmental health; increased fossil fuel emissions contributing to increase global warming; and in the economic and social costs of the disruption to human activities; of displacement of people and businesses; and of the destruction of community cohesion and amenity. These external costs far outweigh the questionable short term benefits of building roads which poorly serve people's transport needs and are not sustainable in the long term.
2. I strongly object to the privatisation of the WestConnex project that turns public monies into private profit.
3. I object to the issue of this EIS only 14 days after submission of comments on the concept design closed. There is no public response to the 1000s of comments on the design and it seems impossible that the comments could have been reviewed, assessed and responses to them incorporated into the EIS in the time. This questions the integrity of the entire EIS process.
4. The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1000s more per day onto the roads to the Airport which are already at capacity.
5. The increased amount of traffic the M4-M5 Link will direct onto the roads to and from the St Peters Interchange will have a heavy disruptive impact on the local transport routes, whether by vehicle, bus, or active transport (walking and cycling).
6. Given the high cost of the tolls and their anticipated annual increase it is also expected that there will be an increase on traffic generally on local roads as motorists avoid the tollways. This can already be seen on Parramatta Rd immediately the new M4 tolls were activated. We expect exactly the same effect in the roads around the interchange, including the Princes Highway, King St, Edgeware Rd and Enmore Rd and though the streets of Erskineville and Alexandria.
7. The increasing numbers of vehicles will mean more vehicle pollution in the area (known to have adverse effects on breathing and also to be carcinogenic).
8. The additional unfiltered exhaust stack on the north-west corner of the interchange will further increase the vehicle pollution in an area where the prevailing south and north-westerly winds will send that pollution over residences, schools and sports fields. The St Peters Primary School in particular will be at the apex of a triangle between the two exhaust stacks on the south-western and north-western corners of the interchange. This is utterly unacceptable.
9. I object to there being two different tunnelling operations taking place in close proximity in time and location - the deep tunnelling for the M4-M5 link and the tunnelling for the new Sydney Metro in the same area - Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond. The impact of this combined tunnelling is an unknown hazard to the soundness of the residences and buildings above, many of them very old and heritage listed. This is a serious community safety issue and residents who do experience damage will be caught between 2 separate contractors for repairs and compensation.

Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration: I <u>HAVE NOT</u> made any reportable political donations in the last 2 years.	

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the Environmental Impact Statement M4/M5 application, for the following reasons:

1. SMC has made it all but impossible for the community to access hard copies of the EIS outside normal working and business hours. The Newtown Library only has one copy of the EIS, and has extremely limited opening hours. Monday and Wednesday: 10am to 7pm. Tuesday: 10am to 6pm. Thursday and Friday: 10am to 5pm. Saturday and Sunday: 11am to 4pm. This restricted access does NOT constitute open and fair community engagement.
2. EIS 6.1 (Synthesis, Page 45) describes the Process for addressing project uncertainties. *"The EIS is based on the concept design developed for the project. As such, it is to be expected that some uncertainties exist that will need to be resolved during detailed design and construction and operational planning. As described in Chapter 1, construction contractors (for each stage of the project) would be engaged during detailed design to provide greater certainty on the exact locations of temporary and permanent facilities and infrastructure as well as the construction methodology to be adopted. This may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval"*. The EIS **should not be approved** until critical 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment.
3. At 7-25 the EIS refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
4. The EIS acknowledges at 7-41 that there is great concern in the community that King Street, Newtown, will be made a 24-hour clearway, stating "Roads and Maritime has no plan to change the existing clearways on King Street". This statement is deliberately misleading - it infers that SMC has authority in controlling impacts on regional roads. Roads and Maritime have the unfettered right to declare Clearways wherever and whenever they wish, and RMS has **NEVER** stated publicly that King Street will not be subject to extended clearways.
5. The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. There are no further details provided. Again, this casts doubt over the integrity of the entire EIS process.
6. The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.

I call on the Minister for Planning to reject this project and demand that the government re-think the transport planning for the whole metropolitan area.

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application

- It is clear that the tunnel portals will be major sites for more traffic congestion. Some intersections that are currently very congested will be just as bad in 2033.
- No road junction as large and complex as the extraordinary spaghetti junction proposed to go underground has been built anywhere in the world. The feasibility is not tested. There are no international or national standards for such a construction.
- The impact of the deep tunnelling for the M4-M5 link - in addition to the tunnelling for the new Sydney Metro in the same area - in the Tempe, Sydenham, St Peters, Newtown and Camperdown and beyond is an unknown hazard to the soundness of the buildings above, and given that two different tunnelling operations will take place quite close, the people in those buildings will struggle to get repairs and compensation for loss because either contractor will no doubt blame the other.
- The EIS uses maps indicating alignment of the mainline tunnels. It is clear from more detailed reading deep into the EIS (ie 12-57 Sydney Water Tunnels) that the alignment and depths of the tunnels may vary very significantly, after further survey work has been done and construction methodology determined by the construction contractor. The maps provided in the EIS are nothing more than 'indicative' and are misleading the community. The EIS should be withdrawn, corrected and updated, and reissued for genuine public comment based on 'definitive' information.
- The justification for this project relies on the completion of other projects such as the Western Harbour Tunnel which has not yet been planned, let alone approved.
- Are there other potentially serious problems with Sydney Water utility services (described at EIS 12-57) or with other utilities in other suburbs or along the proposed M4-M5 tunnel alignment ? If so, the EIS proposals and application should not be approved till these are all disclosed, researched, surveyed and the resolution publicly published.
- The increased amount of traffic the M4-M5 Link will dump on the roads to and from the St Peters, Haberfield and Rozelle Interchanges will disrupt local transport networks including bus and active transport (walking and cycling).
- I oppose the destruction of any more of Sydney's heritage for WestCONnex. I am appalled that Sydney Motorway Corporation is seeking approval to tunnel under hundreds of highly valued heritage buildings in Newtown without any serious assessment of risk at all. This heritage belongs to all of Sydney.
- I strongly object to the privatisation of the WestConnex project that turns public monies into private profit.
- The mechanical ventilation proposed depends on single direction tunnel construction, so how it can possibly work for large curved tunnels on multiple levels is unknown.
- Other Comments :

Submission to:

Planning Services,
 Department of Planning and Environment
 GPO Box 39, Sydney, NSW, 2001

Attn: Director – Transport Assessments

Application Number: SSI 7485

Application Name: WestConnex M4-M5 Link

- One toll road leads to another 3 being proposed. The EIS's for the M4 East and the New M5 argued the case that serious congestion created near interchanges would be solved once the M4/M5 was built. Now it seems this is not the case and more roads will be needed to relieve the congestion – WHERE DOES THIS END? According to the M4/M5 EIS the real benefits will depend on building the Western Harbour Tunnel, the Airport Link and a tollway heading South. None of these projects have been planned, let alone approved but yet are part of addressing the congestion impacts acknowledged for the M4/M5link project. Given this how is it possible to know or address the impacts of the M4/M5 Link, unless this is just yet more justification for yet more roads?
- Research about roads clearly demonstrates that roads create congestion. The WestConnex project is no different and the EIS clearly indicates that this is an impact of the M4/M5 and the consequent roads that will follow. WHERE WILL THIS END AS THE m4/m5 Link EIS itself indicates the RMS is already hard at work considering how to solve these problems – of congestion caused by roads.
- Vegetation: Leichhardt. The mature trees on the Darley Road site should be preserved. If any trees are removed during construction it should be a condition of approval that they are replaced with mature trees.
- The Inner City Regional Bike Network has not been included among projects assessed under Cumulative Impacts. It is identified by Infrastructure

Australia as a Priority Initiative and should be included.

- Visual amenity - Pyrmont Bridge Road site - The EIS acknowledges that visual impacts will occur during construction. However it does not propose to address these negative impacts in the design of the project. This is unacceptable and the EIS needs to propose walls, plant and perimeter treatments and other measures at appropriate locations to lessen the impact on visual amenity. (Executive Summary xviii)
- Increased traffic cannot be accommodated in Central Sydney. It will further impede pedestrian movement and comfort and undermine easy access to public transport and reduce access to jobs over large areas of the city. It will undermine the attractiveness of Central Sydney to internationally competitive high productivity firms and their potential employees. Overall productivity is adversely affected.
- In view of the above no tunnelling less than 35m in depth from the surface to the crown of a tunnel (ie the top) under residences should be contemplated let alone undertaken. And of course no tunnelling should be undertaken under sensitive sites.
- Why is there no detailed information about the so called 'King Street Gateway' included in the EIS ?

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Declaration: I HAVE NOT made any-reportable political donations in the last 2 years.

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS M4/M5 Application, for the following reasons:

1. I strongly object to the **unknown hazard** associated with two different tunnelling operations taking place in close proximity in time and location - the deep tunnelling for the M4-M5 link and the tunnelling for the new Sydney Metro in the same area - Tempe, Sydenham, St Peters, Newtown and Camperdown. The impact of this combined tunnelling is an unknown hazard to the soundness of the residences and buildings above, many of them very old and heritage listed. This is a serious community safety issue and residents who experience damage will be caught between 2 separate contractors for repairs and compensation.
2. I object to the issue of this EIS only 14 days after the deadline for submission of comments on the concept design. The formal response to the 1000s of comments and submissions on the design, released only after the EIS, cannot possibly be based on a full assessment and consideration of the community responses. This is an insult to the community and questions the integrity of the entire EIS process.
3. The decision to build a three-stage tollway of the scale and complexity proposed and that has never been built before is risking community safety and state resources. I strongly object to that fact that this risk has never been subjected to democratic decision-making and in fact has been opposed by the great majority of submissions received in response to the Environmental Impact Statements for the first two stages.
4. The original objectives of WestConnex was to improve road and freight access to Sydney Airport and to Port Botany with the Interchange now being built at St Peters located much closer to the airport. This contradicts the stated purpose of the extension of the M4. Now both the new M5 and the new M4-M5 Link will dump 1000s more cars per day onto the roads to the airport which are already over-crowded and competing with freight transport. I strongly object to the impact of the M4/M5 link as it fails to meet the original purpose and provide a sustainable rail link to enable freight to be moved out of the city and commuters to travel by public transport.
5. Across all 3 stages the business case has not taken into account the external costs of these massive road projects in air pollution for human and environmental health, in adding fossil fuel emissions to increase global warming effects, and in the economic and social costs of the disruption to human activities, of displacement of people and businesses and of the destruction of community cohesion and amenity. These external costs far outweigh any benefits from building roads which poorly serve people's transport needs but instead enrich private corporations.
6. The high cost of the tolls has already resulted in an increase in traffic on Parramatta Rd immediately the new M4 tolls were activated. Their anticipated annual increase will likely mean that more and more commuters will seek to avoid the expensive tolls. It makes sense to expect the same effect on the roads around the St Peters Interchange, including the Princes Highway, King St, Edgeware Rd and Enmore Rd and though the streets of Erskineville and Alexandria. The increasing numbers of vehicles will mean more vehicle pollution in the area (known to have adverse effects on breathing and also to be carcinogenic). A viable public train system would easily and effectively manage commuter traffic without the requirement for expensive private tollways.

Submission from: Name: <u>LISA BOROAN</u> Signature: <u></u> Please include / delete (cross out or circle) my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years. Address: <u>1/532 King St</u> Suburb: <u>Newtown</u> Postcode: <u>2041</u>	Submission to: Planning Services, Department of Planning and Environment GPO Box 39, Sydney, NSW, 2001 Attn: Director – Transport Assessments Application Number: SSI 7485 Application Application Name: WestConnex M4-M5 Link
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

I submit this objection to the WestConnex M4-M5 Link proposals as contained in the EIS application # SSI 7485, for the following reasons, and ask that the Minister reject the application.

- This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.
- Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.
- The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
- Increased traffic congestion in areas around portals will increase pollution along roadsides, with predicted adverse impacts on breathing and through long-term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that enables them to be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
- This EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain – and is certainly not included here.
- EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
- The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1,000s more per day onto the roads to the Airport which are already at capacity.
- There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
- Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area. How can residents have any trust in a process that is underpinned by such hypocrisy.
- The EIS at 7-51 refers to concerns that were raised by the community that the alignment of tunnels in Newtown appeared to go to the east of King Street, an area that had had no geotech drilling or testing. SMC staff indicated at Community information sessions that the maps included in the Concept Design were broad and indicative only, and that further details would be available in the EIS. No further details have been provided. This casts doubt over the integrity of the entire EIS process.
- Other Comments

Campaign Mailing Lists : I would like to volunteer and/or be informed about the anti-WestConnex campaigns - My details must be removed before this submission is lodged, and must be used only for campaign purposes and must not be divulged to other parties

Please <u>include / delete (cross out or circle)</u> my personal information when publishing this submission to your website Declaration : I HAVE NOT made any reportable political donations in the last 2 years.		

I object to the whole of the WestConnex Project, and the specific WestConnex M4-M5 Link proposals as contained in the EIS application, for the following reasons:

- ❖ This EIS provides no basis on which to approve such a complex project including the building of interchanges underneath Sydney suburbs Rozelle and Leichhardt. It would be absurd to approve the building of up to three tunnels under people's homes on the basis of such flimsy information.
- ❖ Hundreds of risks associated with this project have not been assessed but have instead been deferred to a detailed design stage into which the public will have no input. I call on the Department of Planning to reject this inadequate EIS that has been prepared by AECOM that has multiple commercial interests in WestConnex.
- ❖ The EIS at 7-25 refers to 876 comments (limited to 140 characters) made via the collaborative map on the Concept Design 'up to July' that were considered in the preparation of the EIS. It does not mention the many hundreds of extended written submissions that were lodged in late July and early August. These critical 'community engagement' feedback submissions have clearly not been considered in the preparation of the EIS. This casts doubt over the integrity of the entire EIS process.
- ❖ Increased traffic congestion in areas around portals will increase pollution along roadsides, with predicted adverse impacts on breathing and through long-term carcinogenic effects. The maps and analysis of the pollution effects in the EIS should be presented in a way that enables them to be understood by ordinary citizens. Instead information is presented in a way that is deliberately obscure and hard to interpret.
- ❖ This EIS contains little or no meaningful design and construction detail. It appears to be a wish list not based on actual effects. Everything is indicative, 'would' not 'will', telling me nothing is actually 'known' for certain – and is certainly not included here.
- ❖ EIS 6.1 (Synthesis, Page 45) states. "..... this may result in changes to both the project design and the construction methodologies described and assessed in this EIS. Any changes to the project would be reviewed for consistency with the assessment contained in the EIS including relevant mitigation measures, environmental performance outcomes and any future conditions of approval". It is unstated just who would have responsibility for such a "review(ed) for consistency", and how these changes would be communicated to the community. The EIS should not be approved till significant 'uncertainties' have been fully researched and surveyed and the results (and any changes) published for public comment (ie : the Sydney Water Tunnels issues at 12-57)
- ❖ The original objectives of the project specified improving road and freight access to Sydney Airport and to Port Botany. Neither Stage 2 or 3 provides such access. Both the new M5 and the new M4-M5 Link will dump 1,000s more per day onto the roads to the Airport which are already at capacity.
- ❖ There has been no 'meaningful' consultation with the community. Some areas affected by M3/M5 have not even been letterboxed by SMC. These include St Peters and sections of Erskineville. The SMC received hundreds of submissions on its concept design and failed to respond to any of these before lodging this EIS.
- ❖ Unfiltered stacks anywhere in Sydney are not unacceptable. There must be a review of the NSW government's unacceptable policy on this issue. I am appalled that the ex Minister for Planning Rob Stokes who approved the New M5 and unfiltered stacks in St Peters and Haberfield would declare that he would not have them in his own area.
