

I object to the Cleanaway's Western Sydney Energy & Resource Centre

I object to this project of 5 incinerators in the Sydney Basin. The Sydney BASIN traps pollution and is unsuitable for 1 incinerators let alone 5.

I love Sydney and want to remain here. My family live here. I want them to remain healthy and happy, and to breath clean air. This project puts my health and my family's health at risk.

Ultrafine and Nano particulates are emitted from incinerators in high quantities. There is no known technology to filter these particles.. The EPA submission in 2018 could not support this proposal due to air quality concerns and health impacts.

Burning rubbish is the dirtiest form of energy production. It is not as economic as solar, it costs jobs and it undermines the move to real renewable energy.

It undermines recycling efforts by competing for the same material, ie. plastics , a product we must move to eliminate for the health of the planet.

Please move towards a clean, healthy, pollution free future for this beautiful city and reject this proposal.

Louise
