

David & Karen Hanel
100 Klinberg Road
Jindera NSW 2642

I would like to state my objections to the Glenellen Solar farm SSD-9550 for the following reasons

- The close proximity of this development to the proposed Jindera Solar Farm will cause cumulative effects especially to neighbours that are caught in the middle. I don't understand why these developments have to be clustered so closely together.
- 84 residents are within a 2 km radius the impacts this will cause with dust noise and traffic is huge
- The consultation process has not been good enough there has never been public consultation with either of the solar companies
- 11 ha of native vegetation and trees to be removed is heartbreaking
- The access to the development site is a narrow dirt road which goes past a lot of neighbours.
- I don't believe that this development should be considered before the draft Riverina Murray Important Agricultural Land Mapping has been released as I know that a lot of farms have put in submissions to get this map updated & as such their land could fall into this category. We need to protect agricultural land.

So in conclusion I'm not against renewables just strongly disagree with large scaled solar developments been placed in this area were our Greater Hume Shire Council is actively working to look after & protect agricultural land.

With the amount of large scaled solar in NSW being put on farmland at an alarming rate what will be left in 10 to 30 years?

A state of solar panels with farmland that cannot be used to its full potential.
