

20.92 hectares of land that needs to be clear in order to finish this project. I object to not only the clearing of land but the lack of information in the EIS and a complete lack of substantial environmental protection measures against soil erosion and pollution. Sites that have been nominated for construction represent some of the last non-fractured wildlife corridors in Sydney. This project is a huge threat to biodiversity, waterways and land on the northern beaches. This project also has questionable motives around fuelling development. Offsetting had not been clearly outlined in the EIS either.
