

SOUTH32 ILLAWARRA:

COAL FOR STEEL

WHO WE ARE AND WHAT WE DO

South32 is a globally diversified mining and metals company, headquartered in Australia. In New South Wales we produce high-quality metallurgical coal, much of which goes on to the local steelworks, supporting local manufacturing and regional jobs.

OUR LOCAL CONTRIBUTION

We have been operating in the Illawarra region for 85 years and continue to contribute to its development today:

- More than 90% of our 1,800 employees live in the area, creating flow on effects for local businesses.
- In 2017-18 we spent \$407 million in the region, of which \$161 million was spent with locally-based suppliers.
- In 2017-18 we purchased from more than 400 local businesses.
- At a state level, we paid more than \$57 million in royalties and taxes in 2017-18, supporting the building of schools and hospitals, and provision of services across NSW.

OUR PRODUCT

Our coal is used to create countless products - from the seat belt buckles that provide safer car journeys and the ColorBond® roofs that keep us warm and dry; to the medical equipment that can save our lives.

It's also part of the planes, trains and automobiles that help keep us connected.

Our mines have operated in the Illawarra for 85 years, producing coal for steel. We are currently applying to continue operations at the Dendrobium Mine beyond 2024. For more information visit www.south32.net

THE FUTURE OF DENDROBIUM

Dendrobium is an underground mine in the Illawarra, near Mount Kembla and Kembla Heights. The mine began operating in 2002 and has operated continuously since then, supplying coal for steelmaking to local and international markets.

The coal reserves in the approved mining areas will be depleted by 2024. We are seeking approval for the continuation of mining activities in the next two areas, within the existing mining lease.

A Development Application has been made and an Environmental Impact Statement (EIS) prepared.

For more information about the project and details on how to contact us, visit www.south32.net

If you have a **ColorBond** roof or fence, it's likely made with our **Dendrobium coal**. We supply ColorBond® manufacturer BlueScope with around 60% of its metallurgical coal needs.
