

### **Built Form**

The scale and mass and height of the proposed building is way too dominate the surrounding residential properties especially within heritage conservation area in Pymble Ave. The look of the street view in the area should be protected. The proposed building should be redesigned and ensure it has the same scale, height, and setback to the surrounding residential properties.

### **Future school population**

Why is the school not seeking to increase students from K to Y12 but this project proposed to increase 4 additional classrooms for Y5 and Y6? And why is the school estimate there will be 46 more Y5 and 48 more Y6 students generate from this development? I am so confused.

### **Traffic Impact**

The estimated junior students increase and the new ELC facility will certainly have large negative impact to the already busy traffic around the school. The school must also assess the future traffic impact from its Master Plan. It is very disappointing that the school has not used this project as an opportunity to work out a long-term solution for the school traffic. Instead, the school is avoiding to produce a 10 year traffic impact model. It is very irresponsible of the school.

### **Cut tree on the campus**

No, no, no. The tree must be protected. We need to plant more tree instead of cutting them. Look at the climate change, temperature is rising, the ice is melting in Antarctica, the sea level is rising. Projected sea level rise will have widespread gloomy effects in Australia and around the world. Please play your part to change the world.
