FORMAL OBJECTION TO
Application Number SSD-11591659
279 Deep Creek Rd, Limeburners Creek 2324
Ironstone Developments 'DEEP CREEK QUARRY'

As a landowner on Fords Rd, a resident and on behalf of my business **Ocean and Earth Farmstay ABN 98994349591** (Operational since 01/01/2007) I strongly object to the above mentioned Application from Ironstone Developments for the 'DEEP CREEK QUARRY'.

Ironstone Developments have not consulted with myself in regards to their application for the proposed quarry. They have not adhered to the SEARS (Secretaries Environment Assessment Requirement) in relation to communication with myself in regards to the impact this project will have on my business and livelihood.

The Mara consulting group working on behalf of Ironstone Developments have stated that all businesses in the area have been contacted which is a BLATANT LIE! Nothing has been communicated in writing or verbally to Ocean and Earth Farmstay.

The noise, vibration, air pollution, traffic congestion and safety of travellers staying at my property will adversely impact negatively on my business and the paying clients impression of the area and my farmstay. People come from all over NSW, VIC, QLD and other states to visit our unique property brimming with wildlife, flora and serenity which will be adversely compromised by the proposed quarry.

I understand this project is classified as State Significant but locally it will ruin our community, tourism to the area including Stroud and Barrington Tops due to high levels of traffic. The Department of Planning need to be held accountable if the above project is approved whether it be a **legal injunction directed toward Ironstone Developments** for lack of communication with those affected and the mistruths documented in their proposal. The underhanded way this has been handled to date is incomprehensible.

We as a local community will not tolerate the submissive way in which we have been treated to date. We are beginning the process of speaking to Federal ministers in regards to the zero emissions by 2050 which this does not comply.
