

## **I object to the:**

### **Noise & Vibration**

- Noise from crushers, site machinery truck traffic, cumulative noise from laden and unladen truck and dog movement. See EIS, 55 laden trucks per day that states 110 truck movements per day, you'll hear this constantly all day.

### **Air Quality**

- Dust will impact you
- 

### **Traffic**

- Queuing of trucks at M1 intersection, safely travelling on the bucket's way, width of bridges, school buses on the Buckets Way. People will die.
- They say the hours of operation are 7 to 5 but trucks will arrive at 6 and leave by 6.
- 

### **Social Impacts**

- Devalue of our properties. What is the cost benefit to the community? 10 jobs at the site. (see table enc).
- People who own properties on the boundary their life will be destroyed.
- Lack of community consultation. Majority of people in the area use PO boxes.,
- Financial impacts to current local businesses (B&B) or other proposed small cottage businesses.
- Will take away the opportunity for people to create animal refuges, B&B retreats
- 

### **Water**

- How do they water the haul roads for dust mitigation?
- How much water will they use and where will it come from ?
- What about water run-off into the local waterways and the consequences.
- Impact to fishing and Oyster leases.
- 

### **Bio Diversity**

- Koala habitat, other animals will be effected?
- Trees and flora effected - destroyed
- Input from National Parks as run off directly effects the waterways through the national park and into the Karuah River
- The impact for first nation heritage artefacts, sacred places, traditional land
- 

### **Visual Amenity**

- Current property owners will be affected visually, we did not move here to see, hear, feel a quarry operation.
