# RE: State Significant Development Application - SSD-36156297 at 813-913 Wallgrove Road, Horsley Park (DHL Warehouse and Distribution Centre)

Thank you for notifying Sydney Water of the abovementioned SSD application, which proposes construction and operation of a warehousing and distribution centre in Gazcorp Industrial Estate with a total gross floor area of 31,860 square metres to be used by DHL. Sydney Water has reviewed the application based on the information supplied and provides the following comments to assist in planning the servicing needs of the proposed development.

### **Water and Wastewater Servicing**

Sydney Water's servicing requirements for this proposed development delivered under the Notice of Requirements for the S73 application that the proponent has already lodged with us for SSD-5248 under CN 182316 should still apply. This may be subject to change or any future Notice of Requirements. A summary of our servicing advice is attached below:

## **Water Servicing**

- There are currently no water services available to service the development.
- Watermain extensions will be required to service the proposed development.
- This watermain will be extended from the proposed Lead In main being constructed under CN 181258.
- Main sizing will be advised once information of the water demand by the proposed developments are known.

### **Wastewater Servicing**

- There are currently no wastewater services available to service the development.
- Wastewater main extensions will be required to service the proposed development.
- This sewer main will be extended from the proposed Lead In main being constructed under CN 181159.
- Main sizing will be advised once modelling has been undertaken under Lead In case 181559.
- Detailed requirements will be provided at the Section 73 application stage.

The proponent should contact their Sydney Water Account Manager under CN 182316 to discuss how to proceed this SSD modification with us at the Section 73 application stage.

## **Recycled Water Servicing**

- While there is no existing Sydney Water recycled water supply to this area, Sydney
  Water is open to working in partnership with developers to consider recycled water
  servicing solutions that may offset potable water demands.
- Consideration should be given for rainwater capture and stormwater runoff reduction.
- The proponent is advised to contact their Sydney Water Account Manager to investigate the potential for a commercial arrangement to supply recycled water to the development.

This advice is not formal approval of our servicing requirements. Detailed requirements, including any potential extensions or amplifications, will be provided once the development is referred to Sydney Water for a Section 73 application. More information about the Section 73 application process is available on our web page in the <a href="Land Development Manual"><u>Land Development Manual</u></a>.

Further advice and requirements for this proposal are in Attachments 1 & 2. If you require any further information, please contact Thomas Mudgway, Senior Development Consultant in the Growth Planning team, via <a href="mailto:urbangrowth@sydneywater.com.au">urbangrowth@sydneywater.com.au</a>.

Yours sincerely,

Ashtar Malki

Ishtar Malki

A/Commercial Growth Manager City Growth and Development, Business Development Group Sydney Water, 1 Smith Street, Parramatta NSW 2150

#### **Attachment 1**

# **Section 73 Compliance Certificate**

A Section 73 Compliance Certificate under the Sydney Water Act 1994 must be obtained from Sydney Water.

The proponent is advised to make an early application for the certificate, as there may be water and wastewater pipes to be built that can take some time. This can also impact on other services and buildings, driveways or landscape designs.

Applications must be made through an authorised Water Servicing Coordinator. For help either visit <a href="www.sydneywater.com.au">www.sydneywater.com.au</a> > Plumbing, building and developing > Developing > Land development or telephone 13 20 92.

## **Building Plan Approval**

The approved plans must be submitted to the Sydney Water <u>Tap in™</u> online service to determine whether the development will affect any Sydney Water sewer or water main, stormwater drains and/or easement, and if further requirements need to be met.

The <u>Tap in™</u> service provides 24/7 access to a range of services, including:

- building plan approvals
- connection and disconnection approvals
- diagrams
- trade waste approvals
- pressure information
- water meter installations
- pressure boosting and pump approvals
- changes to an existing service or asset, e.g. relocating or moving an asset.

Sydney Water's <u>Tap in™</u> online service is available at: <a href="https://www.sydneywater.com.au/SW/plumbing-building-developing/building/sydney-water-tap-in/index.htm">https://www.sydneywater.com.au/SW/plumbing-building-developing/building/sydney-water-tap-in/index.htm</a>

Sydney Water recommends developers apply for Building Plan approval early as in some instances the initial assessment will identify that an Out of Scope Building Plan Approval will be required.

## **Out of Scope Building Plan Approval**

Sydney Water will need to undertake a detailed review of building plans:

- 1. That affect or are likely to affect any of the following:
  - Wastewater pipes larger than 300mm in size
  - Pressure wastewater pipes
  - · Drinking water or recycled water pipes
  - Our property boundary
  - An easement in our favour
  - Stormwater infrastructure within 10m of the property boundary.
- 2. Where the building plan includes:
  - Construction of a retaining wall over, or within the zone of influence of our assets
  - Excavation of a basement or building over, or adjacent to, one of our assets
  - Dewatering removing water from solid material or soil.

The detailed review is to ensure that:

- our assets will not be damaged during, or because of the construction of the development
- we can access our assets for operation and maintenance
- your building will be protected if we need to work on our assets in the future.

The developer will be required to pay Sydney Water for the costs associated with the detailed review.

## **Tree Planting**

Certain tree species placed in close proximity to Sydney Water's underground assets have the potential to inflict damage through invasive root penetration and soil destabilisation. Sydney Water requires that all proposed or removed trees and vegetation included within the proposal adhere to the specifications and requirements within Section 46 of the Sydney Water Act (1994) and *Diagram 5 – Planting Trees* within our <u>Technical guidelines – Building over and adjacent to pipe assets</u>. Please note these guidelines include more examples of potential activities impacting our assets which may also apply to your development.

If any tree planting proposed breaches our policy, Sydney Water may need to issue an order to remove every tree breaching the act, or directly remove every tree breaching the Act and bill the developer or Council for their removal.

#### **Attachment 2**

Requirements for **Business Customers for Commercial and Industrial Property Developments**.

### **Trade Wastewater Requirements**

If this development is going to generate trade wastewater, the property owner must submit an application requesting permission to discharge trade wastewater to Sydney Water's sewerage system. You must obtain Sydney Water approval for this permit before any business activities can commence. It is illegal to discharge Trade Wastewater into the Sydney Water sewerage system without permission.

The permit application should be emailed to Sydney Water's <u>Business Customer Services</u> at <u>businesscustomers@sydneywater.com.au</u>

A Boundary Trap is required for all developments that discharge trade wastewater where arrestors and special units are installed for trade wastewater pre-treatment.

If the property development is for Industrial operations, the wastewater may discharge into a sewerage area that is subject to wastewater reuse. Find out from Business Customer Services if this is applicable to your development.

## **Backflow Prevention Requirements**

Backflow is when there is unintentional flow of water in the wrong direction from a potentially polluted source into the drinking water supply.

All properties connected to Sydney Water's supply must install a testable Backflow Prevention Containment Device appropriate to the property's hazard rating. Property with a high or medium hazard rating must have the backflow prevention containment device tested annually. Properties identified as having a low hazard rating must install a non-testable device, as a minimum.

Separate hydrant and sprinkler fire services on non-residential properties, require the installation of a testable double check detector assembly. The device is to be located at the boundary of the property.

Before you install a backflow prevention device:

- 1. Get your hydraulic consultant or plumber to check the available water pressure versus the property's required pressure and flow requirements.
- 2. Conduct a site assessment to confirm the hazard rating of the property and its services. Contact PIAS at NSW Fair Trading on 1300 889 099.

For installation you will need to engage a licensed plumber with backflow accreditation who can be found on the Sydney Water website:

https://www.sydneywater.com.au/plumbing-building-developing/plumbing/backflow-prevention.html

## **Water Efficiency Recommendations**

Water is our most precious resource and every customer can play a role in its conservation. By working together with Sydney Water, business customers are able to reduce their water consumption. This will help your business save money, improve productivity and protect the environment.

Some water efficiency measures that can be easily implemented in your business are:

- Install water efficiency fixtures to help increase your water efficiency, refer to WELS (Water Efficiency Labelling and Standards (WELS) Scheme, http://www.waterrating.gov.au/
- Consider installing rainwater tanks to capture rainwater runoff, and reusing it, where cost effective. Refer to <a href="https://www.sydneywater.com.au/your-business/managing-your-water-use/water-efficiency-tips.html">https://www.sydneywater.com.au/your-business/managing-your-water-use/water-efficiency-tips.html</a>
- Install water-monitoring devices on your meter to identify water usage patterns and leaks.
- Develop a water efficiency plan for your business.

It is cheaper to install water efficiency appliances while you are developing than retrofitting them later.

# **Contingency Plan Recommendations**

Under Sydney Water's <u>customer contract</u> Sydney Water aims to provide Business Customers with a continuous supply of clean water at a minimum pressure of 15meters head at the main tap. This is equivalent to 146.8kpa or 21.29psi to meet reasonable business usage needs.

Sometimes Sydney Water may need to interrupt, postpone or limit the supply of water services to your property for maintenance or other reasons. These interruptions can be planned or unplanned.

Water supply is critical to some businesses and Sydney Water will treat vulnerable customers, such as hospitals, as a high priority.

Have you thought about a contingency plan for your business? Your Business Customer Representative will help you to develop a plan that is tailored to your business and minimises productivity losses in the event of a water service disruption.

For further information please visit the Sydney Water website at: <a href="https://www.sydneywater.com.au/your-business/managing-trade-wastewater/commercial-trade-wastewater.html">https://www.sydneywater.com.au/your-business/managing-trade-wastewater/commercial-trade-wastewater.html</a> or contact Business Customer Services on 1300 985 227 or businesscustomers@sydneywater.com.au.
