

To whom it may concern;

I Brendan Mudd, wish to submit an application of support for the Glendell Continued Operations Project. I have looked at and reviewed all the benefits this project would bring to the local community; through the continuity of existing jobs for local people so they can continue to provide for their families, support for local businesses that supply products and labour to the project for the life of the mine, construction jobs created for the project to construct a new mine infrastructure area and the continued contribution to the local community that Glencore provides.

I also feel that the Glendell Continued Operations Project environmental assessment addresses the key areas of concern from an environment and community point of view e.g. noise, dust, final void and final landforms that utilise natural landform designs. The Glendell Continued Operations Project is located in an area of established mining operations, therefore I see little to no impact on surrounding residence and the mine is also mining in a direction away from the closest residence. I feel Glendell has completed a thorough assessment, executing work at industry best practice and are addressing the project to make sure it has minimal impact on the surrounding environment and community during and after mining.

I have seen first-hand that Glendell takes environmental issues very serious and always look to improve and maintain environmental compliance and has recently been recognised as having industry leading rehabilitation practices.

It is my view that the Glendell Continued Operations Project should be approved, I am making this submission of support for the project on behalf of myself, for my family. I hope this project gets the approval to go ahead so I have continued employment for myself, so I can continue to support and provide for my young family now and into the future.

Regards,
