11th September 2020

Dear NSW Government,

Sydney International Speedway submission

This letter is in response to the current expedition of the Sydney International Speedway.

The applicant has identified the Austral Bricks private road as a cycle route in the study. This private road is not appropriate or designed for the use and safety of cyclists.

The project has identified an area closest to the Austral Bricks facility as a stockpiling area. What is the expected time frame that this site will be used as a stockpiling site? When will this material be removed from site? Further information in relation to the management of dust is requested. This is to include during the construction/stockpiling stage but also the timeframe the material will be stored in this location.

The report states during construction stage, issues may arise due to cumulative impacts from other projects in the area. One point outlined is:

- Increased construction noise, vibration and visual amenity impacts to nearby sensitive receivers
- Austral requests a visual image to understand the visual impact of the stockpiling area from our facility entrance and office areas.

Regards

Cassandra Steppacher
Environment Manager
On behalf of Austral Bricks
